Emerald and Ermine

A NEW NOVEL BY
THE AUTHOR OF

"The Martyrdom
of an Empress"

THE AUTHOR OF
"EMERALD AND ERMINE"

A BEAUTIFUL young duchess, living alone in the midst of the Breton woods, passionately guarding the heritage of her dead husband's domain, is hunted with sorcerous magic by a kinsman and his peasant accomplice, befriended by an old hermit, loved by one she loves and would yet resign for the sake of fealty to the great name she bears. Fair ladies, chivalrous gentlemen, hardy, faithful peasants, move within a setting of nature so appealing that the mind cannot shake off the spell. Never was such a woodland color as lies upon this sylvan Brittany, never greater warmth of life than stirs these Breton people.

Baltimore American—

"It is easy to over-enthusiasm in comment upon this book. It is sure to abide when much that is ephemeral has had its day."

Philadelphia Record—

"This is a singularly beautiful story. The author is a master of beautiful phrases."

New York World—

"Charming all the way through."

The Scotsman, Edinburgh—

"To the close of this charmingly written story the author carries with her the sympathies of the reader."

Chicago Inter-Ocean—

"One wanting a masterpiece of the ordinary will do well to get *Emerald and Ermine*."

Brooklyn Standard-Union—

"The tale has the glow and beauty of the emerald, the purity and richness of ermine."

London Times—

"Pictures with a full brush the beauty of the forests of Brittany and its old-world feudal ways."

Chicago Tribune—

"A book the end of which we reach too soon."

Illustrated in Color by the Author. Price, \$1.50 net

EIGHT VILLAGES
TO BE WIPED OUT
NEW YORK NEEDS A
CUPFUL OF WATER

In 1914 the city will require about 500 million gallons more water every day than its present supply. So the great Ashokan Reservoir is being constructed.

The engineers have dreamed a dream which sounds like modern magic, as William Inglis will interpret it. Vernon Howe Bailey has made a series of wonderful pictures—a panoramic view of the great field shut in by the Catskills, vivid glimpses of the homes, the schools, the churches—some of them beloved landmarks—of the people who must move on. The area of this great basin is equal to that of Manhattan Island itself, in shape like a great bat with wings outspread. Where 2,000 people now live happily and 3,000 more spend their summers will be a body of water 120 feet deep, containing the scarcely comprehensible total of 120 billion gallons of water.

Details: Thirty cemeteries to be moved, a railroad must pull up its tracks, 200 acres of wooded land cleared even of two-inch roots, and the whole tract scoured as carefully as a Dresden-china cup—to give New York another drink of water.

STORIES OF SYMPHONIC MUSIC

A Guide to Modern Orchestral Programme-Music

By LAWRENCE GILMAN

Music Critic of "Harper's Weekly"

This book fills a genuine need of the music-lover, for it offers in compact, accessible, and easily intelligible form information which will help him to listen understandingly to the music of an orchestral concert. It presents clearly and without technical analysis the poetic or pictorial or dramatic basis of every important example of programme-music in the symphonic repertoire. The reader in possession of information which will enable him to listen comprehendingly, for example, to a symphony by Berlioz, an overture by Mendelssohn, a symphonic poem by Liszt, or a tone-poem by Strauss or Debussy.

"The best thing for every concert-goer to do is to get a copy of Mr. Gilman's book and prepare himself beforehand."—*N. Y. Evening Post*

"From Berlioz and Liszt and Raff and Wagner down to the latest works of Strauss, d'Indy, Debussy, Schubert, Rimsky-Korsakoff, Elgar, Chabrier, and Converse, with many others that will occur to concert-goers, Mr. Gilman has left nothing that has any claim to the attention of music-lovers. It is a useful and interesting book."—*The New Music Review*

"A valuable contribution to the music-lover's library."—*Chicago Post*

COMMENT

A Franchise is Property

THESE are one or two affirmations of truth in Judge Horan's decision that the New York 80-cent gas law is unconstitutional that might command the attention of the raiders—that is, if the raiders want any truth. Judge Horan has decided that a corporation must have a fair return on its investment, and that a franchise is a valuable property on which it has the right to make a profit. While by direct legislation the State may establish rates, it cannot confiscate property, or go just short of it. "When this is the law," he says, "representative government as prescribed by both Federal and State constitutions is at an end." He further holds that there is "no authority that permits officials to injure the property of any citizen when unconstitutionally directed even by the State." The voice of reason and the word of truth are certain to be heard if you give a rational people, as the Americans are, sufficient time.

Coal and the Hepburn Law

How are we to avoid another coal famine? This is a subject which is bothering the coal-mine owners, and ought to be bothering the politicians. One of the provisions of the Hepburn law forbade any railroad company to transport, after May 1, 1906, any coal mined "by it, or under its authority, or which it may own in whole or in part, or in which it may have any interest, direct or indirect." The law makes it impossible for the railroads that own most of the anthracite coal of the country to bring it to market after the 1st of next May. To some of the roads these coal-mines are their most valuable property. Much railroad-building has been done for the sake of opening up coal-fields. The bonded debt of some of the roads is based partly on the coal-holdings, and these are included in the mortgaged property which secures the bonds. The coal-lands have not been sold by the roads; it is not easy to sell so much property. Devices for evading the law have been rejected. The roads will not consent to any course which looks like evasion, and this is well. A plan has been suggested in accordance with which a great billion or two-billion trust ought to be formed to hold and operate all the coal-lands; but this has been put aside for obvious reasons. No plan has been devised that will enable the roads, without grave injustice to their stockholders, and to their creditors who own their bonds, to rid themselves of the coal properties. Therefore, unless something can be done to modify the law or to infuse wisdom into its administration, there is likely to be trouble for the roads, the miners, and the consumers of coal. The penalty for transporting the coal under existing conditions is so severe

as to mean bankruptcy to those who violate it. The counsel for the roads believe that this section of the Hepburn bill is unconstitutional, and it is proposed to ask the authorities to suspend the infliction of the penalty until this question is decided by the Supreme Court. This would seem to be a reasonable request, and its granting might put an end to all fear of a coal famine.

Opposition to Bryan Grows

It is a pleasure to learn, as we do from several Democratic papers in the North and South whose freedom of speech has not departed, of a more wholesome attitude towards Mr. BRYAN. Editors who a few weeks ago were hopelessly inclined to accept the inevitable are now beginning to say that there is no inevitable; that there are a number of leading Democrats who would make better and stronger candidates than BRYAN. The Southern newspapers are asking the North and the West to help them out of a difficulty into which they have fallen by reason of the folly and the weakness of Southern Democrats who have precipitately committed themselves to Mr. BRYAN, and who unfortunately have control of the State and local organizations. They say that BRYAN is not the choice of the South, and that if the East, the North, and the West would take the lead against him in the Denver convention, the South would follow, notwithstanding their organizations. The *Charleston News and Courier* asserts that "the sentiment is growing that Mr. BRYAN could not be elected should he be nominated." There is no doubt of the soundness of this view, and it is, indeed, spreading. Judging from a recent interview with him, Mr. BRYAN believes that he can defeat any radical Republican. Possibly this is because he naturally expects the votes of Republicans who are essentially Roosevelt voters in addition to what he has called his own; but the truth is they are mostly the same. He fears Secretary TART on the ground that he is too conservative; why he entertains this opinion he does not explain, but he thinks that he would prefer L. S. FOLLETT as the Republican candidate. The fact remains: BRYAN can defeat no one, and Delaware has pointed the way to Democrats who believe that their party can elect the next President if they nominate a candidate who is opposed to the Rooseveltian-Bryan policies. Delaware has declined for GRAY. There are others. Indeed, there is more available conservative material among the Democrats than among the Republicans.

Bryan and the Discontented

No political party or candidate can succeed on the platform of discontent. It may be true that the Rooseveltian policies of discontent had Mr. BRYAN for their real author, but the world, at least on this side of the water, is not moving towards the natural and obvious goal of such policies, away from freedom and towards governmental restraint. Sometimes it may seem to be going in that direction, but the movement is, from its very nature, only temporary. The "policies" have produced a reaction, and only Mr. BRYAN remains on the old camp-ground. History again repeats herself. Once the Republicans of the Western States thought well of the Grainger movement, but they deserted it in time and left it to the Populists. Once a Republican majority in Congress passed an inflation bill, but GRAY vetoed it. WILLIAM ALLEN, of Ohio, picked up the idea, intending to thrash the Republican traitors with it, with the result that RUTHERFORD B. HAYES became, first, Governor of Ohio, and then President. The Orala farmers once wanted to borrow money on wheat, but the wise men among them soon saw that that was an issue fit only for a perpetual minority. The Republicans, under the lead of McKNALLY in the House and of ALLISON in the Senate, once undertook to "rehabilitate silver," to relieve the "white metal" from the consequences of the "crime of '73," but a Democratic President, GROVER CLEVELAND, relieved the country from the intolerable evil that the Republicans had indicated upon it. Then Mr. BRYAN, following the example of WILLIAM ALLEN, saw an *ignis fatuus* shimmering over the graves in the old political churchyard, and followed it with shouts of exaltation. At one time he seemed to have gathered a victorious army about him and to be marching to victory; but the Republicans, made wise in the school of GROVER CLEVELAND, turned upon the unfortunate "white metal" and left it to

the care of its Nebraska nurse. It died on his hands. Thus it is now; all the famous policies which have been confusing the people are now the political property of WILLIAM JENNINGS BRYAN and his friends, who propose to nominate him at Denver because he stands for the policies which have caused a reconsideration of the popular attitude towards Mr. ROOSEVELT. Mr. BRYAN could not be elected, for the same reason that has put an end to the third-term movement for Mr. ROOSEVELT. He would be again, as he was in 1896 and in 1900, the candidate of the discontented minority.

Mr. Bryan and the Tariff

The Philadelphia *Ledger* asserts that in 1896 Mr. BRYAN deliberately turned his back on tariff reduction for the "titillation and allurement of the Silver Republican voters of the West, who insisted on some guarantee that the protection principle would not be radically attacked in the event of the candidate's election." To this end the word "only" was omitted, with BRYAN's consent, from the phrase, "a tariff for revenue only," while BRYAN inserted in his "cross-of-gold" speech the declaration that "if protection has slain its thousands, the gold standard has slain its tens of thousands." He has now abandoned silver as he once abandoned the tariff, and is ready for government ownership of railroads, initiative-referendum, or any other old thing.

The Taft Boom and Governor Hughes

It was said the other day that never had a Presidential boom been so mismanaged as Mr. TAFT's, and the intimation was that the Secretary of War would probably not receive the Republican nomination in consequence of the incompetency and tactlessness of the managers of his so-called "boom." This is not sound reasoning. The Secretary of War will probably not be the Republican candidate in 1908; but this is not because of the mismanagement of his campaign. No real movement in behalf of a public man who is a candidate for a Presidential nomination fails for any such reason, if the individual or his cause has attracted popular support, while many a shrewdly managed movement has failed because of popular opposition to the man for whom it was organized. Secretary TAFT, if he fell of nomination, as he probably will, will fail because his candidacy has not attracted the necessary popular support. Its origin has never been liked, and now he would be on the defensive throughout a campaign. On the other hand, could there be a campaign—if there can be said to be one at all—which must be so offensive to the practical working politicians as that in behalf of Governor HUGHES? As one of the most practical of them all, "AM." GARDNER, says, the politicians want to know if a man wants his friends to organize for him, which, being interpreted, means, how much money for how many "boys"? Governor HUGHES has treated the appeals of the "boys" for an announcement that he wants an organization with the studied indifference that must hurt their tenderest feelings, and thus dampen their ardor. He has told them, in effect, to mind their own business and he will mind his. And yet his "boom" grows as rapidly as the organized booms halt or decline. The truth is, and it is greatly for the credit of the country that it is so, that the most certain way for a Governor, for example, to make progress towards the Presidency, is to be the kind of Governor that HUGHES is and that CLEVELAND was, and to be indifferent to the politicians who want to "organize" for him. Vice-President FAIRBANKS is said, for instance, to be very completely and wisely organized, but one would hesitate before putting FAIRBANKS'S chances above HUGHES'S.

The President and the Governor

A rumor came some days ago from the White House, after an interview between Senator PACE and Mr. ROOSEVELT, that the President would not actively oppose the nomination of Governor HUGHES, and it was intimated that before long he might be found aggressively supporting it. This rumor was all too quickly followed by an episode that may have saved Senator PACE and other of Governor HUGHES'S friends some momentary distress. The county committee, under the leadership of Mr. HARRISON PARSONS, who is supposed to speak for the President, postponed until the January meeting a resolution expressing the hope that the New York delegation to the Republican national convention would present the name of Governor HUGHES. This action will do the Governor

no harm, if harm was intended, as possibly it was not. Mr. PARSONS was so discredited by his alliance with HARRIST that his opposition is now rather helpful than injurious, even if he is really in opposition. Another sinister fact is that he runs his county committee with the help of a small army of Federal office-holders. That sort of thing is not popular now, and it is especially obnoxious when the activity is that of office-holders under an administration pledged to civil service reform.

The Sailing of the Fleet

The great fleet has sailed, and the Japanese statesmen have hastened to declare by cable that the Japanese people will be glad to see the ships and the men, and are confident that there is no hostile intent concealed in the sending of the fleet. We are willing to accept the assurances of the administration that this is true. Nevertheless, the world is not so easily satisfied. The English papers, including the *Spectator*, which is abnormally respectful to the President, thinks that the sailing of this extraordinary fleet of battle-ships, prepared for war, is most untimely because it excites the lingo spirit. The *St. James Gazette* is notably savage, and asserts that it is a bombastic exhibition of naval strength for the purpose of intimidating the Japanese. The cordial tones of the Japanese statesmen are themselves a recognition of this uneasy suspicion, a suspicion that finds no response among Americans, unless the hostilities of the Pacific coast are hopeful that the Japanese will be trimmed. The people of the United States at large are confident that there will be no trouble with Japan, and yet they are made uneasy by this extraordinary and, we may add, extravagant display of force. It is devoutly to be hoped that the ships will return, by way of Suez or otherwise, without in the least disturbing the peace of the world. We believe that they will, but it is patent that when that happy day arrives there will be a fairly loud-sounding sigh of relief in Europe, Asia, and America.

The Aikman Incident

Governor HUGHES, on the initiative of Mayor McCLELLAN, removed JOHN AIKMAN, president of the Borough of Manhattan, because, after careful examination, he found that AIKMAN was incompetent. It appears from the evidence that while there is no reason to suspect AIKMAN of corruption, he has tolerated corruption in others. He permitted the boys to get their "divie." This is one of the worst and yet most common features of our political corruption. The Board of Aldermen, without examination, without attempting to answer the Governor's findings, after the courts had refused to enjoin the Governor's action, reelected AIKMAN to the office from which he had been legally ejected. It is said that this is an insolent defiance of the Governor. That does not sufficiently express the conduct of the Aldermen. It was, indeed, insolent and defiant, but it was an insolent defiance of the city's rights, and an ignorant contempt for decency. It was an open acknowledgment of those who participated in the "vindictive" of AIKMAN that public office in New York city is to be administered for the good of the "organization" and its boys, and that plumb-line of the taxpayer and profitable neglect of duty cannot be punished so long as the Aldermen are able to protect the plunderers.

The Australian Tariff

We have been pretty well informed of the nature of the triple protection tariff bill which has been pending in the Australian Parliament. It is the embodiment of the theory that if a people tax themselves sufficiently they will enrich all classes of themselves. This is the American protection principle carried to its logical conclusion. The object of the Australian bill is to secure the enrichment of Australians in three ways: by taxing themselves on all they consume the consumers will enrich the manufacturers; by taxing the manufacturers who charge too much, the consumers are to get back what they have paid in behalf of manufacturers generally; by heavily taxing manufacturers who do not pay satisfactory wages, the laborers are to gain. The closed shop is to run the factories; the factories are to have the Australian field to themselves; and the state is to keep down prices to the consumer. The cost of production is to be increased, and prices are to be lowered. How would Pennsylvania stand-patters like this? The bill has just passed the House of

Representatives, and the proposed rates of duty have been lowered. As they stood before, they did not begin to approach DUNDY rates. This effort of Australia to lift itself by its boot-strap will be watched with interest.

A New Currency Bill

Senator ALDRICH has promised a new currency bill about this time, with the assurance of its passage through both Houses of Congress. No bill is likely to be presented that will not in some way or other provide for a more elastic currency than we possess; but unless that elasticity be in the main automatic, the bill will not afford a satisfactory or a final solution of the problem.

A National Bank Looted

Federal examination of national banks has not proved particularly useful to the depositors of the Jewellers' National Bank of North Attleboro, Massachusetts, which the newspapers at this writing report to be "about as badly broken as a national bank can be." It is true that the Federal bank-examiner discovered that the bank was insolvent, but not until the cashier, since deceased, had managed to create a shortage said to approach \$250,000. The bank's furniture is left, but the loans made by the late cashier look very bad to the directors, who think that some of them will not yield more than ten cents on a dollar. Painful things do happen even in institutions that enjoy Federal supervision.

A Naval Fight, Ashore

Our navy, since its handsome start from Hampton Roads, has had a hard shaking up; not on the sea, so far as is known, but ashore, in *McClure's Magazine* and in the newspapers. It is asserted that our vaunted ships do not wear their armor belts where they should, but put them on so low that when the coal-bunkers are full the belts barely keep above the water-line. Also, that the ships ride so low in the water that there is a fairly heavy sea the forward turret guns cannot be fired. Also, that the ammunition-hoists are not yet just right, and are liable again to cause such accidents as they have in the past. Also other calamitous errors. These charges, vehemently brought by persons licensed to write on matters relating to naval construction, are for the most part disowned and controverted with corresponding spirit by the official authorities and responsible designers. Inasmuch as war-ship construction is a very progressive industry, constantly changing, improving, and growing in cost, all this passionate discussion is doubtless good for it, and will make for the better construction of ships still to come. Inasmuch as the chance to test battle-ships by actual performance in war comes very rarely, the only way to try them out seems to be by these furious battles in print.

A Deep Regret

Major HENRYPHILL, who is too good a man for South Carolina to elect to the United States Senate, upbraids us. The WEEKLY a few weeks ago mildly wondered why, amid the clash of protests against the omission from the new gold coins of the "In God We Trust," no one had "found apposite to the discussion that New Testament line which runs, 'Render unto CÆSAR the things that are CÆSAR'S, and to God the things that are God's.'" Yet at this very time HENRYPHILL was singing that very refrain. The only explanation is that the sounds of the other sectarian were so ear-filling that we did not catch the peep of the Presbyterian Pope of Charleston. We were unfortunate, but we are not wickedly neglectful of our blessings. The Major says, with undesired impudence, that we ought to follow more carefully the *News and Courier*. Well, we do read it much more, or much more intelligently, than South-Carolinians; if they did as well as we, Mr. BRYAN would cease to be their candidate.

Green Hands

The papers reported that Mr. BRYAN's recent presence in Guthrie, the capital of the new State of Oklahoma, inspired the chaplain of the local House to pray that he might be the next President of the United States. When the prayer was finished, the House applauded it very heartily, and at the instance of the Speaker all the Democrats endorsed it by voting aye, thinking by that means, perhaps, to give it the benefit

of their influence. These seem like elementary proceedings, but Oklahoma is an elementary State; the only one in the Union that has never had experience, as a State, with Mr. BRYAN as a candidate.

Welcome, William

Returned, on December 20, after an absence of 129 days, WILLIAM HOWARD TAFT, Secretary of War and candidate for President. Welcome, WILLIAM! A good deal has happened since you left. We lost our balance some, and there were days when the footing seemed mighty uncertain. The little tremor that shook this hemisphere when you put your foot down again on the edge of North America was welcomed by thousands of your countrymen as evidence that another deposit of ballast was about to be made in the hold of the ship of state. Said ship, WILLIAM, spends a mighty night of sail these days, and doesn't always steer with the precision that she might. Get aboard of her, air; get aboard.

A Great Many

How many Democrats are there who find Mr. BRYAN's greatest recommendation as a candidate in the conviction that he cannot be elected?

Pernicious Activities

A number of bills have been introduced "by request" in Congress directing that the motto "In God We Trust" shall be put on all the coins. Members report that religious organizations and women's societies are active in correspondence on the subject. Doleful news. Religious organizations and women's societies have more influence with Congress (as the anti-union law attests) than wisdom in legislation. We shall get some pretty coins if the hands of the molders can be kept off. The twenty-dollar gold pieces are a great advance in art and beauty on anything we had before, and the ten-dollar pieces are better than their reputation.

Disallowed

The Rev. SAMUEL DICKIE, D.D., president of Albion College, doubts President ROOSEVELT's courage because he did not put anything about the liquor question in his message. This doubt is disallowed. The President was bold far beyond the point of rashness about putting things in his message. He probably omitted to put in a liquor-question paragraph for fear it would get lost.

Help Wanted

A great novelist, a really big one, equal to the true portraiture of various conditions of men, and to the illumination of true doctrine about their relations with one another, might do enormous good in this country in these times. Our people seem to have a great appetite for knowledge about one another, and very defective, misleading, and inadequate means of satisfying it. The poor want to know about the rich, and the rich about the poor, and the great middling mass between wants to know about both, and about its own components. The cheaper and more popular magazines are full of endeavors to satisfy this desire; honest endeavors, apparently, and often interesting, but more nibbles at the great cake. One of the ten-centers leads off this month with the observations of a writer who, having slummed successfully in the parlors of Chicago, purports to have since been slumming among the excessively rich in New York. A quick turn; so quick as to cast doubt on the writer's qualifications for the new job. Slim stories have their uses if they are true, but a *Vanity Fair* would do us more good. No doubt the country is too big and too diverse to be put in a book, but it is not bigger than human nature, and it is possible to put a vast deal of human nature between book covers if a powerful-enough comprehension is behind the pen. It is a mighty yesty country in these days, and very unsettled in its standards of living and behavior. Some folks have been jettied out of steady habits by too much money, others by too much power, and a far greater mass than either of these by the reading of sensational, undigested, and misleading literature.

No, Tom

TOM LAMSON has got his second wind and come out for a third term, anyhow. No, Tom. That ghost is hid. Why not speak for yourself?

Our Armada: Its Precursors and Significance

It is perfectly true, as Mr. ROBERTS has said, that no fleet representing collectively so great a tonnage and weight of armament ever undertook so long a voyage as that upon which the sixteen battle-ships under Rear-Admiral EVANS set out on December 16 from Hampton Roads. There are in modern history only two objects of comparison, to wit, the Spanish armada, intended for the conquest of England, and the naval force despatched under Admiral ROBERTS against Japan. The largest Spanish vessels of 1588 would be deemed insignificant when measured by our present standards, and the gains of that date, whether for raillart, length of range, or precision, would now be accounted worthless. The voyage, too, from Spanish ports to the North Sea, even though we must add the subsequent circumnavigation of Scotland, was short indeed compared with that which is to be performed by EVANS. From this point of view and from that of size the only precursor of our armada which deserves consideration is the naval expedition of which the ill-fated ROBERTS had charge. The Russian fleet was inferior to that which just started from Hampton Roads even in nominal tonnage and fighting power, and, as the event proved, it was destitute of every requisite for success, with the possible exception of personal courage on the part of officers and men. ROBERTS' fleet, it will be remembered, did not proceed by a single route, or in a single body, part of it traversing the Suez Canal, and the second part rounding the Cape of Good Hope, while a third squadron did not set out until a later date. The naval concentration was not effected until all the ships had reached the China Sea. The commander-in-chief endeavored to tarry to account the resultant delays in Madagascar waters and off the coast of French Indo-China by striving to improve the discipline and the efficiency in seamanship and gunnery of the squadrons under his control, but all his efforts to these ends were unavailing, and it is easy to prove by Russian witnesses that there never was a modern fleet so woefully unfit for battle as that which went forward to its doom in the Bay of Japan.

The fleet under Rear-Admiral EVANS enters on its voyage to the Pacific under very different auspices. Between Hampton Roads and San Francisco it has no enemy to fear, unless it be the stormy weather which is so apt to prevail in the Straits of Magellan. Instead of being regarded, as was ROBERTS' fleet, it will be welcomed by every intervening power which it may wish to enter for recouling or repairs. Should the voyage be extended from San Francisco to Manila, EVANS will find American harbors in the middle of the Pacific.

There is really no likelihood whatever that Admiral EVANS will have an opportunity of attesting his skill in naval strategy or tactics. The official spokesmen of the Japanese government have repeatedly declared that they regard the despatch of the fleet under EVANS from our American coast to another as a matter with which no foreign country has any concern, and the Japanese newspapers are almost unanimous in averring that there is no ground for seeing in the expedition any indication of hostility to Japan.

Yet, although the presence of a great American fleet in the Pacific is more likely to prevent war than to precipitate it, there is ample reason for the interest with which naval experts all over the world are watching it. Admiral CHANVAY, of the French navy, regards it as one of the most memorable incidents in the naval history of the world, and he has no doubt that it will be prosecuted successfully if the Straits of Magellan are traversed without disaster. What he means is sufficiently evident, namely, that if such a demonstration can be made at the present time, when it is needful for American war-ships to circumnavigate South America, how much more may be expected when the Panama Canal is opened, and when the energies of our navy are intensified by the pressure of international war and the imminent risk of self-protection. The effect upon the German mind is equally unmistakable. The German naval programme, as finally revised, some weeks ago, by the Kaiser's command—a revision which is almost certain to be sanctioned by the Reichstag—provides for laying down three battle-ships of the *Brundage* type, or a still higher type, every year up to and including 1911, and for laying down one such vessel annually thereafter until 1917, so that at the date last mentioned the German Empire will possess, and steadily maintain, an aggregate strength of thirty-eight battle-ships. For the moment the United States undoubtedly rank as the second naval power on earth, and the question which Germans want to see answered is whether we can retain the place. We undoubtedly can retain it if, in compliance with the request of the Secretary of the Navy, Congress shall consent to provide for four high-class battle-ships this year and every year up to 1911. In addition to the sixteen battle-ships that left Hampton Roads on December 16, and the two battle-ships already in Pacific waters, we have in commission, or building, ten other first-class battle-ships, which give us a total of twenty-eight. In three years, if the requisite authority and appropriations are assiduously forthcoming, we can assure the attainment of a naval force superior to the aggregate

which Germany contemplates for 1917. If we go on expanding the number of our battle-ships at the same rate for some years afterwards, we shall utterly outstrip the utmost efforts, and, perhaps, the financial capabilities, of the Germans, and long before the date last mentioned we shall have proved the impossibility of outdoing us from the second place in the list of the naval powers of the world. There is no doubt that, owing to our possession of long coasts on two oceans, we need a navy inferior to that of Great Britain alone. We need to have it. That is not denied by the ROBERTS administration in which all American patriots who possess any forethought and sense of duty must concur.

There are other points of view from which the despatch of the American armada to the Pacific is certain to prove impressive. Should Rear-Admiral EVANS be instructed to conduct his fleet, consisting, when reinforced en route and at San Francisco, of no fewer than eighteen battle-ships, accompanied by many armored cruisers, we shall possess incomparably the strongest naval force that has ever been seen in the Far East. It would be impossible for Great Britain itself, without seriously weakening her Channel, Mediterranean, and North Sea fleets, to send thither an array of battle-ships fit to cope with our own. The effect of such a state of things on the prestige and influence of the United States in the extreme Orient is obvious. We shall have proved to the satisfaction of all well-informed onlookers that, in a superlative sense, we are a great world power even in an ocean which, for the moment, is for us the most difficult of access. The presence of our eighteen battle-ships at Manila—should Admiral EVANS be ordered thither—cannot but increase enormously the power of our diplomats at Peking. Chinese diplomacy will be encouraged nightly to resist the encroachments of the Japanese on Chinese sovereignty in Manchuria—encroachments embodied in the recent demand as to the telegraphic and postal systems—and will tend to convince them that our guarantee of the independence and territorial integrity of China rests upon a solid foundation. The exhibition of such tremendous naval force, coupled with the proof of our generosity afforded by our return of the larger share of the indemnity paid to us by the Peking government for alleged losses in the Boxer rebellion, should, and will, convince the Chinese that we are the most trustworthy, disinterested, and useful friends that they possess upon the globe.

While, therefore, in the past, we have expressed some doubts as to the necessity, the opportuneness, or the expediency of the EVANS expedition, we shall follow, with the most lively sympathy, the progress of the fleet, now that it has actually started. For its safety and honor we offer our best hopes and wishes. We do not for a moment doubt that they will be fulfilled.

We observe, finally, that there is an aspect of the EVANS expedition which is sometimes overlooked, and that is the deep effect which it must necessarily produce on our sister republics of South America. When the Latin-American commonwealths behold the enormous dimensions and colossal latent powers of the first American armada, they will inevitably be impressed profoundly with the importance to themselves of the Monroe doctrine. Here, they will say, is a protector who is abundantly able to protect. The Monroe doctrine means something. Now, while the United States possesses such splendid naval resources, will any Latin-American state have to dread European aggression. The inhabitants of South-American countries will feel, perhaps for the first time, that under theegis of so mighty a protector they may work in peace. From this point of view the exhibition of sixteen American first-class battle-ships in South-American waters is a useful and possibly necessary supplement of the naval influence exerted by the mission of Secretary Root.

The New Year

The mistake of the average thinker is to believe that life is a finished product presented to us from some power outside us. On the contrary, life is a fluid set of circumstances into which we walk with full power to push, or shove, or solidify, or freeze, or boil, according to will. To begin to will, then, as soon as we take stock of surrounding circumstances, is the man's interest in existence. If we set ourselves to operating upon circumstances without a definite plan of action, without quite knowing whether it is boiling or freezing we want to do, we are apt to make but little progress. But even for the man who has frozen what he meant to boil there is still a hope; circumstances are so fluid, so willing to be dealt with, that all he has to do is to apply a greater amount of heat to his lump of ice, ultimately to reach the boiling-point. To will, then, is what we are to set about in this hot world we call life. We are ourselves compact of past wills, tendencies, and impulses handed down from generation to generation, but over and above these inherited tendencies there is ever something new, something individual, namely, the turn which this particular combination of tendencies takes, its will, its desire, its personal effort which is to awaken and set upon circumstances. For each man, though he is the result of the

selection and the shelling of thousands of minds through the centuries," is yet a new power, a new consolation, a fresh brain full of new seeds of thought; alive with desires and intentions which, liberated, shall add their quota to the unfolding drama of human consciousness.

A New-year is a likely moment to pause and take stock of our outfit and consult our will. Not that the New-year is really in any way different from any other point in the vast expanse we call time, but because any definite point upon which we can make a deeper impression than the habitual one is useful as a reminder, as a line of a mark in empty space to which we can tack on our further actions. It is a start from which we can get a sense of logical continuity. And so, despite all the journalistic cheap jokes about the New-year and resolutions, the New-year is a good point from which to look backward and forward—a kind of a cornerstone in the palace of life. If we dislike the material of which we are built, if we find the badness and ineptness which have been handed down to us are, on the whole, rather poor and futile stuff, we need not waste time lamenting the poor foundations of our forebears; but we can realize that will is the universal remedy, and we can set industriously about the business of restraint and reinforcement. For one thing is certain: no one can afford to go out of life without leaving some visible tracks of his passing for those who follow after. It is wholesome, from time to time, to take into account the second point in creation, and instead of dwelling on the fact that life was created in seven days and presented to man complete and perfect, remember that if ever there was an Eden it was forfeited, and man was driven out to re-create a life for those who should follow after. And it is this task we still have in hand, or by conscious or unconsciously, for good or for evil, by hook or by crook, with careful choices and vigorous willing, or by stupid carelessness and feeble drifting, we are creating life for the generations to come—life and its values and its possibilities, its joys and its griefs, its health and its sickness.

The pain, the suffering, above all, the spreading of despair, the epidemic of suicides that closed in upon us at the end of last year, do not speak very well for the work of our forefathers. A life in which money is a supreme power and pride of heaping up concrete things a source of solace speaks ill, indeed, for the values past generations have created. A journalist not ashamed to chronicle the minutest details in the lives of rich men simply because they are rich is a harsh criticism of our fathers. That is past, and what is created is created, but the world is still in embryo. Each man has his little plot to cultivate, and he can still weed and plant, and what is planted spreads and grows of its own will, once it gets a fair start. It is not necessary to have such a wide expanse; an invalid's room, where pain is courageously and cheerfully borne, poverty that forgets itself in work and helpfulness, the tiniest workshop where beauty and durability and honest craftsmanship are loved and fostered, is space enough for a better life than this to be built. For the real beauty of life, after all, is the quality we learn to put into things; and just now, when things are said to be rather more scant than usual, it is an excellent time to decorate death with quality. Whenever we are, however near the end of our running, it is never too late to resolve that high thoughts and brave qualities shall accompany us for the rest of the journey. Such resolves may be easier for those who have made them before and carried them out; they are, undoubtedly, more difficult for those who have made them before and then turned selfish and let them slide out of grasp, but what is worth while to bear in mind is that beginning again is never impossible; the field of effort is open, and who sets his will to work may achieve.

There is a good deal of writing, nowadays, that treats of life as if it were a *cul-de-sac*; as if men were caught here in a blind alley with no outlet, but surely, if there is one universally known truth, it is that life has beginning and end; as we have come in, so also we shall go out, and that after we have once waked up to our position, measured ourselves, and taken our endorsement and tendencies into count, it is pretty well left in our own hands how we shall spend the interval between the coming and going.

There is a certain play of *Imax's* which seems, at a first reading, to be largely an arraignment of nature; all the instincts play false; the wrong people are coupled together; the wrong influences emerge at critical moments from the outside; everything is working at cross-purposes; and finally the most innocent person in the play, a little lame boy, dies, leaving his parents childless and without responsibility; by his going the field is cleared for every evil impulse to hold sway, but it occurs to the parents in their grief to resolve that the child's death shall not go for nothing; all the care and the training and the help that they would have lavished upon him they decide to give to the poor and innocent children of the village, and as wherever we awaken, blind instinct hails, the play closes with the slow dawn of redemption breaking in the distance.

Sin and suffering, mistake and wrongdoing may also lay the foundations of a new building. Are we better? There is always some one looser upon whom we may lavish care. Are

we poorer? We are, all of us, marching the direct road to death; and whatever death may or may not be, it is, at any rate, divested of creature comforts and venuous things, and poverty is good discipline and preparation for their ultimate loss. Have we reached the further milestones of old age, to find the way behind us empty and ugly? Have we begun to feel the shakiness of the past, and to think that what we have been we are, and that new adventures are but futile dreams? But who wills may keep the flame of hope alive, and the little sparks of interest kindled. To fan alive the flame of life, to blow it into a glow, to keep it burning for our warmth and others', and to go down to death knowing that whatever was worth while in this life has in it the seed of everlasting life, is to have lived successfully, and one may begin to do this at any odd tarning in the course of life. Any New-year will do for a beginning. Life is still plastic; it waits for the mould we offer it, and whatever part in time we may have reached we are free to still the vessel into which life flows, of noble outline and generous purpose.

Personal and Pertinent

SOME entertaining news about Americans can be obtained from the London newspapers. For example, the *Evening Standard* announces that "UPON SINGULAR, latent on the exposure of the 'inabilities of the American millionaire,' secured a position as better to Mrs. VANDEBILT,"—which, isn't said. "He was, it seems, sacked because a fellow asexual reported the 'Christian [anon de douctique]' was in the habit of writing elaborate reports in his pocket-book every night before he went to bed."

They have a great Norwegian woman writer of fiction whose books are beginning to be translated into English in England; her name is Madame ALVIDE PETER, and some of her novels are named *The Heart of the Northern Sea*, *The Children of Hara*, and *The Promised Land*. England is waking up to her merits late. For America, Germany, and Russia have already had translations of her. On her father's side she is German, and her mother is the daughter of SWEDENBORG, a Danish painter. She is fairly advanced in years, for she intends to be sixty years old next year; she was born in the north of Norway in 1848. Afterwards she lived at Christiansia and on the northwest coast of Norway. FREDERIK IMSEX and BROMBERG called her so often and so impressively the greatest woman writer of Norway that the government made grants of money to her, and thus enabled her to travel over the Continent. The government of the United States does not do this sort of thing, and therefore Mr. HOWELL, for example, and MARK TWAIN and UPON SINGULAR have to pay their own fares. But then she is a woman, and they haven't got so many penuses in Norway as we have in America. There is more money in Norway per capita for penuses.

THE JOHN HARVARD house in Stratford-on-Avon has been saved from destruction and is now owned by Harvard University. The salvage was the consequence of the joint efforts of MARIE CORBELL, who has lived at Stratford for about seven years, and of Mr. EDWARD MORRIS, of Chicago. The business cost Mr. MORRIS between \$6500 and \$7000, and Miss CORBELL a deal of effort, far-labouring parts of writing of a vigorous and often wearing kind. THE JOHN HARVARD house was worth preserving for more reasons than one. He was not born in the house, and perhaps he never lived there, but it was built by his mother's father, THOMAS BOGARD, when his daughter KATHARINE, to be the future mistress of Harvard University in America, was twelve years old. It does not make much matter whether JOHN ever lived there; he probably visited there, at least, and it is the only bit of real estate in England which has a living interest to any one to whom the memory of the founder of our oldest university is dear. It was built in 1596. Besides being a relic, it is the best specimen of a timber house in Stratford, and one of the most beautiful in England. America may have waked up late to the merits of JOHN HARVARD, but that it has at last evinced a concern about this pious founder of the great institution which bears his name may be some evidence of spiritual and intellectual growth. Our fathers and grandfathers didn't think of putting up a statue to JOHN HARVARD at Cambridge, or a monument at his grave in Charlestown, nor would they have dreamed of saving his mother's house at Stratford from the auctioneers and other upstarts who were despoiling it. Perhaps this generation does these things because it has more money; but it is also true that money, who have the more money are wiser in it to express more respect for education, and for those who, like JOHN HARVARD, have made sacrifices for it.

The other day a new Washington correspondent stated that the Democrats would be greatly injured by the panic, because they were preparing such foolish banking and currency legislation in the Senate cloak-room. This is a strange misconception of the deep significance of a cloak-room. The cloak rooms are the

places where Senators indulge their fancies. In days when men told stories, Aves of Missouri was the king of the clock-room and Don Cameron was his lay figure. They rig jokes on men in the clock-rooms, and the last thing they do is to construct serious laws there. The Senators who spend most of their time venting their own clocks and those of their fellows with tobacco smoke are not often consulted on especially serious matters; they constitute the "army" of the day, and follow their leaders. Harvey did a good deal in the clock-room to foster the Philippines in this country, and the Washington letter-writers say that he has been alarming his anxious friends by talking over financial measures there that he thinks ought to be adopted. One of his most ardent supporters has been so moved by the words of the Nebraska that he took him over from the Democratic clock-room to the Republican clock-room just to have him talk it over with ALBANI and some of the others whose ideas needed righting. It is said that when HARVEY got through, ALBANI, or some one else, was very polite to him, and said that he hoped that HARVEY would be the Democratic candidate. But this aside, when a real bill is to be prepared it will not be thrashed out amid the chaff of the clock-room, but in some committee-room. ALBANI will do it in his little back office, in the apartments of the Finance Committee. ALBANI may help, if the lawyers do not think him too old. If LYNDENBERG has any amendments to offer he will prepare them at home. When GEORGE F. EDWARDS and THURMAN wanted to draft a bill or an amendment, EDWARDS used to rise in his place and blow his nose. Then he'd walk out of the chamber. Soon afterward THURMAN would walk out at another door. They'd meet down in the Judiciary Committee-room, and there the business would be done. The Senators or visitors who talk about legislation in the clock-room talk so much about it that they never find time to put down any thoughts, if they really have any, on paper.

Correspondence

LAS VEGAS CERTIFICATES

LAS VEGAS, N. M., November 23, 1907.

To the Editor of Harper's Weekly:

SIR.—We regret very deeply that before publishing your article on the Las Vegas clearing-house certificates in your issue of November 23, you did not make some effort to inform yourself as to the need and objects of these certificates, as well as to the security behind them.

The Clearing-house certificates were issued in Las Vegas only when the banks in reserve cities refused to ship currency to Western correspondents, and were issued solely as a substitute for actual cash in order that payrolls might be met, and the making of the change incident to ordinary business transactions might be carried on as usual, in spite of the tying up of cash in Eastern cities. At the time that the allied business interests of Las Vegas decided to issue clearing-house certificates to relieve the money stringency caused in the West by the action of Eastern bankers, the plan of the organization of the Las Vegas Clearing-house and the security of its issues were so thoroughly explained by the local press, and at two open meetings of the business men of the community, that it was not deemed necessary to again recite the provision for the security of the issue in the certificates themselves; particularly as they were intended merely for local use.

In order to obtain these certificates from the Clearing-house, each of the local banks deposited one hundred and twenty-five dollars of approved securities for every one hundred dollars of certificates issued to it. In addition to this security, there was a guarantee of \$300,000 pledged by the incorporators of the Las Vegas Clearing-house, whose private fortunes aggregate more than three million dollars.

We beg to advise you that since the incorporation of the Las Vegas Clearing-house, all personal checks or Clearing-house certificates sent out in payment of accounts have been, and will continue to be, promptly redeemed for in Eastern exchange as heretofore.

You stated that "No one is going to sell goods for printed bits of paper which will not buy food or pay rent." We beg to advise you that these certificates have been in circulation since October 21, and there has not been a single instance (barring the action of HARPER'S WEEKLY) where they have not been gladly accepted by the business men, merchants, and laborers in payment of any obligation whatsoever. You state further in your editorial that "Happily the example of Las Vegas will not be followed." We respectfully call your attention to the inconsistency of this statement, for it is an established fact that practically all important banking points in the Middle West, the Southwest, and the Pacific States are now issuing clearing-house certificates, in small denominations, for current circulation.

We ask you, in all fairness, if it would not have been better to have published your article only in the event you failed to realize on your one-dollar certificate?

Inasmuch as you have created the matter into print without inquiry or investigation, we trust that your inherent sense of justice will prompt you to vindicate Las Vegas for an action she has been forced to take, and from local circumstances, but by conditions entirely beyond her control.

I am, sir,
HALLUT RAYMOND,
Assistant Cashier.

The Las Vegas Clearing-house certificate upon which the WEEKLY commented was, Mr. Reynolds states, issued for local purposes. It was, however, sent to New York in payment of a debt. We were perfectly justified in our comment upon it because it contained no notice of security behind it, and because it was payable only if deemed advisable by the committee of the Las Vegas Clearing-house. For the purpose for which it was employed it was an absurd piece of paper. We had no doubt of the object for which it was intended, nor were we in error in saying that the Las Vegas example would not be followed. Other issues of so-called emergency currency, so far as we are aware, are not defective in the particulars mentioned.—EDITOR.

THE OLDEST FRATERNITY

WILLIAMSTOWN, MASS., December 1, 1907.

To the Editor of Harper's Weekly:

SIR.—The letter from your correspondent in your issue of November 20, discussing the question as to which is the oldest college fraternity, will bear correction.

Phi Beta Kappa, founded in 1776, was at first a secret society of a literary and social character, perhaps similar to the present triek, letter fraternities; it is now, however, and has been for many years, a purely honorary society, with no secrets and a merely formal organization in most of its chapters. Elections are based on scholarship, and women as well as men are admitted as members.

Kappa Alpha, founded in 1825 at Union College, has been from the first a close brotherhood of kindred spirits, of a secret nature, and is the parent of the present great system of American college fraternities.

Being a member of both of the organizations referred to, I may speak with some knowledge of their difference in character.

I am, sir,

TALCOTT MINER BAKER.

CHARLES BRADLAUGH

New York, December 13, 1907.

To the Editor of Harper's Weekly:

SIR.—In justice to Mr. Pratt and myself, I may say that in my first letter (dated October 21)—as it was written—I based my characterization of Mr. Pratt's letter on his example and not alone, as he was misled into thinking, on his statement of "the sole issue" between the House of Commons and Mr. Bradlaugh. His first letter was, I said, in many of its assertions "villainous and imbecile abuse." I say so still. Moreover, I pointed out that the space afforded in HARPER'S WEEKLY was not adequate to permit correction of all Mr. Pratt's inaccurate assertions in detail, and I called attention (for those who wished to judge fully of the merits of the case) to that book, written with so much candor and devotion: *Charles Bradlaugh: A Record of his Life and Work*, by H. B. Fomer and J. M. Robertson.

Specifically I object to Mr. Pratt's statement of "the sole issue," as he called it. I denied the truth of this statement:

"Did Mr. Bradlaugh's atheism give him the right to defy the law of the land . . . before he could take his seat? This was the sole issue. He refused to do so." (Do what, Mr. Pratt?) "expecting the nation would rise in his behalf, and the nation took no notice of him."

I reiterate that this is (in so far as it is intelligible) false. Mr. Bradlaugh never claimed that his atheism gave him the right to defy the law of the land, either before he could take his seat or after having taken it. He claimed he had the right to affirm. The issue between the House and Mr. Bradlaugh—after he had been denied the right of affirmation—was this: Did the House have the right to exclude a regularly elected representative from the House because of his professed personal religious or irreligious views?

Mr. Pratt calls me "openly reckless" for saying that the House "backed down," and that its position was "indefensible." The House "defended itself" by refusing Mr. Bradlaugh either the right to affirm or permission to take the regular oath when he had expressed his willingness to do so under penalty of a supererogatory representative function. Finally, after years of unrighteous struggle, the House was forced to accept his oath as valid, in spite of the fact that it was perfectly understood that the theistic phrase in the oath was to Mr. Bradlaugh an absolutely "unmeaning" farce. In other words, the House "backed down," as I said. Thus it is shown that its position was morally and, in the end, legally "indefensible," which is what I claimed.

With this I rest my case. Charles Bradlaugh suffered greatly in life from ignorant misrepresentation and villainous abuse; in death the voice of slander cannot reach him. His fame is secure. "Beside the curious and merely judicial or clerical matters he stands out as one of a larger mould and greater fibre, a baffling and conquering Titan, sure of the sympathetic retrospect of happier days."

I am, sir,

RAYNE ADAMS.

UNRECONCILED

McKENNA, WIS., November 26, 1907.

To the Editor of Harper's Weekly:

SIR.—Every one who reads your WEEKLY can easily see the fact that you are a confederate of the *graffias* and are paid for your steady work.

Abuse on the *thieves*. God will punish you all. The President is a great and good man. The bad men murdered Lincoln also. The President will show you yet.

I am, sir,

D. H. GRAHAM.

The Battleship Fleet saluting the President upon his Arrival on the "Mayflower"

IN the silence which follows the thunder of a hundred guns, the world-watched battleships of the Atlantic fleet have swung into line and steamed for the open sea. At the horizon the black pennants of smoke which fly from the sixteen steel-clad ships are travelling away to the northward. Strong eyes can still mark the white specks which so short a time ago were towering floating fortresses, thorny with guns, yet flowery with the speech-flags of the sea. Left behind are only the straining eyes, the wonderment, the anxiety of it all and the years of a deserted roadstead. And although the smoke is fast disappearing from the rim of the horizon, the watchers still stand with their faces seaward, as if perhaps just at the last they may be able to see into the future—only for the space of five or six months—which stretches away before the ships in endless leagues of sea.

Of the voyage of these ships nothing is known to the legion of watchers save that their destination is San Francisco. But wherever the sea track lies, to whatever point the course of this fleet of steel is laid, in whatever guise history rides upon the prow of

the flag-ship, it is known throughout the land that it will render its own fair and honorable account to the nation's first home flag.

The fleet which passed out from Hampton Roads is the most powerful massing of sea-fighters under a single command which has ever been seen accomplished in the New World. And when the signal of the Commander-in-Chief was flashed from the flag-ship, the sixteen great craft, with their fourteen thousand souls aboard, bore anchor and swung to place in line with the ease and precision of a drill squad. It was wonderful to watch that line stream past, to note the power of each ship as she glided by. Each ship so clearly indicated the strength, the reserve, the determination animating her, and yet the magnitude of the scene was not so impressive in this passing as in the later movements when one marked the length of the line, for when the last ship was close under the ramparts of Fortress Monroe the van-ship of the fleet was four miles away to the southeast and fast dimming on the horizon.

It was with a gripping patriotism that one watched the lines of ships respond to the Admiral's signal, leave anchor, ship by ship, and steam to proper and appointed place in the double column, each vessel four hundred yards behind its seaward mate. It was a time, too, to remember the last leave-takings, and had a last God-

The Last Word—President Roosevelt giving his parting instructions to Admiral Evans

speed to some one standing unconsciously merged into the group at the rails.

Of late it has been a season of farewells, and up to the very last moments before dawn of the day of sailing, launches were plying between shore and ships, carrying belated officers who had lagged for a last goodbye. But practically everybody was aboard his ship before daylight, and when the first heavy glist of the sun struck across the waters of the Florida, it came upon a fleet as still and silent as so many white ghosts of ships. After the rain and gales and gloom of the last three days it was a relief to see the brightness steal across the waste of waters, and to find a kern and dry, although cold, north wind whipping the surface into ridges of white. There was not one wisp of cloud in all the broad blue sky.

As the last reverberations of the eight bells of eight o'clock died away among the most distant ships of the fleet, a signal was rigged from the *Conqueror*, Rear-Admiral Evans's flag-ship. Instantly from every ship in the fleet there was broken out from stern to stern, from masthead to masthead, the most gorgeous imaginable array of signal-flags, red, yellow, blue, white, black, and green.

Soon a lookout aloft on the *Conqueror* hailed the deck with a cry that the *Mayflower* was in sight. An order was passed, and instantly rows and ranks of men in blue were massed along the main-decks of the white fighting-ships. This was the ceremony of "man-of-war" in honor of the presence of the President, the Commander-in-Chief of the Army and Navy.

Thick double-breasted overcoats protected the blue-jackets from the biting wind that piped through the rigging and crashed the peasants like whips. On the bridge of every ship stood her officers, as erect and immovable as on parade, clad in full-dress uniforms which were eclipsed by heavy overcoats.

When the *May-*

flower, attended by two scumbe torpedo-boats, came up to the flag-ship there was a sudden burst of flame and smoke from the *Conqueror's* saluting broadside, and at the flash every ship in the fleet hoisted her batteries in a salute of twenty-one guns in honor of the President, while all the bands, stationed on the quarter-decks beat out "The Star-Spangled Banner." The President's yacht dropped anchor halfway between the two lines of ships, and, according to a programme long before arranged, the commanders made their way aboard to give greeting and farewell. There was a sudden darting of launches from every part of the fleet, and all gave way at the starboard gangway of the *Mayflower* to the *Conqueror's* launch, from which emerged presently Rear-Admiral Evans. The piercing whistle of the boat-wala piped him over the side, the six side-boys raised their chuffy blue hands in salute, and the drums sounded three ruffles.

Close to the President Rear-Admiral Evans halted and stood at salute. The President saluted in return, and both men clasped hands heartily. Then the Admiral presented his staff and led the way to greet the other members of the President's party, while

captains after captain of the various ships, was piped over the side, honored with two ruffles apiece, and similarly greeted by the President and the group near him.

At last the President drew the Admiral aside and talked earnestly with him for five minutes. What were those farewell words of instructions—if such they were—no one may ever know. Both men were grave. Admiral Evans's replies were a series of emphatic nods of assent. Presently the Commander-in-Chief grasped the Admiral's hand and heartily exclaimed, "Good-by and good luck!" At the gangway, Admiral Evans saluted and started for his flag-ship, followed over the side by the captain in the order of their seniority.

The *Mayflower* then

The Arrival of the President's Yacht "Mayflower" opposite the Line of Battle-ships

weighed anchor and steamed to the head of the line, where she made for the open sea. The *Consacient* immediately struck her gay array of signal-flags, and from all the other ships the lines of whipping bunting were drawn down and stowed—the first step from gaiety to grimness. Then cables began clattering through hawse-pipes, and the stripped stokers below caught up their shovels, for great clouds of black smoke arose from the funnels of the fleet, and blew darkly down the line.

Slowly the *Consacient* began to slip away from her anchorage, and, as if impelled by the same set of engines, all the other ships gathered headway in her wake. As silently as phantom ships the great fleet, which may make history on the other side of the world, began to move on its long journey, and as silently as shadows followed the trail to the sea.

With the *Consacient* in the lead, the armor-clads slipped into column and followed after the Mayflower. They passed close together, as near as possible to the Hotel Chamberlain, the long wharf, and Fortress Monroe. The balconies and windows of the hotel, the wharf, the ramparts, and the shore for a mile or more, were crowded with men, women, and children who seemed unconscious of the cold as they stood bercharded waving hats, handkerchiefs, wraps, anything and everything wavable. Many of the men on the ships not engaged in duties of ceremony waved their caps in reply. The bands on the ships began to play. Some of them favored "Auld Lang Syne," one played "Nancy Lee," but most of them with great tact piped merrily about "The Girl I Left Behind Me."

Of course there were many crowded tugs and excursion boats in the Breeze following the departing armor-clads and swarming at a respectful distance all the way down to the Virginia capes, but they were hardly visible to the average observer, obscured by the great glory of the fighters.

For ten miles the *Mayflower* steamed ahead of the fleet, then turned at the tail of the Horseshoe Shoals, and waited to review the ships as they passed.

From stereograph, copyright, 1907, by Underwood & Underwood

President Roosevelt with Division and Ship Commanders of the Fleet on Board the "Mayflower"

On the bridge of the *Mayflower* stood the President alone, his hat removed as the flag-ship passed. His jaws were set, his expression serious, as he contemplated the vast and imposing procession. It was his fleet, assembled by his order, sent by him in battle line half way around the world. What the consequences of its journey might be neither he nor any other man could tell. Those who saw him say that he seemed deeply impressed by the gravity of the moment.

Admiral Evans and his officers stood at attention on the bridge of the *Consacient*. The blue-jackets manned the sides, and the marines on the quarter-deck presented arms. The saluting battery crashed farward as the great ship passed the *Mayflower*. Next came the *Annals*, saluting as she approached and passed. As the *Kentucky*, last in line, came aboard and began to fire her twenty-one guns the *Consacient* was vanishing over the rim of the southern horizon. And as the *Kentucky* and the gun-boat *Yankee*, which closed the file of fighting craft,

went on and on into the trailing smoke-cloud of the fleet, the wonderment, the unspoken inquiry arose anew, when were those great ships to be seen again, what were of them was to be flashed home from the singing wires spanning their decks? What was to come to them in their amazing adventuring? Their presence in the sunny roadstead, their boating flapping, their launches rocking back and forth, had aroused little thought save that of their power, their dignity, and not a little of their determination to carry the flag overseas; but with the sailing away, the doffing of the guns of celebration, and the marked silence about the saluting, the seriousness of it all was as quick in coming as the smoke cloud. The water became conscious that the eyes of the whole world were upon that fleet, that for months beforehand in distant admiralties the preparations for this day—the orders to dock, to provision, to take on ammunition and other paraphernalia of war—had been scrutinized and discussed to the minutest scrap of information. Also that in some of these naval cabinets had been—there must have been!—conjectures, if not prophecies, and that some

The last Glorioso—the sixteen battle-ships steaming out to sea, as viewed from the roof of the Hotel Chamberlin

of those were favorable, encouraging, others not. The press of Europe and the Far East had also kept as close watch of the march of events, devoting much more space to comment than to the news, and here and there making bold to characterize the expedition in unequivocal language.

It had long been a world-matter, this sailing of the American fleet, and it was for this reason that the watchful shores who saw the long line form and stream seaward felt, somehow or other, that these ships must be going forth to some great deed, to something which would repay the world for all its interest.

COINED IRONY

By JOHN W. HALL

HE discussion which has been brought about by the omission of the legend "In God We Trust" from the United States coins has attracted attention to mottos which have at different times, and in different countries, appeared on coined moneys. It is a fact that in other ages certain inscriptions have given rise to such cynical interpretations as Providence feared of the legend "In God We Trust." The Venetian coin coined in 1474 bore the inscription *In te solo gloria*, meaning, "To Thee alone the Glory." In that day the motto on the Venetian coin was perverted in meaning, and made to apply to the coin and not in the Deity. In 1744 Cardinal Borgia coined a sequin on which appeared the words, *Veri Lumen Cordium*, translated, "Come, thou light of hearts." There was also coined a Venetian piece bearing an allegorical figure of Justice, accompanied with the words, *Nostra est Ane Frisities*. This inscription was irreverently treated as implying "Our happiness is in this" coin—rather than in Justice, as contemplated by the designer.

In 1573 the Papal coinage bore the arms of Gregory XIII. and the words, *Et Mager Hanc Petrus*. The inscription, literally translated, means, "And upon this rock," which the Pope and the artist making the design intended to apply to the Papacy. The secular-minded saw in the motto only the reliance of the Church upon the coin, a meaning so distorted that the issue was withdrawn from circulation as speedily as possible.

An opportunity for the malicious to see sinister motives in a coin motto was afforded in an issue of dollars by the Knights of Malta. On the coins appeared the Maltese cross, the sign of the order, together with the inscription *In hoc signo vinces*, meaning, "In this sign you conquer." As in the case of the Papal coin, the ribald contended that the coin and not the

sign of the order, the Maltese cross, was the inspiring motive. The King of the two Sicilies, Charles II., caused to be inscribed on his silver ducat the words, *Evas non Regis*. This motto meant, of course, "one is not enough," and was intended by the King to refer to a single seignior. This coin thus inscribed attracted the attention of the humorists of the day, and it had been in circulation only a short time before there was not one of his subjects who did not enthusiastically agree that some (ducat) was sufficient. The inscription on the small coin was so appropriate to its purchasing value that the perversion of the idea intended really enhanced its popularity in all the realm.

In the early part of the nineteenth century Louis de Bourbon, King of Etruria, caused the coins of the country to be inscribed, *Videtur Pauperes et Lactare*. The translation into English reads, "Let the poor see and rejoice." The circulating of this coin provoked ironical opposition from the great masses of the people, but there is no record that the King discontinued the issue. Then as now the poor could not see wherein they should rejoice at the mere sight of a coin, which was the meaning of the inscription as interpreted by the populace, whereas the idea of the designer of the coin was that the poor, beholding the coin, would be inspired to serious effort in the endeavor to possess and accumulate them.

Whatever irreverent and cynical comment may have been provoked by mottos, legends, and inscriptions on coins issued by any authority, in any country, or in any age, it is not apparent in any instance that the conceiver idea was not good—that there was not in the minds of the originators the recognition of some obligation, or the promulgation of some incentive to good, as was the case with the American Congress when it enacted that the motto, "In God We Trust," should be inscribed on the coins of our country.

Strictly Educational Mountains of Corned Corn and Triumphal Arches of dried Wheat

NOW that the Jamestown Exposition has closed, after meeting with a measure of success, the question seems pertinent: Have we not had enough expositions for some time to come?

For the earlier expositions there were reasons in plenty. There was splendid excuse for the Centennial, and that show was good enough to be worthy of the distinguished event that it commemorated. People were not surfeited by expositions in those days, and the Centennial appealed to them mightily.

There was a good deal of excuse, too, for the Chicago Fair in '93. It came quite a number of years after the Centennial, and none but a very minor show at New Orleans had intervened, while the country had grown wonderfully in the mean time. Electricity had developed from a mere toy into a marvellously potent commercial agent of man, and we had learned to build with something of the taste and dignity of older nations. So there was a good deal to see at Chicago, and the lovely White City made a deep impression upon the country; which, with the best will in the world, is more than one can say of its successors.

But Chicago developed a new factor in expositions: the side-show idea. From the strictly educational mountains of corned corn and thought-inspiring triumphal arches of dried wheat what a side line was thrown in which little naked savages and piquant dances from the Orient were introduced as a new means of intellectual development. From that moment the corned-corn pyramids and the sheaves of wheat had a formidable enemy. Persons who had the price began to seek the new form of diversion, and the Midway Plaisance was, by many, the most vividly remembered thing at Chicago. There were many who found it a good deal easier to be entertained than to be instructed.

The immense success of the Chicago Exposition was, of course, a great incentive to other ambitious towns. Half-forgotten incidents of their early histories were carefully taken down from the shelf, dusted, and "commemorated" with a greater or less display. San Francisco had an exposition, so did Nashville. Omaha fell into line, and it was a poor year that did not see an exposition blossoming somewhere in the country. In 1901, the Pan-American at Buffalo would have been a substantial success had it not been for the momentary tragedy that darkened its closing days. For one carried away exquisite impressions from the Buffalo show, Chicago had demonstrated the possibilities of electric-lighting, but the lighting of the Columbian Exposition was by gas-light, and it was crude compared with the incandescent glories of the display at Buffalo. The side-show features at the Pan-American were immensely developed, and it was in a large measure due to these that the show made its appeal, although architectural effects had not been equalled or approached since the Chicago Fair, which was the high-water mark of American expositions.

"I don't care about the exhibits," one would hear a visitor at Buffalo complain: "it's all very tiresome. Let's go over to the Midway and ride a camel." Then it was that the Exposition mania reached its extreme height. What were the pyramids of rained corn and the photographs of the new High School at Oskosh compared with the intellectual opportunities afforded by riding the ship of the desert, tramping on a steel scow, or drinking Andy beer at twenty cents the pitcher while a real imported German band (from Hamburg, Erie County, New York) diffused atmosphere and ragtime? Of course there were some who still went into the big exhibit buildings to see the wheels go round, and came out bulging with yard-sticks, catalogues, and other removable souvenirs; but these were scarcely in the majority. It was to be observed that even these went "the limit" back to the Midway—the limit of their purses. The Midway was the great thing, the Pan-American the lesser. The tail was already beginning to wag the dog.

So it was at St. Louis and at Portland, so it has been at Jamestown. From a mere side show at Chicago, intended to provide a slight diversion in the evening and at odd moments, this feature grew enormously in importance. Business men now lean and lope

reason for participating in the expositions, and big manufacturing and retail concerns have long since begun to realize that the making of an exhibit at an average exposition—with the tremendous expense and worry entailed—is decidedly not worth the candle. A good many substantial firms have been dropping out of the ranks of exhibiting their showings, and only Uncle Sam's remains in the front—and he has to.

People have a pious habit of referring to the government exhibits at these big shows as something half holy and altogether above criticism. But those who go from one to another of the expositions notice that it is the same old government exhibit which appears to each one of them. Suppose we grant that the government exhibit is profoundly educational, that the moving pictures of the overworked letter-carrier coming up the front steps with a bundle of duns for you is a stimulating demonstration; that the long rows of serious-faced secretaries of the something-or-other department are charming to look upon; that even the printing of the Presidential features by the Treasury Department upon a very ordinary variety of monochromes for retail distribution among the visitors at a quarter each is a popular bit; but is it worth while? People get to Washington pretty regularly nowadays, and all these things, besides a good many others, can be seen there, without an exposition schedule of prices all along the line.

Suppose Squashville wants an exposition. They may have forgotten that Squashville is on the map, and the Squashville correspondents of the metropolitan journals have found that the tele-

The Intellectual Opportunities afforded by Camel riding

graph editors have been turning down their clever stories of three-legged chickens and saturs-faking bears; so the situation becomes desperate. Something must be done. Somebody remembers that it is just a hundred years ago that Uncle Jonas Crabtree began grinding even down at the lower falls, thereby laying the foundation for a Greater Squashville; and that salient event is selected as the basis for an international exposition—noting smaller will suffice. The earnings of the town go into the show, which is to be built on a marsh back of the settlement. A Mayor of Squashville is elected this time with an oratorical reputation, a valet, an automobile, and a big house for entertainments. Intellect attains new levels in Squashville. Aldermen are elected who were valetotarians in successive classes at the Squashville High School, for certainty is to be pumped pretty freely during the twelvemonth. All Squashville drives out on Sundays to see the big "palaces" going up on the grounds, each "palace" having a lovely plaster exterior, and an interior re-creating the famous cow-burns that the descendants of the Crabtrees have built all through the county. The dear old government exhibit arrives, and on the eastern one can see "Chicago," "Buffalo," "St. Louis," "Jamestown," and other names which have been lettered and then erased.

So much for the official side of the Squashville Centennial Exposition. Various experts trained at preceding expositions are on the ground—publicity men-beggars, director-generals of concessions, of transportation, of music, of art, of about everything that can be imagined; and the fair will be complete some three or four months after the opening day, if some of its chief features are omitted. As for unofficial Squashville, it is to be one mighty procession, as our French cousins would say. Ordinarily you can rent a well-furnished room in Squashville for about \$2 a week; but this rate is altered to apply to a daily room, and the local hostilities stop serving dinner in the middle of the day and enter upon the European plan, while their room rates achieve a New York and London level. Squashville is on the make, and the *Evening Gazette* predicts that the great transatlantic lines will have to withdraw some of its steamers during the summer because of the rush of tourists that will seek Squashville instead of the more prosaic joys of the Continent. Delightful anticipation is rife in Squashville. Giant brick and wood structures rise on the marshes out toward the grounds, in the penitentiary style of architecture, with tiers upon tiers of tiny cells, only slightly inferior to those of the best prisons; and there are to be more hotels, with unfurnished bell-boys and tea-rooms and other metropolitan decorations.

The fair is opened on schedule time, which is about all that can be said of it. The Governor, certainly, and possibly the President, are snowed out and brought to the grounds; the militia makes a brave show in the rain (it always rains), and the valetotarians get off their oratory without a single casualty. The prose poets of the local papers do their part, and altogether it is the biggest day in Squashville's experience since the whole north side of Main Street with the K. and C. freight house burned in a single night.

But the second day at the Squashville Exposition! The treasure goes home with a truck headache after totaling the receipts; and, as it is still raining, you can hardly get across the Court of Honor without a canoe, while the carpenters are making such a din that you cannot begin to hear the Fire Department band at its afternoon concert in front of the entrance to the Commemorative Plaza to the Nations of the World.

The third day—the same.

Likewise the fourth day.

The fifth day shows an increase in gate receipts of \$1.50.

But this is offset on the sixth day by a decrease of \$1.50.

By the middle of the second week the gossip in the club are afraid that exposition stock may not stay at par, and the local newspapers are beginning to blame the railroad rates because people are not tumbling head over heels to board train-bound for Squashville. The railroads have nothing to say in return, for they are sure to be the only thing in and about Squashville during its memorable centennial year that is not "done." They have had experience.

By the fourth week the exposition grounds are fairly clear of underlying rubbish, but the foundations of several social frauds that are not to last into Squashville's second century have been not only laid but

Serious-faced Secretaries of the Something-or-other-Department

pretty firmly cemented. Mrs. Ezra Holden is a grandniece of Uncle Jonas Crabtree by his second wife, twice removed, and the Woman's Board of the Exposition placed her eleventh in line at its first official reception instead of ninth, the place she had counted upon as her genealogical right. Mrs. Ezra Holden has money, and contents a bank, and she disseminates some disturbing rumors about Exposition stock and bonds held by her bank. Mrs. H. Heyesophotel had her name mispelled in the engraved invitations for the same event, and so any man concerned with the Exposition management had better beware of the German vote if he ever decides to run for office in Squashville.

Squashville has Honeytown as its liveliest competitor. Honeytown has the cotton-poll and Zeke Pod's whiskers as its star features—Zeke made a vow in '96 that

he would not cut his whiskers until Bryan sat in the White House—and, being young, cannot offer the intellectual treat of a centennial show. About the fifth week of the Squashville Centennial Exposition the Honeytown papers begin to print spiteful articles about the incompleteness of the show and the "robber hotel rates," while Squashville papers come to the rescue with virulent leaders about the libelous jealousy of besecked rivals. Fewer folk than ever come to Squashville. "It's early now. Just wait till the schools close," sing the Squashville papers; but even then most of the people who alight from the train are of the thrifty sort who planned to come and stop with their relatives at home, as it was known that Squashville was to have an exposition. But the "Trail" is completed. The "Trail" is a delirium of unrestrained joy; it is the side-show feature of the exposition; and if you want to be altogether devilish you "Follow the Trail," which costs you about \$25.00 an evening. If you do not care to eat or drink, and wish you about forty-two cents' worth of actual pleasure, its educational value being roughly estimated at about six cents more.

Why prolong the agony? The "pull dress evening suits," the "plug hats," and the "Prince Alberts" that Squashville has endured throughout the hottest summer of the decade are growing rusty before the ordeal is over and the exposition has closed its doors. It is when Squashville that is now selling its festival garments at cut rates, for Squash-

It always Rains

The Commemorative Plaza to the Nations of the World

TWO THOUSAND MILES 'TO DELIVER A LETTER

By AGNES DEANS CAMERON

Many days ago a Canadian mail-carrier named Cornwall, started off from the town of Edmonton, on the Saskatchewan, on the longest, loneliest, and most hazardous mail-delivery route in the world. This hardy postman, when he waved good-by to the little group at Edmonton and turned his face to the Far North, had a journey of 1954 miles between him and Fort McPherson on the Mackenzie, and twice that distance before his return journey shall be completed.

The first hundred miles is covered by horses, the rest of the long way by dog-train. From Edmonton to Athabasca Landing, on the Athabasca River, consists simply of a hundred miles of wagon-road, which Cornwall can cover in three or four days if the roads are good.

At Athabasca Landing, with provisions, dog food, and the precious sacks of Christmas mail, the one man and the little team of huskies began the long journey north. The first stop will be at Fort McMurray, which is somewhat more than half-way down between Athabasca Landing and Fort Chippewyan, on Lake Athabasca. The rapids at Fort McMurray, which cause the yearly fur brigades to unload their boats and carry every piece of freight round the falls on the backs of the crew, are no hindrance to the midwinter mail-carrier, for his route is over a landscape of unbroken white.

Giving the people within the trading-post of Chippewyan their share of His Majesty's mail, and leaving Lake Athabasca behind, the postman pushes on due north, following the Slave River to Fort Smith, another Slough of Despond to the summer traveller, where almost sixteen miles of boiling waterfalls make navigation a burden. But all is silent here now, the one sound in the still air being the call of the driver hurrying his dogs ever northward, for Fort Resolution must be gained, the Great Slave Lake crossed, and those eagerly looked for letters delivered to the successive

village has had enough of formal entertaining to last it a second century. Prayer-meetings come into popular favor again, and people once more eat their dinners in the middle of the day. Oratory is a lost art in Squashville. The town elects a new Mayor in November who is tongue-tied. It takes ten years building the new High School it needed so much, and the big park that it planned to lay out down by the river is just pined for a generation. A lone cow munches her noonday meal in the Commemorative Plaza to the Nations of the World, and the Berra Vista Hotel, which stood opposite the main entrance of the show, has been made into a pickle factory. And a Squashville man out to dinner and tell him in sincerity that you enjoyed the Centennial Exposition in his city, and you lose a potential friend.

No Squashville has ever held a Centennial Exposition, nor is any likely to. But just take aside a fair-minded man in some of the big towns that have held exhibitions and ask him what permanent value they have had, and you are apt to find that Squashville's was only an average experience. In a word, the question resolves itself into two parts: If an exposition is to be a mere side show, what's the use? Luna Parks, Wonderlands, and Electric Parks are commoner than colleges throughout the land, and they offer constant and stimulating joys of a kind equal to those of the best exhibitions. If an exposition is to be an exposition, why not give the nation a fair chance? Why not space our exhibitions far enough apart to have each represent an era of national development, in manufactures, in science, and in the fine arts? Why not make our exhibitions real mile-stones of progress rather than mere street signs at every corner?

clusters of shut-in people waiting for them within fort-walls all down the course of the mighty Mackenzie. Fort Providence will be reached first; then Fort Simpson and Fort Snrman; at Fort Good Hope the Arctic Circle is passed, and there remains but Fort McPherson to reach, where, near lone Herschel Island, the Mackenzie disemboques into an ocean of ice.

Between Edmonton and the Arctic there are only eleven post-offices, but the mail-carrier is instructed to take little side-trips of a hundred miles or so off the main line to accommodate those settlers who may have Christmas letters consigned to them. This means practically a rural free delivery along the entire Mackenzie Basin.

The Postmaster-General of Canada has found it necessary to limit the mail-matter for these Arctic despatches to letters only, and so single letter may weigh more than one ounce, for every pennyweight counts on a 2000-mile journey. Letters may be registered, but not insured, and preference is given first to registered letters, and, secondly, to ordinary letters according to the date of posting.

This remarkable mail-service requires a picked man, and Cornwall's record as a fur-trader and adventurer in sub-Arctic fast-noses would seem to prove him worthy of his trust. It is no holiday outing. At times the thermometer drops to sixty degrees below, and the lone traveller faces for days at a time the blizzards and ice-winds from the great north. He will be beset with dangers of many kinds throughout the trip, and must for a greater part of the distance subsist on game of his own shooting. The dogs feed on tallow and fish, the weight of which is carefully calculated at the initial point of departure. As night comes on the postman will erect a small canvas protection between himself and the prevailing wind, feed the dogs, make a billy of tea from snow water, and partake of the spare meal which necessarily expends upon him.

Postman Cornwall and his Pack of "Huskies" on their 2000-mile Mail-route through the Arctic Wilds

Picked Off

By VICTOR ROUSSEAU

ILLUSTRATED BY GEORGE GIBBS

CORPORAL HERRING flattened his stomach against the ground. He had shifted his ammunition pouches onto his haunches, so that he might embrace his Mother Earth more closely, and the cartridges had dribbled out into a small metallic pile on either side of him. He had lost his pull through, and his shoulder arched visibly from the kick of his feet ride. With bleeding aalls he scratched at a small mound of earth in front of him, which he had made compact with stones. "If one of them things 'its me, it'll 'it me in me 'ead," reflected the Corporal.

Corporal Herring's world consisted of a dery ball, burning in a zone of blue, some distant bombers, horrid with roaring rifle fire, and the long yellow grass winks that beat under the stifled wind. Through these he could distinguish, on each side of him, familiar profiles: Dutsky, the squarehead; Scotty; and Oreguard Haynes. Coarse peasants were bawled before them.

Overhead the bullets were humming like honey bees. At times one whistled past him, or a little squirt of dust arose close by; then Corporal Herring's stomach throbbed to water, and he shouted some jest coarser than the rest. It was his first general engagement.

"Did you hear that one?" quavered Oreguard Haynes, with simulated interest, no something louder than the rest went booming by.

"Shut up, you fool!" said Corporal Herring. "That's a pompon shell."

Five miles from flank to flank, unseen by their invisible foes, five thousand men lay prone, held to the ground by that unceasing shower which booted over them. They knew that somewhere some directing mind controlled them, and they lay there, eager, as all recruits, in charge. Two hundred yards in front was a safety zone, from which, once gained, they might advance unmolested almost up to the enemy's trenches. Many had tried this perilous passage; it was strewn thickly with corpses, which made strange, irregular depressions in the waist-high grass.

High overhead, mere specks in the blue, the vultures waited. They had followed the trail of dead transport animals which marked the progress of the column. Corporal Herring shuddered as he squinted up at them. He had seen flocks of these sable

beasts ceaselessly, winking away the flies that clustered upon his staring eyeballs. Under its chocolate stains his face was whiter than a clown's. Some sucked the exact roots of grass-blades to relieve their intolerable thirst; some rendered ravenous through fear, crunched their emergency rations of beef and chocolate in their dry mouths, and could not swallow them. And everywhere Fear reigned, fear that would have driven them in headlong flight but for that sweeping sheet of nickel above them; fear that increased as the slow hours went by, while they lay helpless.

A hare leaped through the grass toward Herring, and sat, poised on her haunches, watching him. He saw her little heart thumping tumultuously. "Hey, puss!" he yelled, and flung his hat at her. "Berk! berk!" shouted the soldiers, as she sped swiftly down the line into the distance. "Berk, Berk, Charing Cross, Cheap side; all aboard, ladies, penny all the way." The hat twirled through the air and floated back, with a hole through the brim no wider than a lead pencil. "If my 'ead ad bin there, the corporal murmured, as he crumpled himself.

The wounded man suddenly began to shake and hammer on the ground; then his head dropped and he rolled backward. The flies descended on him. Oreguard Haynes stared at the corpse one moment and then sprang to his feet. "Advance!" he yelled. "Follow me, boys; to hell with them!" A storm of protest rose. The corporal pulled him down. "Easy; don't funk, lad; easy," he shouted. Oreguard Haynes sat down and burst into tears. He felt up his sleeve for his handkerchief, but before he had found it his head went down on his arms, and he was weeping.

Far to the left cheers arose, which were taken up along the line. "Hoarsey!" they cried. "Kee come the guns! Now we sharn't be long." The batteries rolled past in splendid alignment, the yellow muzzles of the guns black against the sky line. Suddenly a distant boom broke the deep silence, and with a vast a shell upon through the air and dropped among the horses. The batteries wheeled and disappeared through smoke wreaths, the drivers lashing their mounts furiously. Boom! sounded again; and with the slow roar of a train a shell plunged into the ground not fifty yards away, scattering a circle of steel fragments, and splashing up a shower of smoking earth. Another fell nearer; the enemy were getting the range, and now heaven was filled with them. They shrieked and howled on their long journey; they fell right, left, in front, behind;

"Berk! berk!" shouted the soldiers as she sped down the line

scavengers, clustered on dead horses, too gorged to rise, their bald heads whiter than leprosy, their curved beaks indicative of horrible rejection.

The sun's hot trail blazed in the zenith of the hazy sky. Mirages danced over the staring plain—houses where there had been rocks, boulders where trees had grown, rivers of gurgling water. Ah, those waters of the mirages! How they lured for them as they fattened themselves lemmeth that pitiless glare, the swollen tongues boiling from their panting mouths! They almost envied the dead who, with open jaws and clenched fingers lined the long slope behind them.

Dust whiffed their groins, unclean faces; dust had caked the moist necks of their drained water-bottles; dust clogged their eyes, their matted hair, and their sweat-stiffened shoulder- straps.

One man, shot through the brain, twisted and untwisted his

scrapes appeared miraculous. Sometimes the arid fumes hung overhead in a yellow, sickening cloud. Men rose up, shaking their fists at the mote sky. "Lie down, you blasted fools!" cried others. "You're drowning the fire of their 'ole blooming battery."

"If one of them things 'its me, I'm a dead 'un. Good bye me and put me out of 'em," prayed Corporal Herring.

"If this keeps up we'll orl be corpses, myte," said Scotty, moistening his cracked lips with his swollen tongue.

"Oh, I dunno," the corporal responded. "A bloke's a juggins if 'e gets 'isself killed in 'is first fight, thet's not I say."

"Ah! and wat about that bloke there?" asked Scotty, sneering.

"And wat about Fagin at Pandering? Nice ay to die, thet, ain't it? It's a pulke misson, thet's not it is, myte. A nurse and fivers for mine, thet's my tyne."

"Dad wat's the difference?" asked Corporal Herring. "It's orl one, ain't it? 'E didn't feel nofunk."

"Ow d'you know 'e didn't feel suff'ick?" Scotty persisted. "Ow do you know wat it feels like at all?"

The chorus of a song came rolling out of the distance:

"Buck the arms to meever,
Tell 'er that I love 'er,
Kiss 'er dear, sweet fyre for me, and sy I am no more:
Bake the news to meever,
Sy there is no other . . ."

On the flank a bugle pealed. "Advance—advance!" it called. Instantly Greenguard Haynes, who had snored through the shell fire, was on his feet, with a thousand others, stumbling forward

agonizing pain shot through him. He ceased to rub himself upon his hands and knees, but his hands turned sideways, and his feet had no more sensation than horsehooves. The distance seemed tremendous.

"I'll 'ave a bit of a nap, and proceed when it gets cooler," thought Herring, sinking back into the grass and watching a culture crawling over him. But a few moments later his strength returned. He clambered over the corpse and seized the water-bottle, draining it eagerly; then sprang to his feet and hastened after his troop, flinches whined overhead, but none touched him. "You told 'em that!" he shouted, waving his arms. "Follow me, boys!" The whole line leaped up with a roar.

"Fix bay'nets!" the corporal screamed, and led his men right into the trenches. A giant floor, with a patriarchal beard, leaped up with a pistol. The corporal had lost his rifle, but he seized his antagonist round the waist and grappled with him. The Dutchman's hat fell off, and his bald head looked exactly like a vulture's. They swayed backward and forward, until the corporal stumbled and fell full length into the burning sand. He gasped and spluttered, and opened his eyes; he was back where he had been lying, and the hideous leer of Dutchy confronted him. Overhead there passed the shadow of wings.

"Stop that, I say! Stop it!" he screamed, shaking his clenched hands at Dutchy. "You shomin' squashed, will you stop grinnin' at me!" He meant to take him by the throat and choke him, but Dutchy disappeared, and in his place stood the white teeth of the empanchement lying in the sand. The company cooks were boiling bully beef with compressed vegetables over a fire of wet wood. "Silly fools," yelled the corporal, "you're forget to put in the peptizers." The cooks threw down their utensils and advanced with threatening gestures, but the corporal ran and afraid. He knew that they were only phantoms. Something that he knew very well, had always known in the most intimate manner, was lying upon the void, thirsting with an unquenchable thirst, winking away the flies, and Dutchy was back again and grinning at him.

"Ow did you git back, Dutchy?" he thought he said, but only the rattling of air came through his open jaws.

A culture crept down from the blue, and now lunged poised directly over him, as though some hand had sailed

it to the firmament. Then, as by one cut of the dagger, pinpoints appeared, at equal intervals, grew larger, and lunged poised in their places, motionless against their background of cloudless sky.

"You'll 'ave to wait a long time for your dinner, myn," thought Corporal Herring, mentally apostrophizing the leader. As it in answer one simultaneous movement seemed to communicate itself to each. They swept downward and circled over him, their wings outspread, their claws contracted tightly against their breasts. He quivered and shivered.

"My God," he whispered, "what will I do! Suppose a snake should bite me!" The rustling grass seemed to become a snake's stealthy approach, and in anticipation he could feel the smooth contraction of the sleek coils around him. From where he lay he could perceive the mud-colored felt covering of Dutchy's water-bottle, which had been torn from its supporting strap, and rested between the corpse's knees. Only ten paces distant! He heard the breath hiss through his swollen lips as he strained his avid eyes toward it; but not a muscle would respond to his mind's promptings, and the corpse still lay facing him with its deriding smile.

Slowly, after uncountable epochs, his form subsided. And now he no longer suffered from that torturing thirst. His mind was clearer than crystal, but he could no longer reason inductively. For the outline of his consciousness had fallen at his post, and ideas, no longer adhered in with sequence, poured through his brain with quick, fantastic imagery. "We are my 'ands no wet!" he thought. "It must be ryzing—and I forgot to ask the old woman for yer umbrella."

Presently he was aware of companies that moved toward him. With them were prisoners, and all gazed at him morosely as they passed by. "Wy, there's Pagin," he whispered. "I saw 'im killed at Paardeburg." But nobody noticed him, only Pagin, as he passed, indicated two empty places in one file of fours. The corporal rose. Before him lay a hideous thing that writhed and twisted, beating out a tattoo upon the ground with hands and heels. "My God," he thought, "that's me!" The tattoo ceased suddenly, the thing fell backward, and with a swoop the cultures slighted.

Looking down he saw a crimson stain widening upon his tunic

over the uneven ground. Their lips were blue with fear, but the habits of the parade-ground held them and drove them on. Most of their rifles were still sighted to fifteen hundred yards. Fear verged upon fury; they leaped from among the scattering shell splinters, cursing the enemy and one another.

Sometimes a knot would bunch, and then the bullets blazed past them like hailstones; and all the while shells whined out of the distant sky and plunged, roaring, into the ground beside them. Greenguard Haynes's rifle stubbed Corporal Herring in the side, and he turned on him furiously.

"For tuppence 'alfpenny I'd bash yer blousing fyre in!" he screamed, as they raced neck and neck together toward the safety zone.

Men began falling thickly. Some, shot through the brain, would spin round and round, their features horribly contorted, their fingers clenching the air. Others, who had fallen down and could not get up again, stared wide-eyed at their wounds, in stupid resentment and astonishment.

"Git out of my way, damn you!" Corporal Herring screamed to Dutchy, as they lay down to breathe. An instant later the sky seemed to fall in on them, and everything was lost in a choking fog. A shell had dropped between them. As the smoke thinned the corporal saw Dutchy grinning at him. "Git out, you grinnin' swine!" he howled. Dutchy's grin widened, and his cyetech showed in the corners of his mouth like fangs. "Wat's the matter, Dutchy?" asked Corporal Herring. "I don't know," Dutchy whimpered. "My eyes hurts. I think I'm going blind." He stood up uncertainly, spreading his arms, and tottered forward.

"Lie down, you blasted fool!" Corporal Herring shouted. "Lie down, I say!" And Dutchy lay down obediently, but all his members reached the ground at the same instant, and he doubled upon himself like an acrobat. He was only the shell of a man.

"My God!" the corporal whispered, trembling.

"My God!" screamed Greenguard Haynes, painting and gibbering at him.

"Waster all staring at me fer!" asked Herring resentfully. "Wat's hup? Were 's all these flies come from? I fell down over a stone." He tried to rise, but his legs snaked under him, and, looking down, he saw a crimson stain widening upon his tunic. His mouth opened, and he looked at it in foolish amazement.

"I wonder were I'm 'it?" he thought. "I'll 'ave to lie 'ere till they pick me up, I suppose. They'll send me down to the big 'ospital, and then wet (I bet here!) It was very comfortable there in the soft grass, and he could have gone to sleep but for the thing which tortured him. There was another thing disturbed him, too, and that was the grinning face of Dutchy, lying in the grass, ten paces distant.

"Stop that. Keep your face still!" shouted Corporal Herring.

"Pore beggar, 'e can't 'elp 'imself!" he asked, reflectively. "They'll 'ave to splash 'im under pretty quick, or 'e'll swell 'errible. Thank God, I'm out of it."

Then it occurred to him that he might as well poison himself of Dutchy's water-bottle; but when he tried to crawl toward it an

The Theatre Cat

By JOHN S. LOPEZ

DRAWINGS BY HENRY RALPH

CAME across the Serious Student, late one morning, stretching his lank form along an area railing, a sprig of withered green held miserably between two fingers, and a huge tortoiseshell cat rubbing expectantly against his legs.

"Have you become a Dick Whittington of the Drama?" I asked.

"Precisely," he said; "a sort of talking plays makes me seek guidance of the dumb animals. There are theatre cats. Why? The answer may disclose unsuspected phases of the dramatic art. I shall begin investigation with a bribe—this rat-snip." Whereupon he dropped the green sprig, which the cat immediately seized and disappeared down the airway.

We followed, and found ourselves upon the stage at Wallack's. There was to be a benefit matinee, and stage hands from several other theatres had come to handle their scenery. They had

stopped for lunch, and were lounging picturesquely about a jumble of trunks and props piled at one side of the stage. The Student singled out a grizzled veteran.

"Why is there a cat attached to every theatre?" he asked, respectfully.

The old man extricated his teeth from an enormous sandwich and swallowed meditatively.

"Well, sometimes they're actors," began the old man. "I knew a cat—"

"You mean old Salt?" broke in a Wallack stage hand. "He began as an actor. They wanted a cat in a show called 'The Salt of the Earth,' and we had to furnish some as props. Used to send bags out to steal 'em, and I guess we got a dozen and had 'em before Salt was brought in and liked it enough to stick. He's an old-timer now; been around here ten or twelve years and is part of the place. He has the run of the theatre, and most every patron knows him. Never raised a bit of trouble; he's as wise as they come."

"Speakin' of wise rats; they've got to be trained to—" began the veteran again deliberately, laying down his sandwich.

"Yes," interrupted the Wallack man; "you've got to get 'em young. We had a cat, called Binky, down at the old house, afterward the Star. We found her one day way up in the fly gallery. She was a kitten with her eyes just opened. The mystery always was how she got there. But she grew to be a wise one—"

"Yes, they've got to be brought up in the business," a man from Daly's broke in. "There's old black Tom over at our house; he must be fifteen if he's a day. The Governor used to stand in the gallery doorway near Thirtieth Street and wait for a Broadway car most every night late after the show. One night in a snow-storm a poor little kitten rubs against Mr. Daly's legs. He opened up the theatre again and put it in his own office. Tom's too wise now to go on the stage—"

"Speakin' of rats goin' on the stage—" began the veteran again, hopefully.

"That's what," spoke up a quiet-looking man, catholically; "they got to be trained up from infancy. We got an old cat at the Belasco who has the proper notion of bringing up her kittens. We always find them first in Box B, the boss's private box; and we can't keep her out of there. It's funny, after the kittens run wild, to see the mother lead them back on the stage and march them around from one side to the other. It's a feat; she'll do it for hours, and never let them get outside the scenery. If they try to, she thumps them."

"Now, our old Tom," said the man from Daly's, "knows enough to keep off when there's anything doing; but he knows what the stage is for all right. Often after the show, if he catches a rat or mouse, he brings it right out on the stage under the gas jet and gives a performance with it, because he knows I'm up in the gallery chasing up and will see him."

"I'll tell you how a cat can get to understand about acting," began the veteran, determinedly, but the Wallack man seized the cue:

"That's another reason why these ordinary cats cause trouble around a theatre; they ain't got the real understanding of the stage, like old Salt."

"He appreciates drama, then?" gasped the Student, hopefully.

"Sure!" asserted the Wallack man, sweeping a defiant glance over the group. "Salt knows more about shows than all the actors and critics in New York mixed together. You'll see him camping in the private boxes? Well, he's not there to show off, like most people in 'em. No, sir; he's there to keep tabs from the front and see that things go right."

"Regular stage-manager," remarked the man from Daly's, sotto voce, with a comprehensive wink. The Wallack man heard him.

"Better's some around here," he said, pointedly. "Why, if I believed in this transmutation of souls, I'd think Jim Wallack or some of the old-time real ones was squatted in Salt's body. By watching that rat we can always tell whether a new show will make good. Sometimes in the middle of the first act he'll get up and leave the box, and then I never know it to fail that the show falls down. Sometimes he'll stay longer; and when he sits to the finish, the piece is worth seeing."

The man from Daly's laughed superciliously, and the other turned on him.

"Think I'm a nature-faker, do you? Well, ask anybody around this theatre; and most every actor that's played the house in

He brings it right out on the stage and gives a performance

The three white mice of the leading lady

wise to it. There was a comedian had an experience here with a musical show he won't forget. It had one good act in it, which Salt steps to see every night. The comedian has a song in it which was usually the hit of the show—don't always. Whenever Salt gets up and leaves, the song goes bad.

"He begins bringin' in all kinds of popular cat grub, but it don't make any difference to Salt. By and by, every show, there's a bunch of us in the wings, waiting to see what the cat will do. Then we begin to notice that the comedian actually slugs his song to Salt. Sometimes the cat'll rest comfortable to the finish, and the song is sure to go fine. But sometimes, half through, you'll see Salt get up and hump his back and yawn; and then it's pathetic to watch the comedian throw in the expression and gestures and work hard to make the cat change its mind. Sometimes he succeeds, but usually not; at which times he loses his nerve and finishes so bad that it's sure to be a frost.

"I hear the manager explain to him, one night, that if he didn't pay any attention to Salt, he would be able always to do the song the same. He offers to have Salt kept out of the private houses, but Mr. Comedian won't hear to it; says it would be the worst kind of bad luck."

"There should be more such cats as correctives of musical comedy," mused the Student. "Did the actor finally improve?"

"Well," explained the Wallack man, "the comedian hadn't been in good health, anyhow, and after a while he had to go to a sanitarium to rest up his brains."

The veteran assured himself elaborately that there was a pause. "Speakin' of a cat's brains," he began, "you've got to figure on mice, too."

"Yes," cut in a man from the Empire. "We had a blossom when I was props down at the old Lyceum Theatre. There were three white mice belonged to one of the main actresses. She was kissing and hugging them all the time. Had bows of the baby ridden on their necks and kept them in a padded brass bird cage in her dressing-room. Says I to her, very respectful, she'd better be careful as our old cat, Adolph, was strictly on his job."

"Why, how ridiculous," she says, with a laugh, "the dear little things are white mice."

"I tell her straight that in the matter of vermin, Adolph is color blind. I'm thinking, but she won't listen. I ain't worried over the mice's health, but I want to hold my job, and I know I'll be blamed if there's an accident. So I keep Adolph penned up."

"Well, one afternoon when she's on, I notice her door open a little, and see Adolph come out lookin' satisfied and flickin' his chops. I got sense enough to put the fancy cage back in place and straighten things up a bit before she comes off."

"By the time I'm sent for, I've been doing some thinking, and I says, 'The mice simply got out to have a little look around. When they get hungry they'll come back; sure, before the show to-night.'"

"What I do is to send the prop boy over to buy three mice that'll watch up. Say, it worked fine? Only trouble was tying new laces on their necks; worked an hour before the boy says let it go any old way, as mice cut on a hat would sure have their trimmings messed. The new mice was a bit nervous at first, welcomed home with kisses, but she blamed that and the ribbon to their wandering off and maybe gettin' in bad company."

"It's most always pets that cause trouble with theatre cats," spoke up the veteran, cautiously but on being heard.

"But a cat may be mighty useful when it gets a home-feeling in a theatre—"

"That's right," said another at his elbow. "I'll tell you what happened down at the Academy one night when we were putting on a big production of 'Ingomar.' The star had a pet cat that she called Vivien or something—one of those with a fluffy tail and bushy face like a chrysanthemum. Well, she gets one prep at our tough old house cat, John L., and she can't have Vivien associating with him. I tie up John L., and he's mighty sore. Vivien has the run of the place and is in everybody's way."

"Well, it's during the act where there's a big arched gate. The star is leaning against it and spicing some soft stuff with half lights, when all of a sudden I hear a low yowl that sounds familiar. She hears it too, and gets nervous. It's near, but I can't figure where, till I happen to glance up at the arch, which is a big one stretching three deep on one side and leaved with heavy scandling. On top I see John L., pointing my way, crouched and waving his tail. Between me and him is Vivien facing him. John L. has chewed his rope and is on the warpath. He's a wise one, and knew where

to blame for his belt's tied up. He gives another yowl, so I get in the entrance and hiss at him. He always used to mind me. Then I wave at him to blow, but he must have thought I meant to sick him on. Whew! There's a rowl and a screech that stops the show, and before the star has time to get away, down come the cats at his feet, spitting and rolling around so fast they look like one ball of fur with legs stickin' out all over."

"We sent John L. away till the show was gone. But even when

Down come the cats at her feet

he came back, judgin' from his looks, Vivien wasn't such a boss scrapper if she was high-class."

"Cats is important to a theatre, and they know it," spoke the veteran who had been waiting impatiently. "Why, if we hadn't had a cat once—"

"You can't blame 'em for being jealous of their job," spoke up another man. "Theatre cats, when they state out a solid claim, won't allow any buttin' in. Of course, though, they know what they're there for and will make allowances. Like an old cat we get

One night the boy holding the mouse lets it slip

The kid sticks one of the mice's heads out

up at the Broadway. Except when there's a mouse show on, he wouldn't let another cat hardly pass the stage-door."

"What's a mouse show—one with trained mice?" asked the Student.

"No, no," explained the Broadway man, impatiently; "one that has props and staff that draws mice and rats—more'n one cat can handle satisfactory. Well, in such cases our cat will stand for others being brought in, though he never gets friendly. But as fast as the mice get diminished, he'll run the rats out, one at a time, till there is only one left, and then he slashes it off in a big battle."

A gleam of deadly determination had been growing in the veteran's eye. He leaned forward and said, distinctly, significantly:

"There was a cat I knew become a star by accident."

He looks across and sees the logs burning, and naturally they appeal to him. First thing you know he starts over the stage with a dignified actor walk, and proceeds to make his toilet right down in front of the blaze.

"Say, the homelike effect is great! The two stars don't notice it and go right on. I'm looking for the house to throw a laugh, but instead of that, a few moments later, there's a burst of applause that almost knocks us silly. Luckily it's most time for curtain and we hurry it a bit. But the band keeps growing stronger and out go the stars and take several bows. Then we hear 'em out front calling, 'The cat, bring out the cat!' The manager gets wise quick and has the leading lady carry out Pete. When! You ought to of heard the cheering and stamping."

"Next day the papers was enthusiastic about 'the wonderful piece of realism,' and said the rat is the best actor in the cast and has made a success of what would have been a sure front."

"Of course you kept Pete in the play," said the Student.

"We did," said the veteran, reminiscently. "Luckily next day was Sunday, so an early rehearsal is called to look Pete in on that scene. The log-fire is set going, and Pete is carried down and his head pointed from the opposite entrance. But it's no go. He just turns and sneaks for the prop room. The boss thinks of a plan to open everything up and chill off the stage so that the heat will attract Pete. But it don't work; and, anyway, the ladies say they'll quit if we have to take chances on getting pneumonia."

"Then we put something to rat in front of the fire. Pete has been starved all day, and he'll chase over and grab a piece of meat and blow. Tying the meat on a string and pulling it through a hole don't do, because he sets up a crying and tries to claw his way after it through the scenery."

"It's about ten o'clock at night with everybody exhausted and sore, when the property-boy drops out the way. He's a bright kid, and knew a thing or two about rat nature. Says he:

"No rat ain't dumb fool enough to let itself be trained to do extra work. Lookin' after mice and rats is Pete's job, and we got to make him do the stunt along them lines."

The manager is down and out; he says go ahead and try anything. So the kid produces a trap with two mice in it he had set for his and Pete's amusement. Pete is immediately very much lit up, and if we held him off side and set the cage by the fireplace, he makes a beeline across. Then the kid cuts a little hole in one corner of the fireplace and sticks one of the mice's heads out from behind just far enough for Pete to see but not reach. After he gets onto the game, he'll sneak across the stage and camp in front of the fire and just sit there quiet, watchin' and wavin' his tail, same as any cat on the trail. After that, by keeping him hungry

The unfeeling critic at his post

He paused and glared challengingly around at the others as if to say, "Now, does that remind any of you of anything?" Amused at last by after silence, he went on:

"There was a play on in a house where I worked; it had a pretty good cast, but every one was nervous because it didn't measure up strong in lines and situations. On the opening night there's a crowded house, but the first act is a sad sketch. We know the second will be worse, because, barring a lot of quiet talk-talk, there's nothing in it but a swell setting with a fac upon fireplace and real gas logs down left."

"It's a cold sleety night, and Pete, our house cat, has been out visiting. He comes in while the act is on and walks down off side,

and always proks' out a mouse when the curtain drops, we manage to pull through a season of ten weeks with only one fall down."

"What was that?" asked the Student.

"Well," said the veteran, "one night the boy who is holding the mouse lets it slip. It jumps by Pete and reaches where the leading lady is sitting out some tender lines. Pete is right behind and makes a beautiful merry-go-round chase circling her skirts. The audience thinks it's great; and, by gum, the manager was fool enough to figure if we could possibly repeat it."

"Did you try?" asked the Student.

"Not on your life," said the veteran. "The leading lady said she'd quit on the spot if they ever pulled a rehearsal."

THE HENRY HUDSON MEMORIAL BRIDGE

THE CONCRETE ARCH WHICH IS TO SPAN THE HARLEM RIVER AT SPUYTEN DUYVIL

DRAWN BY VERNON HOWE HAILLEY

The Season's Plays

DRAMATIZED FICTION AND MUSICAL FARCE

By "I"

The perils of dramatization, or adaptation, to adhere to the programme announcement, have again been made manifest. Mr. Channing Pollock, with commendable temerity, has taken that excellent story of Agnes and Egerton Castle, "The Secret Orchard," and arranged it for the stage. To state the result frankly, Mr. Pollock's play does not touch the interest-level of the book, albeit he has equipped his version with several markedly good scenes. The thing in which the stage

The role of the Duke, which was given to Mr. William Courtenay only three days before the opening night, is more or less theatrical and surreal, and quite outshine by that of *Jacqueline Fawcett*, the staunch friend in the dual household. Mr. Edward H. Mason plays the part with a sincerity and forthrightness which, from time to time, force the Duke into the background. Among the moments which stand clear in the play are those in which *Fawcett*, who has always loved the Duke, demands that *Cluny*, the Duke, shall not confess the sin which is torturing him, requiring that he shall forfeit all honor rather than break his wife's heart with so dreadful a disclosure.

The more or less squalor-pompous part of the Duke's falls, unfortunately, to Miss Adelaide Prince, who deserves something better. Just as the tragedy in her life arrives the curtain falls in the last act, and the audience is groping for fate and wraps. The play is, by the way, admirably staged at the Lyric.

"A Knight for a Day," a "musical farce," so-called, which enjoyed a successful run of several months in Chicago, was displayed to New York a few days ago at Wallack's Theatre. It is a pot-pourri of the usual ingredients, flavored with a dash of *naïve* propriety in the shape of an exceptionally good chorus, and it is staged with considerable ingenuity. The piece resembles the curate's egg, in that it is "good in spots"; but the spots that are good come close enough together to insure fairly continuous entertainment for the audience. The humor is frankly of the home-play, kit-occasional variety; more often than not it misses, but when it hits it generally does so quite definitely and emphatically. The plot centres on the compulsory marriage of a certain man and woman who identify one another by means of two similar medals. This—so far as "I" understood the somewhat nebulous plot—is useful to insure their coming into the inheritance of large estates in Corsica. The first act shows us the grounds of a "young ladies' seminary"; Act Two takes us to Corsica. Miss May Adams, as *Tillie Day*, the "sacred lady," is the luminous star of the piece. Her impersonation is skilful and original, and it apparently pleases the audience. *Jonathan Joy*, who furnishes the wondrous element in the amusement scheme of the piece, is played by John Slavin. The pair provide many diverting scenes, notably when *Jonathan*, by a stroke of inspiration, conceals himself in a baby-carriage in order to detect his inamorous's flirtation with the ex-procurator; and again when he assists *Tillie* to slip down a ladder at midnight, and collapses, after the manner of contemporary comedy, under her weight and that of two jowels and a properly trunk. Nellie Fisher, who plays the part of the heiress *Marion Miller*, won numerous accolades upon the opening night, her songs, "Life is a See-Saw," and "My Very Own," apparently pleasing the house. But the chief excellence of the piece, without doubt, lies in the intelligent and well-trained chorus, a collection of attractive and accomplished damsels of whom the chief glories are the "Original Eight Berlin Dancing Madcaps," who strike a subtle combination between the dance and the circus. Two pretty electrical displays are shown—the swinging see-saw, glittering with colored lights, at the end of Act One, and the falling stars at the end.

Mr. Arnold Daly and his company recently revived that true "drama of ideas," "Camille," at the Berkeley Lyceum—a play which not only remains the best of Mr. George Bernard Shaw's multifarious stage-works, but which has served as Mr. Daly's most substantial asset since he first produced it some years ago. The performance is not quite so brilliant as was the original production. Mr. Daly remains, of course, inimitable as the stuporously wise and singularly misapprehended poet, *Eugene Henshaws*; but Mr. Holbrook Bliss does not give so felicitous a portrayal of *Camille's* husband as did Mr. Dodson Mitchell and *Camille* herself. In the hands of Miss Margaret Wyrley, fares less well than she did in the hands of Miss Dorothy Campbell. Herbert Standing's Mr. Barret is delicious.

May Vokes as "Tillie Day" in "A Knight for a Day," at Wallack's

William Courtenay as the "Duke of Cluny," Josephine Victor as "Joy," in "The Secret Orchard," at the Lyric

version falls short is in its failure to create the atmosphere of the written story, its failure to strike the profoundly tragic note which rings through the tale when the Duchess of Cluny becomes aware of the sin of her much-loved husband. Thus, too, the young girl in the play, *Joy*, lacks the attractiveness which enveloped her namesake between the binder's boards. Of course the grief of the wife, the desperation of the girl, and the killing apprehension of the Duke are shown in the play, but, perhaps, most appealingly to those of an audience who have not read the book. All this, however, is not to say that Mr. Pollock's "adaptation"—although it departs in great measure from the novel—lacks interest and force; it is, let us say, a rather different story, and as such, is fairly interesting, but it suffers by comparison with the work of the Castles.

The tragedy of the deceived girl, *Joy*, is the motive of the play rather than the tragedy of the wife, and it hangs like a pall over all four of the acts. A great deal of praise is due to Miss Josephine Victor for her portrayal of the girl, when she makes a compelling but attractive figure in the drama. Strangely enough, one does not experience much sympathy for her, strong as is her delineation of the horror which possesses the girl upon her realization that the Duke, in whose house she lives, and who coldly refuses to recognize her, in the man who betrayed her. In the scene in which she denounces the man whose name she has so closely guarded, intelligent, as a climax, to point him out to the household, but at the same moment constrained by the evidence of the sympathetic but unsuspecting wife, Miss Victor was tremendously convincing.

Bird Professors

"Professorism" among birds are those that are kept for the purpose of teaching their companions to sing. These professors have been taught by other birds, or by persons clever in the mimicry of bird-whistling. Years of experience have taught canary-raisers that, if they would get the best results from their songsters, they must use Mexican birds as teachers.

The industry of training young birds flourishes in the Harza Mountains, and especially at Andrewsburg. Nowhere else, it is claimed, are the birds so conscientiously brought up. Thanks to the wonderful patience of the German presenters of those parts, the birds learn to modulate their voices, produce silvery sounds, and introduce a variety of notes into the long trill, embellishing them with many a grace note.

For a great many years these results were obtained nowhere else, for the exported birds cease to transmit their vocal qualities in perfection after one or two generations. Now, however, canary education in both this country and England may be said to have fairly begun, where the musical education of these warblers is entrusted to "bird organs" brought from the Harza Mountains.

These instruments are in sound as they are in appearance. They consist of large rollers full of water. These slide one into the other, and are moved by a chain on a pulley attached to a fixed bar. The musical box is placed at the top of this arrangement.

The bird organ produces a plaintive and monotonous sound resembling that of water rolling over a bed of rocks, and of wind sighing through trees. It seems that these sounds have the effect of taming the birds, and of making them amenable to discipline.

The walls of the "class-rooms" are occupied by lines upon lines of cages. The pupils are grouped in classes, according to their degree of education. Those that possess weak or defective voices, or have false methods of warbling, are the objects of special attention.

Birds that have made a successful begin ning are put under the persuasive influence of the finest bird organs, which are worked by electricity and are remarkable for the richness and perfection of their tones. Whenever a pupil is considered worthy of it he receives individual tuition, the artists thus produced afterward becoming teachers to new arrivals.

True Rubies and Sapphires for a Song

The scientific sensation of the moment in Paris is the fact that Professor Frederik Bordas, of the College of France, has succeeded, after long and patient experiment, in producing precious stones by exposing the coarse ordinary form of crystallized alumina known as corundum, or adamantine spar to the action of radium.

The possibility that this process may be used industrially for the production of certain kinds of precious stones at a cost which will seriously modify the present market values of the natural gems invests the subject with much interest. At present, gems are in composition crystallized alumina, but through long exposure to varying conditions of heat and pressure during the slow cooling and development of the earth's surface they have assumed different colors, to which the names of ruby, sapphire, etc., have been given. The discovery of radium revealed the active agent through which various changes in certain substances, which had hitherto been of slow progress, might be intensified and accomplished in a comparatively brief time.

The present discovery of Professor Bordas was suggested by the fact that the minute glass tubes in which radium is confined kept for scientific use take on gradually a beautiful sapphire color resembling the sapphire. This was attributed by Professor Berthelot to the presence of traces of man ganese in the glass, which the marvellous projectile power of the radium reveals and reacts with varying grades and tints of coloration. Professor Bordas therefore placed crystallized corundum of several tints in contact with minute tubes of radium,

laid them away in a dark place not subject to changes of temperature, and found after a lapse of several weeks that the white corundum had become yellow like the topaz, the blue crystals had become green like emerald, and the violet had turned to blue like the sapphire.

Thus was overthrown the theory held hitherto by scientists that each of these precious stones has its own special coloring oxide, and that these several oxides—green, blue, red, or yellow—have no definite relation to each other. Professor Bordas took his newly created gems to a leading lapidary jeweller, from whom he had purchased the corundum crystals, who identified and tested them, and found that they had been converted into a topaz, a ruby, and a sapphire, which fulfilled all the tests and requirements of natural stones.

He then obtained from the same jeweller a new series of corundum crystals in pairs, each pair of an exactly similar color. One stone of each pair was exposed for a month to the action of radium, the other retained for comparison, and the result of this second experiment was the same as before. The light reddish corundum, valued in commerce at about fifty cents per carat, had been converted into a ruby valued at \$100 to \$150 per carat. The dark red corundum became a deep brilliant violet, the violet amethyst had become a sapphire, and the bluish corundum a topaz.

The possible effect of this discovery upon the trade in jewelry and precious stones can be readily inferred. Radium is as yet one of the rarest and most precious substances known to science, but the duration of its power is practically unlimited, and since corundum (al₂O₃) is a gem of sufficient value to convert several corundum crystals into precious stones within the space of a month, and since this process may be repeated indefinitely with the same stock of radium, it is naturally, though perhaps prematurely, assumed that this latest discovery may have an important industrial value and lead to serious modifications in the commercial prices of certain precious stones. Professor Bordas, however, regards his discovery as a mere laboratory experiment, and disclaims any intention to secure for it a commercial value.

The Decadence of American Shipping

In a report on the shipping of Hull, England, Consul Walter G. Hamm directs attention to the disappearance of American shipping at that port as follows:

Among the 10,000 or more ships that have entered the Humber River ports during the past seven years there has been only one ship of American register. This was the bark *Flowerdew Road*, from San Francisco, loaded with barley, which reached Hull in March, 1900.

In the years from 1885 to 1900, both inclusive, at least one American ship a year arrived at the port of Hull; but in the seven and a half years from April, 1900, to October, 1907, only the one ship of American register has entered the Humber River. No more striking evidence than this probably can be given of the decadence of the American merchant marine. Regular lines of steamships run from Hull to New York and Boston. Another line, to Galveston, touches at Glimby, the second port on the Humber River. Chance steamships also run frequently to Philadelphia, Norfolk, Savannah, New Orleans, and Galveston. Not one of them, however, flies the American flag. The trade must be profitable or it would not be kept up. It is to be regretted that Americans have no share in it.

Domestic Graft

CHANDLER. "How's that for hank getting about you, give you your money?"

CHANDLER. "Ene. I never had myself out of our fare now."

Willing and Able

MORRIS. "Are you ever impatient?"

WORTH. "No, waitress." "I'm willing to learn, an'am."

He Could Run Some

A COLLIER boy, shabbily dressed, applied to the foreman of a sheep camp one fall day for some employment. The foreman looked him over somewhat critically and inquired what he could do.

"Oh, I don't know much about ranch work, but I used to be on the track at college and I can run some," replied the youth.

"Well, go over on that hillside and run those sheep late in the coral, and then we'll see what we can do for you," said the foreman.

The boy was gone a long time, but finally returned and reported to the foreman.

"Did you get them all in?" asked the boss as he looked at the young fellow, who seemed somewhat out of breath.

"The sheep were no trouble, but the lambs were so nimble they took most of the time, but I finally succeeded in getting them in, too," said the boy, proudly.

"Lambs, lambs!" repeated the foreman; "why, there aren't any lambs; you must be crazy."

"Just come down to the coral and see for yourself," said the youth.

The foreman put on his hat and went to the coral and found two jack-rabbits. He looked at the boy.

"I told you I could run some," returned the latter.

A Literal Youth

"Wav, Johnny," said Mrs. Miggins, "what are you doing here? Is Willie's party over?"

"None," blubbered Johnny. "But the minute I got inside the house Willie's father told me to make myself at home, and I came."

Possible

"The trouble with our respected President," said the Commentator, "is that he jumps to conclusions."

"No," said the Philosopher. "You are wrong about that. He jumps to premises. He doesn't see the conclusions."

IT MAKES THE BABY STRONG.

Gems with contains in the most easily digested form all the elements necessary to the building of bone, flesh and muscle, Borden's Food is a healthy nourishment which has found these great evidence of strong and healthy babies. Has no equal as a baby food.

Music and the Opera

IN VARIOUS KEYS

By LAWRENCE GILMAN

MR. WALTER DAMROSCH, in his interesting lecture-recital the other day on Debussy's "Pelléas et Mélisande," observed—I repeat the substance of his thought—that Germany, so far as its creative musical art is concerned, has given us nothing fundamentally new since Wagner. Richard Strauss, he felt, had patterned after Liszt in his symphonic

poems and after Wagner in his lyric dramas. It is in the revolutionary and wholly novel music of such Frenchmen as Debussy and D'Indy, and such kindred temperaments as Loeffer, that we must look for authentically new development, for a quality of music genuinely self-sprung. Without committing one's self at the moment upon any definite and perhaps a question, it may nevertheless be said that Mr. Damrosch's dictum occurs to the mind in rather a beguiling way when one reflects upon so highly typical a product of contemporary Teutonic music as the symphonic poem by Ernst Boehe which the Boston Symphony Orchestra played upon its second New York visit the other day, at Carnegie Hall. Boehe calls his work simply "Taormina: Tone-poem for grand orchestra." There is no other description, no motto, programme, or other guide to the composer's intentions. There is on the score a picture of Taormina, the historic Sicilian town on the eastern shore of the island, on the Ionian Sea. Yet it has been truly said that, so far as any suggestion of local characteristics is concerned, the tone-poem "sings as well have been called Dortmund or Schenectady." As a piece of total delineation, therefore, it is not effective; it remains to be considered as sheer outside.

Boehe—who is one of the very young Germans he was born at Munich in 1880—wrote "Taormina" in his twenty-fifth year, and there is no question at all that he accomplished in so doing a rather extraordinary feat. It is a large score, and an elaborate one, and it is sumptuously orchestrated—that, indeed, is its chief virtue. But it is notorious that, in our day, a mastery of scoring is not only expected, but is prized a little too complacently by contemporary observers. Mr. Boehe exhibits an indisputable command of the art, and he deserves emphatic praise for it; but aside from this, it is difficult to understand how "Taormina" can have commended itself to Dr. Muck. One grows weary of finding the same delinquencies in an immense proportion of the creative music of our day—the inescapable faults of emptiness, of poverty of line, allied with the extreme of elaboration in the manner of presentation. Mr. Boehe is a striking example of these characteristics. He is most deliberate and determined in address—you would think that the message about to be delivered was of the utmost consequence, the deepest moment; the pose and the manner of the utterance of great things are admirably simulated. Yet how futile and dull, how pathetically meagre, is the actual deliverance! How often must we remind ourselves that it is as impossible to achieve salient or distinguished or noble music without salient, distinguished, and noble ideas as it is to create fire without flame! How often is it to be said that no genius for construction, no delicate or masterly of form, no diligence in contrivance, no subtlety of craft, can possibly

Gustav Mahler, who has just come to America

avail when the inner flame is absent? Surely a trifle odd, it would seem, a superfluous thing to insist upon; yet how deeply and commonly it is realized: how often are we made aware that the seed has ever been perished? How often is contemporary music—or music that is known and honored, for that matter,—

praised or rebuked in accordance with this requirement? Concerning our particular text, Mr. Boehe's tone poem, it is necessary to express one's conviction of its superfluity, of its ideas, and by ideas one means pregnant melodic, harmonic, or rhythmic conceptions—it is as devoid as it is rich and gleaming in outer investiture. But let this not be understood to imply the smallest disapproval of the performance of such music by Dr. Muck and the brilliant orchestra from Boston. How should we be sure that "Taormina" is some what less than a masterpiece if we had not had the opportunity of hearing it? Better the disclosure of a hundred lamenesses than the ignoring, through lack of advantageous liberality, of even a minor masterpiece.

Luisa Tetrazzini, who has been secured for the Manhattan

At the Manhattan Opera House Mr. Hammerstein, in the midst of arduous preparations for forthcoming novelties, yet has contrived to add to the season's list of effective performances Loeucomb's "I Pagliacci" and Massenet's "La Navarraise," which, in days gone, served as a vehicle for the diffusion of Mme. Crovi's artistic influence. The Manhattan forces give a very potent, very vivid reading of the perennially appealing "Pagliacci," a performance that is propitiously borne along on the current of Mr. Campanini's irresistibly vital exposition of the arch-trait score. Mr. Hammerstein, whom the Manhattan's audiences have learned to hold in fervent regard, is a superb Tonio—here is one of the best singing actors whom the public is now privileged to behold. Mr. Boed is a passionate and sincere Tonio. Mr. Crovi makes the indelicately anonymous Scarpia a wholly credible being, and Miss Zepilli as Violetta is uncommonly good to look upon, though she does not in this role equal her marvellously skillful depiction of Glycytis in "Les Contes d'Hoffmann."

In Massenet's turbulent melodrama, "La Navarraise," Madame Gerville Wrasche is playing the devoted heroine, Isola, with a true conception of the essentials of the role, and in the part of the avowedly beloved friend that unduly delightful singer, Mr. Dalmore, is, an always completely satisfying; and yet we need to be told that the name of French tenors of the first rank was extinct.

At the moment of writing, there is keen and widespread disappointment over the postponed performance, for the first time in America, of Giuseppe L'Angelier's "Leone," one of the most interesting and brilliant of modern lyric-dramatic scores, for which Mr. Hammerstein had prepared an elaborate production, with that remarkable and engrossing artist, Miss Mitty Garden, in the title-role.

Five years ago Massenet permitted us to hear, under his personal direction, the first American performance of his Japanese opera, "Iris." A good deal of water has flowed under the bridge since then, and not a little musical history has been made and recorded—among other things, we have heard another Japanese opera, Puccini's "Madame Butterfly," written, it is instructive to note, after "Iris" had been completed and produced. Now, in this current year of grace, there is opportunity to observe these two works in close proximity, for they are both in the season's repertoire at the Metropolitan Opera House. A deliberate and detailed comparison of these scores would be instructive, but it is not now possible. It may be observed, however, that that ingenious, probably and beloved work, "Madame Butterfly," would probably not be so warmly greeted and glory for Puccini if he had not preceded it, in 1898, the first performance of the "Iris" of Pietro Mascagni.

Richard Boebig, one of the Season's new Paragons

"DON'TS" FOR THE DRIVER

WISDOM AND WARNING FOR THE MAN BEHIND THE WHEEL

By HARRY B. HAINES

MANY useful hints can be given by the experienced automobilist to the man who has just bought a car and is unfamiliar with its operation. Most of these suggestions are simple and not difficult to remember, particularly if they are read carefully after a study of the mechanism of the machine, and during the period when the first attempts are made to run the vehicle. If such hints are memorized and

followed the novice will not only secure better results from his car, but will reduce to a minimum his bills for repairs.

The agent who sells a car is usually willing to give the customer "full instructions," and will send an experienced driver out with him for half a dozen rides or more. But, as the car is new and in first-class condition, it seldom gives trouble, and so the purchaser gains little actual experience, except in starting and controlling the engine, and in guiding and stopping the vehicle. The "expert" conscientiously tells him of a multitude of things that may happen, and what to do to avoid trouble or to remedy faults; but the beginner is so deeply engrossed in handling the car at the time that the things he is told regarding possible emergencies that may arise later on make little impression and are soon forgotten, if indeed they are heard and comprehended at all, so that when thrown upon his own resources the novice quickly finds that he has not learned nearly so much as he supposed, and when the engine stops and refuses to start again he suddenly discovers that he is helpless.

It is always advisable for the purchaser of a new car to examine a machine of the same make with the body removed, studying the relation of each part of the mechanism to the other parts, and moving the various pedals and levers to note their effect, and to fix them in his mind. He should have the agent, or a mechanic employed by the agent, explain all of the working parts, the adjustments that will have to be made from time to time, and locate all of the grease-ups and oil-holes. It is not sufficient that complicated or difficult adjustments be merely explained verbally;

the only sure way is for the novice to make the change himself and then reset the part to its original position, thereby gaining the actual experience in advance of the time when the knowledge will become necessary and ignorance might prove annoying and embarrassing. Knowledge of the location of every lubrication point is a primary essential, for if the cylinders and bearings are not allowed to run dry no very serious injury to the car is likely to result during the novitiate period.

One of the most important rules for handling a gasoline car is this: Never allow the engine to run at higher speed than is absolutely necessary to do the desired work. "Flogging" the engine does it more real harm than overhauling it, as it racks the bearings and joints and causes overheating. If this rule is constantly borne in mind and followed, much expense and annoyance will be saved, and the life of the car extended. In order to know when the engine is pulling its load properly and not racing, it is necessary that the driver should be perfectly familiar with the engine-controlling devices, and also with the gear-changing system.

The engine is controlled principally by means of the spark and throttle levers, which are always secured to the steering wheel or to the steering column just below it. There may be one, two, or three such levers, but commonly there are two—one for the "spark," and one for the throttle. The former varies the time of ignition with relation to the position of the piston in the cylinder, and the latter reduces or increases the quantity of gasoline vapor admitted to the cylinder up to a certain limit. An excellent guide to good driving is to bear in mind that the "spark" governs the speed, and the throttle regulates the power. In addition to the manual throttle-lever most American machines have a small pedal, commonly called an "accelerator," also connected with the throttle acting on the carburetor. A spring attached to this pedal holds the throttle nearly closed, save when depressed by the foot. When

(Continued on page 32.)

When leaving the Car, set Brake Lever right, with no Gears in Mesh

How to Sit—Steering should be done largely with the Left Hand

A wrong Position for the Driver—Dangerous and Inefficient

The Auto Goller

By Earle Hooker Eaton

AN auto devotee was Buggs,
He'd broken all his arms and legs,
And drunk of sorcery to the drugs,
He rode both day and night;
And in and out of his machine
He smelled so strong of gasoline,
None dared a match to light.

The game of golf he thought a bore;
Said he, "Why do theuffers rear
The idiots warning 'Fore!'
To those who go ahead?
I'll try the game this very morn.
And with a proper auto-horn
I'll hush 'em to them instead."

His driving from the foremost tee,
Quite wonderful, indeed, to see,
Evoked remarks of "Hully gee!"
"Twas straight as well as far;
For toward the hole, with steps for strokes,
Including fancies, jabs and pikes,
He drove his motor-car.

Though bunkered near the putting-green,
He drove ahead with his machine,
And landed in a deep ravine.
Then golfers came to coach.
"Twas not the place to drive," they said,
"The wonder is you are not dead;
You fouled your approach!"

Then Buggs, with gargoyle-like grimace,
His collar-bone slipped back in place,
And deftly rearranged his face.
Said he, "I like this game;
And though it's new to my machine—"
He glanced around the deep ravine—
"We holed out just the same!"

Perhaps

DE STILLE, "I hear Lakeside is so forgetful
he always forgets to put gasoline in his
auto."

LAURENTA, "I hear he bought a motor-boat
for his private lake."

THE STYLIS (cheerfully-sadly), "Yes, And
I suppose half the time now he'll forget to
put water in the lake."

When La Follette Played
"Iago"

SENATOR ROBERT MARION LA FOLLETTE, of Wisconsin, is said to have had histrionic aspirations in his early days, and it is related that when the actor McCullough visited Madison, Wisconsin, the future Senator prevailed upon him to listen to a few recitations. The great actor, who desired to temper his disapproval with diplomacy, bowed him in silence until the end, when he asked Mr. La Follette to play Iago to his Othello. Scarcely after scene was rehearsed, until it came to McCullough's turn to exclaim:

"Assault! beyond! then had set me on the rack."

FARRELL. Othello's occupation's gone."

Here he seized the diminutive future Senator by the throat, and shook him violently until his teeth chattered.

"No, Mr. La Follette," continued McCullough, as he released him, "You're too small to be an actor. In this scene, had we been acting together, the gallery would have exclaimed, 'Oh, let up. Take a man of your own size.' On the stage you must meet powerful combatants. You would but excite pity. No, Mr. La Follette, the stage is not for you."

Making the Poet Wittier

Remember, "John G. Whittier, the Quaker poet, would have been wittier if he had been an Englishman."

Remember, "How do you make that out?"
Remember, "Because he would have dropped his 'h'."

Publishers - - - NEW YORK

A sudden Stop can be made by simultaneously applying the Brakes and throwing in the Low-speed Gear

(Continued from page 36.)

the driver's foot is removed it will allow just enough gas to enter the engine to keep it "turning over" at very low speed without stopping. Thus, when the car is standing still, with the clutch disconnected, the engine will continue to run indefinitely without racing; provided, it should be made clear, that the throttle lever on the steering-post is shut off. The hand-lever and the pedal act independently on the throttle, which can be opened by either; but the pedal opens the throttle wider than the lever, and, as its name implies, is commonly used to increase the power and speed above normal, as for a flight along a good stretch of straight road or for reaching a hill.

Fair results can be obtained, in ordinary driving, by setting the throttle-lever on the steering-column at some intermediate position, and then advancing the spark as long as the car continues to increase its speed, stopping when the motor begins to slow down and labor. The sound of the exhaust is to the testator an indication of the correct timing of the ignition. Loud and prolonged exhaust indicates a "late" spark, while a very light sound, together with a tendency on the part of the engine to slow down and to "pound," is a sign of too early ignition. In the control of the spark lies opportunity for the exercise of the best judgment on the part of the driver. A large proportion of all engine troubles is due to indifferent handling of the spark-lever. Only by constant practice can the driver learn just what his engine will do at various relative positions of the spark and throttle levers; and in time he acquires the habit of moving these almost subconsciously, changing their positions as the road conditions alter, following no guide save the action of the motor.

It is imperative that the respective functions of the clutch, brake, and accelerator pedals, and of the change, speed and brake levers, be thoroughly fixed in mind, together with the location of each, before attempting to drive on the highway. A good precaution is to have the clutch and brake pedals covered with leather, rubber, or adhesive tape, so that there will be no danger of the feet slipping off of them. The beginner should assume an easy, comfortable position—avoiding a low, crouching, cramped posture—and should practice to do most of the steering with his left hand, using the right to assist in making difficult turns, and to

steady the car when running at high speed or over bad roads, and at other times to sound the horn, shift the gears, and set the emergency brakes. In driving the horn of either foot will be allowed to rest on the floor of the car, with the ball of the foot resting lightly on either pedal, from which position the feet will not be moved so long as the car is in motion; if the feet were taken from the pedals, and it should become necessary to stop suddenly, the novice might become confused and be unable to find the proper pedals with his feet. Very little practice is needed to gain sufficient knowledge of the pedals.

It is in the proper handling of the change-speed lever that the beginner will have his greatest difficulty. Once this is overcome, he will feel confident of the mastery of his car. When the car is standing still the change-speed lever should be set in "neutral" position, with no gears in mesh; and it is important to remember never to move the lever from this position without first disengaging the clutch, for such a mistake might mean the tearing out of gears or an even, more serious accident: with the engine running, and the clutch engaged, a movement of the lever from neutral might cause the car to shoot ahead suddenly or to reverse unexpectedly. On cars having the "selective" type of gear-change, in which the shift-lever moves in a "gate" or H-shaped quadrant, it is almost equally important to remember, after using the reverse, always to close the safety-catch that prevents the lever from accidentally slipping into the reverse slot when the driver is trying to shift to one of the forward speed-gears. It is evident that should the reverse be engaged by accident, when trying to change from high speed to intermediate with the car travelling thirty miles an hour, the strain would be tremendous, and the transmission gearing would probably be torn badly out of the car.

With practice the beginner will learn to start his car easily and without a sudden jump; many drivers of cars fitted with powerful motors start from a standstill on high-speed gear; but this is a bad example to emulate, at least until one has become very proficient. When the clutch has been disengaged, and the engine speeded up, the change-speed lever should be moved with a quick, steady thrust into first-speed position and locked there with the automatic latch; then the clutch should be engaged slowly and steadily, so that the car will start smoothly and gradually.

Before turning around on slowing up, Signal the Driver of a following Vehicle of your Intention

Turned Aside

OPPOSITE the Union Depot, on Canal Street, in Chicago, there is a line of cheap saloons devoted exclusively to the patronage of more or less undesirable citizens.

The other day, two Swedish laborers, looking for work, came to Chicago and landed—stumped—at the Union Depot.

As they started out the main entrance, one of them looked across the street; a huge red sign caught his eye:

WANTED:

1000 MEN TO UNLOAD SCHOONERS.

Greeting his friend by the arm, he dragged him across the street toward the enterprising saloon which bore the sign.

"I think we finda plenty work to do right here. Olef," he grinned, pushing his friend toward the door.

"One moment, Svedsky," said the other, who had lived longer in America and spoke almost perfect English. "that is only a sign to attract persons to the bar. The schooners mentioned are beer-glasses, not ships. Let us stay out and save our energies for real ships."

And so the oldest joke in the world failed.

Vindicated

"No Mrs. Ganson has only been married once."

"Yes; but she made another man of her husband."

Pie and Etiquette

CAPTAIN ROALD AMUNDSEN, Norway's famous explorer, tells this story about a national guard encampment last summer:

"A new volunteer, who had not quite learned his business, was on sentry duty, one night, when a friend brought a pie from the kitchen."

"As he sat on the grass eating pie, the major sauntered up in uniform. The sentry, not recognizing him, did not salute, and the major stopped and said:

"What's that you have there?"

"Pie," said the sentry, good-naturedly.

"Apple pie. Have a bite?"

"The major frowned.

"Do you know who I am?" he asked.

"No," said the sentry, "unless you're the major's groom."

"The major shook his head.

"Groom again," he growled.

"The farther from the village?"

"No."

"Maybe you're the major himself?"

"That's right. I am the major," said the stern reply.

"The sentry scrambled to his feet.

"Those gringos!" he exclaimed. 'Hold the pie, will you, while I percent arms!'"

Dangerous

"Where do they live, in South Brooklyn or Philadelphia?"

"I've never dared ask them."

Especially Little Brothers

RELLA. "Children should be seen and not heard."

RELLA. "I believe they should be compelled to give warning, like autos."

That Kind

"I WANT some cigars for my husband for Christmas."

"What kind, madam?"

"Well, I don't know, exactly; but he is a middle-aged man and always dresses in black."

WHEN IT FREEZES OVER.

The American Civic Association

gave life, force and direction to the popular demand for the preservation of Niagara Falls. It is now fully recognized as the guardian of the people's interest in the great cataract, maintaining a constant watch on the power situation.

It originated and is the moving force in the nation-wide effort to restrict the extension of ugliness by having billboards legally taxed, as is other productive property.

It has advanced the children's garden movement, and was instrumental in securing a Congressional appropriation for school gardens in the District of Columbia.

It has secured the enactment of a model street-tree law in Pennsylvania, and is teaching the intelligent care of trees the country over.

It is giving guidance and effective direction to the widespread and rapidly growing movement for the abatement of the smoke nuisance.

It helps in progressive city-making, and is continually arousing and fostering sentiment for civic beauty, for clean streets and home surroundings, for convenient and serviceable parks, for playgrounds—in short, for every form of civic betterment.

Growing Demand for Help

If Niagara is to be permanently preserved, there must be an international agreement. Legislative campaigns must be made in every state to secure laws restricting and taxing billboards. Public sentiment must be further aroused in favor of forest reservations. From every section of the country there come calls for concrete assistance.

More Members are Needed

The American Civic Association is a voluntary organization of persons working to make America the most beautiful country in the world. The five weeks it has done was accomplished solely with the dues and contributions of members and interested friends. The demands upon it require for it greater resources in membership and more liberal support.

The careful co-ordination and economical execution of its working plans enable the American Civic Association to render invaluable service at small cost, for it is free from cumbersome machinery of organization and in position to do things—to do them speedily, quickly and thoroughly. This is a direct appeal for YOU to become a member. Use the coupon below or a copy of it in remitting.

Discoveries in Every-Day Europe

By DON C. SEITZ

The author, with shrewdness and observant humor, has done that impossible thing, written a new kind of book about Europe. This is pure fun, original humor, American wit. It is a book of delicious chuckles, not a guide-book. And the pointers are as funny as the writing—nearly—and that is saying a lot. It skips all over Europe, letting in everywhere the sunshine of a laugh.

WALLED IN

By

ELIZABETH STUART PHELPS

THIS book is written with strange tenderness and depth. An automobile accident results in injury to a young professor in a college town, and his pretty wife, incapable of devotion, sacrifices her husband and her home for gay indiscretion among the students. Gradually her selfishness destroys the man's love and makes room in his heart for another woman. The picture of domestic unhappiness is drawn with no sign of gloom or despair. Life swings back into joy and usefulness through a sudden disaster at the end, that leaves love free. The author proves that a man and a woman may steadfastly love each other and still be faithful to the ties that separate them. A story of strong emotions that lie deep in every-day life.

ILLUSTRATION FROM "WALLED IN"

"A three-cornered love-story, unique in its original handling."

—*Philadelphia Ledger.*

"Flashes of passion that have the hot sun of Spain in them."—*Cleveland Leader.*

"Positively marvellous if we had not long ago learned to expect these fine things from the author of *The Gates Ajar.*"

HARPER & BROTHERS, NEW YORK

THE PROOF OF SUPERIORITY

There are seven hundred and thirty-five packing houses in the United States putting out meat under the supervision and inspection of the United States Government.

Some of these packers have national reputations and their brands are well known. Others do a local business only.

The trade of Swift & Company is international, and in competition with the other packers.

The fact that Swift & Company's products have both a larger and wider sale is the best proof of their superiority. We understand the needs of the consumer, and we prepare, cure, smoke, pack, and ship Swift's food products so that they reach the dealer in perfect condition.

There are no secret processes in preparing Beef, Mutton, Pork, Veal, and Provisions.

But there is a know-how about everything, and Swift knows how. Swift's products are popular, because they deserve to be. They please the housewife, the cook, and all the family.

Ask your dealer for Swift's Premium Hams and Bacon, Swift's Silver Leaf Lard, Swift's Premium Milk-fed Chickens—and prove their goodness on your own table.

Swift & Company, U.S.A.

Moving the Nerve Centre of
New York's Police System

The Historic Romance of
"300 Mulberry Street"

The completion of the great new Police Headquarters Building has brought up a serious question.

What shall it be called?

It will not be at "No. 300," nor even on Mulberry Street.

However, Frank Marshall White tells the story of "300 Mulberry Street" in a most interesting fashion—and history has been made there since 1863.

National history, too.

A number of striking photographs—both the old and new headquarters—accompany the article.

STORIES OF SYMPHONIC MUSIC

A Guide to Modern Orchestral Programme-Music

By LAWRENCE GILMAN

Music Critic of "Harper's Weekly"

This book fills a genuine need of the music-lover, for it offers in compact, accessible, and easily intelligible form information which will help him to listen understandingly to the music of an orchestral concert. It presents clearly and without technical analysis the poetic or pictorial or dramatic basis of every important example of programme-music in the symphonic repertoire, putting the reader in possession of information which will enable him to listen comprehendingly, for example, to a symphony by Berlioz, an overture by Mendelssohn, a symphonic poem by Liszt, or a tone-poem by Strauss or Debussy.

"The best thing for every concert-goer to do is to get a copy of Mr. Gilman's book and prepare himself beforehand."—N. Y. Evening Post.

"From Berlioz and Liszt and Raff and Wagner, down to the latest works of Strauss, d'Indy, Delussy, Sibelius, Rameau-Korndorff, Elgar, Chabwick, and Coenew, with many others that will occur to concert-goers, Mr. Gilman has left nothing that has any claim to the attention of music-lovers. . . . It is a useful and interesting book."—The New Music Review.

"A valuable contribution to the music-lover's library."

THE PRINCIPLES OF MONEY AND BANKING

By CHARLES A. CONANT

In the demand for literature on financial subjects, this work deserves special consideration. A chapter of the second volume is specially devoted to "The Origins of Crises," in which much is set forth that anticipates present conditions. Another chapter, on "The Management of Crises," anticipates the recent steps taken by the banks and the Treasury to afford relief to the money market.

This book was among the first to point out the danger of making large loans on securities pushed upward by speculation to inflated values.

COMMENT

Labor and the Railroads

THE Georgia Federation of Labor has some sensible opinions, and expresses them, on the subject of the Southern war on railroads. For instance, the Federation remarks in the course of a recently issued address that the "subject is of tremendous importance" both to the general public and the railroads (fancy considering the railroads!), and should not be made the "subject of heated political campaigns where in the people, led by office-seekers, are apt to have their passions and prejudices unduly inflamed." The address goes on to declare that "lawmaking bodies are liable to be led into too drastic and ill-considered legislation under the impassioned harangues of overzealous reformers"; it seriously reflects upon the intelligence of the agitating radicals, saying that they know very little about the subject concerning which they are so glib of speech. The Federation is sanely conservative in this address. It is convinced that there have been evils—and who is not so convinced!—it wants evil-doers properly dealt with and evil-doing stopped, but it does not want the punishment to go to such an extent as to cripple the services which railroads, and railroads only, can render the public. Information is increasing to the effect that the people of States which have been most extravagantly and noisily hostile to the railroads are waking up, and are beginning to look at the situation calmly and with unfrightened eyes. The trade of the stump orators is decreasing, but so, unfortunately, is that of the roads. The persecution has gone so far that the cost to the country is already too great.

Why Bryan is Impossible

The *Charleston News and Courier* publishes an editorial with this heading. The inquiry which it makes is interesting and its observations are true. It asserts that South Carolina will vote for BRYAN, or for any other Democratic candidate, and what it asserts for South Carolina may be safely predicted of the whole South. This is a misfortune—a misfortune for the South, for the North, for the whole country, but the South is not primarily to blame for the evil condition. This, however, is too long a story. If the South were not solid, it might have more effective influence in a Democratic convention. As it is, we are not inclined wholly to agree that it must take what the Eastern and Western Democrats see fit to give it. It can probably divide some State delegations, and, doing so, may be of great assistance to rational Democrats of the East and the West who have no higher regard for BRYAN than the South has. Leaving the South, the *News and Courier* is justified in saying that New York and New Jersey Democrats will not vote for the fads

and follies which compose BRYAN's anti-Democratic platform. BRYAN is now, indeed, more unpopular in the Middle and Eastern States than he was in 1896 or in 1900. The BRYAN forces did defeat the Democrats in Massachusetts, but in doing so they enormously weakened their own cause and their own candidate throughout this part of the country. What success the Democrats had in New Jersey last fall was gained on a platform which was anti-BRYAN. What renewed strength BRYAN may have in the West is from the devotion to him of purely BROWDER votes in States that, nevertheless, are and will remain hopelessly Republican. The real reason for BRYAN's weakness can be read in HENRY WATKINSON's declaration of Democratic principles as set forth in the *Louisville Courier-Journal*, as follows: "Home rule, sound money, and all men's rights; the interests of the few subordinated to the interests of the many, but the interests of the few respected; the complete separation of Church and state, and a tariff for revenue only; no clericalism, no class distinction, no caste discriminations, and no 'sanitary laws.'" "This," continues the *Courier-Journal*, "is Democracy pure and simple." And, indeed, although there may be some redundancy, it does include all sound Democratic principles. If any one is opposed to it, he is not a rational or "pure and simple" Democrat. Mr. BRYAN's platform is directly opposed to Mr. WATKINSON'S Democracy. Among what the *Philadelphia Press* calls the "BRYAN specialities" are "government ownership of the railroads, the initiative and referendum, and the government guarantee of bank deposits." No one can possibly be elected President who espouses these causes, and no Democrat can be elected President who does not substantially accept the WATKINSON platform.

The Trouble in the Navy

It is a great pity that there is war in the navy, but whatever may be the cause of it, the whole country is quite aware that Admiral BROWDER is a better sailor and officer and a higher authority on naval subjects than the President, or Secretary MERRILL, or Doctor RIVY, all three of whom are laymen. They may be intelligent in their own ways of life; they may even happen to be right on this question, but the chances are against this in a controversy with so able, so well-instructed, and so devoted an expert as BROWDER. The WEEKLY has no desire to join in the controversy, but it believes in the value of experts, and it presumes, as it ought, that the burden of proof lies with lay opponents who question an expert's judgment on a professional subject. There is here illustrated in a manner and with a vividness that ought to attract the attention of the country a significant and perhaps necessary feature of our two military services. In order to maintain the supremacy of the civil over the military power the real command of the army and navy is in the hands of civilians. It may be that this general command has degenerated into ill-advised interference by the civilian authorities with details that should be purely professional. There might well be a revision of this democratic trait, especially so far as the navy is concerned.

One Detail of Disagreement

As we understand the question which brought up the immediate issue on which Admiral Browder resigned, it was whether a commissioned officer of the navy should be put in charge of a hospital ship under the command of a surgeon. A hospital ship is a floating hospital. It is proper that a surgeon should command a hospital, but a surgeon is presumptively incompetent to command a ship. A surgeon in charge of a floating hospital is in the position of a yacht-owner aboard his yacht. He must have a sailing-master who shall navigate his vessel and take him where he wants to go. Then why not give relief ships civilian sailing masters who shall navigate under the general orders of the surgeon in charge? Colliers and supply-ships are not commanded by commissioned officers of the navy. Is there any sound reason why relief ships must have them? But the matter of the command of the *Relief* is only one detail of the war between staff and line in the navy.

Secretary Taft's Haughty Friends

It is not to deny Mr. Taft's fitness to be Republican candidate for President that we point to certain defects in the methods of his campaign. The truth is that we were born

before President ARTHUR caused the Republicans of the State of New York to nominate Judge FOLGER for Governor. No one can say at this time who would or who would not be a good Republican candidate. The answer to the problem depends upon the policy of the party. What is that to be? If the party is to renew the war on industry, on enterprise, on corporations which serve the public, without much regard to the interests of those who serve or of those who are served, Senator LA FOLLETTE would be the proper candidate. If its policy is to be the revolutionizing of the Constitution and the establishment of the Federal government upon the ruins of the States, then, we opine, Secretary TAYT might be the better man; he knows a good deal of law, and therefore could twist it—if, indeed, he really thinks that way. If the Republican party nominate Secretary TAYT, however, with these expectations, it must deny the constitutional doctrine laid down by the unanimous court in *Kansas v. Colorado*, by Justice BRANSON in his noteworthy address, and by Justice HALLAN in his recent speech before the Kentuckians, both these justices being old Republicans. In the mean time, as we have said, there is too much administrative work, no matter what the issue may be. With—besides other loads—Assistant-Secretary-of-the-Navy NEWBERRY and his Michiganians, and Attorney-General BONAPARTE calling to his Marylanders, Mr. TAYT has a serious handicap.

Taft in the Philippines

MR. THOMAS F. MILLARD has written some remarkably able and illuminating, maybe disillusionizing, letters from the Philippines to the *New York Times*. One of his letters of a few weeks ago has not attracted as much attention as it ought. In it Mr. MILLARD said that in his Shanghai speech Secretary TAYT's tone was bolder—much bolder—than that which he assumed at Tokio. He went so far as to threaten the East with the sounding snare of America if Asia's customs laws were not more liberal and civilized than the laws of the United States—in a word, if the open door was not respected. He did not put it so briefly and perhaps brusquely as our statement may appear to some people to be, but we have given the substance of the speech from our own point of view. In view of Mr. TAYT's candidacy for the Republican nomination, it would be well for the country to know whether with shot and shell we are to batter open the Asiatic door, while we keep our own shut with the DINGLEY law, which Mr. TAYT does not desire to have revised—at least not yet. Now Mr. MILLARD gives us another view of the Secretary of War. In a notable letter from Manila he describes the speech of a real statesman, or one who would be a more practical statesman if he did not disregard his limitations. In what must be acknowledged to be a large, even a grand way, Mr. TAYT set aside the Americans of the islands, and declared that it is the first object of this government to govern the islands with a view, first, to the interests of the Filipinos. This may be Mr. TAYT's view; it would naturally be the view of the generous American people; but it is not the view of Mr. TAYT's party, and it is not compatible with Mr. TAYT's own tariff policy. The first step towards such treatment of the natives as Mr. TAYT rashly promises is the passage of the Philippine tariff bill, and of the repeal, so far as they apply to the islands, of our navigation laws, which are of a Malayian barbarity. No one knows better than Mr. TAYT of the impossibility to secure this needed legislation from Congress. How can Mr. TAYT carry out his statesmanlike policy? Is it not an economic dream?

The Banks and the Reserve

It seems to be well established that the interior banks, as they are called, had much to do in creating the currency famine which has so greatly distressed business men through the country. It is worse than useless to specify the offenders, but it may be justifiable to commend, in passing, the unselfishness of the banks of St. Louis, which, like those of New York, permitted the depletion of their reserves in aid of the unfortunate situation. The action of the banks accentuates the point made by Comptroller RUGGLEY against the system. The reserves of all the national banks ought to constitute, all together, a national reserve which should in time of stress be at the service of the country. But the banks have no common head, and therefore there is no cohesion and only voluntary cooperation. It is now demonstrated that the banks

cannot be trusted to administer their currency accumulations for the general welfare. Mr. A. B. STICKNEY has likened the scattered reserves held by banks that are independent of one another to scattered military organizations under independent commanders. There may be many of them in the aggregate, but since they cannot be called to the standard by a supreme authority, they are of comparatively small advantage to the country. Mr. RUGGLEY recommends a central bank. The proposition that there should be such a bank will be assented to by many bankers, and it will also be agreed that it should in some way administer the issue of a credit currency that would be an addition to our bond-secured currency, so long as we must have that kind of currency. Mr. RUGGLEY does not believe in bestowing upon anybody—politicians or board of directors—the power to declare when and how much additional currency is needed. That part of the system should work automatically. The difficulty in working out his plan will be apparent when the attempt is made to provide for government control and at the same time to keep the bank out of politics.

Good Sense about Immigration

There has been some revival of talk about restricting immigration since Mr. SARGENT's report showed that more than 1,200,000 aliens came to this country during last year. This talk is aside from that about Oriental immigration, which is on a basis of its own. So far as the Japanese are concerned, their government have decided to do their own prevention, a step, probably, to refusing to be discriminated against in a treaty. So far as European immigration is concerned, it seems to be the general opinion of the country that something ought to be done, the question being what is to be done and how to do it. This question is not likely to be solved at this session of Congress, nor, indeed, is the solution likely to be attempted. None of the cures that Congress has applied thus far have seemed to work, and there is an increasing suspicion that the attack has been improperly directed—or directed against a wrong part of the line. The laws have endeavored to set up a property standard, and it is known that this effort has worked much injustice and has done little good. Labor votes have been secured by provisions of law against contract labor. Senator LOVER has spoken many times in behalf of an educational test, although it is well known that many useful wealth-producers and good citizens have been unable to read on coming here, while some of the most dangerous of our imported anarchists have possessed some learning. We have not only the problem of numbers, but the problem of distribution. The last is complicated. Many immigrants are needed in the South or elsewhere, but the problem of getting them there has not been solved, and not much worked upon. Of two things we are sure, however, and for them, for they are grievous evils, there are remedies that may be easily applied. Some of these immigrants are bad citizens and even criminals, like the members of the "Black Hand"; more of them are demoralizing voters, especially in cities. The National Liberal Immigration League, among whose members are President ELLER, President WOODROW WILSON, Bishop POTTER, and ANDREW CARNEGIE, have suggested two remedies. One is that any immigrant who shall become a criminal within a certain time after his landing shall be sent back to the country whence he came; the second is that an alien shall not become a citizen until he has been here ten years. These suggestions do aim directly at immediate evils and have no politics in them. They are sensible enough to be considered.

The Goldfield Predicament

The President had much the better of the correspondence with Governor SPARKS of Nevada which got into print on December 29. Having sent troops to Goldfield at Governor SPARKS's solicitation, the President gave notice to the Governor that he must convene the Legislature and put upon it the responsibility of keeping the peace in Nevada, and that unless he did so the Federal troops would be withdrawn. After much delay and farther poking up, Governor SPARKS at length replied by telegram on December 26 that Nevada had had a lamentable experience with strike; that the troops were much needed at Goldfield; that it would take not less than three weeks to convene the Legislature, and that he had excellent reasons (which he specified) to doubt whether the

Legislature, when it did assemble, would ask for troops or take effectual measures to keep the peace. To which the President replied by telegraph on December 28 that the Constitution of the United States imposed upon the Legislature of a State, if it can be convened, the duty of calling upon the Federal government to protect the State against domestic violence; that Federal troops kept in Nevada without the request of the Legislature would be kept there in violation of the Constitution. Therefore he gave the Governor five days to issue a call to the Legislature, and said that if the call was so issued he would leave the troops at Goldfield for three weeks, which would give the Nevada Legislature time to assemble and make known its wishes. This puts the responsibility where it belongs; on the Governor, first, to convene the Legislature, and, if he does so, on the Legislature, to say whether it wants the Federal troops or not. If the Legislature will not take measures to keep order and protect property, we shall see what we shall see; but it is eminently desirable that it should be disclosed to what degree representative government is a failure in the State of Nevada. The State is an absurd State, anyway. Its population is about 60,000, and includes probably very much the largest proportion of turbulent persons that can be found in any State in the Union. But being, unhappily, a State, it must be governed as a State, and not as a Territory. What may happen if it proves unable to take care of itself is suggested by the President's remark in his despatch: "Circumstances may change, and if they do I will take whatever action the needs of the situation require, so far as my constitutional powers admit."

A Brownsville Plaintiff

"Wealthy residents of New England, some of them prominent in the Republican party," are said to be behind the suit brought last month against the United States government by a firm of New York lawyers in the Federal court in New York, to recover \$122 35 claimed as pay due to OSCAR W. RICH, one of the negro soldiers discharged "without honor" at Brownsville. The purpose of the suit is to give this discharged soldier the day in court which hitherto he has never had, and decide whether the President had any legal right to discharge him. It has been a much-mooted question whether those Brownsville soldiers had fair play, or even legal treatment or not. To us it has seemed that, perhaps, some of them didn't. We shall be glad, and we suppose a great many other dispassionate observers will be glad, to have the matter threshed out before a competent and impartial legal tribunal.

Scholarships and Physical Training

That was an interesting proposition that was put forth on December 27 in an address by Dr. DEXLEY A. SARGENT, of Harvard, before the Society of College Gymnastic Directors at Columbia University. In the last twenty-five years, he said, there had been physical improvement in all classes of college men except those holding scholarships. Dr. SARGENT has long been the director of physical training at Harvard, and has had oversight of the physical condition of the students there, as well as more or less knowledge of the conditions in other colleges. He declared, and backed his declaration with data statistics, that the deficiency on the part of the scholars in our colleges is startling and worthy of grave consideration. Fifty years ago the average student was so feeble and physically feeble a creature that his sad condition led to the stimulated development of college athletics. From that development Dr. SARGENT found all classes of students to have benefited except the scholarship men. But they, the ones above all others most in need of physical training, he finds to have made little or no improvement in physique during the last twenty-five years. The trouble he finds to be in competition, which he calls "the arch-enemy of all true culture, mental as well as physical." Students (at Harvard at least) who hold scholarships must compete, first to get them, and afterwards to keep them. Being asked why they neglect exercise, they almost invariably answer that they haven't time. Dr. SARGENT considers that the real trouble is their fear that if they let up for a moment on the everlasting grind, the nearest rival in the scholarship competition will get ahead of them. To meet this state of things Dr. SARGENT proposes that as most colleges now require its notorious athletes to attain a certain grade in studies

before they can represent their college in athletic contests, so the scholarship men should be required to attain a certain standard in physical achievement as a condition of getting into the competition for scholarships.

A Likely Suggestion

What the practical difficulties may be of putting this suggestion to use we do not know, but it looks pretty sensible. What is naive for the goose commonly answers pretty well for the gander. Harvard alone distributes about \$100,000 a year in scholarships. The true purpose of this money is to educate men who will be useful; men worth educating. It ought not to go to bestow education on men who will be too feeble to make use of it after they get it. No doubt it goes in the main to the right men now, but surely it should be so directed as to make them healthier and more effective men as well as scholars, instead of leading, as Dr. SARGENT thinks it does now, to produce mawkishness for the sake of scholarship.

Relative Scholarship

Harvard finds, as nearly all the other colleges do, that high scholarship among her undergraduates does not bring its winners the popular distinction that eminence in some other field does. It is trying to cultivate more fervor of appreciation among its masses of the achievements of its student scholars. Accordingly, it has made an occasion of its annual award of scholarships and prizes, and has a public meeting about it, and some one to address it. Mr. OWEN WESTER was the distinguished gentleman who this year (on December 18) addressed the Harvard scholars at this annual meeting. To stimulate them to continued exertion he told them that there was not in the teaching force of any American college a single scholar whom the world of scholarship recognized as the highest authority in his branch of learning. "No American university," he said, "possesses one single teacher of undisputed preeminence." Our balance of trade in food products for the year (1907) he found to be 444 millions. Our balance of trade in scholarship, "minus 100 per cent." In discussing this European monopoly of preeminent scholarship he named many names. The American teachers who were most nearly preeminent he found to be BLOOMFIELD of Johns Hopkins in Sanscrit, RICHMOND of Harvard in chemistry, and MICHIGANSON of Chicago in physics. Five masters in their chosen fields he found in HENRY C. LEA, HENRY HOWARD FRANKES, S. WOOD MITCHELL, WALCOTT GIBBS, and CHARLES ELDER NORMAN, but he did not set count them in the world's group of "teachers of undisputed preeminence." Remarkable men, admirable in their various lines, and with international reputations he found in considerable number in the American universities, and he named them and praised their labors, but he urged the young scholars whom he addressed not to let Europe continue to win all the first places in the world-competition in learning. We presume that some of Mr. WESTER's assertions will be disputed when they come to the attention of persons competent to dispute them, but there are comparatively few of us who are informed about the relative eminence of the erudite. The mere dispute, the better. To have talked (and stirred dispute, perhaps) about the world's greatest teachers as though they were worth talking and disputing about, and as though their relative positions were matters of consequence, was a good work, and useful for the purpose it was aimed at. We have seen many columns of newspapers devoted within two months to determining the relative places in order of achievement of American student football-players, and have read some of them, but nothing before for a long time about the comparative distinction of scholars.

Ornithological Phenomena

American eagles are homing birds in these days; also double-eagles. From all over the world they have been on the wing, heading for mouths past for their home ports. A flock of eighty thousand of them came into New York on December 28 from Buenos Ayres, "as bright and new as though they had never been in circulation." Nice birds; and nice of them to show this old-home spirit. From Europe they have come by the million, but it is unusual for so large a flock to make the long journey from South America.

Personal and Pertinent

FITZ-GERALD thought little of his "Omar Khayyam" as a poetic success, and the publishers and booksellers, and the bookbuyers too, did not for a long time give him much reason to change his opinion. He might think better of it in one way if he were alive to-day, and even so he might be disappointed. He might regret that so many persons, among them Americans, loved deeply, sometimes in a maudlin way, the philosophy of the Anglicized Persians poet, persons who cannot understand, or at least enjoy, WILLIAM JAMES'S Pragmatism. We all know, at least, that FITZ-GERALD's poem is now a "seller." So widely known is the poet at present that the other day, when a slice of marriage of JOHN FITZ-GERALD, EDWARD's brother, was buried at Brooklyn, in Suffolk, there were "reporters present" to mention the fact, that across this new-made grave fell the shadow of the rose-tree planted over the neighboring grave of EDWARD FITZ-GERALD. It was planted by the Omar Khayyam Club in 1903, and it bears this inscription: "This rose-tree, raised at New Gardens from seed brought by WILLIAM SIMPSON, artist and traveller, from the grave of OMAR KHAYYAM at Nishapur, was planted by a few admirers of EDWARD FITZ-GERALD, in the name of the Omar Khayyam Club, October 7, 1903."

Not so long ago there occurred at Harvard an illuminating incident on the relations between science and mere education. They have a banquet at Cambridge of which the lower orders think a good deal; it is the ceremony of recognizing with academic display the honors won by undergraduates, and it is participated in by professors and people of that sort. It is an exhibition of mind, and it is attended by the fifty or so of honor-graders and by about as many more students who have grabbed in vain. The other day a distinguished Congressman was invited to make the address, and, being a Dartmouth man and having heard humorous innuendoes of the higher ideals prevailing at Cambridge, he was surprised that the evidences of mind in the ungrateful part of the audience were so inconsiderable. After his oration, which was, unfortunately, not directed to the legs or the arms or the chests of the students, he expressed to a neighboring gown his surprise that he hadn't a bigger audience: he thought that he could get a better one down-town. He even went so far as to express regret that his own son, who was an undergraduate of the university, had not seen fit to be present to hear his "pa." "Why," said the gown, "you couldn't expect him to devote any time to the concerns of the mind; he's on the 'variety nine!'"

"Wooten is out for McCall's seat in Congress?" Such was the startling announcement which appeared the other day in a Boston paper, not the *Tribune*, but JOHN M. WOOTEN is the man meant, and he is otherwise known as "Somerville's Strong Man." He has written a circular about himself, and he has proclaimed his own virtues at great length. He is the most recent of the "strong men" who have made up their minds that SAM is out for the district long enough, and that they will now take it away from him. Most of them have been more gracious about it than "Somerville's Strong Man," and have been willing that SAM should have another term or two before they turned him out, but every such term or two that they wish SAM has grown in strength and in grace, and therefore aspirant after aspirant has ceased to breathe defiance against him. The "Strong Man," however, expects to do the job, but it is tough. The other day a leading statesman, who has not liked McCALL's insistence in saying what he thinks, was talking about him to President KIDDER in a way that would have satisfied the "Strong Man's" soul. McCALL was this and that and the other thing, and this was small and that was smaller and the other thing was smaller. Finally, KIDDER wisely observed that if McCALL was such a little bit of a thing as all that, he wondered why the statesman should take the trouble to talk so much about him, and should bother himself so much with thinking about him. The statesman's wit saved him, for he answered, "because, sir, he represents Harvard." Well, that worked one way that time, and it may work another way another time. "Somerville's Strong Man" will probably not find it working to his advantage.

The Southern newspapers are just now talking more about JOHN ALBERT JOHNSON, the Governor of Minnesota, than about any of their own people for the Democratic nomination for President. JOHNSON is a good-looking American—for there is no Swedish peculiarity in his face—something after the fashion of Mr. ASQUITH, or of CHAMBERLAIN as he was, for they say in England that CHAMBERLAIN acquired an American look after he had invented the caucus for Birmingham politics. JOHNSON's father was born in Sweden, and he came to this country in 1852. He married a Swedish girl in Minnesota, whether he went when he landed. The old man wasn't of much use to his family, and so often left his togs—for he was a blacksmith—for the joy of drink that he died in an almshouse. The family had to struggle up by its own unaided strength, and, as it had a real mother and a real woman

at its head, the boy was stimulated by her. Somehow or other he got some degree of useful education, but, above all, he impressed the people of the State with his calmness and sound judgment. They sent him to the Legislature several times, and the Democrats ran him for Governor in 1904. He had a great victory. While JOHNSON carried the State by more than 100,000 majority, JOHNSON had more than 700,000 plurality. He had changed 84,000 votes. Then running a second time on a platform with one plank—"one good term deserves another"—he carried the State by 72,000. This made MRS. HENRY WATSON sit up and take notice. He is a modest man, a direct speaker, and believes that government should not undertake to do what one letter he done by private enterprise. The Gridiron Club would be astonished by his appearance in evening clothes. He seemed to fit them so well. Fancy thing to notice in this country, isn't it?

As all the world knows, a Danish sailor, Captain ROALD AMUNDSEN, succeeded last year in taking his vessel, the *Gjøa*, through the Northwest Passage, being the first man in all history to sail from the Atlantic to the Pacific through the arctic seas; and readers of HARPER'S MAGAZINE will remember Captain AMUNDSEN's extremely interesting account of this extraordinary achievement. Since he arrived at Bering Sea and then sailed southward past the Alaskan Islands, along the Alaskan coast, and so on to the Golden Gate, his little 73-foot sloop has been lying in the harbor at San Francisco. As this diminutive vessel made a voyage which baffled every other craft undertaking it for more than 400 years, it had been generally expected that the *Gjøa* would be taken to Denmark, and there be permanently preserved with the same rare shows in the preservation of the well-known Viking ship discovered long ago—thus forming an exhibit of which the Danish nation would be forever proud. We understand now, however, that the *Gjøa* may not go back to Denmark after all; and it might be worth while for one of our American museums to ascertain whether she could not be permanently preserved here, inasmuch as her achievement lay in coasting along the most northern boundary of the continent of North America. It should not be difficult to bring the *Gjøa* to New York or another Atlantic port, inasmuch as should not be obtained by one of the institutions of the Pacific slope. A crew of six or seven men could sail her through the strait and northward to the Atlantic, or she probably could be placed on the deck of some large sailing-vessel bound from San Francisco to New York or Boston. Unless Captain AMUNDSEN has made a definite plan for the disposal of his craft, the idea suggested above might be found to be entirely practicable.

A new Diary has been published in England. It is that of WILLIAM AINSLIE, who died in 1889, and these reminiscences of CARLYLE from it will interest everybody:

We learn that CARLYLE looked on his *Cromwell* as much the most important book he had written. *Heritor Rectoris*, in the retrospect at least, delighted him not, though it brought him much benediction. As to *Frederick the Great*, he said that it occupied him thirteen years, eight of them having been spent in writing the book, and that he had had mountains of dust and rubbish to swallow. "My mind was full of *Frederick*. I used to ride a great deal then, and when I came in I usually had an hour's bright talk or so (ah me!), and then after dinner sat down to *Frederick*—she silent in another corner of the room. Often I think she would have been glad to speak to me—ah dear. . . . Well, it nearly killed me. It was the desire and longing of my life to finish it."

Once the conversation turned to NAPOLEON III., CARLYLE had known him when he was kicking his heels about London in unhappy exile—"Met him at dinner—he made up to me rather, understanding as to be a writer, who might, perhaps, be a help to him somehow. His talk was a puddle of revolutionary nonsense. He was internally a mass of darkness. I used to meet him often in the street, mostly about St. James Square. His face had a melancholy look that was rather affecting at first, but I soon recognized that it was the sadness of an opera-singer who cannot get an engagement. When I heard of him afterwards as Emperor, I said to myself, 'Gad, sir, you've got an opera engagement such as no one could possibly have expected!'" WHISTLER, CARLYLE described as the "most absurd creature on the face of the earth." He thought that the painter was more concerned to depict his coat than his face. BROWNING he liked as a man to a notable extent, but he could not away with his poetry. "He ingeniously twists up the English language into riddles." BURNS, he declared, was the greatest poet since SHAKESPEARE—as for KEATS, he wanted to live in a "world of flowers."

They say that Senator WARREN, of Wyoming, is going to make ROBERT EVANS a vice-admiral. This is what the newspaper headlines say, at least; but when you read a little farther down into the sensible part of the column you find that the Senator has introduced a bill which provides that there shall be the grade of vice-admiral in the navy, and this must embrace the army, seeing that the corresponding grade of lieutenant-general has not so long since been abolished. The merits of the question, however, are too grave for serious discussion in this column, which has just political intelligence enough to be glad, if the grade is going round, with its

extra pay and gold here, that "Bon" will get it first. The last time there was talk about a vice-admiral the rank was to be for SAMPSON. EVANS wanted SAMPSON to be a vice-admiral, and so did CHADWICK, of course; so also did HARRY TAYLOR, EVANS's brother-in-law, and FOGGIE and ROBINSON and a lot of other first-rate sea-fighters. Then some civilians wanted two vice-admirals, the one to be for SCHLEY, but that couldn't go through, and so the whole thing was dropped. SAMPSON didn't expect it, and was so willing to give it up that he did make it impossible for the bill to live. SAMPSON was much more concerned about his officers and his men than about himself. He always told that the long and anxious siege which had been maintained at Santiago was the naval achievement of the war, and naval experts here and abroad, including the Spanish, agreed with him. The unfortunate controversy which had been engendered by certain politicians prevented the recognition which SAMPSON believed to be due to his officers and men. How perfect that blockade was is to be seen in the diary of the Spanish officer of the port of Santiago. Having noted that before SAMPSON's arrival the "enemy" disappeared to the south, and every day towards nightfall," he notes in one brief entry that after SAMPSON's arrival a close blockade was maintained until the end. It is further evidenced by PAGEY's exclamation—PAGEY, the British naval attaché—on going aboard the *New York* one day, and finding himself so close to shore and to the Spanish batteries. "How damned impudent!" he exclaimed. But SAMPSON grumbled because while HENRY's men had medals to wear when they went ashore, his men, who had watched the Spanish day and night for months, and who finally prevented their escape, had none; while his officers could not have the promotion that they deserved. So he wrote a letter to President McKinley, preferring charges against SCHLEY, in order to have the matter cleared up so that his officers and men might be rewarded, and renouncing any promotion for himself. EVANS and TAYLOR and some of the others didn't like that remembrance and protested, but the letter went forward and was pigeonholed—only the remembrance held.

CAMPBELL McIL. WINSTON is now, for a time at least—so long as the staff of the navy consent—the head of the Bureau of Navigation. He is young and only a Commander, but he is very near to being a captain. The daily newspapers have told the country that he married THEODORE HAYMEYER's daughter, and no one who knows him has any doubt that whatever he has he has by his merit. He is very good-looking as well as very intelligent, and he combines the talents of a modern officer (he is familiar with steel and steam and machines) with the genial and rather reckless character of an old-fashioned sea-dog. On the other side of him, he might, if he were as old as some retired admirals, a few specimens of whom are still extant and flying about at the club, be grudgingly forgiven when he is heard to say "can't see nothing when he looks aloft." But WINSTON is too young for that, and has too much education. He is of good New England—Massachusetts stock—and his folks are proud of him. So are his friends, warm among whom is HUGHES. The President likes him, too, but he also liked HUGHES. Root is very fond of him; he took the Secretary around in the *Charleston* on the South-American cruise. It ought to be said that WINSTON doesn't believe that a doctor can command a ship any more than a steam-engineer can fight a turret or shoot off a torpedo, or a locomotive sing a song. WINSTON's life has been pleasant of late years, but there was a time when it wasn't, but when the Department seemed to be doing its best to make it a burden and to fill it with pins. WINSTON was the first officer of the navy to develop the latent resources of the torpedo-boat; he was in command of the *Cooking*, and he made himself and the boat famous. He was said to be a naval cavalryman. He dashed about in the *Cooking* in a seemingly reckless and dangerous way. Sometimes passengers on board of Long Island Sound steamboats were vastly lightened when the *Cooking* would dash at them as if it were going to sail through their wooden or sheet-iron hulls; but WINSTON always knew how to stop the little devil in time. He was also employed to amuse Secretaries of the Navy and the like with the aquatic antics of his little boat. They had a good deal of fun out of it, and seemed to think that WINSTON had, too; and he did have professional fun, but it was nerve and body wearing work all the same. A torpedo-boat is not the most comfortable dwelling-place that the human mind ever desired, and in those days such a boat as the *Cooking* was a trifle worse than its modern successors. A man must be younger even than a Brutus—say about as young as a midshipman—in deep night after night in a partially submerged hulk, and to wake up to the splash of the icebergs dripping in his face. So when WINSTON had performed his hardy service and had gone ashore he had a bad case of nerves—and while it was temporary it was hard. There happened to be, at the time, at the head of the Bureau of Navigation a mind that knew not torpedo service, nor, indeed, much of any kind of sea service. In foreign service the command of a torpedo-boat counted for a good deal of sea service, but to this particular mind it did not count for any sea service at all. WINSTON thought that he had earned a little repose; the mind decided that he had been playing around the shore, so it ordered the young officer off to a leaky old tub

on the Pacific and scoffed at the doctors' protests. The doctors in this instance were doing staff duty. WINSTON had no consolation in those dreary days, except in the bosom of society, where he properly received much sympathy. This gave him some pleasure, but he never enjoyed the sympathy half as much as the mind enjoyed its unpopularity. In the end the President, this time also, took the side of the staff which was performing, as we have said, strictly staff duties, and WINSTON rested and recovered. Now we shall see the staff and the line again in action, and will be able to note the result. Not many days ago WINSTON expected to go to sea next May; perhaps he will go, notwithstanding.

Correspondence

IS A PRESS CENSOR NECESSARY?

PARK TOWER, December 25, 1897.

To the Editor of Harper's Weekly:

SIR—One given to the newspaper habit, or even to novel-reading, must confess that the *crisis* for sensationalism is sweeping over the length and the breadth of the land.

In this Rooseveltian age, when we do our own thinking, we speak in glowing terms of the freedom of the press and yet we mothers burn the papers that date print the testimony in the Thaw trial and the Bradley case, that our innocent daughters may not be polluted.

And yet we have been "taken in" in our latest novel by a woman of deservedly international literary fame, the author of a story for children which is already a recognized classic, an author who has been held in such esteem that, heretofore, any book that she might write would be given without question, to sweet gradations, unswayed, by otherwise careful parents.

In *The Shuttle*, however, this author has stooped to conquer, and thereby has placed an indelible blot upon her literary credit by discovering us one last chapter.

At once the reader comes under the spell of this fascinating book, so full of "Americanisms," almost fearlessly narrating the two threads of the story—the American and the English. Pushing on to the climax (which is at the end of the book), what do we find? Pages devoted to the description of an attempted criminal assault upon the heroine by an English lord—a description so vivid as to cause his woman readers to shudder and to be filled with disgust and horror.

There are things too base to be written of or discussed. This final chapter needs expurgation. Is a press censor becoming a necessity? Most certainly, if the George Eliot of our day is to become a Guide: if the offense of the author is to go unrebuked.

In this particular case a liberal use of pen-knife is recommended if there are no buzzards in the neighborhood to relieve the stench.

I am, sir,

ESTITA T. KIRKPATRICK.

We think this correspondent's strictures entirely absurd and unwarranted.—EDITOR.

GO SLOW WITH TARES

To the Editor of Harper's Weekly:

SIR—In the parable of the tares is found—"But he said, Nay; lest while ye gather up the tares, ye root up also the wheat with them."—MATTHEW xiii, 29.

To be learned by "the man who reaped the host."

I am, sir,

F. R. W.

THE TRIBULATIONS OF PORTO RICO'S GOVERNOR

New York, December 27, 1897.

To the Editor of Harper's Weekly:

SIR—In your issue of December 7 you publish an article by William Hughes, concerning the troubles in Porto Rico between Governor Post and the educational authorities and mismanagers of the island. It so happens that I visited that number of the WEEKLY, and have only just had my attention called to the article.

As your article well explains, the whole trouble and the present controversy grew out of a speech delivered by Governor Post in September to the superintendents of schools of the island and the officials of the Department of Education. For the past two years I have held the position of General Superintendent of Schools of the island. I was present at the meeting of the superintendents which was addressed by Governor Post. The indication meeting of the superintendents held after the termination of the speech and the subsequent meetings held to determine what action, if any, was to be taken by the superintendents as a body, were held in my home in San Juan, and I officiated as chairman. Taking into account these circumstances, it will, I think, be conceded that I am in a position to know and state the facts.

The remarks attributed to Governor Post in your article, first printed in the *Porto Rico Review*, and subsequently reprinted in HARPER'S WEEKLY, are a true and almost verbatim report of the Governor's speech. His abuse of the superintendents, his statement that the superintendents and the misdoings were responsible for the anti-Americanism in the island, his statement that the misdoings were the worst of all, his use of blasphemous language—these are all facts and have been correctly reported. It is also true that the speech was delivered at the private residence of Commissioner of Education Dexter, that Governor Post was Commissioner Dexter's invited guest, and that Commissioner Dexter attempted to excuse

the Governor's remarks by saying that Governor Post was "in his cups."

In your article you publish Governor Post's denial. In it he states that the meeting where the speech was delivered was an administrative conference. This is not in accordance with the facts, it being in reality a social occasion at which the Governor was invited to speak. He states that he called the superintendents together and talked to them further, after which they decided not to tender their resignations. This is contrary to the facts, for he did not call them together. They met of their own volition, and he went to their place of meeting. He states that he did not make any apology. Nevertheless, his remarks were so construed by those present who heard him, he states that the language attributed to him is distorted and garbled and most of it without foundation. I have already stated that the remarks as reported were actually delivered and the facts as given were correctly stated.

Since the publication of your article, and presumably because of it, Senator Garfield has called to Mr. William Sweet, editor of the *Porto Rico Review*, asking if he can substantiate the charges first printed in the *Review* and subsequently reprinted in the *Inglis* article in HARPER'S WEEKLY. In response to this called request, Editor Sweet, who is an ex-Congressman (he represented the State of Idaho), has forwarded to Secretary of the Interior Garfield an affidavit sworn to before the Clerk of the Federal Court of San Juan, and signed by the superintendents of schools, J. Warshaw and J. F. Packard, and mentioning as witnesses who were present and heard the Governor's speech seventeen other superintendents of schools and high officials of the Department of Education. This affidavit very positively states that Governor Post's remarks were correctly reported. Copies of the affidavit are being sent to the President, to Senator Foraker, and to other members of the Senate Confirmation Committee.

As your article has attracted widespread attention among those interested in the welfare of things educational and governmental in our West-Indian possessions and up to the present time has done our forward either to affirm the truth of your article or to confirm or deny Governor Post's answer in charges made, I trust that you will find place to publish in the WEEKLY this statement from one who is exceptionally well situated to know the truth of the affair.

I am, sir,

LEONARD P. ABRAHAM,
General Superintendent of Schools of Porto Rico.
(On Leave of Absence).

A FAMOUS EPIDRAME

New York, November 15, 1907.

To the Editor of Harper's Weekly:

SIR,—As an Englishman who has been three years in your country you will allow me to say that I consider there is more common sense and sound judgment in your comments upon British politics than I can discover in all other American periodicals. I am glad to permit me to point out that you have fallen into an error in crediting Mr. Lloyd George with the famous epigram, "The more the British Empire expands, the more the Chamberlain family contracts."

The author of that witicism—it was the one lonely joke perpetrated through Britain during the dark days of the Boer war—was not Mr. Lloyd George, but Mr. C. K. Griffiths. It was made at the time Mr. Arthur Chamberlain, a brother of the ex-Colonial Secretary, had instituted an action for libel against the *Morning Leader* for publishing articles suggesting that the managing director of Kynocks, Limited, had endeavored to get contracts for his firm on the strength of his family connection with Mr. Joseph Chamberlain.

I believe the plaintiff sought \$250,000 damages. The jury awarded him a few hundred.

I am, sir,

H. COHEN-HARDY.

THE HOPI INDIANS

Pasadena, California, November 26, 1907.

To the Editor of Harper's Weekly:

SIR,—Apropos of Mr. Jackson's sympathetic article on the Hopi Indians in your issue of November 20, I would like also to call attention to the little-known fact that these Indians are not "wards of the government." In the sense that the Sioux and Yon and Apaches are, but citizens of the United States; and being entitled to the rights which that condition implies, the corrective treatment to which they have been subjected is entirely unwarranted. The Pueblo Indians of New Mexico and Arizona—of whom the Hopi are a section—were awarded those rights of citizenship by virtue of the treaty with Mexico ceding to us the southwestern territory over half a century ago. The Supreme Court of the United States has confirmed the Pueblo more than once. I believe in this status, "with power to own, control, manage, purchase, and alienate, and to exercise all the rights and privileges of citizens." As certain special Territorial laws have restricted the voting privileges of these Indians to matters pertaining to their own communities, the politicians have not had the particular fear for them that they have had for the colored brother, and so the fact of their citizenship has remained unobserved to the mass of Americans. It is shameful that our government, which professes to guarantee life, liberty, and the pursuit of happiness to all its citizens, should have allowed these humble red children of the Hopi nation to be disgraced and harassed as they have been of late years. If a Hopi chooses to wear his hair long, as his people have done from time immemorial, he has the same right to do so as I have

to wear a full beard or side-whiskers; and as to his dances, they are to him solemn religious ceremonies, to which he surely has the same right as the Episcopalian to the ritual of his Church or the Quaker to his silent meeting.

In common with all the Pueblo communities, the Hopi Indians are a peaceable, kindly, industrious people, who have attained to a marked degree of civilization through their own efforts, and have forced the desert to yield them a livelihood—a fact that in itself makes them worthy of American citizenship, even if the law had not already invested them with it. They are the practitioners of many beautiful native arts, notably pottery and weaving, and of quaint and interesting customs that make their picturesque villages a Mecca for ethnologists, artists, and travelers of taste. Instead of being stupidly and criminally forced into white men's clothes and ways, these Indians should be encouraged in their ancient customs; or, at the very least, they should be let alone, and allowed to exercise their own choice in matters pertaining to their own welfare—a right to which under the law they are clearly entitled.

I am, sir,

CHARLES FRANCIS SAUNDERS.

HARD ON SUBSCRIBERS TO BONDS

To the Editor of Harper's Weekly:

SIR,—On November 18 the Secretary of the Treasury issued a call for subscriptions to \$400,000,000 of the certificates of indebtedness authorized by Section 32, Act of June 13, 1898. The published notice may be referred to for particulars, among which I respectfully call your attention to the following, viz: a requirement that each subscriber should pay in at the Subtreasury nearest the point of subscription on or before December 1, 1907, the full value of certificates named in the allotment, etc., and a promise that allotments will be made as rapidly as possible, it being recited that for such subscriptions as are made immediately, the Secretary of the Treasury is prepared to deliver temporary receipts, etc.

Under the above call a friend of mine subscribed at the Boston Subtreasury, on November 20, for \$100,000 of the above-described certificates. As the statement at the Subtreasury in this city, and I presume at other Subtreasuries, was that each would be required on allotment, my friend made arrangements with his bank for cash deposited therein, and awaited the coming of December 1, on or before which date it appeared by the circular allotment would probably be made. Did not thousands of other ordinary citizens, without banking influence, do likewise? If so, such citizens are finding with my friend that, depending on the good faith of the government, and expecting a fair return, they have been not only discriminated against in favor of the banks, but they have held their money idle during the great uplift in the bond market, and must now pay from fifty points upward more for each investment bond and from ten to twenty points more for each intervening share of stock which they would naturally have selected for their savings had not the Secretary of the Treasury intervened with his investing office.

My friend finds that he has suffered an appreciable loss. I do not doubt but that he has many thousands for company. What is your judgment of this kind of national financing? Does it make for confidence?

Granted that the call was ill-judged and *ad hoc*, should not subscribers have been notified at once that they would receive no allotment? I sympathize with Mr. Cortelyou's desire to save his face after making a break, but submit that it is ill-judged for a fiscal minister to place his own interest before that of the people.

I am, sir,

CITIZEN.

CAUSERS OF THE PANIC

Boston, Mass., December 25, 1907.

To the Editor of Harper's Weekly:

SIR,—In the issue of HARPER'S WEEKLY for December 7, in an article entitled "Roosevelt and the Panic," you refer in a very commendatory way to a study which I have made of the panic of 1903, published in "National Problems." The conclusions, however, which you draw from the article in regard to the cause of the present panic do not seem to me to be justified. An academic student of economic affairs hesitates to pronounce a final judgment until all the evidence is in. But it seems to me that there are sufficient data already at hand to show that the present financial and industrial disturbance is logically occasioned by the working out of a variety of forces which cannot be attributed to the attitude of any one man, even if he have enormous executive power behind him.

In the interpretation of the present situation we must take into account the vast increase in the supply of gold; the dissipation of prices on an ascending scale; the rush of industrial enterprise to secure the profits which accompany the production of goods; the strenuous desire to increase capital and the consequent increasing rise in the rate of interest; the revaluation of old securities at a lower price with loss to their holders; the great strain upon banking capital as evidenced in the call and time money rates in the money market; the waste of capital by wars, earthquakes, and in extravagant living. If to these factors should be added bad banking practices, as shown more particularly in the unscrupulous methods of trust companies, and the backing up of loan capital in enterprises not immediately productive, there will be found a much easier explanation of the trials through which the country is passing than to make them attributable to President Roosevelt.

I am, sir,

DANIEL R. DREW.

Submerging Eight Villages in a Drinking Fountain

BY
WILLIAM
INGLIS

DRAWINGS BY
VERNON
HOWE
BAILEY

TOWARD the close of a sultry forenoon in the summer of 1914 a solitary traveller might have been seen up-pouching the ticket-window of the West Shore Railroad Company at the foot of West Forty-second Street. Tropical suns had deeply tanned his rugged face, and there gleamed in his piercing blue eyes the spark of eager expectancy which burns in those who return from long sojourn in foreign lands.

"Give me," said he, boldly, "a single ticket to Broadhead's Bridge."

"Don't sell to Broadhead's Bridge," said the ticket-agent, politely, after a start of surprise and a scrutiny of his rack.

"Yes, you do, too," responded the traveller. "It ain't on your main line. It's on the Ulster and Delaware road, and I change at Kingston."

"No; not here; never heard of it," declared the agent, still polite, but very firm.

"Pshaw!" exclaimed the traveller. "Guess you're new on the road. You must have tickets to Broadhead's Bridge. It's the nearest station to Ulster Bridge, where I was born and raised, on the banks of the Esopus River."

"Non-sense," said the ticket-agent after another search; "no Broadhead's Bridge nor Ulster Bridge. We do sell over the Ulster and Delaware. There's Brown's Station, Cold Brook, Moosic Place—"

"One minute, there!" the traveller interrupted. "Give me a ticket to Brown's Sta-

Site of the Great Ashokan Reservoir, to be a Lake Twelve Miles long for supplying New York with Water

tion. That's pretty nigh Broadhead's, though I'll find my way home somehow when I get round to it. I've seen it been down in South America mining for a spell of ten years or so, and now I'm going back to see the folks and get some of that faded wool they all

ways have waiting for the feller that comes home with a bunch o' nuggets. And, you mark my words, nuster, I'll find Broadhead's Bridge up there, and Ulster Bridge too, 'less they've been and changed the map considerable."

The traveller questioned the young conductor on the journey up the line, but he, too, was positive that there was no such place as Broadhead's Bridge or Ulster Bridge on the face of the earth. He would tell the traveller what he would do: he would let him a good ten-cent seegar against a toothpick that there wasn't any such place on the map.

"Oh, shucks!" cried the traveller, a little peevishly. "You rail road people don't know much about Ulster County. Never mind! I'll show 'em."

Changing cars at Kingston, the traveller felt reassured when the conductor with C. & D. in gold letters on his blue cap gave the signal and the train began its journey northward. He rejoiced exceedingly when the familiar landscape of Stony Hollow unfolded itself before the flying car-windows, though shortly afterward he sat up and rubbed his eyes in amazement to find that the train unexpectedly whirled off to the southward and skirted the shores of a shimmering lake where, according to his recollection and in the language of the old song, no lake ought to be. He was still puzzled when the train stopped at Brown's Station, and he presently found himself on the platform, staring out upon a vast inland sea that extended for six miles on either hand both eastward and westward.

"Is that—is that real water?" he asked the boss of the station.

"Surest thing you know," replied that official. "Gosh! I've all beat out," cried the traveller. "Say, what d'ye call that lake? I never saw it before."

"Lake nothin'," replied the station agent, cheerfully. "That's Ashokan Reservoir, and it's full of one hundred and twenty billion gallons of water for New York city people to drink—both straight and mixed—and wash in and put out fires and run their factories with."

"Nukes alive!" cried the visitor. "You don't say! Tell me how I'll get over to Ulster Bridge? I've seen, I been away quite a spell, and I'd like to see the folks—higher walk up through the back yard past the old wheel with the milk-pans drying on it, and step in and hanez up my hat reel quiet—underground."

"Well, I'll tell you," the agent suggested kindly. "If you can do those stunts you're talkin' of you're the greatest submarine diving wonder of the world and you've got Laurine the Water Queen gurgling for help. Why, the village of Ulster Bridge is just one hundred and eighty feet under the surface of this water you see, three mile off there to the left."

"Dye mean t' tell me our old homestead's gone? Can't I even see the chimney?" the visitor insisted. "I'm Homer Magdore, I

West Shokan
TO BE SUBMERGED UNDER
FORTY FEET OF WATER

ASHOKAN RESERVOIR WHICH EFFACES EIGHT VILLAGES

WHEN THE WORK IS COMPLETED, AS HERE SHOWN, THE HAMLETS PROKAN, WEST SHOKAN, GLENFORD, BROOKHEAD'S BRIDGE, AND-
TON, OLIVE BRIDGE, WEST HURLEY, AND ROSSETT WILL HAVE BEEN BAZED TO THE GROUND AND THEIR SITES DEEPLY FLOODED

DRAWN BY VERNON HOWE BAILEY

am, and my folks cuts considerable bread these parts."

"Maybe the superintendent of the reservoir 'll take you out in his power-launch," the agent said. "He can tell you pretty near where the old place was, seeing they have complete maps and charts of all the country at the bottom of the reservoir. Then, if you can see sixty yards down through solid water, you'll see where the old place used to be. Every house in the country that's under water now was clean burned up and the ashes carted away. Your folks have moved out to Standakes."

The incidents thus far recorded may well be considered to have taken place after the new Ashokan Reservoir shall have been completed. The creation of this inland sea is one of the greatest engineering feats ever undertaken by any municipality, and the changes to be brought are nothing short of marvellous.

The most casual lay observer needs but one glance at the great Ashokan basin to see how vast an enterprise is this latest effort to provide New York city with one more cupful of water—a cupful only figuratively, of course, for as a matter of fact this new source of supply is expected to send down to the thirty city five hundred millions of gallons every day. Americans are so accustomed to think in large figures that they are apt to overlook their full significance. But consider—one hundred millions of gallons of water would heat a good-sized fleet of war-ships. Multiply that volume by five, and you have a fair idea of the amount of water that the new Ashokan basin will give us during every twenty-four hours. And this, of course, will not be even half the amount of water consumed daily by the metropolis of the Western world. Half of the five hundred millions of gallons will be derived from the springs and streams in the Ashokan basin, the other half from the Catskill, Rondout, and Schoharie reservoirs, a few miles away.

Esopus Creek, the principal stream in the new basin, is not big enough to float a Hudson ferry-boat very far. There are deep pools, of course, as at Olive Bridge, where a yachting squadron might safely ride at anchor, but throughout most of its course the creek is a big, noisy, brawling brook, rattling over boulders and pebbles and dashing gaily down slaty rapids on its way to the Hudson. The stream is seldom more than eighty feet wide, and where it reaches this width it is shallow.

But careful analysis showed that the water was pure and free from any of the taints that might render it unfit for use as a beverage, and moreover it was found to be much softer than water—that is, not so impregnated with lime and silicious ingredients. The other stream in the Ashokan valley—Beaverkill Creek—is much smaller than Esopus Creek, and its water, although rendered

of sufficient volume to yield 250,000,000 gallons a day, they made accurate surveys of the Ashokan valley, and found that by erecting a great dam at Olive Bridge, one mile wide and two hundred and twenty feet deep, also a series of smaller dams extending for nearly three miles east and west of Brown's Station, they

Old Shokan

HERE THE WATER IS TO BE TWENTY FEET DEEP

could create an inland sea twelve miles long and two miles wide whose boundary crossings is a great are from southwest to east should be a wall of mountains, including several of the highest peaks to be found in the Catskills.

Now that all the surveys have been made, most of the surveys at the sites of dams and dikes completed, and the work of building the dams actually begun, it is interesting to view the great valley with its eight villages, scores of churches, schools, factories, and farms, as well as miles of railroad track, and bridges—all of which must be publicly swept out of existence to make room for New York's newest big cupful of water. Brown's Station, sixteen miles west of Kingston on the Hudson, stands on an elevation five hundred feet above sea level and ninety miles north of New York. It is from this point that the newly created inland sea will stretch away on either hand to east and west, in outline vaguely resembling the wings of a flying bat, of which Brown's Station would represent the body. The artificial lake, which the creators hope to have completed within the next seven years, will extend over an area equivalent to that of Manhattan Island, ranging in depth from a ripple to two hundred and twenty feet, and containing one hundred and twenty billions of gallons—120,000,000,000—of water.

The gallons, by the way, is such a tiny unit of measurement that even the picture of it in hundreds of billions gives but a faint suggestion of how vast the inland sea will appear, whether backing in silvery calm under June suns or roaring in white-mountain, sudden and when lashed by November gales.

From a high and windy hilltop a mile back of the station one can command a sweeping view of the entire valley. Far down the gorge at Olive Bridge the waters are crashing over rocks and plunging over a vein with a roar that comes but faintly to our ears a mile away. The low, flat, snow-laden meadows surrounded by mountains have the appearance of having been prepared for the very use they are to fulfill. As ranged in a far-flung are beyond them, their lofty heads wrapped in swirling-snow clouds, are the mountains which form the wall of the sea that shall exist obedient to the will of man. There is something Titanic in the very roll-call of these huge buttresses of rock and earth that have stood for ages patiently awaiting their turn of service—High Point, South Mountain, Banner, Baboon Cap, The Slide, Cornell, Wittenberg, Mount Pleasant, Tietz, Tietz, and Tietz, Spread

among the foothills and along the banks of the streams, with many a pleasant farmstead in between, are the eight villages which are to be destroyed—Olive Bridge, Broadhead, Bridge, Boisterous, West Shokan, Shokan, Standakes, and West Hurley. These are the characteristic and hitherto untroubled hamlets of the region which have needed many years to grow in that hill-girdled quiet.

Broadhead's Bridge
ONE OF THE SCENIC
POINTS, NINETEEN FEET
IN CHAIN WATER

hazy at times by vegetable stains from the meadows, is found to be excellent for human consumption.

So when the engineers and other experts had determined a few years ago, that these streams and their little tributaries were not only potable, but

If the capacity for taking infinite pains had not been long ago adopted as the definition of genius, it might have been ascribed to dam engineering. The work that has been done upon the Ashokan Reservoir project during the past year has been chiefly preparatory for what is to be done during the next seven, yet it is of great extent and importance. In establishing a reservoir

Two hundred acres of forest land must be cleared before the water is collected in the reservoir. Not only must the trees be chopped down and dragged away, but the stumps and roots must be cleared out, too, even the rootlets down to those one inch in diameter. Thirty small cemeteries will be eliminated, the skeletons decently reburied, and all the adjacent soil carried away to a safe distance. The houses constituting the eight villages will all be leveled to the ground and their ashes carted away. It used to be the custom to sacrifice these houses, in the days of building earlier reservoirs, but the thrifty owners formed combinations, and each man bid in his own without rivalry for the fixed price of \$50, then refused to move it off the reservoir site until after long and expensive litigation. So now, as a matter of safety and speed, the order is to burn houses and clear the sites. The most interesting house to go—from the historical point of view—is Will Avery's home at Shokan, which is very ancient, and stands upon the site of the old black-house from inside whose stout walls the earliest Dutch settlers took pot shots at the attacking Indian hordes.

As to how many miles of railroad-track must be removed, to make way for the reservoir, even the engineers do not know up to this date. The furthest eastern flow-line has not yet been fixed with certainty, and upon the determination of this will rest the movement of the tracks. This change will include, of course, the carrying away of the railroad-station buildings and side tracks, spurs, etc., from the various villages affected, and their reestablishment on sites higher up the mountainsides. Incidentally, thirty miles of macadamized highway will be built around the highway, and a strip of land, varying from a quarter of a mile to a mile and a half in width, will be taken across the water-line to ensure perfect cleanliness of the intake.

The question of damages to be awarded for property taken for the Ashokan Reservoir promises to remain a burning issue for many years to come. The moving of the railroad will be a rather simple matter, and the settlement of damages not much more difficult, for the engineers have had a census made of the railroad business, including all the passengers who ride to and from the condensed stations in the course of the year. But for every acre of land taken, whether farm, forest, or water right, the most remarkable and famous claims have been made. One man who owns a seventy-nine-acre farm, part of which is on the dam site, asks \$150,000 for it because the water rights are so valuable. Of course the water rights were practically nothing until the city of New York began to collect water with its dams. The owner of a sixty-nine-acre farm modestly asked \$90,250 for it, saying that that was its marketable value, as distinguished from its market value. Men who have hitherto raised hoop-poles and hickories on their farms now hope to raise millions of dollars.

The entire Ashokan district will be clean as a baby's Dresden trumpet before the dams are closed and the reservoir flooded. Every sordid trace of the occupation of the 12,000 acres of land by man or beast will be wiped and swept away, and the site will be as free from animal contamination as it was at the dawn

The Head of the Reservoir
VIEW FROM OLIVE BRIDGE
AS IT NOW LOOKS

the faculty of accurate and infallible precision is absolutely necessary. Imagine what would happen if a dam should give way—the loss of life and destruction of property in the immediate neighborhood of the reservoir! These would be awful enough, as the Johnstown disaster of June, 1889, bears witness, yet only a small proportion of the loss that would ensue. For a break in such a great reservoir as this would mean a water famine in New York, and a water famine in New York would mean not only a dearth of water for drinking, cooking, and bathing, but a lack of water for flushing any sewer system, and that would inevitably mean a deadly plague of typhoid fever.

With such a dread calamity always in view, as the result of structural weakness, the engineers have groped deep in the earth to find a safe resting place for the dams that will resist the heaviest pressure of the water. The element of chance has been eliminated, so far as human foresight could eliminate it. Thin drops of borings have been made covering the entire site of the great principal dam at Olive Bridge through silt and shale and slate clear down to the great primordial rock which antedates the glacial period. Upon this immovable foundation will stand the core of cyclopean masonry which will form the backbone of the 3000-foot dam. And as even in this rock floor certain fissures appear, a series of traps and vents has been arranged to carry away the seepage and avoid the possibility of any erosion of the dam itself. The core of masonry will be 1000 feet long, 150 feet wide at the bottom, and twenty-six feet four inches wide at the top. The continuations, or "wings," stretching away for 2000 feet on either hand will be rolled and packed every four inches on the water side, and every six inches on the lower side, so that when the vast wall of stone and earth is completed, it will be structurally stronger than any of the mountains ever at hand. Of masonry alone the dam will contain 347,000 cubic yards. In the dam and all the dikes that supplement it 7,000,000 cubic yards of earth-filling will be used. A most careful survey has been made, so that the exact contents of the reservoir for every inch of depth is accurately recorded.

of creation. Even the underbrush and the alluvial deposits along Beaver Kill and Rat Vley Kill, the presence of which colors the waters brown every autumn, will be cut and dug and dredged away. In the two hundred acres of forest land which are to be degraded men are to-day chopping and hauling timber to saw.

(Continued on page 32.)

The Needless Peril of the Coal-mine

By GEORGE H. CUSHING

COAL-MINE explosions are increasing in number and severity in the United States. They are going to continue to increase unless measures be taken to effect new conditions that are constantly arising. Both miners and mine-owners are taking steps to find a remedy, and the government now purposes to give them valuable aid.

Within four weeks, beginning in the latter part of November, the nation was shocked by as many mine explosions. By the disasters at the Naomi Mine of the United Coal Company near Fayette City, Pennsylvania; at the Menomah Mine of the Consolidation Coal Company at Monongah, West Virginia; at Yolande, Alabama, in the mine of the Yolande Coal Company; and at the Darr Mine of the Pittsburgh Coal Company, in the Connellsville District of Pennsylvania—over 700 persons were killed. It is peculiar that the cause of each one of these explosions was a variation only from that of all the other three. In no sense could they be regarded as cataclysms, occurring suddenly and mysteriously. They were the natural expression of a certain disregard for natural and yet dangerous conditions.

The easy thing to do would be to say that grasping greed, on the part of corporations, had driven hundreds of men into a dark and dangerous hole, supposedly against their wills, to toil for the enrichment of the few. It would be equally easy to say that the ignorant class, carried away by the easy money-making methods of the day, had become careless. In haste and careless of the laws of nature, paying for their heedlessness the awful price of reckless conduct. Neither of these things will satisfy those who are looking deeper into the causes of mine disasters with a desire to understand how to avoid them in future. If one were looking for the real cause, it might be better to say that the rush of industrial demand had driven both employer and employee blindly into a trap, the secret springs of which neither was able to study beforehand.

The output of coal in the United States has been increasing with striking rapidity in recent years. In ten years we have mined more coal than in all the history of the country prior to that time. The production of coal follows naturally the line of least resistance. The upper seams, or those which lie nearest the surface, are mined first and, consequently, are soonest exhausted. The lower seams are developed more leisurely. It is one of the tenets of the geologist that the lower we go for coal the more gas we strike. In those days when so much attention is being paid to economical and swift haulage of this coal, from the bowels of the earth to the surface, the motive power is chosen which lifts the coal with the least expense. The use of electricity in mine haulage, consequently, has been growing more and more general. It is not set down as a point established beyond controversy, but, nevertheless, it is declared that sparks from these electrical appliances quite frequently touch off the gas that is liberated in deep "shaft" mines and the explosion begins. The coarser's verdict at the Naomi Mine gave such an explanation for the starting of that explosion.

It is scientifically established that nearly the whole of a pile of coal is combustible. An explosion, in the last analysis, is nothing more nor less than instantaneous combustion. To produce an explosion, in anything that will burn, it is only necessary to reduce the whole mass of combustible substance to such fine particles that the combustion will be instantaneous. For instance, if all the ingredients in a lump of coal could be broken up at the same time, coal would be equally as dangerous as dynamite or nitroglycerine. In a great many mines the roadways and shafts are exceedingly dry. In these roadways often consist of coal which has not been taken out. Constant passing to and fro of the system of haulage, the constant passing to and fro of the army of mine employees, the action of the air currents upon the loose particles of coal carried in the cars—all work to charge the air with infinitesimally small particles of coal which are really lighter than air and are, consequently, carried in suspension. This coal dust in dry mines is constantly arising, and, in fact, it seems almost impossible, despite every effort, to keep it down. So long as the temperature of the air is normal there is absolutely no danger, but let something happen which will raise the temperature in a room, or lighten some of these fine particles of coal dust, and the explosive power of coal is demonstrated in an instant. The explosion seems to travel almost like a prolonged round of thunder. It may start from a given point and travel from chamber to chamber until practically the whole mine has been involved in a terrible catastrophe. The result is that the mine-workers are often burned by the explosion or are killed by the falling material dislodged by the shock. Instantaneous combustion of this kind uses up all the oxygen in a mine chamber, and the men are suffocated because the force of

the shock has wrecked both the fan and the power-house and, consequently, has shut off the supply of fresh air. After one of these explosions comes the noxious product of the discharge, and then the death-dealing work of the explosion is completed. Thus, in fact, is what occurred at the Menomah Mine. Practically every known device has been used to keep down the dust, to keep the temperature lowered, and to avoid anything that would start an explosion of this kind; and yet, as seen in the four recent disasters, explosions do occur, and are likely to occur, with even greater frequency in future. Many, in desperation, have demanded, 'Why?'

Coal is only a changed form of some other substance having virtually the same ingredients, as gases is only a changed form of coal. The principal ingredients of coal are fixed carbon and volatile matter, or gas. In some places the substance from which coal was made (originally decayed vegetation) had more gas than the coal could contain. Practically everything that decays gives off a certain amount of gas. All this fermentation was subterranean, and when the gas could not all be held in suspension in the coal it sought some outlet. In places it formed in river voids, hence the natural gas belts. Where the quantity given off, by the formation of coal or the fermentation of subterranean matter, was not sufficient to establish one of these larger river voids, the volatile matter, or gas, collected in smaller spaces known as gas pockets. The coal miners, in picking down or shooting down, his coal, quite frequently open one of these pockets, or, as they are known in the mines, gas feeders. If the air is not pure, it is quite easy to touch off this supply of gas and an explosion occurs. Where the quantity is comparatively small, and where there is no accumulation of coal dust, these explosions amount to but little. Given a larger amount of this gas, rushing suddenly into an enclosed mine-chamber, or given even a small quantity of gas sufficient to start a fire in conjunction with a large amount of coal dust, and we have one such catastrophe as that at the Naomi Mine of the United Coal Company in Pennsylvania.

It is, I believe, generally conceded that the lower we go into the earth the better the grade of coal. At least this is the natural assumption, based upon theological investigations. It is known that coal, having a comparatively small percentage of fixed carbon and a comparatively high percentage of volatile matter, will begin to release this gas the minute the temperature of the coal is raised, even though the fixed carbon does not reach the point of combustion. This, in fact, is the underlying principle of the manufacture of artificial gas. It is, of course, mere speculation, and yet it has a groundwork of reasonableness, that the pressure, or whatever you will, deeper down in the bowels of the earth originally raised the temperature of the coal formations and caused the substance to give off a large part of its volatile matter, retaining only the more valuable ingredient of fixed carbon. Thus it is that we find in the lower strata the more valuable grades of coal.

The gas, given off by the coal under such pressure, naturally could not rise to the surface, the obstructions being too great. It had to collect somewhere, and so in the early upheavals of nature it found lodgment in small pockets at a great distance below the surface. If the theory is at all correct that the deeper we go the better grade of coal we find, it is equally true that the deeper we go for coal the more gas we are bound to encounter. By the same process of reasoning it is very easy to determine that the deeper we go for coal the more danger there is going to be of gas and other explosives, and, consequently, the more dangerous becomes the mining of coal.

Another point established is this: the deeper we go for coal the more difficult it is to force fresh air down into the shafts, and, necessarily, the mine-worker has not only to contend with the greater obstacles presented by nature, but also the greater difficulty of those on the surface in providing him with the natural means to combat the greater dangers in the deep mines. It is for this reason that the statement was made at the beginning, that mine disasters are going to increase in number and in severity in future, rather than diminish, unless some new means be found for overcoming those natural difficulties. If we are going to continue to consume coal at the present rate, it will be absolutely necessary to meet and overcome these difficulties, because the upper seams are every day becoming more nearly exhausted, and the resort must eventually be to deeper seams. The question naturally presents itself: How are the people of the United States going to stop this tremendous loss of life and property?

There are three ways which have been adopted by some coal-mine operators. The first of these is a careful selection of the explosives used in the mines. Initially, in the use of explosives is found one of the most patent causes of mine disasters. Unfortunately, in the United States the study of mining has never been reduced to a science—that is, such a science as has come to govern the same production abroad. Our methods here are extremely crude. To the average miner and to even the average

The New Canal and Old Cape Cod

By REED CARRADINE

The Canal's Eastern Terminus

EMIT Cape Cod's seafaring and cranberry-raising folk, along with many of its historic spots and buildings. These cherished landmarks of American history are falling before the steam-shovel and gravel-train of the canal-builders, and the people living on the windswept acres of their grandfathers must move on. Every day further progress is made on the new Cape Cod canal. Work was begun last August for the much-needed improvement by William Barclay Parsons, the chief engineer of the undertaking.

The fame of the fearless fishermen and whalers who formerly inhabited this peninsula, which spread to every quarter of the globe, is even now a matter of history. The type disappeared and was succeeded by a generation of quiet, peaceful men and women who earned more in a single season by raising cranberries than their fathers could achieve on a five years' cruise. Now this generation must give way.

Along with many buildings connected with the early struggles of the Pilgrims there are also some celebrated modern buildings to be torn down in order to make way for the canal. "Gray Tables," at Buzzards Bay, which was the nation's summer capital during President Cleveland's terms, is one of them. "Gray Tables" is situated at the western extremity of the canal and soon will be torn down. A railroad station will be built near it, and when the canal is completed thousands of ships will pass annually over the spot where diplomats, statesmen, and politicians gathered and great public questions were decided.

A short distance from "Gray Tables," on Buttermilk Bay, is "Crow's Nest," the home of the late Joseph Jefferson. This beautiful house is directly on the line of the canal and must be demolished. The famous actor's grave, a short distance from the banks of the canal in the quaint old village of Sandwich, is far enough removed so that it will not be necessary to disturb his ashes. The old Perry homestead, built in 1632 by the ancestors of August Belmont, the president of the company which is building the canal, and which was for a considerable period the residence of the hero of Lake Erie, has already been destroyed.

The Tupper House, built in 1637, the oldest home on Cape Cod, which has descended in an unbroken line from father to son, generation after generation, with never a transfer or a mortgage appearing against it, will become khalid-wood. The great parking industry of the Swifts had its inception in the canal zone. Here in a picturesque little farmhouse, the several brothers composing that firm were all born, and Noble Swift, the eldest, still lives there.

The town of Sandwich, which is at the eastern terminus of the canal, was originally apportioned among the thirty-six town proprietors by John Alden and Captain Miles Standish. It is historic and quaint, and there are many points of unusual interest within its limits. Joseph Jefferson declared that he wished to be buried there because he considered it the most beautiful village he had ever seen. The appearance of the town is rapidly undergoing a change now, and will soon be unrecognizable to its admirers of another day.

It is a matter of sincere regret to many who love the Cape and

revere its history and traditions that in order to save the hundreds of lives and thousands of property which are annually sacrificed in navigating this dangerous and treacherous coast it is necessary to wipe out a place so picturesque. It is even more lamentable that the new conditions which must prevail on the peninsula will cause the disappearance of the simple and unadorned people who, though living in the State of Massachusetts, yet were never of it. But factories of various kinds are rapidly being built on the cranberry bogs, and the old residents are giving way before the coming of a more commercial and more ambitious population.

From the beginning of New World history the east and southeast coast of the Cape has been the graveyard of the Atlantic. Figures show that about twenty-five per cent. of the wrecks which happen on the eastern shores of the United States occur on this treacherous coast. Here never a gale blows but the inhabitants turn out in force and grimly watch the outer bar for the ships that are caught with a lee shore awaiting them. The bottom is covered with the hulks of hundreds upon hundreds of once splendid ships, and the bones of their brave sailors sink deeper into the sands with every tide.

This canal is virtually cutting Cape Cod at the shoulder. It will shorten materially the all-water route between New York and Boston, and enable vessels to avoid the hurricanes and fogs which are otherwise inevitable. This canal has been talked of for considerably more than two hundred years; but no intelligent or earnest effort was ever made to put the plan into effect until recently, when former Representative DeWitt C. Fleming obtained a charter from the Massachusetts Legislature and secured the cooperation of August Belmont, William Barclay Parsons, and John R. McDonald. On August 10, Mr. Parsons, the chief engineer, turned the first shovelful of earth, and the great undertaking was started fairly on its way.

The canal, which will have width and depth sufficient to accommodate the largest ships, will be twelve miles in length and will extend from "Gray Tables," Buzzards Bay, to a point near the town of Sandwich, on Barnstable or Cape Cod Bay. It will give a safe route to vessels of any size and in any kind of weather. It will be twenty-five feet deep at low water, thirty-five feet deep at high tide, with a bottom width of 160 feet at the narrowest part and a surface width of 320 feet at the same point. It is estimated that it will cost \$12,500,000, that it will require \$250,000 per year for operation and maintenance.

For operation and maintenance, and will be in full operation by 1910. It will be a sea-level canal, and ships will be able to pass entirely through in one hour and a half to two hours, thus saving six to nine hours on the voyage from New York to Boston. The saving in distance will be seventy-four miles over the Sound route, and one hundred and forty-two miles by the sea or outside route.

It is very hard to believe that a larger number of vessels round Cape Cod every year than pass any other one spot on the globe, yet the United States Light-house reports prove that such is the case. More than 40,000 vessels pass around the Cape annually, practically all of them 2000 and 4000 ships traverse the Cape Canal during the same length of time. The beginning of work on this public improvement has had a wonderful effect in stimulating public interest in ship canals, and it is now proposed to build a chain of inland waterways, which will furnish a safe channel for vessels of any size and type paralleling the Atlantic coast from New York Bay to Key West, Florida.

Many men who are acknowledged authorities on such matters assert that the only possible solution of the congestion in freight

William Barclay Parsons turning the First Spade of Earth

transportation lies in the construction of such a series of canals. The Cape Cod canal, the first link in this proposed chain of waterways, and the only one on which work has actually begun, is, because of its geographical position, the most important.

Tentative plans for this channel, as the only means of avoiding the dangers encountered on this coast, began almost with the Pilgrim settlement at Plymouth in 1620. The records of that colony show that in 1622 a party succeeded in getting a boat around the Cape, only to have it lost in Vineyard Sound. The year following, the settlers discovered that there flowed a river southward from Mansuet, an Indian town within twenty miles of

Federal government but for the fact that the Civil War put a stop to the undertaking. In 1884 the State of Massachusetts granted a charter under which for the first time work was actually begun, but the death of the man chiefly interested in the project resulted in work being abandoned, and the charter was allowed to lapse. In 1899 the Legislature granted another charter to former Representative DeWitt Clinton Flanagan, and it is in accordance with the specifications of this charter that the canal is now being built.

It is significant that when DeWitt Clinton gave to New York the Erie Canal his most intimate friend and closest adviser in this

The Swift Home

BIRTHPLACE OF THE FAMILY OF PACKERS

Steam-shovel at the Deerpont Cut

"Gray Gables"

WHERE PRESIDENT CLEVELAND LIVED

Plymouth, and the thrifty colonists established there a trading station, between which and the Dutch settlement at Fort Amsterdam there at once developed a brisk trade, which marked the beginning of the Boston New York water-born trade which has since grown to such huge proportions. The idea of extending this river not over two miles to the north, so as to make a continuous waterway and dispense with land portages, soon occurred to the thrifty colonists. Under date of October 6, 1670, Samuel Sewall records in his diary: "Mr. Smith of Sandwich rode with me and showed me the place which some had thought to cut for to make a passage from the South Sea to the North."

Initially, however, things moved slowly, and it was not until 1807 that a commission was appointed by the General Court of Massachusetts "to view the place and make report on the probability of effecting such a channel and what the charge of the same may be." So far as the records give evidence the citizens appointed on this committee have not yet reported, and the matter lay dormant until May 17, 1778, when another commission was appointed, who employed Thomas Marlin, the most eminent engineer of his day, who made a survey recommending practically the

project was Judge James Flanagan, the grandfather of DeWitt Clinton Flanagan, who has finally after more than two centuries of delay brought this new canal to a successful conclusion.

In speaking of his plans for the canal Mr. Parsons said to the writer:

"The plans that are under construction and which have been approved by the Joint Board of Railroad and Harbor and Land Commissioners of Massachusetts, contemplate a canal free from lock or dam. The law requires that the bottom width shall be not less than 100 feet, with passing-places twice as great, and with a minimum depth at any point at mean low water of twenty-five feet. In actual construction these dimensions will be greatly exceeded; in fact the passing-places instead of being three in number will be increased so that the canal will have everywhere a bottom width of 150 to 250 feet, and a surface width of 250 to 300 feet, depending upon the slope the banks will take. These dimensions can be compared with the bottom width of the Sag Canal of 147 feet, to the Kaiser Wilhelm Canal of 72 feet, and in the Manchester Canal of 170 to 200 feet; the depths of these canals vary from 25 to 30 feet."

The Tupper House (1637)

route which has been adopted by William Barclay Parsons, Mr. Marlin's work on the canal was interrupted by General George Washington, who wrote to the chairman of the committee: "The great demand we have for engineers in the War Department has obliged me to send Mr. Marlin hither to assist in that branch of the business."

Commissions were again appointed and surveys were made in 1791, 1818, 1824, and 1831, when the project again languished until 1899, when the Congress of the United States appointed a commission, and a canal would probably have been built by the

Work was continued on the canal until December 10, when further operations had to be suspended for the winter. As soon as the weather will permit the work will be resumed next spring. Four immense hydraulic dredges, which are now being specially constructed for this purpose, will be put to work, two at either end of the canal, and will go through on their own power. The soil, which consists almost entirely of sand and gravel, will be used to fill in the swampy marshes. This converting water land into valuable real estate, Mr. Parsons says that the canal will be entirely completed and in full operation by the fall of 1910.

OMERY FLAGG

The Way of the Waiter

By
ROBERT SLOSS

ILLUSTRATED BY MAY WILSON PRESTON

W.W.P.

FROM the table just behind there came the rasp of a chair, accompanied by a snarl of rage. A waiter had spilled a glass of water over a neat old gentleman.

"I glanced from the irate victim into the face of my own waiter who was looking on with his peculiar smile, half appreciative, half contemptuous. He leaned over my table confidentially.

"You couldn't drive that old fellow away with an ax," he said; "he likes the place too well."

Fortwith he was off with that peculiar stride of his, emitting a sort of dignified dispatch; and I felt to myself, why I too, like the outraged old gentleman, would be hard to drive from the little subterranean café.

It was Joseph! I watched him bringing my coffee with that virtuosity he always employed toward me. It was undoubtedly Joseph! He was remarkable. And I reflected, he had come to be one of my familiars—in a way—in many more ways than in anticipating the crochets of my palate. Joseph knew me better than many a man to whom I had unbosomed myself. And yet, I had never even had to explain myself to Joseph. And, it occurred to me, Joseph had never explained himself to me. There was an undoubtedly something about him to be explained. He was possessed of an intelligent reserve singularly detached from his occupation. Although I had often admired, I had never penetrated his impenetrable philosophy.

"In your business, are you never discontented, Joseph?" I said. "Always," he replied; "but I can't afford to show it. I've had to get over that. I'm a waiter."

"But that is a worthy calling, Joseph."

"It's worth just as much as I can make out of it and no more," he said, dextrously wiping the polished table. "I might just as well be a second-story operator; that's a gentleman's business compared to a waiter's."

"But yours is an honest business, Joseph."

"Like lots of other jobs that depend on graft; but it's the only job where the way you get yours keeps you all 'round."

When I looked up with another question, he had effaced himself in that sudden way of his. He was truly remarkable! How could he remain to become so proficient in an occupation he obviously despised! And why did he think so ill of it?

"It's all due to tipping, you see," he said at my elbow, as if in answer to my thought. "It cuts a waiter off from the rest of mankind, stamps him as a grafter; and he knows it if he has any brains."

"He could change."

"No," he interrupted; "it gets a hold on a man. Once he is assigned, he becomes defiant, and then he begins to find his satisfaction in the very thing that unclassed him. He works for tips, and soon finds that he makes more money than he could at any other business he can get into. That's my case."

Joseph had forgotten some of his reserve, and as it was late there was nothing to interrupt him.

"That's why the waiter seeks his kind," he continued. "That's why he has his own clubs and organizations, and what is more to the point, formulates methods for getting tips."

"Not of unsocial high-waymen, eh?" I said.

"No, of course not. I can carry the personal interest so far," he continued. "There was Earnest, he had built up a trade of good regular tips. He came in about this time one evening and called for a certain meal. Earnest used to let him do his own

"Well, it's only self-protection," he rejoined. "The whole world's against us on that score, and although even Uncle Sam allows his traveling officials a certain amount each day for feeding porters and dining-car waiters, we have to keep up a running fight with 'tip-diggers.'"

"But it's the way some thick heads do it that brings us all into disrepute—that stout of Duv's there, for instance. That old fellow's been coming here for months and never gave any one a tip. Of course, after the first time, word was passed to every waiter in the place, and so he got the worst kind of service. But he just kept changing tables, and finally complained to the boss. Every one in the place got a raking over the coals. So you see what Duv's did to get out of him."

"He don't use good judgment, though. He could just as well have crumpled his table with strangles, kept him waiting, served stuff as cold as possible, and cut down on extra larder and other things. Old men, pig headed enough to defy a crowd of waiters, are sure to be facetious in other things, and it would make him more uncomfortable in the long run than spilling water on him. And then the boss couldn't kick."

He fell to straightening the chairs absently, as one who remembers many things learned only from experience.

"Is it often necessary?" I asked.

"Not here," I replied. "Most of our waiters are experienced enough to get what they want by diplomacy."

"Instruct me in the diplomatic code, Joseph," I said, trembling lest he grow non-committal again; "for you certainly are an adept at its application." I think he penetrated my subterfuge, but he was minded not to deny me.

"Well, showing personal interest in your customer is what pays in the long run," he began. "I don't care who he is, he likes to think that the waiter remembers his particular tastes. For instance, in comes a regular. 'Ah, Mr. Second-o, you greet him enthusiastically. I was just thinking of you; get your favorite dish tonight—lobster à la Newburg, and prepared just as you like it.'"

"Probably he'd rather have corned beef and cabbage, but he enjoys being singled out and publicly stamped as a favorite patron and a high liver. Men are as fond of beer and cake reputations as women are of department-store deference."

"What if your man is too quick for you and orders something he's had in mind?" I queried.

"Then," he said, "it sometimes pays to advise something else. Even if it is laborer. It proves your interest in his welfare. It helps in two ways, because maybe the dish he ordered is standing short, and there are instructions to work off what you suggest."

"Liable to slip up if you don't know them well?" I inquired.

"Not if you use ordinary judgment," he said, with finality. "You can pretty near tell the kind of stuff a man likes to eat. Suppose one of those lean, lanky chaps, who always wear high

chokers pushed open in front to make room for their Adam's apple, come in and brandish off his chair and table, when he thought no one was looking. Do you think I'd offer him green-turtle soup? But you bet I never try to anticipate

his order on the stout old boy with the red face, who's just beginning to get laid—you know the kind; he hasn't got everything, including rattles, figured down to a system, like the other fellow."

"I began to wonder how my portrait was marked for identification in Joseph's regrettably glib."

"Of course, you can carry the personal interest so far," he continued. "There was Earnest, he had built up a trade of good regular tips. He came in about this time one evening and called for a certain meal. Earnest used to let him do his own

The waiter had spilled a glass of water over a neat old gentleman

ordering because he was unreasonable. Well, he told the man he wouldn't advise him to have what he ordered, as it was not fresh-cooked. This was repeated on four dishes, and the man was puzzled. "Look here," he said, "what would you advise?"

"Well," said Earnest, meditatively, "come to think of it, I wouldn't eat anything here to-night; it's kind of late." The man was grateful; you could see that—his tip proved it. In about five minutes he got up and left quietly. Earnest followed, but not quietly. The boss had overheard him.

"I know by the way you nod your head you think it's pretty hard on the public. Suppose every waiter here got a regular salary with no chance for a tip. Do you suppose he'd be jumping hurdles for a lot of fussy people, all kicking about better things than they get at home? Do you think he'd present the glad smile to those he'd like to choke, break his neck making everybody comfortable, and then listen to their hard-luck stories or more painful facts? No, sir; he'd serve the stuff just as he got it from the kitchen. He wouldn't go back and fight for tidbits and extra-hot food. He'd be in a hurry to serve any one and pile up work for himself. The customer would wait because the waiter wouldn't; and probably he'd never come back, and that's where the owner would lose."

"It must take great ingenuity to make the system pay," I mused. "It does," said Joseph. "The stupid waiter stories. Do you know that in order to keep good waiters the cheap hash-slinging joints have to pay higher wages than the swell restaurants? There's not the opportunity for tips in the cheap places, and the waiter must follow opportunity like a blind of prey. He simply has to be clever enough to get tips, and he has no social standing to make him bashful. There are two methods: one is to get them spontaneously, the other to force them out. Most people tip only because they're ashamed not to. I make out better with the first method, especially in a place like this, where most of our patrons are regulars. It isn't the regular who does the complaining; he knows, and saves the exertion."

"Which stranger's it's a gamble. It may be a little party, and the things they order gladden your heart with anticipation. You try to be a gentleman with the service, and then at the finish you get nothing—or maybe a dime. You can't complain, you'd be discharged. But there are ways. You can't blame a waiter who is lunched if he administers a rebuke in a dignified way, such as: 'Ah, sir, you've forgotten a dime of your change.' Or he can call his helper, and without a word point to the coin for him to remove."

"Some waiters don't like parties, but I do. They're either very good or very bad, according to the way you handle them and the judgment you use in selecting them. If they don't tip liberally, it's best to lose to the waiter, because they lead around, and keep him from serving other live ones. It isn't the habitues of the big restaurants, or the after-theatre parties that come night after night with a big flash, that do spectacular tipping. They're used to the game. It's the party from Okla., in town on a visit, or the young clerk showing his sweetheart a good time, that produces the big tip. Their friends to the very know him to do the thing right. It's a wise waiter that stands in with his head-waiter, even at the cost of his prerogative, and has those parties stored his way."

"Those are the prices of the profession that even up things for you," I suggested.

"Yes, but they never can make it even at that," he said. "Take this through and through, it's the waiter who gets the worst of it. The customer puts up his tip after he knows what he's had; whereas the waiter may work like a horse, and even invest money, and then lose out altogether."

"Invest money?" I said, surprised.

"Certainly; you don't suppose a waiter can hustle up a quick order in a swell restaurant or in one of the big seaside resorts, unless he gives up to the cooks. Take you don't let any rascals slip, either."

"Most order cooks always have straws and chips and things cooking at the rush hours for special emergencies, but you don't get them unless you tip the cook according to schedule. Otherwise your stuff goes to the fire in its regular turn, and you wait. Well, it's up to you to do a little gambling on human nature. Sometimes, until you get experience, you'll lay out forty or fifty cents because the host of the party was in a hurry, wore diamonds, and was talking private yachts and trips to Europe. When they leave the fellow hands you a quarter, and of course you can't call it to his attention that you've been swindled."

"No, sir; give me the chips with big initial seal rings on waiter's fingers, whose brand new clothes and painful-looking collars remind you of 'up State.' Especially at the big seaside restaurants they struggle in bashfully, and the waiter who catches them first and pushes them to a table is treated with deep gratitude and respect, and usually ad dressed as 'sir.' I've seen waiters fight over such parties until the head waiter gives them to his best friend—the one who divides with him most generously."

"Of course, this party of, say six,

is dazzled, fascinated, helpless. All they can think of are steered oysters or ice-cream, or something which they suspect is wrong here, having got a Sunday-newspaper education in preparation for the trip. And so they thunder until the waiter takes a hand."

"Stinks," he suggests.

"Yes," gasps the relieved man, "six of 'em!" never suspecting the size of the portions. And so they go through the bill of fare clerking off a separate order for each one."

"And now," says the waiter, "in order to save time when you get your bill, you should mark down each item as you order, and count it up in advance! That's a reasonable suggestion."

"On his way to the kitchen, the waiter suddenly realizes that to order all that food would be wanton waste; so he orders just half as much. Then out of sheer kindness, and in order not to litter the table, as he explains to the guest, he carries the steaks and serves them and the sides from the pantry. Everybody has more than enough, and as the host has counted up what he owes according to the scheduled prices, he usually hands the amount to the waiter to pay the bill for him."

"But suppose he demands the official bill?" I objected.

"In that case," said Joseph, "it's up to the waiter to handle back get three more complete orders, and have them added to the bill. Then he shoves the stuff aside for future disposal, and carries back the completed bill for his. Of course, it is only a dishonest waiter that will go so far. A man that saves waste is entitled to something, but not

half, besides it's getting dangerous."

"Are there many opportunities for that sort of thing?" I asked.

"Summer-resort jobs are still pretty good, but not like they used to be, since the proprietors are playing for the goodwill of their patrons and don't care how the waiters make out. The real places for quick money are the big public halls in town. You see, some of the union-keepers whose places are rendezvous for waiters for the privilege of supplying men for the ball. There are applicants for every vacancy, and if you want your name on the list, it's necessary to make a bid with the union-keeper by spending in his place. As that list never goes through till the last day, there is always considerable competition at the bar."

"Of course the waiter gets a small fee for his services, but if he depends on that and the straight tipping to even up what he has invested, he'd probably be a heavy loser. Why, then, does he want the place so badly? He's going to wait on 'wise ones' so, obviously, he can't extract money by ordinary methods of the craft. But there is going to be just as much competition among the 'high rollers' as there was among the waiters to get the job. After midnight every man in the place starts to buy wine at once. Then opens the harvest for the waiter and the checker he is working with. It used to be that imitation champagne in convincing-looking bottles was safe to serve, but smart the wine agents got on it's own different. Now they get the real wine, but they pay for it twice."

"You've seen these joggins parties where there were bottles all over the table, and you've also noticed that the waiter continues to carry away bottles to make room. But he don't carry away empties, you bet, because two half bottles make one full, and when it's properly shaken up and the cork removed at a safe distance from the table, Professor Wiley himself couldn't tell the difference. You see, figure that with several tables like this going, it don't take long for a waiter to gather a considerable hunk rill."

"But one can't depend on these occasional grabs; it's the regular source that counts, and a wise waiter gets in a good place and builds up a regular trade as honestly as he can."

"Yes," I said; "and you seem to have a lot of friends. I've often wondered why you—"

"Please don't!" he said quickly, in an appealing tone. "I've always figured you in a different class."

Fearing I had offended, I hastened to explain that what I wondered was how he managed to become more popular than other waiters.

"Oh," he said in evident relief; "I thought you were going to ask why I don't start a restaurant of my own. That's one of the favorite jollies the duffers have for getting the extra dishes to that a waiter can put on the bill or not, as he sees fit; and to do that, they'll greet you like a brother, inquire after your wife and baby, and display the deepest interest in your welfare. But outside they're different—very different."

"It didn't take me long to learn how popular waiters are out of restaurants. My first real tip came from a young fellow who struck up such a strong friendship with me that he never thought of hurting my feelings by offering tips. He belonged to one

He doesn't carry the bottles away empty

Every one starts to buy wine at once

card cloth uptown that was going to give a dance. After he learned I had to work on that particular night, he invited me to attend, and left a card of admission. Well, it happened that I got off, and being young, I put on a dress-suit and hurried up to the dance.

"Even yet I hate to think of that night. By and by it began to strike me as queer that I couldn't get near my man in so small a hall; and then it suddenly dawned on me that there were others there who knew I was a waiter, and he didn't have the nerve to either greet me or turn me down. But he convinced me that I was a social outcast."

"Still, among people who didn't know your business—" I began.

"You're wrong," interrupted Joseph; "a waiter can't possibly adopt Jekyll and Hyde methods. The first summer after I was married, the proprietor's wife wanted mine to go with her to a swell hotel up in the mountains. I was making good money then, so off they went. The boss and I used to run up from Saturday to Monday. Somehow or other I became very popular among the gentlemen, who understood that I was in the restaurant business and took it for granted I owned one."

"One day I dashed out of the pantry with a tray of dishes, and before I had time to notice, I was unfolding them at a table at which two of my swell hotel friends had taken seats. I had been playing billiards and bobnobbing with them the previous evening."

"But if I felt bad, they felt worse, and even harrowed their souls by offering me a tip. But as I was done with someone, I took it and sent it on a telegram to my wife in the hope that she could leave the hotel before they got back."

"The boss took it to heart and offered to make me manager at twenty-five dollars a week. Dignity is a good thing. But I can make easily twice as much as that this way. No, you see, I am still a waiter."

"I had been playing billiards and bobnobbing with them the previous evening"

Mr. G. A. Redford, Play Censor

FORTY PLAYERS-HITS UNITED IN A PETITION TO ADDRESS HIS OFFICE. THE FIGHT WAS BROUGHT ABOUT BECAUSE PERMITS WERE NOT GRANTED FOR THE PRODUCTION OF "WASTE" BY GRANVILLE BARBER, WHO HAS BEEN CHOSEN AN DIRECTOR OF THE NEW THEATRE IN NEW YORK CITY

THE MOST ABUSED MAN IN ENGLAND

GREAT BRITAIN possesses an interesting survival of antiquity in the person of Mr. George A. Redford, the official Examiner of Plays. Not only an official of the Lord Chamberlain's household, Mr. Redford could in fact shut down every theatre in the land by the mere process of withholding his authorization for the production of new pieces. Mr. Redford was for many years assistant to Mr. Neville Paget, the late Examiner of Plays, a man who was equally abused, but his death Mr. Redford succeeded to the duties of the office. He is accused of having graduated to his present position from that of bank clerk, his accuser being George Bernard Shaw, one of the most implacable adversaries of the Examiner, whom he regards as the original Devil's Disciple.

It is possible that this galling dramatic censorship will be removed within a reasonable period of time, and the performance of all plays permitted which do not come within the scope of the police laws. For the purpose of effecting this change a petition has been recently addressed to the government, signed by all the leading playwrights. It is indeed difficult to discover any sane reason for retaining a dramatic censorship, an office originally established during the eighteenth century for political purposes. Nevertheless, there is a vague feeling abroad that the public morals must have some publicly constituted defender, and this many other authorities. Mr. Redford may long retain his office in spite of reason. Among the few defenders of the censorship is Mr. Bram Stoker, for many years manager to Sir Henry Irving. He recently advocated its extension to books as well.

Besides being the most abused man in the world, Mr. Redford is prohibited by the government from making any public defence of his actions. It is generally understood, however, that plays are prohibited which either deal with persons prominent in public life, expound Radical incidents (as Oscar Wilde's "Salome," which came under the ban), or are contrary to good morals. With the first two conditions playwrights separately assent; it is with Mr. Redford in his capacity as moral champion that they find fault.

Why, they demand, does he ignore adaptations of amusing French farces which would not be tolerated on the American stage; why did he tolerate a piece of stage play in Mr. Pinero's "A Wife Without a Smile," which had to be cut out before it was produced in Broadway, when he is so squeamish at plays such as "Mamma Yama" and "La Vie Parisienne"? Attempts made to discover some of these in Mr. Redford's decisions are invariably met with a refusal to assign reasons. Harassed by incessant attacks which he may not refute, this unfortunate gentleman has become a bureaucratic gargon, unflinching in his protection of the morals of his countrymen.

Germany's Ireland

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

THE Germans and the Poles are at odds once more. Prince Bismarck has taken another bold stroke along the road planned and surveyed by the Iron Chancellor. He has introduced in the Prussian Diet a bill devoting \$100,000,000 to the compulsory expropriation of Polish landowners in the eastern provinces. The bill has, it is true, gone nearly for the moment in the committee to which it was referred. But it will, of course, emerge. The check is only temporary, an affair of details, not of principle. German policy

is not about to retrace its steps: there are no signs, either, of weakening or enlightenment. The \$100,000,000 demanded by Prince Bismarck, in spite of the insatisfactory condition of the Prussian finances, will be granted and will be applied to the purposes for which he has demanded it. Prussia takes up her Siegfried task once more; a government renews its fight with a people; a system, a policy, plunges again into the old, barren, and hopeless struggle with a race and all that a race holds dear. It is an amazing spectacle. Were it not for the example of Ireland, one would call it an incredible spectacle; and even Ireland has produced nothing quite like it since the days of the great confessions and of the organized planting of English colonies. In one most vital aspect the Irish situation is, indeed, at this moment the reverse of the Polish situation. After seven and a half centuries of struggle for the land the British government has practically owned itself beaten, is helping to buy out the descendants of those whom it quartered in Ireland as a British garrison, and has passed a gigantic measure of appeasement, handing back the soil of the country to its original owners. In the Polish provinces of Prussia, the government is pursuing an exactly opposite policy. So far from abandoning the Prussian garrison, it is determined to extend it. So far from relinquishing the field to the Polish proprietors, it is more than ever bent on owning them in favor of German settlers. So far from being convinced that the attempt to Germanize the Polish provinces must end in failure, it is now prosecuting the attempt with renewed vigor and on an ample scale.

"I owe it to the labors of my forefathers," said the Kaiser, when he paid his state visit to Posen six or six years ago, "to see to it that this province shall remain irrevocably bound to the Prussian monarchy, and that it shall ever be a Prussian and good German." That has been the twofold aim of Prussian policy, since the partition of Poland became an accomplished fact, and in part, the most important part, it has succeeded. That is to say, no one doubts that the provinces of Posen and West Prussia, where the Poles predominate, and of East Prussia and Silesia, where large districts are exclusively Polish, are, in the Kaiser's words, "irrevocably bound to the Prussian monarchy." In that sense there is no real "Polish danger." The Poles, of course, are inactive dreamers and agitators. They still fondly imagine that some day, somehow, their ancient kingdom may be resurrected. But the mere fact that, before that ambition can be realized, not Germany alone, but Russia and Austria as well, have to be not only conquered on the battle-field, given the measure of its hopelessness. The dream of a reconstituted Poland stretching from the Black Sea to the Baltic must always, so far as human foresight can penetrate the future, remain a dream. Even supposing a revolution in Russia, a great racial explosion in Austria-Hungary, and some great upheaval in Germany, it is impossible to conceive that the ancient Poland, whose glories the poets and orators are never tired of chanting, could be welded together again into a political entity. To that extent Prussian policy has, doubtless, secured its main end. It has "irrevocably bound" those parts of the ancient Poland that fell to the share of Prussia to the empire of Prussia proper. But the further object which the Kaiser mentioned, that of making the Polish provinces "good Prussian and good German," is far more difficult of fulfillment. Nor has it been fulfilled. The Polish provinces remain to this day good Polish and good Slav; and the effort to Germanize them is what constitutes the somewhat sorry tale of Prussia's policy along her eastern frontier.

It was Bismarck, twenty-one years ago, who started the fight against the Poles by expelling some 50,000 Polish farmers who had flocked over the border from Austria and Russia. It was a shrewd blow. The consequent scarcity of agricultural labor ruined hundreds of the great Polish landowners. Their estates came into the market. Bismarck promptly appointed a Committee of Colonization, provided it with \$25,000,000 from the public funds, and ordered it to buy up all the Polish estates it could lay hands on and parcel them out among German peasants. When the \$25,000,000 was exhausted, another \$25,000,000 was ordered. Altogether over \$116,000,000 has been spent by the Prussian government in colonizing the eastern provinces. With this sum between 90,000 and 100,000 Germans have been settled in the country districts, and between 40,000 and 50,000 in the towns. Over 250 entirely new villages have been established, and nearly eighty are at this moment in course of construction. The example of these imported settlers has had an enormous influence for good on their Polish neighbors. The dreary and squalid disorder that characterized the

Polish rural communities of a generation ago has disappeared. Agricultural methods have been radically improved. There has been a great industrial revival. The whole standard of living in the Polish provinces has enormously risen. The spendthrift nobility that used to waste their substance in Paris and Warsaw are to-day hard-working patriots, who are in the van of the fight against German predominance. It is said that within the last forty years the wealth of the Polish sections of Prussia has been quadrupled. A Polish middle class, drawing its means from the best-sugar factories, the iron, coal, and salt mines, has sprung into startling existence. Few districts in Europe, indeed, show a greater material and social advance than Prussian Poland has accomplished during the past generation; and a large share of the credit of it must be set down to the benevolent prudence of the Prussian government in seeking new openings for German farmers and artisans, in building villages, roads, and railways, and in conducting on so vast a scale a state-aided scheme of exploitation.

But these, of course, were only subsidiary objects in the Prussian policy. Its key-note and raison d'être were neither social nor material; and it is precisely on its political aim that it has broken down. The Poles have met the German invasion by banding themselves together under the leadership of their nobles and their priests, and building up an extensive system of land-banks, whose purpose, of course, is to buy up estates and divide them among Polish peasants. There has thus been generated a powerful competition between the Prussian government and the Polish land-banks for the possession of the soil. The inevitable result has been an immense increase in the value of land. Governments always buy dear, and the Prussian government, though more business-like than most, is no exception. The Polish land-banks, on the other hand, have always been able to purchase at the lowest price. The imported German colonist therefore starts at a serious disadvantage. Whenever he settles he is remorselessly boycotted by his Polish neighbors, who, being used to a thriftier and more frugal style of living, prove irresistible competitors. The result has been that for every acre purchased by the Prussian government from Polish landowners, it has bought two acres from German landowners. In the last twenty years the Poles, through their land-banks, have formed more homesteads than the Prussian government has been able to form with all the resources of the state. The Poles have bought more German estates than the Prussian government has bought Polish estates. The result, therefore, is a drawn battle, it is a positive victory for the Poles—a victory which they are steadily pursuing beyond the confines of the old Prussian provinces.

But it is not only through the land alone that Prussia has sought to strike at the Poles. In dealing with them, as they lie on her eastern border, over two and a half million strong, she has duplicated all the mistakes England has committed in Ireland, and all that England would have committed if the Irish still spoke Gaelic. She has conquered, confiscated, and partitioned. She has tried coercion, and she has tried concision. The Kulturkampf showed her little if not her desire to respect the Polish religion, rather than to suppress it. A whole series of enactments has been aimed at the Polish language. There are, indeed, degrees of unquenchable and pettiness in Prussia's policy towards the Poles to which even the English, in their government of Ireland, have never stooped. The Germans have many admirable qualities, but tenderness towards those who are in their power is not one of them. They delight to prod, bully, and annoy. One hears accordingly of Polish children being forbidden to speak their national tongue within the precincts of the public schools, of Polish newspapers refused a place on the railway book stalls, of letters addressed in Polish delayed for days by the postal authorities, of boys and girls severely punished for wearing colors of the national colors of a Polish patriotic badge denied to Polish meetings, of Polish children flogged by government officials for saying their catechism in Polish instead of German. None, no doubt, it will be a crime for a Pole to own landed property, or to publish any newspapers without a German translation, or to seek admission to a university or the public service, Germany is obliged, and German tradition, laborers, doctors, and lawyers are settled in the midst of Polish neighborhoods, and preference in official contacts is systematically given to German leaders. But the Poles remain undismayed and unrecruegent. They are more polite than their rivals; they have a complete command of all the arts of agitation; they hold together more firmly even than the French Canadians in Quebec; their rise in industry, agriculture, education, numbers, wealth, the arts and sciences, has been one political marvel. The racial impulse, touched with the modern spirit of cosmopolitanism, and welded by Catholicism, gives them a driving power that the Germans in the long run will find themselves unable to withstand. Meanwhile, they remain the Irish of the Continent, brilliant, fascinating, indomitable, swiftly kindled by an appeal to their emotions, unhappy, oppressed, stung with a hopeless national ideal, indomitable. It would take little to make them contented, but that little is beyond the German imagination. Like the English in Ireland, the Prussians prefer a hot and toll-free union to an equal and fruitless union. There is the stupidity against which the gods themselves fight in vain.

New York's Gretna Green

ITS ROMANCE AND ITS PASSING

By KATHERINE GLOVER

NEW YORK has lost its Gretna Green. Dr. George C. Houghton, pastor of the Church of the Transfiguration, more famous as "The Little Church-Around-the-Corner," has inaugurated the custom of reading the banns of all couples that come to him to be married. In consequence, the little lawn church in Twenty-ninth Street will no longer be the scene of romantic runaway weddings. The stream of fluttering, frightened couples that used to turn in at its gateway has already slackened. Impetuous pairs

that one time hurried there pause now before the prospect of that reading amid the hushed silence of the Sunday morning congregation.

For years past each day has brought its procession of couples of every kind and type, the poor and the rich, the obscure and the famous, to the Church of the Transfiguration. Almost any hour of the day, from early morning to late evening, found a timid, wistful pair awaiting the benediction of the rector. It came to be the tradition that it was easy to be married at the Little Church-Around-the-Corner, because the newspapers were always recording some wedding solemnized there. But the many that went sorrowing away were never recorded, and it was only by experience that some learned that it was not so simple a matter after all to meet the requirements of the marriage service at Dr. Houghton's church. First there was a long and solemn blank with many searching and far-reaching questions to be filled out. And the rector, grown wise through long experience in detecting the look of the runaway or any suggestion of secrecy, sometimes had many serious questions to put besides those of the blank. Of the many that called upon him to be married, not all were chosen by any means. Even when the blank was astoundingly filled and the supplementary questions answered without flinching, couples were sometimes sent away. Every month recorded an average of a hundred would-be brides and grooms that the "marrying person" would not marry.

Only recently there came to the church a couple older than the usual couple in the daily procession. They received one of the regular marriage blanks to fill out, and to all its questions they wrote satisfactory answers, and replied unhesitatingly to the rector's own cross-examination. Dr. Houghton finding no possible

barrier, the bride and groom with their two witnesses were led into the little oratory in the home of the rector and the marriage service was begun. The minister, holding the marriage blank closed in the pages of the Bible, put the never-omitted query, "Do you solemnly swear that all the questions herein asked are truthfully answered to the best of your knowledge and belief?"

For a moment there was a tense silence. Then the man spoke: "No, they are not answered truthfully. I am a divorced man. I cannot go on with this service. As long as it was a matter of signing a blank and of replying to your questions I could do it, but when it comes to swearing to a lie on the Bible, I cannot."

The service ended there, the rector never swerving from adherence to the rule of his church forbidding the marriage of divorced persons. That was not the sole case of his kind. In the years of the present Dr. Houghton's rectorate the same occurrence has been repeated a half-dozen times. It is because of such cases, and because of a conviction that many young persons prevent themselves to him to be married without sufficient thought and without the knowledge of their families, that Dr. Houghton has resorted to the expediency of reading the banns of all couples that are married now in his church. It is with a heap of making young people

think a little more seriously of the tie that is to unite them, and of lessening the number of secret marriages. The rule of the banns is not avoidable, of course. Where there are arguents or convincing reasons for a marriage being solemnized without the delay involved in a formal reading of the banns, the rector acquiesces, and a dispensation is granted. But this seldom happens, and in most cases the custom holds. The new decree has checked the tide of those that came wishing to be married at moment's notice. The impulsive brides and grooms and the runaways no longer turn to the Church of the Transfiguration, but to the homeless couples of the great city the Church of the Transfiguration with its hospitable reputation, in a favorite place to wed, and to them the reading of the banns will be no barrier, adding only a note of additional reverence. The little lawn church bears the stamp of a noble heritage. Stories and romances have clustered about it as thickly as the ivy that clamber along its walls. Shut off by the tall buildings that hurdle closely in its neighborhood, it has saved for itself a bit of garden space that protects it from the too close intrusion of noise, and some splendid old trees that have stretched their arms in loneliness over many a shy couple. With its playing fountain in the yard and its quaint bridge and general air of aloof quaintness, it seems more like some little church in an English village than a scraping tenement and ambitious towers, and the exterior seems to merit the name "little" that is always applied to it. Within, the church ramifies far to the north, to the east, and the west, with old wings and unexpected turnings that make its capacity very large. There is a mystic haze of purple over everything. The light streams in through deeply tinted stained windows, such

The Interior of the Church of the Transfiguration, which has witnessed the Beginning and the End of many Romances

with its story to tell. As the church has ministered in life to men and women of every kind and calling, so in death it bears some memory of those associations. One of the most impressive of its pictures in glass is of a silent, meditating Bonito, exquisite in soft melting tones of purple and red, a picture by the artist Edwin Booth erected by the Players Club; and another, of almost equal beauty, representing a pikeman marching onward, is a memorial to Harry Montague, the actor.

The association of actors with the church is especially known because there is the element of the unusual and the picturesque in the tie. But of the half-hundred or more persons that come to the rectory doors for a night's

"The Little Church-Around-the-Corner," in East Twenty-ninth Street, New York, which has long been bound up with the City's most intimate history

lodging, little is known, as of the poor and the destitute, the homeless and the sick, that seek it, and those who come desperately for a place to rest their dead.

From the day the church came to life in 1850, under the rectorship of the Rev. George H. Houghton, who conceived the idea of it, and of whose aid and spirit it was born, the Church of the Transfiguration has stood for unquestioning welcome to all who came in the right spirit. The incident that gave it its name of the Little Church Around the Corner and endeared it to the hearts of the stage-folk is almost too well known to bear another telling, but its interest never grows old.

It was back in the summer when George Holland, the actor, died. His wife had been accustomed to attend a small church at the corner of Madison Avenue and Twenty-eighth Street, the Church of the Atonement. Joseph Jefferson, who was a warm personal friend of the actor, offered to go to the rector in behalf of Mrs. Holland and make arrangements for the funeral. When he had consulted the clergyman the latter regretted that he would have to refuse burial to an actor, as he could not stably himself in the minds of his people when he had so often preached against the stage and the actor's profession.

"But what am I to do?" asked Mr. Jefferson in despair.

"I think," the rector answered after a moment's pause, "there is a little church around the corner that might be willing to undertake the service."

"It will be a great honor to that little church," answered Mr. Jefferson, with a bow to the minister, and he made his way to the Church of the Transfiguration. There he found the rector, and soon made all arrangements for the funeral. Just before leaving, Mr. Jefferson, with some of that hesitancy of his Van Winkle when he found himself unrecognized by his old associates, said to Dr. Houghton, "My friend was an actor."

Dr. Houghton answered gravely, "I don't know why I should be told anything except that your friend needs burial."

The incident, in happening to a man like Mr. Jefferson, was like one of those seeds sown on good ground. He told it with great warmth to the first person he met and to many others. The story got into the papers, and so the link was forged that bound the people of the stage world to that little church around the corner. It has held through all these years. On the death of the old rector in 1897, his nephew, Dr. George C. Houghton, who fills his place, accepted the inheritance and holds out the same welcoming hand to the men and women of the play world. Yet the Church of the Transfiguration is not a church made up of actors and actresses, as some have supposed.

The idea never came into the association of the church with the stage as illustrated by an incident that happened not long ago. The rector was just leaving the church one day, after a service, when he met a woman in the vestibule of the church.

"Are you Dr. Houghton?" she asked.

Answering that he was and inquiring what he could do for her, the woman replied very earnestly: "I want to see you about a communique I have composed. It is the best ever presented to the stage. I thought if I brought these samples to you: I producing some hours from the depths of a black bag" that you would tell your congregation about it, and that would build up my business."

She was plunging into a dissertation on the merits of her commodity, when the rector, smothering a chuckle, interrupted.

"Maudie, if you will come this way," he said, "I will introduce you to our prima donna"; and he led her to a little room where a very grave old lady, who was one of his strongest allies in the parish work among the poor, was seated at a desk hearing the pleas of some foreign petitioners. To her he introduced the communique of the excellent communique, adding, "Mrs. F., this lady has an article that you may be able to distribute to advantage among your dancers and actresses."

Then the rector wisely withdrew.

THE MINUTE-MEN OF THE COAST

By LARKIN G. MEAD

THE saving of a quarter of a million lives along this country's coast has just been credited to some fifty men, as the result of a year's vigorous work in the solitude of the shore rocks and reefs. The eye of man seldom sees the Audubon warden as he plods his stormy beach, the focus of thousands of eager, trustful glances; yet the water-fowl over whom he watches number 250,000 more to-day than they did a year ago. That many human lives have been saved by the faithful services of these sea-birds as scavengers of the whole coast region is a fact which has long been recognized by sanitary scientists.

The record of this last year of bird husbandry on the breeding-grounds of the American coast lies to-day in the shape of a little pile of well-thumbed and pressed report blanks, down at 141 Broadway, where the National Association of Audubon Societies has its headquarters. The results of their day and night of beating up and down the shore and we have been scrawled into the cramped formulae of a dozen questions by the coast wardens. The rest of the story is known only to rare visitors on their steam-beaten stretches—and to the birds, whose ancestral homing-grounds they guard. The advent of storm tides, the equally disturbing visitation of human destroyers, and even estimates of the eggs laid, the young reared, and the increase or decrease of each species of their bird families are set down with brief, blunt comment by these shepherds of the sea flock.

The exacting work of covering sea and shore in every weather demands of the Audubon warden the sternest qualities of soldier, guide, scout, and hunter. These men are in fact picked from just these classes for their added qualifications of patience, gentleness, and sympathetic knowledge of bird life. Many of the guardians of the rocky Audubon reserves off the New England coast are veteran lighthouse tenders or captains of life-saving crews. Others are guides and trappers of lifelong experience and local reputation. It is essential that each should know every inch of his territory as well as how to traverse it with speed and safety in the face of storms or treacherous tides.

Dean of the Audubon corps of wardens, old Captain Halford lives in absolute solitude for ten months of the year out on Little-Boys Island, an important bird reserve in the Gulf of Mexico. In his scanty little craft, the *Albatross* tied, this skipper of three-score and ten years puts out nightly for his island through the treacherous passages of the Gulf. Provisions and night quarters lie in the hold of the *Albatross* dingy, snugly anchored to the shore of his de-solate domain, which the sturdy old man stamps from end to end in the course of his duty. One of the most valuable of the wardens, Captain Halford has become a practical ornithologist of no mean attainments, and his word on the racial developments, traits, or condition of his charges is accepted as gospel by authorities of note.

Captain Sprinkle is another sage among the Audubon wardens. In the *Boat* Tail, one of the best of crafters for which the association paid \$25,000 during the past year, the captain and his son make the rounds of the Gulf Islands within their province, living aboard their craft—the only human habitation within miles of nesting herds of sea-fowl. With only his ship and the skaters

year-old lad for company, Sprinkle has come to find society in the thousands of chattering gulls, herons, terns, and pelicans among whose homes he visits in closest intimacy.

It is this fatherly supervision of homing flocks about their breeding-grounds that constitutes the chief work of the wardens. The duties of sentinel and skipper afford a real and constant danger which makes the life thrilling and picturesque; but it is the keen observation of conditions surrounding the birds at their crucial mating period, as well as the humdrum labors of counting nests and eggs, that renders an inestimable service to the Audubon Association and to the country at large. "Are there more birds now than when you first became warden?" is an species degrading in number; if so, name them and give reason!" are two of the questions which each warden must answer after his year's patrol of his bird metropolis. In this way President Dutcher has from his minute-man immediate warning of important and often wide spread changes and developments in the national bird body, upon which the country must depend as an essential force in the great work of scavenging the whole coast. Plague and pestilence, it has been demonstrated, must follow any considerable depletion in the ranks of these birds, as rich in economy as in sentimental value to all Americans.

To just what extent the invasion of the human destroyer on their chosen breeding-grounds means murder to whole races of water-fowl, unborn or breeding, cannot be exactly determined; though students of bird life calculate human encroachment to be even more fatal than nature's devastating ocean tides. The Audubon warden has, however, succeeded this year in holding in check within his boundaries the raids of poachers and plume-hunters whose activities always threaten the extinction of many breeds of birds. This has been accomplished more by friends of farming than by force; and though the warden goes armed to his work, he leaves behind him signs and words of warning that are beginning to teach marauders that there is a power behind the helpless nesting birds. There is sequence in the fact that, while the birds perch and seek fastidiously about their wardens on those reserves which the Audubon Association has succeeded in procuring and maintaining, on other shores they fly at sight of man, while often their breeding-grounds show and evidence of the human destroyer.

It was the unmistakable indications of this sort, met in a recent exploring expedition through remote regions of the Gulf of Mexico by its ornithological expert, Koyama, that led the Audubon Association to appeal to the government for the reservation of the Shell Keys and other neighboring islands, and to every American citizen to help in maintaining wardens upon them. To-day the Audubon wardens stand guard over many of these islands, which the President has been ordered to have ceded for this purpose, and the association is trusting to private subscription for funds to purchase or lease perpetually others upon which this livery of birds still goes on unchecked. It is only by constant, expert exploration of such regions, where the Audubon workers have conducted hitherto the entire Atlantic and Gulf coasts, and which they are now continuing to cover, that the steady loss of nesting islands and the association we feel may be finally placed under the protection of the Audubon wardens. What New York city would be without its street-cleaning department, the whole coast of America must become if its sea-fowl are allowed to be exterminated.

The Season's Plays

PALMISTS, FAIRIES, GYPSIES, AND CIRCUS GIRLS

By "I"

THE zeal which Miss Ethel Barrymore displays in acting her stage husband from the position of jolly is as nothing compared to the zeal she employs in trying to save Clyde Fitch and Cosmo Gordon Lennox from the results of the title play they have provided for her use, "Her Sister," at the Hudson. The first act of the play is very good, very amusing, and very promising. The other two acts, the second especially, are not even half-sisters to the first. Were it not for Miss Barrymore, for her personal charm, and the ease with which she always plays her parts, it is only fair to say that "Her Sister" would soon be pushed gently aside to share the fate of the usual poor relation. As it is, Miss Barrymore endows the heroine with a grace and distinction which should provoke more applause from Mr. Fitch and Mr. Gordon Lennox than from the house.

Briefly, the plot of the play deals with the threadbare theme of mistaken identity, and the loyal sacrifice of the elder sister, who takes upon herself the misdeeds of a half-sister in order to shield her. Of course it all runs right in the end, and "they marry and live happily ever after." Not satisfied, evidently, with having dragged in the "mistaken identity" business, the authors have utilized the decrepit idea of announcing at the door the name of a person not there, but one whose presence at the psychological moment will either save or sufficiently compromise the heroine. Of course it saves her, and practically ends the play.

Miss Barrymore is deserving of every praise for her work in the play, which, although it does not exact of her anything particularly new, gives her every opportunity to be charming.

The first act discloses the reception-room of the actress, Madison Ives, the crystal-gazing, palm-reading role which *Eloise Alderson* (Miss Barrymore) plays to a credulous clientele in London. In this Miss Barrymore is delightfully humorous. The other two acts take her to the home of the Buckley family, where she is "on approval" as the bride-to-be of the son of the house. *Eloise's* sister, an actress, has been indiscreet enough in America to be sought for in a divorce action, and *Eloise's* picture is printed by mistake in an American paper with the half-sister's name under it. The subsequent complications are obvious.

The new leading man with Miss Barrymore is Mr. Arthur Byron, and although he is a good actor, and particularly good in some of the scenes, one cannot avoid missing Mr. Bruce McEwen. Mr. Louise Dyer as *Miss Minto*, the Cockney secretary to the actress, deserves hearty congratulations for her character-work. Miss Lucile Watson, as the mischief-maker, plays her part with a stolidity of voice which is unparagonable.

Peter Pan returned to town on Christmas eve more deliciously juvenile than ever; and for two hours and a half he delighted a packed and affectionate audience at the Empire Theatre. The play, as everybody knows, is by little Virginia Smith (now *de jure*, "Lina"), a talented lady of some seven summers; and from the moment when, stepping before the arch-aisle, she gave the signal for the curtain to rise, disclosing Mr. Charles If Weston as an intelligent shrewd mastiff with a blending of duckbunt, preparing the children's bath, one was ready for familiar delights. "I" followed the thrilling scene that ended with alternate hopes and fears, for was "I" not one of the band? When Mr. Darling chained the faithful Mr. Weston in the back yard, and the glow of a stage night descended over the sleeping children, we all, as before, shivered with an apprehension that was not decreased by hearing the muffled, warning barks of Mr. Weston below. When *Peter Pan* flew through the window, in company with merry, dancing *Faust* *Reid*, and took us to fly back with him to the Never, Never, Never Land, where *Wendy* *Moira* *Angela* *Dwight* was to be a mother to us all, we shared with breathless excitement the adventures of his intrepid band. We put to rout lions and ostriches and wolves. Far more insidious were the seditious schemes of *James Hook* (played, as before, by Ernest Lawford), the wicked pirate captain, with his infernal belt of rich, damp rick, crustacean with frosted sugar; how narrowly we escaped it! We fought our desperate battle upon the pirate ship, flinging the pirates overboard to disappear beneath the waves, to the accompaniment of huge splashes of spray. And yet we could almost forgive the captain for the sake of his slow, tick-tocking *Ymca*, a lovably eccedilic with vast red cavernous mouth and shining teeth. The pirate *Hook*, too, deprived wretch that he was, was washed after feelings when we learned that he had never had a mother. But we rescued the ship in splendid style, and then went home to Mr. *Dwight* and Mrs. *Dwight* and the faithful *Ymca*, addressed by the loss of *Peter*, yet cheered by the annual spring-cleaning made to him by *Wendy* at the end, where they part in the little house on the tree-top, surrounded by showers of shooting angels. Mildred Morris, as *Wendy*, made a very motherly young person. Bring her back, *Peter*, when you pay us your annual visit next Christmas tide.

Happy, janthier *Peter*, piping on your fate! We wish—*we* *Wendy* a new words to you—we wish you were a little bit further so that we could take you up and squeeze you!

She simply could not be the richest girl in England, was it packed herself off to a gypsy camp in the merry greenwood, at Miss Maxine Elliott, taking with her the family silver for the picnic, a bathing suit, and a couple of jolly play fellows, married and feminine, for good measure. What happened is all represented at the Garrick Theatre in Henry V. Edmund's new play "Under the Greenwood Tree."

Imagine, if you can, the gentle Whittier gushing his "very fair, pale daughter" with automobiles and automobile music.

Miss Maxine Elliott in her discreet bath-robe costume in "Under the Greenwood Tree," at the Garrick

useless, and setting her free in the forest; imagine *Peter Pan*, grown stately and beautiful, but retaining his glib detestable mind to grow up; imagine Mr. Shakespeare's Mrs. *Bonduick* frolicking in a greenhouse of a later day, and you will conceive some idea of the key in which Mr. Edmund has pitched his *Wendy* *Hamlet*. Thus *Wendy* was tired of people, of buzzing letters, of suitors, and of all the other ills of the idle hour. With her bosom friend, (Continued on page 25.)

Japanese Policy in Korea

By PRINCE ITO HIROBUMI

IN reviewing the record of what we have done in Korea in the past thirty years, there is something singular, not to say strange and striking. Instead of increasing in intimacy and friendliness, Korea and Nippon seem to have walked away, back to back, one from the other. This has been inevitable. Good reasons, and many, there are to explain this unfortunate condition of things. Also, it would be well for all of us always to keep in mind that the actual Nippon activities in Korea do not date very far back. Very few years have passed since we have taken over the Korean affairs. Through the course of the Russo-Nippon war, circumstances brought the two countries closer together. As a result of the war, we have come to see the conditions and situations which are prevailing to-day. These are not what the Koreans had prayed for. Simply, it is the natural outcome of the life of the weak that cannot cope against the strong.

At the conclusion of the war and the establishment of peace, we were compelled to revise our relations with Korea, and change our attitude and our policies toward her almost entirely. Our government took into its own hands the management of the foreign affairs of Korea. We have created a protectorate over her. Through this arrangement, the power of dictating the foreign policy of Korea has fallen into the care of Nippon. This, however, left us in the helpless condition of waiting upon the pleasure and sliding by the judgment of the Koreans, so far as their internal affairs were concerned. We have seen the practical workings of this arrangement for nearly one year. The result of it all makes us think of a man who tries to scratch his foot over his shoe.

Powerless to carry out its programme in matters of foreign dealings, the Korean government, nevertheless, has been active and aggressive in carrying out its wishes in its internal administration and in the realm of domestic politics. I have tried to offer them some advice, such advice as had a great and far-reaching bearing upon the governmental reforms and administration system of Korea. In order to bring about the practical application of such advice, I had to look very studiously into the education of the mass and the material progress of the country in their different stages. For these advice which I have ventured to offer affected the peace of the country and the happiness of the people. They had a vital bearing on the protection of person and property, and unless such advice were pertinent and well-advised, would not only be useless but harmful.

In all my actions, I have very carefully weighed the difficulties which were in the path of reform in Korea. I have felt the magnitude of such difficulties at almost every point. Above all things, I have made it my duty to consider the sentiments and ideas of His Majesty, the King of Korea, and his government and people. At such occasions as I have ventured to offer my advice, I have spoken straight from my heart. Sincerity was the keynote of all that I have tried to accomplish in Korea in behalf of the Korean Imperial family and of the people.

My efforts have been answered in a different manner. All manner of intrigue and questionable methods have been employed in nullifying the work that I have tried to accomplish. This has been carried to such an extreme extent that at last it compelled us to abandon our silent acquisitions. Among the Koreans themselves there were many who appreciated the magnitude of this affair. Without a single word from Nippon, they have taken it upon themselves to compel their sovereign to abdicate as a result of it. The abdication was followed by the presentation of a new convention. The signing and ratification of the convention brought about a new day for Nippon administration in Korea. The new convention defines the position of Nippon toward Korea very much more clearly than heretofore. It extends the power of Nippon to the administration of Korean affairs. This convention

also causes additional duties to devolve upon us. In the practical discharge of these additional duties, I have thought deeply and for many days.

Between the Korea of to-day and the Nippon in the first years of the Meiji, in the days when the clans were converted into gentlemen, there is no great difference. Those were the days crowded with affairs calling for reforms, pregnant with great promises, and full of problems. There were two things we needed in those first days of the Meiji—men and money. Korea of to-day calls for the same two indispensable things. Unfortunately, both money and men are beyond my power and control. That is the reason why I have thought it wise to pay a visit to our home government and to its ministers, and with them discuss the different phases of the Korean question.

In the solution of the Korean problem, a man always asks this question: What power is it that exercises the dominant control over that people? What force is it that is controlling the policies of the Koreans? Moreover, what is that invincible power (which one sees in every country controlling the life of a race) that shapes the destiny of the Koreans? Is it religion, or is it customs and habits?

In my judgment the majority of the Koreans are governed by the Chinese learning and the Chinese code of ethics. Beyond that, I do not see any influence that has a particular power over them. In the interpretation of virtues,—policiness, righteousness, truthfulness, faithfulness, affection, and so on,—they find their criterion in the teachings of Confucius and Mencius. Even among the highly educated class of Koreans, education stops with the Chinese scholarship. Beyond that there is nothing. Even those who style themselves scholars are by no means scholars in the professional and specialized sense. When you ask what are the thoughts and ideas which govern this class, you will find that they are much like those young men in the closing days of the Shogunate in Nippon, who were governed by a few pamphlets and patriotic poems written by the thinkers of the time. They look upon Nippon as a barbarian country, they regard themselves as the refined and enlightened race. As for the common people and the farmers, they have no education or culture whatever.

Such are the actual conditions of the people in Korea. You can see readily, therefore, what are the motives which are actuating the acts of violence on the part of the Korean insurgents of to-day. This must be thoroughly appreciated in order to understand the methods with which we solve the problem of meeting the lawless disturbances throughout Korea.

Whatever be the change in the thoughts of the Koreans of to-day, and almost independent of that fact, the time and the world have compelled the Koreans to walk side by side with Nippon. Both the Imperial House and the government seem to understand this fact.

In Korea there is no capitalist of any moment. There are many who pride themselves on their rank, but they are extremely poor, and anxious in influence. The one prime end and aim with the Koreans is to become a government official. A government position brings with it monetary profits. Naturally, those who are out of the governmental positions are exceedingly ill-content.

In bringing about the new regime in Korea, perhaps the most difficult question is to secure the proper men for the governmental positions. When you supply these official positions with the men of ability from the government officials, you are in opposition from the Koreans; they say of us, "They have come to rob us of the means of livelihood," and for this reason the appointment of the Nippon officers of unquestioned ability to leading positions in Korea, I think, is a matter of grave difficulty. I, for one, have determined to face the Korean affair with all my energy and spirit. The one prayer of mine is for the extension of Nippon's power in the Far East.

Lines to Louisa

By EARLE HOOKER EATON

(The Same Being Our Forty-seventh Maid Who Has Gone to Smash Eisenberg)

A WEEK ago we had a Maid,
Whose memory will never fade.
You should have seen Louisa!
She piled the plates on which we dined
So very high they called to mind
The leaning tower of Pisa.

At other times they did not lean,
When carried by our kitchen queen
(Whose other name was Dementia).
But rose as straight as apple or tree,
And then, her model seemed to be
The Campanile, Venice.

The leaning tower was first to go,
And when it hit the floor below,
The havoc was appalling!
At once another crash occurred,
And then, alas! we knew we heard
The Campanile falling!

I see its shattered remnants yet.
Twas half our wedding dinner set—
The other half was Pisa.
My throbbing heart protest! I do:
"Pray leave," she cried, "and I go wild!
For Pisa on Omea piled
Would be your next, Louisa!"

THE NEEDLESS PERIL OF THE COAL-MINE

(Continued from page 14.)

expert mine engineer, powder is powder. To the average mind the word "powder" connotes the positive, comparative, and superlative degrees; like the word "perfect," it admits of no comparison. Nevertheless, the powder in an ordinary keg contains a great variety of sizes which have about the same relation to each other as the minerals from one to mine. An explosion is never more than the instantaneous combustion of powder. If the smaller grains of powder, which compare with the mineral ore, are mixed with larger ones, which compare with the larger minerals, it is reasonable to assume that the smaller particles are going to burn first, and, consequently, the force of the shot will be simply the force of the explosion of those smaller particles, since the larger sizes do not burn until the main force of the explosion has spent itself. The mine becomes accustomed to a constant danger that the minimum amount of powder cannot always be relied upon to produce a calculated shock in breaking down the coal. He is disposed to make sure that he will have enough powder to do the work thoroughly. Very often he will overload the hole bored in the coal, and will give a greater shock than the amount of coal to be shot down actually requires.

Moreover, some miners are careless in drilling holes in the face of the coal. Under ordinary circumstances the miner begins to drill his hole about the top of the seam, or from three to five feet above the face. He drives this hole on a gradual slant back into the coal to a distance of about twelve feet. Then the charge of powder is placed at the extreme end of this hole; a face is attached, the opening is blocked up, and the fire ignited. Sometimes the miner starts by giving a sharper declination than customary to his drill hole. Instead of the shot being placed twelve feet from the face, it is lodged from two to possibly five feet back in the coal. When the powder is ignited the force of the explosion is much greater than the amount of gas to be done registers, and the smaller, which would exert itself some where, rushes out into the miner's chamber in a long flash of fire. This is called a "blow-out," or a "windy shot." If there is any gas in the room, or if there is any reflection of dust, this blow-out, or windy shot, the miner becomes accustomed to a constant explosion can very easily occur. Thus, in fact, is supposed to have been the exact cause of the mine disaster which occurred at Monongah, West Virginia.

Under the circumstances, it would have been comparatively easy to avoid any one of those four great disasters if the mine operators, or the mine engineer, had understood the use of powder, had selected his powder all of one size, and had determined before-hand the exact amount that must be used in each shot. It would have been comparatively easy, even with the present habitual use of powder, to avert these accidents if the laws had been so framed as to take out of the hands of the labor unions and out of the hands of the coal operators the disputed question of who should fire the shot, and had insisted that professional shot-firers be employed.

Before showing the next manner in which these explosions could have been avoided it may be necessary to explain to the lay mind a little about the modern mining of coal. The old method was for the miner, with his pick, to cut an opening under the vein of coal, drill his hole, place his explosive his powder, allowing the lumps of coal to fall to the floor. Later this under-cutting has been done by machinery in some mines. Where the labor unions have their own way and are able to prevent the use of machinery, and where easy-going workmen do not care to go to the trouble of

undercutting the coal, they have a way of "shooting from the solid." This means that the explosive is put into a hole drilled into the coal, which has not been undercut by either pick or machinery. Naturally, with such methods, more powder is required than when the coal is undercut. Some States have passed laws forbidding absolutely any shooting from the solid. This practice is dangerous because the miners are likely to miscalculate the amount of powder that is actually required and, consequently, are likely to have a blow-out shot.

A few years ago, following a number of disastrous explosions caused by blow-out shot, both Illinois and Iowa passed laws which demand absolutely the employment of professional shot-firers. These are not permitted to drill the holes into which the powder is placed, and are charged with the responsibility, first, of seeing that the coal is undercut, and, second, that the charge is placed far enough back in the coal to prevent a blow-out, or windy shot. Moreover, their work is done at a time when there is no one in the mine but themselves. Hence, with such a system, the wholesale killing of men, such as in any of the four recent explosions would have been absolutely out of the question. Attention for the employment of professional shot-firers has recently been carried on in all parts of the country. So far public sentiment has not been able to overcome the prejudice of the mine-workers' union against the employment of such professional shot-firers, because the miners are compelled to pay a part of their wages.

A third preventive of mine explosions is to keep the air perfectly pure. Up to now this has been one of the greatest questions confronting the coal-mining States, because the miners have been able to understand just what kind of work his union-laws was doing. It is realized that even the accumulation of dust is preventable, to a certain extent, by the free circulation of air. It is known, of course, that a liberal inflow of fresh air will do much good to remove, almost completely, the danger of an explosion. It has only been within the last few months that the study of air currents in mines has been reduced to a science, and this innovation was brought to the United States by an expert consultant from Germany, Fritz Scholz, now president of the Luck Island Coal Company of Chicago. The attention of Mr. Scholz was drawn to this important subject by a damage suit in one of the mines of his company in Oklahoma. There had been an explosion in his mine which had killed several men. The heirs of one had sued for damages, setting up the claim that the mine-fan had stopped, and the explosion had occurred almost instantly. The records showed that the fan had stopped that day, although a subsequent investigation proved that the fan had closed down after the explosion had occurred. Nevertheless, this started Mr. Scholz to studying the circulation of air in the mine, with the result that he has now established a pressure-gauge which will tell, by the record it keeps, exactly what had been the action of the air in that mine throughout the twenty-four hours of a day. The results of his study have been so important that they are being taken up by the coal-mine operators throughout the country.

An auxiliary preventive is to keep down the dust in the mines. The mine operators in Wales have gone much further, in this respect, than the people of the United States, as they not only sprinkle the floors and the driveways of dusty mines, but also the sides of the shaft or slope as well as the coal in the cars. They have also erected dust-proof doors, at the opening of the shaft or slope to prevent the drifting in of dust from the outside.

THE SEASON'S PLAYS

(Continued from page 28.)

Peggy Taggart, she forgets it all in the fun of living in a gypsy's wagon out in the open.

It's all whimsical fun, and there's a plot, too. Enter the man, Regis the magnate—Mary as a gypsy. The man, an English country squire, believes it, of course; and, furthermore, he believes that Mary has eloped with the gypsy. Then the climax of Act II. They fall in love. In Act III, if Mary only had a suitable dress—silver or no silver—she'd marry her. She produces a beautiful pink party-gown from the wagon. More plot develops here, because the squire thinks it's burglary. Then the hateful gypsies want more money to explode his powder, allowing the lumps of coal to fall to the floor. Later this under-cutting has been done by machinery in some mines. Where the labor unions have their own way and are able to prevent the use of machinery, and where easy-going workmen do not care to go to the trouble of

As Mary, Miss Elliott gives a charming performance of herself, with a keen feeling for the romantic and whimsical fun of the role. Miss Mary Jermoloff makes Peggy just a delightful girl on a romp. The company is mainly English; the leading man in Miss Elliott's company, Mr. Charles Perry, the only American, was kept out of the opening performance by an accident at rehearsal.

When the circus comes to "a small town in the Middle West," as the programme describes it, Polly, the most wonderful equine artist of a long line of circus riders, was thrown from her horse and badly hurt. They carried her to the nearest house, which happened to be the parsonage, inhabited only by the Rev. John Dowdell and Handy, his old black housekeeper. From the moment the doctor told us that Polly's ankles were broken, and that she must stay in bed for months, the end was inevitable. Miss Margaret Mayo, the author of "Polly of the Circus," now an

view at the Liberty Theatre, has provided nothing new in the handling of a conventional theme.

Nevertheless, the play is an effective one, and this is due to two things—the charm of Miss Mabel Talbot, whose girlish impersonation and stately manner are an irresistible appeal, and the striking effect with which Frederic Thompson, the producer of the play, has realized the circus scene. We see a representation of the circus, but the circus itself on the stage, in its actual human and material reality.

The delightful Polly has never learned of the world outside the tent until the minister tells her of it. Indeed, he instructs her not only in religion and the driveways of dusty mines, but also the sides of the shaft or slope as well as the coal in the cars. They have also erected dust-proof doors, at the opening of the shaft or slope to prevent the drifting in of dust from the outside.

It is almost with a pang of regret that one finds the fascinating child-actress full-grown, but Miss Talbot is as winsome as ever, and has grown in her art. It is difficult to imagine Polly played more delightfully than by the actress who has been the pathos of the part. As Polly Toby, the clown, John Finlay is on the stage for only a few minutes in the first act, but his impersonation of the poor old jester, still in the merry make-up of the ring, but conscious of his anxiety for Polly, is one that cannot be forgotten. Joseph Brannan, who plays Jim, the black man-servant, is as real as if he had always lived the life. Malcolm Williams, as the Rev. John Dowdell, seems to be inexplicably affected with timidity in the presence of his young charge, and his love-making is so awkward that it is almost comical. Polly's friends have been moved by such sincere and honest protestations as his.

Congressional Library Now Third

The contents of the Library of Congress at Washington for the year just ended closes it as the third largest library in the world. It contains 1,422,848 books and pamphlets and some 9000 other volumes. Its net gain in miscellaneous books and pamphlets during the year was 54,504. Among the very recent important collections is one on Russia and Siberia and another on Japan. These two valuable collections were written in the Japanese language. The most notable single acquisition is the celebrated Yudin Library of works on Russia and Siberia. This collection, though nominally a purchase, is practically a gift, since the owner parted with it for little more than one-third the sum expended in gathering it. This purchase is noteworthy as an indication of the broadening scope of the library and its increasing value to scholars. The Yudin Library consists of over 80,000 volumes, and there is probably no other collection of books on Russia and Siberia of such size in the world. These books are rich in local history, ethnology, and institutional history. The material includes certain manuscript records of the early Russian settlements in Alaska, which are most interesting. The portrait of Mr. Yudin and the photograph of the log house he had built for the collection at Krasnoyarsk, Siberia, are exhibited by the library.

Another important feature is a collection of some thousand works on Japan, mainly in the Japanese language. The books and manuscripts were selected in Japan by Professor Joakawa, of Yale, whose purpose was to secure a good working collection for the student of Japanese literature, history, and institutions. The library is also rich in Chinese works.

Among the most notable additions in the year are the Shoemaker and the Knuffmann collections, and valuable manuscripts and papers of the period of Washington, Jefferson, Madison, and Monroe. Among the most notable additions in the manuscript division by gift are the letters of Justice John McLean, of the Supreme Court; the papers of Chapin Joseph C. Thomas, of the Christian Commission in the Civil War; two Revolutionary orderly books; a series of twenty-five papers relating to the trial of Colonel Thomas Butler, and thirty letters addressed to Cyrus W. Field. The purchases include the letters of Judge Joseph Holt, of Washington, and of Governor William Plumer, of New Hampshire; the papers of Edmund McPherson; 300 letters of Frederick Stevens; and many other items of interest. Under the law of 1903 the Pickett Papers (diplomatic records of the Confederate States) have been transferred to the library from the Treasury Department, and interesting Confederate and other records from the Post-office Department.

The Division of Documents of the library shows an increase of 50 per cent in the number of volumes and pamphlets acquired, the total being 23,428. Special attention has been given during the past year to developing the collection of foreign documents by obtaining the volumes necessary to complete sets in the library, and to this end a list is kept showing the countries with which international exchange relations have been established.

Under the special collections to which large additions were made during this year is the maps division, which now has a total of over 150,000 pieces; the music division, which possesses a total of 200,000 pieces; and the prints division, which has a total of 225,000 prints.

Married progress has been made in re-labeling and classifying the documents and pamphlets, and an increase of over 14 per cent in the distribution of printed cards to subscribing libraries, of which there are now 1000 benefiting by this service, which is unique as well as national.

The total expenditures for the year amounted to \$124,000. Eighty-five thousand dollars of this amount was offset by receipts for copyrights, fees, etc. In addition to the above expenditures \$250,000 was expended for printing and binding.

If the Library of Congress continues to grow at this rate, within a few years it will not only be designated the most beautiful in the world, but the most complete, with the largest collection of books.

A Stroke of Luck

He was a speculator, and for a year past nothing had been coming his way except expenses. Misfortunes never came by themselves. One day his daughter informed him, in a cold and unfeeling manner, that if he did not give her a diamond tiara worth at least a thousand she would elope with the coachman.

"Come to my arms, my darling," he exclaimed, as the tears of joy streamed down his wrinkled cheeks; "come to my arms."

"Do I get the tiara?" she asked, hesitating as she accepted his invitation.

"Of course not," he smiled, delightedly, "you get the coachman. I owe him nine months' wages!"

Incontestable

A GRANDMOTHER was reproaching her little grandchildren for making so much noise.

"Dear me, children, you are so noisy today! Can't you be a little more quiet?"

"Now, grandma, your mother's word is law. You see, if it wasn't for us, you wouldn't be a grandma at all."

Correspondence Course for Editors

By George Herbert Clarke

It is generally agreed by the writing craft that the current magazine market is declining; manuscripts are throwingly mutilated. Editorial rejection slips are notoriously inhuman, and even in written correspondence the antecedents of the monthlies show nothing like the versatility and boldness of their contributors. Why, it occurs to us to ask, should not these dull persons freshen up a bit and attack the rejection problem in a way that will at least attempt to justify their own literary pretensions? Why, for instance, should they not undertake to define in brief, limberly with hierarchies, sonnets with sonnets, etc.? For their consideration, we venture to append a number of forms that may easily be printed in that nicely deceptive typewritten fashion, that looks so convincingly professional. Models merely, gentlemen—adapt them as you will:

Sir (or Madam), your versified trick is brilliant and witty and quick,
And yet you are under
(With heart torn asunder)
A bend to print no more—ick.

Dear Friend, your sonnet is the sweetest thing
That we have seen in sonnets for—a week!
We shall to-night with terror of it speak
When in our Harriet Hall we've taken drink
(The Misses likes to hear to have our ring
At all the wicky-wacky, wotul, wick
And wavy verses that our suffering seek),—
(Oh yes, we'll elude of your work, and sing!

Nevertheless, to our immense regret,
We find that in the moment we're on hand
So many contributions of this kind
That we can't use one single fresh sonnet;
With sorrow you can scarcely understand
We send you back, then, yours "With thanks," declined.

ABROT'S BITTERS

III
Your bright tablet
Has turned up duly:
Tis the Editor's pet,
Your bright tablet;
He almost—and yet
By a fate most surely
Your bright tablet
Is here turned down duly.

IV
Declined with thanks is your random,
Regretting that it must be so,
And making you not to infer
That it is void in merit, sir,
(Of course, it says he. He doesn't know!)

"Miss wants but little here below,"
Thus the old phrase of Goldsmith, O.
And that's precisely why we part:
"Declined with thanks."

You see, we've paid out so much dough
To Lawton, Stephens, and Higham
(Miss Tarbell, too—outside her!),
For making fly the festive fur,
That our exasperation's very low:
Declined with thanks.

Chapter One: Kipling wrote a story once.
Chapter Two: So you.
Chapter Three: Kipling's went the round of the publishers.
Chapter Four: So (evidently) has yours.
Chapter Five: Kipling's was not accepted for years.
Chapter Six: You, too?
Chapter Seven: Are you a Kipling, then?
Chapter Eight: That's another story.

A BONE COMFORT.
The merits of BROWN'S PAIN-EXPELLER BREAD EXHAUSTIVELY DESCRIBED IN THE FOLLOWING TESTIMONIAL, recently posted. You are all invited to see it in person. Suitable for trials, courts, law, and medicine.

THE BEST ALL-ROUND FAMILY LINIMENT, BROWN'S PAIN-EXPELLER BREAD, is a bone comfort.

THE BROWN'S PAIN-EXPELLER BREAD, is a bone comfort.

ADVERTISEMENTS.

FOUND A WAY

To Be Clear of the Coffee Troubles.

"Husband and myself both had the coffee habit, and finally his stomach and kidneys got in such a bad condition that he was compelled to give up a good position that he had held for years. He was too sick to work. His skin was yellow, and I hardly think there was an organ in his body that was not affected."

"I told him I felt sure his sickness was due to coffee, and after some discussion he decided to give it up."

"It was a struggle, because of the powerful habit. One day we heard about Postum and concluded to try it, and then it was easy to leave off coffee."

"His fearful headaches grew less frequent, his complexion began to clear, kidneys grew better, until at last he was able to work as well as before. As a result of leaving off coffee and taking up Postum. Then I began to drink it, too."

"Although I was never so bad as my husband, I was always very nervous and never at any time very strong, only weighing 85 lbs. before I began to use Postum. Now I weigh 115 lbs., and can do as much work as any one my size. I think."

"Many do not use Postum because they have not taken the trouble to make it right. I have successfully fed a great many persons who have drunk it at my table. They would remark, 'You must say a high grade of coffee.' The young men who drink in a very ordinary way are very enthusiastic about my coffee." When I told him what it was, he said, "Why? I've used Postum for four years, but I had no idea it was like this. Thank I did Postum hereafter."

Name given by Postum Co., Battle Creek, Mich. Read "The Road to Wellville," in pages. "There's a Reason."

Makes the best coffee! A delicious remedy for all who, spirit and colds, nervousness. A full cup of Postum is a bone comfort. It is a bone comfort. It is a bone comfort. It is a bone comfort.

Important to see that it is Abbott's.

Music and the Opera

THE TWO LISZTS

By LAWRENCE GILMAN

orchestral work which never fails to excite wonder and induce meditation had one of its too infrequent performances last week, at Carnegie Hall, by the New York Symphony Orchestra, under Mr. Walter Damrosch. I speak of the "Faust" Symphony of Liszt, which the general public of this town as seldom hears in its entirety that its performance in full by Mr. Damrosch's admirable orchestra might well have been announced, after the pleasing habit of our local purveyors of opera, as a "revival."

More frequent presentations of this remarkable work in its complete form would, it is easy to believe, be of benefit to those whose interest in musical gnoseology is more genuine than superficial; for in the vivid and ardent pages of this wonderful score are the sources of much that, to-day, we sometimes imagine to be new and freshly wrought. It is as extremely salutary thing to remember that the "Faust" Symphony had been conceived, composed, and even revised before Wagner had put upon paper one note of his more characteristic scores; that this symphony of Liszt's had passed into its final form at a time when all that we know as the most typical product of Wagner's genius was still nonexistent. Yet in what measure has Liszt been recognized as the pioneer that he was: as an innovator of astonishing boldness and fertility; as, it would scarcely be an exaggeration to say, the source and mainspring of much that makes the musical art of to-day what it distinctively is? And the "Faust" Symphony is Liszt at his greatest.

I have called it "wonderful," this pathetic and much-maligned fairytale, and wonderful it is, from whichever of several angles one chooses to regard it. It is wonderful inspiration—for it was completed at a time when all that we know as the most typical product of Wagner's genius was still nonexistent. Yet in what measure has Liszt been recognized as the pioneer that he was: as an innovator of astonishing boldness and fertility; as, it would scarcely be an exaggeration to say, the source and mainspring of much that makes the musical art of to-day what it distinctively is? And the "Faust" Symphony is Liszt at his greatest.

ful in its vitality and freshness of completed fifty years ago, when "Tristan and Isolde," "Meistersinger," "Siegfried," "Götterdämmerung," and "Parsifal" were still of the future; when Gildemark was twenty-five, Saint-Saëns twenty-two, Tchaikovsky seventeen, Rimsky-Korsakoff thirteen, and Richard Strauss still unborn. It is wonderful because of the fullness and definiteness with which it prefigures and anticipates a style and quality of utterance which to-day, half a century later, we call modern—like "Hamlet," as it has before been said, it is full of quotations: "In it speaks the voice of the Wagner of 'Tristan' (composed two years after), as well as the voice of the Strauss of 'Tod und Verklärung' (composed thirty-two years after). It is wonderful in its emotional energy, its passionate honesty, its subtle and powerful exposure of varied dramatic concepts, the width of its expressional range—its mastery of the accents of tenderness, ardor, innocence, irony, despair, exaltation.

It is scarcely needful to say that this music, in the degree in which it possesses these qualities, is not, in our time, overestimated; the wonder of it is that it should have achieved its kind, and degree of excellence at the precise moment in the history of art when it came into being. Why, one may ask, has not such a work prevailed? Why does it not count for more? Its defects are the unacknowledged defects of Liszt's artistic constitution. He was what Mr. Henley would have called "a convinced Romanticist." There was always in him a trend toward the theatrical in style and feeling—he seems always to be falling away from a form of expression that is truly dramatic toward a more theatrical one that is swollen, bombastic, rhetorical. He verges too often and too closely in his music upon vulgarity, upon commonness, upon affectation and sentimentality. He was, in fact, an amazing mixture of conflicting tendencies—tendencies toward authentic greatness, and tendencies toward triviality and pretense. He was greatly gifted, but not finely gifted. He had fecundity, great eloquence, and he knew how to compass grandeur. But there is always present in his work—as it has been elsewhere said—"a certain alloy: ideas of unquestionable power and beauty are tainted by conceptions which have their root in an incurable disposition toward

bombast and fusion. He never looked for ideas, per se; he was too ready to accept without close scrutiny whatever offered itself for his creative purposes. He never learned how to make his work as full of magnificent gleams; but how often the gleam and poetry of the idea is masked by a better that is clear and clear, by rhetoric that is ornamental rather than essential, a spontaneous." It is one of the tragedies of art that of the two Liszts the lesser should have, on the whole, prevailed; that to the innovator, the pioneering creator, the music-maker of notable genius, should have been corrupted and impeded in the conquering victories, the incomparable showman, the invincible power.

As for the "Faust" Symphony, that, as it seems, he will be come to share the destiny of those adventurous spirits of great art who have had to see the result of their pioneering work as a complete realization in the work of their successors; that will be realized with those whose apparent lot it was to see the work from which others should gather the harvest.

Mr. Oscar Hammerstein has issued to the public a letter of test, manifest—call it what one will—which deserves a more than its flippant kind of attention than it has attracted. Mr. Hammerstein claims that he is not receiving the degree of support of the opera-going public which his enterprise merits. If so, indeed, the case, he is justified in his belief. It is, of course, a thing to demand public support for an operatic institution at another thing to deserve it. To demand it, with an expectation that one's right to make the demand will be recognized, is probably a somewhat futile proceeding, but to deserve such support is a wholly different matter. For any one who appreciates what Mr. Hammerstein is doing and striving to do at the Manhattan Playhouse, his dissatisfaction will seem altogether reasonable. What the nature of his enterprise is, and why it truly merits the warm support of all who are concerned in it, is a matter of no small and worthy manifestations, was pointed out on this page a few weeks ago. Mr. Hammerstein is bent upon vitalizing an infusion of new elements, the stable and circumscribed opera repertoire which has long been, with few exceptions, the possession of the public of New York; moreover, he intends to accomplish this end by presenting certain new works which are usually certain to confer upon their producer nothing more substantial than artistic honor. Upon the support of whatever portion of the opera-going public there may be that is able to appreciate such ambitions Mr. Hammerstein has a right to depend; it would be lamentable if it were withheld.

Despite the triumphant sway of Italian opera at the Metropolitan, it is not after all impossible for Richard Wagner to make an occasional deprecatory appearance on that stage. There are still some who prefer, insignificantly enough, to hear even a second-rate performance of "Die Meistersinger," "Lohengrin," and "The Flying Dutchman" to a performance of, say, Gluck's "Iphigénie en Aulide" or Gounod's "Adrienne Lecouvreur," with Mr. Caruso and the inimitable Miss Cavallieri in the cast; and these find at Mr. Conried's theatre infrequent compensation for their devotion to the gods of the past. For the manner in which the Metropolitan management produces, this year, the Wagner score named above is very far indeed from being second-rate. The performance, in particular, of that supreme masterpiece of the comedy, "Die Meistersinger," with Mr. Van Ruy, Mr. Knote, Mr. Goetz and Madame Giadzi in the chief roles, is so eloquent representative of Wagner's art at its best that it almost emboldens one to consider whether one's preference for the eternal kind of entertainment is not after all justifiable; and wonder if the alleged passing of Wagner and the revivification of Denzetti, Rosini, Fyodor, and the younger Verdi are as insignificant as they are said to be by those who fail to realize that eternal away of the gifted singer over the popular heart.

mills and pulp-mills, to be framed into great timbers and planks, or to be ground into a wood pulp, which forms the vehicle for some of the most destructive explosive compounds known to man.

The last picture in the series illustrating this article affords a comprehensive view of the broad, deep valley whose deep, flat floor and wall of splendid hills seem to have been created for the very purpose they will serve.

The experts have calculated that the Olive Bridge Dam will cost \$12,000,000 to build, and that the total cost of the Ashokan Reservoir, including the value of land acquired and the legal expenses, will be \$30,000,000. Add to this the cost of the Escopus, Rondout, and Schoharie reservoirs, the cost of the new aqueduct to New York, and the filter plant at Kensico, and the total cost of the Ashokan and allied reservoirs, which will afford to the metropolis 500,000,000 gallons of water a day, will aggregate \$167,000,000.

THE YOUNG ONE: "He must have lived at a fast pace to have grown that old in a year!"

Setting Him at Ease

POWRYAN HUGGINS, of Grayville, Tennessee, had the misfortune to kill one of his neighbors in a hot political quarrel, and so paid the penalty on the gallows. The Huggins family removed to a distant part of the State. Twelve years later the eldest son, having been in the mean time graduated in theology, was assigned to the pastorate of the Grayville Church. Old Major Hickleigh, the rich man of the neighborhood, always entertained the clergy at his beautiful board. He was a kindly soul, though not overladen with tact.

Early on the Sunday morning of the Rev. Mr. Huggins's first service at Grayville, Hickleigh solemnly warned her husband.

"And where all, Major," she charged him, "no matter what happens, don't refer to his poor father."

The Major promised. Good would not let him leave the porch that morning; but he was anchored there in a broad armchair, a revolving statue of kindly, genial hospitality, when his wife and the Rev. Mr. Huggins approached after service.

"Major," said she, "let me introduce our new minister. He's going to dine with us."

"Right glad to see you, sir," cried the Major, heartily, as he wrung the young man's hand. "Right glad to see you. I hope you'll feel right homelike in Grayville."

"Thank you, Major," replied the young man. "I'm sure I shall. Indeed, I am at some ease. Our family lived here when I was a boy."

"Oh, yes, I remember!" the Major exclaimed, with enthusiasm still rising. "I remember you as a little slaver. I knew your father well!"

Mrs. Hickleigh's frowns and head-shakings of protest were all unavailing.

"Yes, yes; knew your father well," cried the Major with ponderous cordiality. "Your family moved away, but I knew your father well. Great friend of mine, your father. He had some kind of trouble, I believe. I don't exactly remember—some sort of trouble. I think they kind of 'brought him or something'—I don't remember anything about it myself!"

EPH. GREEN. "No, sah; dis am for social wader."

A Brilliant Plan

A MISSOURI man tells of an Irishman named Conghlin who lived in a shanty standing in a field near the main highway from Kansas City. The foundation of the shanty were better than the road, through which ran a big water-main. As the living-hour of the place was raised on posts to make it level with the highway, it left a large cellar underneath, where Conghlin kept a dozen hens.

One day the water-main burst, flooding the cellar and drowning the hens. Whereupon Conghlin took steps to enter a claim for damages against the city. After much delay influential friends succeeded in securing the sum of \$25 in settlement of Conghlin's claim.

"I've got me money!" shouted the Irishman to a neighbor sitting on the steps of his next shanty.

"It's glad I am to hear that," was the reply. "And how much was it, Conghlin?"

"Twenty-five dollars."

"And what are ye goin' to do with the twenty-five, Conghlin?"

"I'm goin' to buy twenty-five dollars' worth o' ducks," said Conghlin.

Travel Comfort

"Hot and cold water, eh?" enthused the new arrival in the dressing room.

"No," was the answer. "I'm kind of cold."

Court Upholds Monks' Charteuse

JAMES HOGENT, of the United States Circuit Court, handed down a decision a few days ago that no Espirou shall be sold in this country under the name "Chartreuse" unless made by the Carthusian monks, and that no one shall simulate the insignia put on the original Chartreuse bottles. Since their expulsion from France the monks have been manufacturing the Espirou at Tarragona, Spain, and have found it necessary to begin suit everywhere to guard their ancient monopoly.

The Universal Adding Machine Co.

in the first ten years of its existence sold more than seven times as many adding and listing machines as did any other concern in a similar period.

It won't be chance or accident, but because the Universal patented original features as well as extensive advantages, and has always been offered at its merits. Every Universal purchaser receives one hundred cents' worth of the best adding and listing machine value for every dollar invested.

The Universal is an accurate machine; it is a ready worker; the key action is light; the handle pull is smooth and easy—only 5 pounds; the adding register is in plain view, just above the keyboard; no black work; all the handle are accurately home taking a total; the totals and sub-totals are printed in red; the totals are printed in black, blue or purple and credit items, account numbers, etc., in green; the paper roll is stored in sight and convenient to reach; the carriage takes roll paper or loose sheets up to 15 inches wide; 8 regular spaced columns and special spaced columns are provided; printing on vertical ruled forms at all convenient times is ready, quick and ready done; the Universal adds and lists, multiplies, divides and computes interest and discount readily; there are many other advantages for doing various tasks wherever figures are used; it's a mighty good machine. It would save you a lot of time.

It won't cost you anything to write and tell us about your place of work, and learn how the Universal would save your time doing it; tomorrow never comes—write today for sample of work.

Discoveries in Every-Day Europe

By DON C. SEITZ

The author, with shrewdness and observant humor, has done that impossible thing, written a new kind of book about Europe. This is pure fun, original humor, American wit. It is a book of delicious chuckles, not a guide-book. And the pictures are as funny as the writing—nearly—and that is saying a lot. It skips all over Europe, letting in everywhere the sunshine of a laugh.

BEST WAY TO CHICAGO AND THE WEST—NEW YORK CENTRAL LINES

The Collected Poems of Dora Sigerson Shorter

Crown 8vo. Gilt top, Untrimmed Edges, \$1.50

THESE poems comprise ballad and folk lyrics of the old native Irish, more moving than stories and vibrant with melody, and many delicately wrought lyrics, independent of the Celtic, besides. They are by a gifted Irishwoman, writing, says George Meredith, from her heart of the legends of her country and the superstitions of the peasantry. Among the minor pieces "The Vagrant Heart" will strike an echo in many a woman's breast. Mr. Meredith, in the introduction, supplies a rare criticism of Celtic poetic art.

Immortal Memories

By CLEMENT SHORTER

Collected in this volume are a number of informal addresses touching the life and associations of men of letters, and dedicated "to the immortal memory" of Dr. Johnson, William Cowper, George Borrow, and others. By reason of fine material and distinctive style these addresses make most excellent reading, intended, according to the author, for sensible people—"of whom the most sensible in society are men of business and of the world."

Emerald and Ermine

**A NEW NOVEL BY
THE AUTHOR OF**

**"The Martyrdom
of an Empress"**

THE AUTHOR OF
"EMERALD AND ERMINE"

A BEAUTIFUL young duchess, living alone in the midst of the Breton woods, passionately guarding the heritage of her dead husband's domain, is hunted with sorcerous magic by a kinsman and his peasant accomplice, befriended by an old hermit, loved by one she loves and would yet resign for the sake of fealty to the great name she bears. Fair ladies, chivalrous gentlemen, hardy, faithful peasants, move within a setting of nature so appealing that the mind cannot shake off the spell. Never was such a woodland color as lies upon this sylvan Brittany, never greater warmth of life than stirs these Breton people.

Baltimore American—

"It is easy to over-enthusias in comment upon this book. It is sure to abide when much that is ephemeral has had its day."

Philadelphia Record—

"This is a singularly beautiful story. The author is a master of beautiful phrases."

New York World—

"Charming all the way through."

The Scotsman, Edinburgh—

"To the close of this charmingly romantic and poetic story the author carries with her irresistibly the sympathies of the reader."

Chicago Inter-Ocean—

"One wanting a novel out of the ordinary will do well to get *Emerald and Ermine*."

Brooklyn Standard-Union—

"The tale has the glow and beauty of the emerald, the purity and richness of ermine."

London Times—

"Pictures with a full brush the beauty of the forests of Brittany and its old-world feudal ways."

Chicago Tribune—

"A book the end of which we reach too soon."

Illustrated in Color by the Author. Price, \$1.50 net

HARPER'S WEEKLY for NEXT WEEK

WORD FROM THE FLEET

A striking article from the WEEKLY'S special correspondent with Admiral Evans' "battle fleet," Robert Dunn, sent from Trinidad, and giving an intimate and graphic picture of life with the great armada.

"LOW RENT OR NO RENT"

HALF A MILLION PEOPLE
IN A FIRESIDE WAR

On the great East Side in New York some one asked for lower rent. The lessee landlord said, "No." Others asked—the answer was the same. Then came rebellion.

The story of this dramatic uprising is told by Victor Rousseau.

STORIES OF SYMPHONIC MUSIC

A Guide to Modern Orchestral Programme-Music

By LAWRENCE GILMAN

Music Critic of "Harper's Weekly"

This book fills a genuine need of the music-lover, for it offers in compact, accessible, and easily intelligible form information which will help him to listen understandingly to the music of an orchestral concert. It presents clearly and without technical analysis the poetic or pictorial or dramatic basis of every important example of programme-music in the symphonic repertoire, putting the reader in possession of information which will enable him to listen comprehendingly, for example, to a symphony by Beethoven, an overture by Mendelssohn, a symphonic poem by Liszt, or a tone-poem by Strauss or Debussy.

"The best thing for every concert-goer to do is to get a copy of Mr. Gilman's book and prepare himself beforehand."—*N. Y. Evening Post*

"From Beethoven and Liszt and Raff and Wagner, down to the latest works of Strauss, d'Albany, Debussy, Charlewitz, and Converse, with many others, Mr. Gilman has left nothing of the music-lover's . . . It is a useful aid."

"A valuable contribution to the music-lover's library."

COMMENT

A Winning Ticket

WILSON AND JOHNSON.

For President

(From the New York World.)

If the Democratic party is to be saved from falling into the hands of WILLIAM J. BRETAN as permanent receiver, a Man must be found—and soon. Disassociated opposition will no longer suffice. There must arise a real leader around whom all Democrats uninfluenced by populism, and thousands of disassociated Republicans, may rally with the enthusiasm which springs only from a certainty of deserving success and at least a chance of achieving it.

The Man's principles must be sound.

He must be a defender of the Constitution, but not the worshipper of a fetish. He must realize that "a return to the old ways" of government by Plutocracy, Privilege, Protection, and Plunder is impossible; that the moral regeneration begun in violence must be completed in sobriety. He must be opposed, as a matter of policy, to gross extravagance in the use of public funds, and he must detect, on principle, any taxing of the people beyond the actual requirements of their government. He must favor immediate reduction of the tariff. He must be a heter in equal measure of paternalism and socialism. He must set his face like flint against government ownership of railroads, initiative and referendum, government guaranties of bank deposits, and all other populist notions. He must demand from all corporations publicity, obedience to law, and recognition of the superior rights of the whole people, but he must also observe the obligation of the state to protect its own artificial creation in all legitimate and authorized undertakings. He must favor the singling out and rigorous punishment of individual wrongdoers, not merely the fining of an impersonal corporation. He must be a radical conservator, not a destroyer, of both public and private credit. He must be an opponent of imperialism, militarism, and jingoism. He must prefer too little government to too much government, and must insist unceasingly upon rigid application of the basic principle of government by the people through their authorized representatives in Congress in preference to any government by commission.

The Man's personality must be inspiring.

Certain personal attributes are essential to successful candidacy. Known fidelity to high ideals. Unquestioned integrity. Veracity. Courage. Caution. Intellectuality. Wis-

dom. Experience. Achievement. Breadth of mind. Strength of body. Clarity of vision. Lucidity of expression. Freedom from contaminating association. Universal respect and confidence of his fellow men. Simplicity in manner of living. Eloquence. Human sympathy. Alertness. Optimism. Enthusiasm. In a word, the rare blending of uncommon intelligence and plain common sense in what might be termed New Idealism. Finally and practically: Availability!

Such are the requirements—many and exacting. One Democrat who unquestionably meets these qualifications is WOODROW WILSON, president of Princeton University.

Dr. Wilson is primarily a scholar—an historical scholar—who in the course of his work and growth has become a statesman of breadth, depth, and equanimity, a true Democrat who, though steeped in Jeffersonian doctrines, asks not what JEFFERSON did a century ago, but what JEFFERSON would do now; an able theorist, but a no less competent executive, who has had much administrative experience as the head of a great university.

Not only is WOODROW WILSON qualified in every respect for the great office of President of the United States, but he is an available candidate.

Who else could surely carry New Jersey? Who would stand a better chance of carrying New York? Who would more certainly restore Missouri and Maryland to the Democratic column and eliminate all possible doubt of the result in any other Southern State? Who has a stronger personal following, fewer enemies, nothing to retract, no entanglements, no commitments to capitalism or demagogism?

Who would more surely command the individual support of the powerful independent press? Who would appeal more strongly to the latent moral sense which twice elected CALVEKAND? Who would inspire a more hopeful feeling of security and stability in the minds of all business men engaged in honest enterprise?

The World has already presented JOSEPH A. JOHNSON, Governor of Minnesota, as an available Western candidate for the Democratic nomination for President. It takes equal pleasure in presenting WOODROW WILSON as a Southern candidate, no less available and with Presidential qualifications exceeded by those of no man whose name will be presented to any national convention.

Bryan Is Not Inevitable

The New York Sun says in its article on the new year: "It is generally believed this New-Year's morning that the Democratic nomination for the Presidency will go by default to the twice-defeated Mr. BRYAN." It adds, "It is not absolutely sure, indeed, that Mr. BRYAN could get the endorsement of the Democratic national convention, for which a two-thirds vote is needed, if even at this late date a sound and conservative Democrat should be brought forward and pushed with energy." With this last statement the WEEKLY is in hearty agreement. This is not the time for sound and conservative Democrats to abandon the attempt to save their party from the killing frost of Bryanism. There is not an editor of a Democratic newspaper of the first importance, nor a Democratic politician of the first rank, who believes in BRYAN's policies, or who respects his fancies, or who has faith in his strength as a candidate. It is equally true that they all believe that the party has now a great opportunity if it nominates a man who, as the WEEKLY has said, believes in "the rights of the States; in the limitations upon, as well as the powers of, the Federal government; in the antique folly of paternalism; in the curveting influence of centralization; in home rule; in the liberty of commerce and of all business; in wise conservatism as opposed to imaginative radicalism." The Richmond Times-Dispatch, commenting on the paragraph from which the above is a quotation, says:

The campaign of 1908 will give the Democratic party the opportunity of its existence: and an opportunity is always a responsibility. Democratic principles have been defiled and assailed by the Republican party under the leadership of Mr. ROOSEVELT, and if the party has other resources or courage, it will resist the attack, carry the war into the Republican camp and win an imperative victory. It is the bounden duty of the Democrats both to fight and to win. To that end they should be careful to select a safe leader, then put on the atmosphere of Democracy and arm themselves with the sword of the Constitution; and so shall they be able to quench all the fiery darts of the wicked. If the Democratic party does not take advantage of the opportunity of 1908, it will deserve defeat.

The Nashville *Banner* echoes these views. Nor in the struggle abandoned by other strong and influential leaders. The JOURNAL movement is at length taking form, and though it may be "belated," as the *Courier-Journal* says, active and forceful opposition is not too late, while abandonment of a cause is always too early. The Boston *Globe* asserts JOURNAL's availability and power. The Washington (State) *Herald* says that he is strong in the Northwest, where BRYAN is weak. The South is talking the language of both WILSON and JOURNAL, the strength of the former being recognized by independent as well as Democratic editors, as evidenced by the *World's* admirable editorial. Delaware has pronounced for Judge GRAY. Ohio Democrats favor the nomination of JESSE HANCOCK. The BRYAN man who would object to either of these three is a factionist and the slave of an individual rather than a party man and a believer in principles. The struggle, the war if you will, ought to go on until the convention decides—not meets, but decides. Let the Democrats thrust out their problem in the convention, and let others who do not believe in BRYAN, who do not accept his shifting kaleidoscopic principles, policies, purposes, and follies, and who do believe that his nomination will bring disaster to the party, disaster and deserved contempt, struggle for their convictions until the latest moment. BRYAN is not inevitable; he may yet be defeated.

Is Bryan Inevitable?

What gives its apparent strength to the BRYAN movement in the Democratic party is the timidity of Democratic leaders—a timidity leading some to apathy and hopelessness, and some to weariness, to an abandonment of the righteous contest, to an acceptance of what they deem to be the inevitable. There is fear of the BRYAN organization, too; a fear that too long continued antagonism to the Nebraska candidate will cost his opponents dear, will cost them, for example, all influence—influence which may still be exercised for the good of the party and the country, in squashing Bryanism—this centralizing policies, his paternalism, and his socialism—in Congress and in the State governments. It is felt that such an influence may be exerted, notwithstanding BRYAN and his success at Denver. Never was there made by rational man a more grievous mistake. Give to BRYAN what he demands at Denver, and not only is the party his, but it ceases to be a great national force, which it has been even as a minority party, and becomes a faction worthy entrance in what HENRY WATKINSON calls the "very little far-away province of the Rockies," whither it is retiring to hold its convention. There is a pitiable and contemptible as well as a tragic side to the proposed inundation of a once great party. Good men have thrown up their hands and abandoned the contest, and chief among them is HENRY WATKINSON with his potent *Courier-Journal*. He is not without argument, not without reason. He has fought a good fight. He proposed very early the name of Governor JOHNSON of Minnesota for the nomination, and his suggestion was emphatically, even flippantly, received. While he had reason for disappointment, no sincere Democrat has any reason to give up the fight against BRYAN until it is announced at Denver that he has received two-thirds of the votes of the delegates. It is not true, as has been carelessly asserted, that WATKINSON has surrendered to BRYAN. He is as strongly opposed to BRYAN as he ever was, and believes as firmly that he cannot be elected if he shall be nominated; but he is one of those whose spirit of combat has been stilled by the creeping sense of the inevitable. He believes that the Democratic party is doomed, and he has said as much. What ever the party does at Denver, WATKINSON will play his part before the country, but, in the event of BRYAN's nomination, with the haunting consciousness of defeat.

The Tariff Issue

The New York *World* has intelligently busied itself in presenting expressions of opinion as to what shall be the issue in the coming campaign. It finds that the Democrats are prone to take the tariff as the issue of the campaign. That this is the issue on which they should rely ought to be patent to all observers. It is the one issue which their opponents are presenting to them, and the one issue upon which there can be a union of all who would break up the existing pernicious and corrupt partnership between politicians and busi-

ness men who are willing to buy government aid from the politicians. This is the one issue, moreover, upon which the Democrats have won many substantial and significant victories since 1876. In the year when they obtained their great popular majority for TAYLOR, the tariff issue was the most important, but in 1892 it was the single issue, and the victory then won might have endured long if BRYAN had not turned his back upon it and sought to replace the substantial political question with his fads and fancies. Political wisdom now points to the expediency, if not the necessity, of picking up what BRYAN threw away. It is one of the traditions of yachting that you must hang to your opponent. There are two ways of hanging to your opponent in a political contest. BRYAN believes in sailing on the leeward side of him, permitting the antagonist to keep the wind from him—to blanket him. This brilliant political navigation he accomplishes by adopting for his own the policies which his opponent deems his own strong-suit. The way in which the Democrats may win the race, however, is by compelling the opponent to sail where they want him to sail; in a word, all probable Republican candidates have proclaimed that they do not wish to make their campaign on the tariff issue; they fear the result; therefore it is absolutely certain that this is the issue on which the Democrats should insist, and they may thus insist, whoever their candidate may be. The only Democrat who has shown fear of the issue is BRYAN.

The Republicans and the Tariff

Every leading Republican who has spoken on the subject has announced that the tariff must not be revised until after the Presidential election. Not one of them has said that it will be revised then in the interest of the consumer. The seeming intended to be conveyed—we have our opinion entirely on Republican tariff practice—is that no change shall be made in what is called the "readjustment" of rates that will injure the protected interests whose campaign contributions—confessed by both parties—have done so much both to maintain Republican power and to increase rates of duty. The President, Mr. FARMAN, Secretary TART, Speaker CANNON, and Senator BREWER in his recent earnest speech in behalf of his friend and leader FARMAN, have uttered the profound assertion that the tariff must not be touched until after the Presidential election. But will it be touched then? This is precisely the question that none of them will answer. They do not desire that the discontented element of their party shall think that their President and Congress will remain hostile to a reduction of duties; they do desire that the protected interests shall believe that, whatever the changes that may be made, they will be in aid of them. The Republican leaders are seeking to dodge the issue in order to save for themselves the votes of the protected and the taxed and the money of the protected.

Boncombe Bills

The Richmond *Times-Dispatch* has some wise words upon boncombe bills in Congress—bills that are introduced by Senators and Representatives who do not expect them to be passed, or even considered. The habit of national legislators to bring in measures "by request," or measures which they know will catch votes among their constituents "not which they also know cannot pass, and some of which they do not themselves favor, is growing with the loss of independence by the House of Representatives. Senator McLELLAN of Mississippi, for example, has introduced a bill providing for an issue of currency against seventy per cent, of the value of cotton to be deposited in United States depositories. Representative CANNON has introduced a bill providing for the sale of the Philippines. The *Times-Dispatch* might have added a long list of currency bills which have neither sense nor significance—in almost every instance introduced by men who have little, if any, knowledge of banking or of money problems. This extravagance in introducing bills is part of the boncombe habit which is further exhibited in the printing of speeches that are never delivered. The bills and the speeches are printed and distributed at the expense of the government for the purpose of assuring credulous constituents of the activity and industry of their Senators and Representatives. Men who are worthy of their places in the Federal legislature do not indulge in the practice of shooting off these blank cartridges for the noise there is in them, and men who do

practise it will be cured when the country becomes conscious of the trick and comprehends its motive.

Bryan's New Idea

BRYAN'S new idea was suggested to him by a Kansas Republican Congressman, who presented it to the President, who is said to have been impressed by it. The idea has been commented on by the WEEKLY, for it seemed to us to be especially one of those wiffs of an untutored imagination that have so often distorted the dreams of our distinguished amateur financiers. The idea is that the government should secure depositors in the national banks. The *Nashville American* is so perplexed by BRYAN'S versatility in constructing and launching issues that it helplessly asks, what are we to do with such a man? The *Indianapolis News* says: "No man ever had a more absolute reliance than Mr. BRYAN on the law as a remedial agent. No man ever trusted to Congress with more implicit faith." Thus remedy after remedy bubbles out of BRYAN'S boiling mind. Every one of them a government panacea; for government, to BRYAN, seems something different from the persons who compose it, something superhuman. The old doctor has no faith in the sense or the sanity or the self-dependence or the self-respect of the people. The people are children, "our children"; and, indeed, there is nothing better calculated to make the people infants, ineffective and im-provident dependents, than a government which shall relieve them of all responsibility.

Is Nevada Capable?

We gave briefly last week the chief points of the telegraphic correspondence between the President and Governor SPARKS, in which the President said that he had no constitutional right to keep Federal troops at Goldfield, as requested by the Governor, unless the State Legislature asked it. The Governor disclosed to the President his reluctance to call the Legislature, because he was not sure it would ask for troops. The President in reply gave the Governor five days to issue his call, and said that if the call was issued the troops could remain long enough to give the Legislature a chance to act. The next news was that Governor SPARKS would issue the call. The Legislature when it assembles will probably ask to have the Federal troops remain. As to that we shall see. Meanwhile let us take a look at the population of Nevada.

Law's Upholders in a Mining State

The census of 1900 gave the State a population of 42,335, of whom 3216 were Indians, and 1352 Chinese. Of the total population 25,693 were males. How useful the Indian and Chinese males may be in keeping the peace we don't know, but doubt their availability for sheriff's purposes. No doubt some of the 25,000 males are children. Altogether the number of able-bodied males in the State in 1900 could not well have exceeded 15,000, of whom one-fourth were foreign-born. Governor SPARKS'S estimate of the present population of the State is 65,000. If that guess is a good one, the number of the males available for sheriff's deputies and militia duty may perhaps at present reach 20,000. Of this possible 20,000 able male citizens, Senator NIXON tells the papers that 3200 are members of the local union of the Western Federation of Miners at Goldfield, at least 1000 of whom are "anarchists and rabid socialists, who march through the town waving red flags." There are other mining settlements in the State besides Goldfield. What proportion of the voting population of the State are miners and members of the Western Federation of Miners we do not know, but it must be very large. It is sufficiently evident from the figures given that when there are mining troubles in Nevada (there were 105 days of strike last year), and all the miners are either active or sympathetic on one side, the responsibility for keeping order that devolves upon the rest of the population must be heavy. Senator NIXON, who is a mine-owner, says the State must have a State constabulary. So it should; but can it elect a Legislature that will provide for one? Is it possible for a State having so small a population, of which so preponderant a part is concerned with a single industry and so quarrelsome an industry as mining, to keep order, protect life and property, maintain justice, and do the business proper to a self-governing State? Senator NIXON wants a permanent camp of United States soldiers at Goldfield. Their presence there is necessary, he says, to preserve order. If it is necessary

permanently, does not that indicate that Nevada is a failure as a self-governing State, and ought to give up and get herself incorporated with some competent neighbor?

Marriages Against the Blood

Plain people sigh when they read of a new international marriage between an American heiress and a European of title. What the title may be, or what they may happen to know about the contracting parties, signifies little. They distrust these marriages and are apt, when they hear of a new one, to think that another American girl is about to make a bad bargain. Mr. EDWIN KELLEY, lawyer, long resident in Paris and late the counsel of Madame ANNA GUINON in her successful suit for divorce, endorses in a general way this opinion of the plain people. He has seen a great deal of the results of international marriages, and is quoted as saying the other day to the law students' club in New York that they are being bargains in the long run, "because while not always formulated against the will of the flesh, they are invariably against the blood." "Races will not mix," he said; "there lies the fault"—a sentiment that has many exceptions, but is recognized by the instinctive estimate of marriages of Americans and English, or even Germans, as less speculative than marriages of Americans with Italians, French, Spaniards, and natives of western Europe. We must remember, however, that the international alliances that turn out disastrously and end in the divorce court are those that make the most noise, and also that our own divorce courts at home are kept pretty busy separating the mismatched in whose antipathies race differences have no part. Furthermore, some of our girls who have married titles have accepted with them men of such demonstrated worthlessness that there was no chance of living happily with them. Such women had no sense enough to make good marriages anywhere.

Web-footed Roosters

"Surg-on-General" is a good title, and has philological sense in it, as have the titles Attorney-General, Surveyor-General, Solicitor-General, and the like. But Surg-on-Admiral sounds funny, and always will. There is no doubt about the importance of the medical corps both in the army and the navy, though especially in the army. The great doctor, NICHOLAS SAYS, who died the other day in Chicago, was especially interested in military surgery, and was chief surgeon of an army corps of volunteers in the Spanish war. Such a man as he, or as Colonel GORDON, of the Army Medical Corps, who rid Havana of yellow fever and made the Panama Canal strip healthy, is worthy of any honor that military or naval titles could bestow. And it is important that the army and navy doctors should get their full due in the matter of rank and distinction, for both services need good men, and will not get them unless their merits are recognized. Nevertheless, Surg-on-Admiral sounds funny, and always will. In the economy of nature hens are about a thousand times more important than ducks, though ducks are good. But no hen, however important, ever looked really well with webbed feet. Webbed feet belong on ducks, and "Admiral" on sailors.

Almost Acquitted

CALVIN POWERS, of Kentucky, has been tried four times for the murder of WILLIAM GORREL. Three times he has been convicted, twice he has been sentenced to imprisonment for life, and once to be hanged. Three times a new trial has been granted him on the ground of political partisanship in the jury. His fourth trial ended on January 4 with the discharge of the jury, which failed to agree after three days of debate. It stood ten to two for acquittal. Is it not time to turn CALVIN loose again? Very few persons outside of Kentucky have any idea that he is guilty, and in Kentucky it seems impossible to convict him except by partisan juries whose verdicts cannot stand. His latest jury had eight Democrats on it, and four Republicans. It is seven years and a half since his first trial. He will be tried again next July, unless meantime the State of Kentucky, by a determined effort, can break itself of the habit of bringing him to justice.

Twenty-five Years Old

Our neighbor *Life* is twenty-five years old, and deserves it. We are glad to learn from its anniversary number that it is prosperous and happy. It is the brightest paper published anywhere.

Governor Johnson and His Views

THE *New York World* is looking up likely Democratic candidates, and finds at least sixteen that are likelier than Mr. BRYAN. First on its list is Governor JOHNSON of Minnesota. It printed his picture the other day (January 3), and a very interesting interview with him, and a couple of columns of biography. Governor JOHNSON's picture will make votes for him if he ever runs for President. Readers of the WEEKLY will find it, page length, in the issue of July 20, 1907. The face is very attractive—strong, reposeful, cheerful, and inspiring of confidence. His biography will make more voters—made them wonderfully in Minnesota, where it came out in the campaign of 1904. It was briefly told in the WEEKLY, six months ago, when the Presidential qualities of Governor JOHNSON were set forth. The *World* adds some illuminating biographical details, and the interview with the Governor which it prints is of much timely interest in considering his availability as the possible Democratic nominee.

Governor JOHNSON has always been, technically speaking, a "regular" Democrat. He voted for BRYAN in 1896 and in 1900, although he has never been a fanatical follower of the Nebraskaan. JOHN A. JOHNSON has views of his own, and at the present time they happen to be at variance in many points with those of Mr. BRYAN. He does not recognize the divine right of the Nebraskaan to lead his party a third time to defeat. On the contrary, the drift of JOHNSON's mind is disclosed when he acknowledges that he would regard Judge GRAY, of Delaware, as an ideal nominee for the Presidency, combining as GRAY does the experience of three branches of government—the legislative, the judicial, and the executive. We cheerfully assent with interest what JOHNSON said to the *World* interviewer regarding the possibility of his becoming the Democratic nominee. When the subject was mooted it seems that the Governor of Minnesota, like the present Governor of New York, remarked that he was attending strictly to executive business, conferring with no political leaders, planning no campaign, entering into no alliance, and neither spending a cent nor losing a minute's sleep because his name has been mentioned.

His Governor JOHNSON expressed definite views with regard to the principal political and economic questions before the country? That is an inquiry which the *World* interviewer was requested to press. The result was satisfactory. Governor JOHNSON expressed the conviction that it is not the province of the Federal government to assume the functions which belong rightly to the individual States. There are laws enough already, he thought, in the Federal statute-book to occupy pretty well the time of the Washington administration. He does not believe, he says, in legalized destruction and confiscation of property. He considers the individual's right to his property indefeasible, save for a State's exercise of the right of eminent domain. He holds all government, State or Federal, bound to give protection to property, just as it is bound to protect human life. He recalls that the right to enjoy property is guaranteed under the Federal Constitution, and declares that the man who has a dollar invested in farm or factory has a right to have his equity safeguarded from the attacks of the extreme radical on the one hand, as well as from those of the usurpation financier on the other. He recognizes in so many words that men who have legitimately acquired much property must be made to feel that there is safety in the laws of government under which that property exists, although, at the same time, the mass of the people must be defended from monopolistic exactions, and infused with faith that the law will protect no man because he is rich. Governor JOHNSON frankly admits that capital in corporate form can often do business more economically and successfully than that business could be transacted by individuals.

In certain particulars Governor JOHNSON does not differ materially from Mr. ROOSEVELT or from Mr. BRYAN. He freely admits that he, like Mr. CLEVELAND, favors an income tax. He would also, like the present Chief Magistrate, welcome an inheritance tax.

In the course of the *World's* interview, Governor JOHNSON went on to say that, as a native of Minnesota, far in the interior of the North-American continent, he could not see the necessity for a great army, much less for the biggest, or second biggest, navy in the world. He added, however, that to be perfectly fair he would concede that if we are to continue the policy of acquiring and holding colonial transoceanic possessions we must have a fleet to protect them. As he put it himself, if we have the Hawaiian west on the national nose, and the Philippine hump on Uncle Sam's back, we shall undoubtedly have to look after those excrescences. What he personally would have liked, he says, was to have seen a different kind of expansion policy inaugurated many years ago, when it was practicable, the policy of extending the boundaries of the United States from the Panama Canal to the Arctic Ocean. As it is, he hopes to live long enough to see the American flag flitting over Montreal, Ottawa, and Winnipeg; not, however, as the flag of a conqueror, but as a flag of friendship, alliance, concord, and amity.

There is one political topic as to which Governor JOHNSON, in

his interview with the *World's* correspondent, was explicit and emphatic. He requested his interlocutor to record the fact that he differed with the present Chief Magistrate of the United States as regards the necessity and urgency of an immediate and drastic revision of the tariff. He believed, he said, that the tariff, more than any other cause, has had a direct bearing on the abuses to which trusts are liable, and that it has placed a burden, direct and indirect, on the people of the republic which has benefited only a privileged few. Governor JOHNSON does not hesitate to pronounce the tariff the paramount issue of the coming campaign. It is about time, he thinks, that infant industries a hundred years old should be weaned from their alleged need of protection.

Assuming that Mr. JOHNSON's political convictions would command him to a Democratic national convention, can we say that from a narrow viewpoint he would be an "available" candidate? That is a question which the *New York World* undertakes to answer in an editorial article. That paper points out that no Democratic candidate for President has ever carried the State of Minnesota, but that, if we may judge from recent history, JOHN A. JOHNSON might perform the feat. CLEVELAND in his three campaigns lost the State by numbers ranging from 41,000 to 12,500. BRYAN in his two campaigns fell short of a plurality first by 53,000 and next by 77,000. ROOSEVELT's plurality in 1904 attained the enormous figure of 161,000. Yet at that very time a plurality of 6332 was obtained by JOHN A. JOHNSON, the only straight-on Democratic candidate for Governor elected on a straight-out Democratic ticket in Minnesota since 1858, when that State was admitted to the Union. Will it be said—can it be said with such facts before us—that the election of JOHN A. JOHNSON to the governorship of Minnesota in 1904 was an accident? If we admit the hypothesis, however, for sake of argument, how are we to account for the circumstance that in 1908, when JOHNSON went down before the people, and this time on the record of his administration, he carried the State by 70,000, the largest plurality Minnesota ever gave to any candidate for Governor.

Summing up the outcome of its investigations the *World* expresses the opinion that JOHNSON, with the aid of the Scandinavian vote, could carry four States nominally Republican, to wit, Minnesota, North Dakota, South Dakota, and Montana. It also ventures the prediction that JOHNSON would poll 100,000 more votes than Mr. BRYAN in New York and New Jersey. We believe this to be a fact; also that WOODROW WILSON would poll in those States 100,000 more votes than Governor JOHNSON. But that, as Mr. KIEPLING would remark, is another story. Let us first reach the Nebraska hour!

Punctuating Time

THE season is waning in which even the least reflective of the sons of earth tentatively makes his little punctuation marks on the great roll of time which flows over him. Christmas eve and Christmas morning, the last twilight of the year and the ringing in at midnight of the New-year, who is it that at such moments shall escape meeting his double, for a few seconds, at any rate? Who shall avoid hobnobbing converse with that other self who has been slowly taking note of the thoughts and impressions man gathers along the way—the loves and hatreds, the good things and evil—and who is there but must give account of himself to the self that has stood aside and watched the buying and selling, the loss and the gain, the rejoicing and the weeping, unmoved but inexorably registering judgments?

These points of pause in time are moments when the ghosts of the past come round so thick and fast, and happy is he to whom they "bend down and smile." A year has slipped by us, and we stand here, as we have stood before, remembering, regretting, hoping, demanding, questioning. A year and a year and many and many years have slid away, and when we pause we find life much the same, though the elements in it shift position. Things and people appeared and vanished, and new ones filled their places. There were friends we scarce should outlast a lifetime, but some of them died, and the impress of their lives upon ours faded faintly, and some forgot us, and lived beyond our reach or self; and others we forgot, and left behind us on the road. And our plans and undertakings, too, were doomed to destiny. Some were smooth, and we dropped them; and some we accomplished, and so forgot; and some met with a forbidding destiny, and were denied and we dropped them there; and some part of us went on living and a large part of us died. For we live under inexorable law, and law cuts off and builds up without asking leave. Life fleets past as, weaving its own great cosmic pattern which we never grow large enough to see; and the corner of the picture where we play is made of things good and things evil. There are honor and justice and fair intents there, and close beside thrive cheating and misery and agony and malignity. There are pauses of high harmony close against shrieking discords, and there are garish colors and cool stretches of twilight gray, and the flood of the moonlit sea and the black shadows of night and death. And

all these are composed for an instant like a picture, and then dissolve and vanish, and a new arrangement of like factors is before us. Standing to look back upon the years, how like it all is to the toy kaleidoscope we played with as children. We hold it to the eye, and under-out a beautiful, multicolored, geometrical pattern, and just as we begin to count the colors, to note the form, a tremble of the hand, a tilt of the arm, or a vibration in the room, and the pattern falls in pieces, and it all dissolves, and the bits of colored glass fall into a new combination. And so we live the kaleidoscopic play of life, and wonder if from the phenomenal mystery there is a thing a man may save from the transient discovery.

At any rate, man penetrates the limitless veil that covers him in this dreariest day of life by reminding himself of memory's *secret* memory. He probes the visions of the dreams that pass in his heart; he gives continuity to the swift happenings and changes; he peers into the past, and, unblinded by the dark and secrets ahead, he strains his eyes to see the future. He draws rules of wisdom from the fading and renewing of the fugitive adventure. He lays hold upon the poetry of remembrance, and proclaims human vibrations past death and where discord; he meets calamity with high courage, and pokes it full of his venom; he directs his deeds so that he may draw as much as possible the inevitable ill upon his own head and spares another; and he seeks a religion out of the chances of posterity, and deals with the world for the sake of those whom he shall never yet eyes upon. He teaches himself a strange, self-satisfactory creed:

Learn to water joy with tears,
Learn from fears to jumpish fears;
To hope, for there's day's no despair;
Kneel for that thou dar'st not grieve;
Plough then the rock until it bear;
Know, for then else cannot rest believe;
Lose, that the lost thou mayst recover;
Be, for none other way canst live.

And, there all, man looks out beyond his own wingless mortality into the regions of the whirling heavens, and watches immeasurable suns speed on eternal ways, and he says: "I, too, am up there. I, too, play a part in the wheeling of the stars through their orbits," and from the thought he drops in peace to his soul, knowing the smallness of his part in the great wheel, and knowing, too, that he cannot so much as pluck a flower but the movement will reach into the farthest, stirred way, and cause a sun to tremble in its course. No his soul, changing, looking for a breath and fading from sight, is yet a part of this matter he names eternal life, and he identifies his little momentary breath with all that is immortal.

These are the thoughts that rise to our hearts, as we make our little marks in time, to divide off a year from a year. These are what we stay our gaze to listen to, but life did by us unnoticed, and too little of its meaning and significance sink into our consciousness. For such calling of ourselves to account do we set apart days for reflection; days for preparation that nine single years may yet unfold, and we tell ourselves once more to take heart, however fleeting the present we call life may be.

For the dream of a world is a dream in a dream,
But the great One is, or nothing could seem.

Personal and Pertinent

W. T. STEAR, the editor of the *Review of Reviews*, in whom the world is indebted for much that is interesting and for some things that are informing, has had his son, who is dead at the age of thirty-three. MR. WILLIAM STEAR, the son, the world knows very little; he belonged to the great, quiet, effective, unselfish army of men who transact much of the world's work, and much for which more obvious men get the credit. Among the beautiful possessions of many of these quiet ones—among whom is a whole white company of anonymous journalists—is the quality of charm. Not many men know them, but those who are fortunate enough to dwell in the small circle know them deeply. WILLIAM STEAR was secretary of JAMES MONROE when the *Life of GILBERT* was in the making, and any man who is good enough to be the secretary of JAMES MONROE must be a very good man. He was acting editor of the *Review*. No one can pay a higher tribute to such a man as WILLIAM STEAR was than his father has done in these words: "WILLIE was the only man in the whole world who knew me completely, who believed in me utterly, and he has now literally served me to the death. He was the most perfect human character I have ever known."

They have what the Chicago *Dial* calls a "Hall of Fame" in England. It is not like our own—or New York's, rather. The dome of the British Museum's reading-room has been reconstructed, and twenty panels have been marked out—one for a clock, and

nineteen for English worthies. In these spaces are painted the names, "the greatest and most representative in English literature." They are CHAUCER, LYNCH, TISSANDER, SPENCER, SHAKESPEARE, BAYLY, MILTON, LARKE, ARTHUR, SMITH, POPE, GIBSON, WOODHOUSE, SCOTT, BYRON, CAMPBELL, MACAULAY, Tennyson, and BURNSIDE. No many names are omitted? That had to be, and, of course, any one of us could have improved the list. We may excuse ourselves, however, because it was deliberately devised that no man, as such, should be recognized as entitled to have his, or her, name painted on the dome. What could be expected from a committee that preferred some of these people to some others? This list excludes so many kinds of writing from literature, besides authors of fiction, that the troubled journalist who has been so long trying to edge his way into the circle may now stay out contentedly in the company of novelists and writers on art, and talk at all over with the ghosts of JAMES MONROE and OTHER THOUGHTFUL and all the English women writers and other orators.

SENATOR HALE has as intimate a knowledge of the navy—as he has of the Senate, and he has very little patience with the idea that a staff officer, whether he buys food, or cuts off legs, or spoons out medicine, or pays out money, or says prayers and conducts funeral services, or gets up steam, run command a ship as well as a battleship. SENATOR HALE is one of the most entertaining characters in the Senate. He is a man of fashion, and loves all the pleasures of society. He is as unlike his colleague FAYE in appearance and in social habits as a hanker is unlike a farmer. FAYE is a great *fisherman*, and while HALE fishes it is not for fish. If HALE ever goes fishing he wears better clothes than FAYE wears as presiding officer of the Senate. It may be said, to emphasize the difference, that when FAYE is thinking or fishing HALE is quelling party—and he quotes with remarkable ability; he has both the accuracy and the wit for application. He likes to eat dinners and to give them. He is fond of breakfasts at the Capitol, where they are often enjoyed in committee-rooms. Only the unknown give breakfasts in the restaurant, and then they are called lunches. HALE likes to drop in to a cup of tea in the afternoon, and his intimate intimacies—those from one end of the continent to the other. He is, in a word, one of the most popular men of society in the country, largely because of his wit and his accomplishments. One day a somewhat obscure and—well, plain body, who was extremely political, spoke of him as "BARRY'S ball," on hearing which crude remark from a common friend, HALE expressed his regret that he had aroused such an emotion in a woman for whose "amplified beauty" he had always felt so great an admiration. On the other side of him, HALE is an intense worker, and, with the possible exception of ALDRICH, the most intelligent legislator in the Senate. He is always present at a session, for even when he is busy in his committee-room his keen and experienced old nose-peg is in the Senate gallery watching long swooning of interest to the Maine Senator come up. It is a something-like come up, the nose-peg disappears from the gallery and HALE appears on the floor.

THOMAS GRAY has always been the foremost Democrat of the old BAYARD kind in Delaware; at least, ever since THOMAS F. BAYARD put his political activity to sleep in becoming ambassador to England. It was a pleasant group that led the party from Wilmington, sitting in more or less harmony with the SALMONS of Dover. The BAYARDS and the SALMONS eyed Delaware in the Senate for many years, not succeeding father or brother following brother. There was no other reason why this should be except that the two families produced not fit to be Senators. There were no losses in those days, and whatever there was that might be called a machine was an every crowd that any one else had there. It got out of gear, but nobody seemed to want to. The Delaware Democrats were proud of the position which their Senators gave to the State, and the DE PUYCHES and the few other respectable Republicans were glad, so long as Delaware was bound to have Democratic Senators, that they should be men of minds and characters with whom it was a credit to any one to be on equal terms. THOMAS GRAY was the leader of them all, especially of THOMAS F. BAYARD, of whom he was the young admirer. He was the center who used to put BAYARD in nomination at Democratic national conventions. He is of the solid, conservative stuff out of which old Democrats used to be manufactured. He believes in individual liberty, the rights and powers of the States and the people, and is especially opposed to paternalism. He is a very good party man, and he worked with persistence to hold back harmony as she was disappearing from the Democratic household in 1893 when Mr. CLEVELAND was insisting upon an unconditional repeal of the SHERMAN silver act. He was a usual feature in Washington—he and his pleasant wife and his agreeable family—and it was a very same act, on the part of the President, when he appointed GRAY to the Federal bench. GRAY is one of the happy men, apparently, who have enough to get on with without worry, and yet not so much that they feel inclined to injure themselves by over-spreading. He and his future walk in the middle of the way where they are not jostled and where neither do they jostle.

Correspondence

A MIND COMPLETELY RELIEVED

BALTIMORE, Md., December 25, 1907.

To the Editor of *Harper's Weekly*:

Sir—It is with deep regret that I feel constrained to address you these lines announcing, as they do, the severance of my relation to you as a subscriber to *HARPER'S WEEKLY*, of which *Journal of Civilization* I have been a constant and inter-
mittent reader for many years, as the bound volumes upon the shelves of my family library. I can without desire to be egotistical, but with the purpose of establishing a point of view, conscientiously and truly say that I lay claim to being fitted by education and experience to express the informed, deliberate, sane opinion of one of your average readers upon the recent conduct of the editorial part of *HARPER'S WEEKLY*. I have to my credit a complete six years' course at one of our leading universities, followed by a two years' course of study in the leading universities of Germany and France, and followed still further by a sixteen years' experience in the practical study and eventual management of one of the large and successful manufacturing establishments of this country; one that grew from a retail store to a corporation of more than a million capital, without a cent of capital from without or without being a trust or enjoying any benefits from the protectingegis of the customhouse.

I have helped to build a successful church, am one of its vestrymen, am greatly interested in its work, and claim to be a Christian, and to be fair and unprejudiced in business, religion, or in judging others.

I have been an ardent admirer of Theodore Roosevelt from the time he first entered public life until to-day. I respect to veneration every line of him. I think no human being that has an honest heart beating in his breast can hesitate to say that as men are regarded in history, as men exist to-day, he would think his dead if he were as much a man as that would be a great deal. He is our beloved President. That Roosevelt has made mistakes no man will deny—least of all, he himself; but that he is free from them than any man who has undertaken and accomplished as much, I venture with perfect safety to assert. The versatility of Roosevelt finds no parallel in the annals of this country, and the universal education, extent, and respect which he has held all over the civilized world absolutely proves this statement. It is true, I grant that he is ahead of his time, as almost all great men in history have been; and you will find that the day will come, perhaps during your lifetime, sir, that justice will be meted out even by *HARPER'S WEEKLY*, to Theodore Roosevelt.

In all my reading, I do not think I have ever seen across an instance where a journal that claims to be "civilized" so outrageously misrepresented and maliciously assailed a public man. While you did and do heap anathemas and pile Pelions upon those of vituperation upon upon Mr. W. A. Bryan, these are, in my humble judgment, as nothing compared to the extent to which you continually go out of your way to knowingly and maliciously misrepresent any action our President may take. No extreme are your scurrilous for false interpretations of Roosevelt's acts that no doubt many of his political opponents must needs apply their backstairers to their noses when perusing your scurrilous distillates. I can stand and appreciate a great deal of honest, plain-spoken criticism, for it is healthy and beneficial; but your criticism is so palpably unjust, oftentimes so disgustingly vile, that with the best of wishes for the journal I wonder if *HARPER'S WEEKLY* really has any subscribers left. The way to stop such unfair, cowardly, and unparliamentary attacks are years in to cut off your source of revenue by working to reduce the number of your subscribers. That is the business man's method.

When Roosevelt did not proceed against dishonest trusts, wild-cat banks, dishonestly managed insurance and trust companies, and even jacking railroad managers or granting officials who our large monies from graft they obtain for passing honest, just privileges to the business man of this country, you carped and denounced that he had sold out to the trusts. When his execution of many large corporations could not be productive of all the results looked for by the people, for want of the necessary legislation to do so, you intimated that he was a failure and failed because he feared he would thereby lose some political influence here and there, and the like. When he did finally get his forces up, and his forces arrived, and was succeeding beyond expectation in throwing the line light of publicity upon the thoroughly dishonest and disreputable methods employed by many of our leading institutions and men of trust, this necessity shaking the public confidence, as it had to be shaken in order to root out dishonest and disreputable men from places of honor they most vilely abused and misused, what do you do? All the wiles and tricks of the desert could not set up a leader and stir him then you intimated. While you knew and know full well that this point was not the fault of Roosevelt, but was a natural result of the "dishonest honesty" that had been tolerated until it had reached its mounting point in the body politic, you spared no invective, no vituperation, no venom that your pen could muster to hold up the President of this great republic to dishonor and scorn. What a noble achievement, and how proud you must feel. The result to any of all this malice, vituperated, self-congratulation will be that of a housewife which while never touching even a hair of our President's head, will reveal on your pate with redoubled force, and leave you what I have long since concluded you must be, either the possessor of a diseased mind or the

slave of a disappointed or injured magnate. When the "Journal of Civilization" sees fit to return to the ways of its fathers, I will be more than pleased to again become one of its interested readers. In the mean time I remain, with best wishes for better things,
Yours very truly,

ALFRED H. L. DORRIS.

P.S.—I have never had the honor of meeting our President, but I judge him, as I judge every one, by what he does and what he leaves undone.

A. R. L. D.

FRANKLIN AND THE CONSTITUTION

To the Editor of *Harper's Weekly*:

Sir—Who has not heard of the omniscient Benjamin Franklin, whose copacetic intellectual mind could contain both kites and constellations?

But who ever heard of Pelatiah Webster, an unsuccessful merchant, though successful schoolmaster and pamphleteer, of Philadelphia?

In spite of the very positive claims set forth by Dr. Hannis Taylor for Webster, Senator Knox begs to differ. At a recent New England dinner in Philadelphia, he spoke at length of the claims of Franklin to the honors so enthusiastically claimed for Webster.

Dr. Taylor states that Pelatiah Webster was the first man in the world to propose that the Federal assembly should consist of two chambers, and that the Federal government should have the power of enforcing obedience to its laws upon the individual citizens.

The Senator agrees that the one basic idea that made our evolving Federal Constitution possible was "the path-breaking idea of a Federal government operating directly upon the citizen and not upon the States as corporations," but the Senator asserts that Benjamin Franklin preceded Pelatiah Webster by twenty-nine years in his advocacy of this unique feature of the Constitution.

It was in the convention of the English colonies held at Albany, New York, in 1754.

John Pickens gives the credit to Franklin: "It was in his main features a noble scheme, and the great statesman who devised it was already looking forward to the immense growth of the American Union."

But Richard Frothingham, in his *Annals of the Republic of the United States*, more definitely credits Franklin in these words: "The Albany plan was designed to establish for all American one government based on the consent of the governed and limited to general purposes, while it left to the local governments their separate functions. It designed to render on the representatives of the people the power of making laws acting directly on individuals and appointing officers to execute them, and yet not to interfere with the execution of the laws operating on the same individuals by the local officers."

"The author of this plan intended to erect a public authority an obligatory on its sphere as the local governments were in their spheres. . . . The credit of this conception is due to the illustrious Franklin."

"It was original and American. It was comprehensive and grand."

The Albany plan was rejected by the colonies. The time was not yet ripe, and Franklin omitted it in his plan of federation submitted to Congress in 1775, and expressly provided that the general Treasury should be supplied through taxes levied and collected under the laws of the respective colonies.

I am, sir,

S. W. NIEBERHAUSER.

BEATIES OF THE SUNDAY LAW IN NEW YORK

New York, January 8, 1908.

To the Editor of *Harper's Weekly*:

Sir—The Children's Educational Theatre is closed Sundays. It has been closed since the first "Blue Sunday." It seems likely to remain closed.

The nature of the enterprise, its religious, educational, and law-protecting significance, makes impossible a resort to any subterfuge, or an opening under the "protection" of an injunction against the Police Commissioner, or an opening subject to closing by law.

Our duty to the hundreds of children we have kept from the streets, Sundays, the past three years, being stopped by law, we are trying to fulfill our duty to the young people who find the chief inspiration of their lives in the work of playing for the theatre.

Saturday, January 11, 8 p.m., we institute a series of evening performances, appealing to the mature taste. We shall play "Top o' My Thumb," produced by Munde Adams some little time ago, and two plays by the result of "The Road to Yesterday," Miss Evelyn Greenleaf's Sutherland.

Please send your representative to see this new work, and please let your public know what we are doing, and why we are not attending to our Sunday duty.

I am, sir,

(MISS) KIMBA SHEEDAN FRY,
Dramatic Director Ch. Ed. Theatre.

The First Page of The Battle Fleet's Log

• By CAPTAIN HENRY C. DAVIS, U.S.M.C.

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY" ABOARD THE BATTLE SHIP OHIO

Admiral Evans
The Trinidad Guard of Honor, Lieutenant Colonel Swain, Commandant, being Inspected by Admiral Evans

On Board U. S. S. "Ohio."

ELLO?"

"Yes, this is the Ohio?"

"Yes, I hear you perfectly."

"He's right here in the chart house."

"Captain, the Illinois wishes to speak to you."

"Hello, Illinois."

"Isn't this the greatest yet? By Jove,

it was like this a few years ago!"

"No.— No.— Is that so? Indeed I will. Yes. Well good by—"

"I wonder if we ring off?"

And indeed who would have thought of talking to a ship two miles away without any wires a few years ago?

"Captain Davis, one of the men wants to speak to you."

"Very well, send him in."

He comes in.

"Captain, sir, the first sergeant says them rubber clothes wet I had in lost and I have to pay for them and I want to tell you how it was sir you see it had been raining and I went in March and I says let me get my rubber clothes outen the box and he give me the key and I get my clothes then the next day I went on the sick list with my eyes and it was snowing or something and I sat. Adams wet to do wit me clothes and he says sir I'll cut 'o' here and it was rainin' or somethin' and I didn't know wet to do wit me clothes so I put 'em in a box where there was the rest of the rubber clothes and the sentinels was wearin' them and that fresh mail order from the Arkansas was always kiddin' me and March about the Ohio says 'sir you got no good clothes on that ship 'cause you see who's he took my rubber coat and my boots was the smallest in the lot and my hat had a split on one side where it rained on my head and it was raining or somethin' and he says to me why don't you get some good clothes so you see sir I ain't responsible for them clothes 'cause that fresh mail order from the Arkansas was always kiddin' me and March and I went on the sick list—"

But by this time Captain Davis was prepping for breath and nearly put down and out.

At twelve o'clock noon to-day (Thursday, December 19) the Admiral jumped us up a knot in speed, so we are now howling along at eleven knots. The strain of this comes on the fire crew force more than on any others, and when it is considered that

every day is growing hotter, it is easily understood how hard a job the men have down there. The burners run just as much and the heat gets more intense every day, yet these lolly lolly know that everything is dependent on them, and they make no whinger as they come out of the stove holes dripping wet from their four hours of hard work feeding the ever hungry furnaces. The man behind the coal shovel is entitled to just as much credit for everything as the man behind the gun.

The navigators of this fleet certainly have no slacker. Mr. Hubbard showed me a list of the compass reports which he has to submit at our different stopping places, and when and where he is to get the time to make them all is quite beyond me. The position of each ship is reported every day at noon, and again at night bells in the evening, and to the captain of the ship additional reports are made at eight bells in the morning and afternoon. This, together with the work of looking out for the electrical equipment of the ship, keeps the navigators a very busy lot all year.

It is a week before Christmas, and we are in white clothes, and the heat is increasing every mile we go south. It seems strange after the cold weather we have just left. However, we now have a laundry and a laundress on board, so we need not be so careful of our whites as we used to. It is quite a sight to see the decks in the morning watches alive with men scrubbing every sort of garment from a pair of socks to a hammock. In this connection I saw a sight, the other day, which reminded me of that old soap advertisement called "You dirty son." There was a big blacky sergeant, with sand and canvas, scrubbing a recruit until he was as pink as the proverbial baby. Such is the penalty for cleanliness in the modern navy.

Friday (December 20) the Missouri signalled that she had a man ill with pneumonia, and she was ordered by the flagship to make haste to San Juan and leave the man at the hospital. At sundown she was nearly out of sight, and going for San Juan about fifteen knots an hour. Just after this signal from the Missouri came one from the Illinois saying they had a man sick with pneumonia, and she was ordered to Cuba to leave him; so the second squadron is now composed of only six ships, but they will rejoin tomorrow as we go through the Virgin Passage.

"The doctor seems set on getting that officer bridge, and I believe he will get it." This was what Captain Bartlett said after Dr. Garson reported that he had a tuberculous patient whom he wished to place on the after bridge for open air treatment. The doctor had already put a man up there for isolation, the man having developed a case of measles on the second day out. So Captain Bartlett's emergency cabin on the after bridge is now

ROLLING DOWN TO RIO

THE PONDEROUS BATTLESHIP "ILLINOIS" RIDING THE SEAS ON HER VOYAGE TO TRINIDAD WITH THE BATTLE FLEET

From a photograph taken by English Maritime Officers of the battle ship Illinois

Admiral Evans and Staff landing at Trinidad for the Official Call on the Governor

turned into a ward for contagious diseases, and Dr. Garton has the after bridge.

Great preparations are going on forward in the crew's quarters for the event of crossing the equator. As all seamen know, when one crosses the "line," one enters the domain of Neptune, the king of the sea, and from all landlubbers and others who have not crossed is exacted the initiation into the mystic rites of this domain. Forward this means the actual passing through the ceremonies, while those aft who have not crossed are assessed in things which appeal to the taste of Neptune and his court. When we do go across, I will send a description of just what took place; but now it must be kept a profound secret, that no one may know what to expect. I have crossed six times, so I know.

To-day (Saturday, the 21st) as we went through the Virginia Passage, the *Maumet* and the *Rhinoc* came out from Culcha and rejoined. Their sick were put on the tug there, and are now on the way to the hospital in San Juan, and curv more we are hauling merrily along in double column at eleven knots. I asked the commander-in-chief for permission to send *Harper's Weekly* a wireless as we entered the Passage, and it was granted. The wireless man, after getting my message off, asked San Juan when it would be in New York, and San Juan said, "Eight P.M. this evening." Think of it! Here we are, far out at sea, and yet able to send messages to New York! Early this morning when we were forty-five miles from San Juan, we were able to hear the tick of the wireless telegraph station there over the receivers of the wireless telephones. It's difficult to get quite used to this sort of thing.

Saturday night at sea, and of course the time honored "Sweethearts and Wives," and after dinner a regular target range squabble. I say target range because then every one is at his best. Old songs, new songs, original songs, speeches, poetry, and all the wit of a wardrobe mess. Yet, after that "Sweethearts and Wives" there was something tingling at all of us, something which made us all say or at least think, "Gee! I wish I was back in Gee's country!"

At this songfest Hubbard, after a great deal of persuasion, sang his inimitable "Henry," and then, as it was part of the bargain, Edgar sang the "Mishlipmitie," and Davis sang an old fellow with whiskers on it called, "Just because they said he hit the boom." Sterling wound up the fun with his imitation of the professor in a *ryd* chantant in Algeria. I don't know what we would do without him to play the piano. We might fall back on McCullough, except that Mac has only two notes in the bass which he likes, and as time is something set to be considered—well, I'm glad Sterling is here.

We have just passed St. Croix and have changed course to S. 25 E. and now are heading direct for Trinidad. We expect to arrive Monday about noon, and I think we will. There is quite a sea running to-night and everything is battered aft, as we are taking water over the quarter deck every minute. The ship is wonderfully well ventilated, and if it were not for this the heat would drive all of us up on the superstructure. It's rather hard to think of this as being Christmas time when we are wearing white clothes and suffering from the heat. However, we are going to have a Christmas tree, and there will be presents for all the mess. I have had six out of seven Christmas in the tropics, and I wonder how it would feel to be cold and see snow at Yuletide.

Sunday at sea is always different from any other day. There is something in the air, even at sea, which makes one aware of the difference. After the Captain had inspected this morning we had a general order published, and all the crew were marched aft to hear the executive officer read it. It was a caution to the enlisted men of the fleet about shore leave. For the Admiral, as usual, has thought of everything. After the roll call had sounded the *Connors* cut made signal, "Disregard the movements of the flagship!" and went off to the command at full speed. We don't know what his object was, but it probably had something to do with the compass work. This afternoon there was a burial at sea. A man on the *Infante* died last night of spinal meningitis, and his funeral took place this afternoon. All the ships saluted their colors during the ceremony, and as the captain of the ship finished the reading of the funeral service, the body, seen in a canvas shroud with a grate bar to weight it, was led into the sea.

Hubbard says we will be anchored by two o'clock to-morrow afternoon and, as that is a day ahead of schedule time, we are not sorry. Christmas eve will probably be spent in getting ready for cooling, and as there will be no work on Christmas day it is likely that the men will be allowed a chance to howl their sea legs on the beach. This cooling will probably be a record performer as every one wants to "hit the beach," and of course no one can do so until all the coal is aboard.

Nearly every day a new dog or a cat puts in an appearance. The men are strong on pets, and we now boast four dogs, three cats, and a goat. Poor old "Bible," the goat, has never got out the bite which Admiral Enory's bull terrier, "Bum," gave him. His right fore leg was in *spinalis* at the knee for nearly six months, and now that it is out it seems useless to him; however, he gets around on three legs pretty well. The dogs are a wonderful collection. "Blink" is a Boston and belongs to Chief Quartermaster Dale. "Fritz" is one of those dogs who are raised under a barrel and only allowed to grow in a few and aft line, while "Bunk," who belongs to the marines, is just plain dog. He was born crazy and won't ever get over it. The fourth member of the dog crew is too young to know his name, even if he had one.

It is Monday afternoon, December 23, and we have just freed column preparatory to going through the Dragon's Mouth. We will anchor at about four o'clock this afternoon, and the fat ship has just signaled that the first division and the *Musson* would take colliers alongside this evening, and be ready to sail ship at daylight. The first division will probably finish to-morrow, and the second will sail the day after Christmas, followed in turn by the third and fourth. The *Ohio* has about a thousand tons to take on, and that means two full days' work.

The lookout has just sung out, "Land ho!" and the mail orderly is collecting the mail, so I must hustle to get this off. We are too far from land to tell much about it, but it looks very attractive and inviting from here. We are about three miles from the wharf, as the harbor is very shallow. The port medical officer is on his way to the flagship now, and the fleet surgeon will get postpaid for us all. There is some rumor about getting fever in the team, but I don't believe there is any more of it than they always have down here.

All of us wish we were at sea. Forty-second and Broadway for this Christmas, but that is not to be. However, we will be there next Christmas, and that is a great consolation.

There goes the last call for mail!

FOUR DISTINGUISHED LITERARY AMERICANS

FROM A PHOTOGRAPH TAKEN AT LAKEWOOD, N. J., WHERE A LUNCHEON WAS GIVEN TO MR. HOWELLS TO BID HIM GOOD-BYE ON HIS JOURNEY TO EUROPE

"The Gentlemen from Manila"

By PROFESSOR G. H. BLAKESLEE

TWO men who are sure to be prominent in Washington at this season are the Philippine delegates, The Hon. Benito Legarda and the Hon. Pablo Ocampo de Leon. Both men have interesting personalities and both are among the most prominent native-born men in the islands.

Benito Legarda, the delegate elected by the Commission of which he is himself a distinguished member, is very young, and received his education in his native city, graduating from the local university of Santa Tomas with the degree of Bachelor of Laws. After being admitted to the bar, he practiced his chosen profession for a few years, but soon found it necessary to devote his whole time to his large business interests. This he did with such success that he is now considered one of the richest business managers as well as one of the wealthiest men in the whole Philippines. His Manila mansion, which is almost palatially furnished, is a very hospitable home. Among those whom he has recently entertained are Secretary and Mrs. Taft, who were his guests during a part of the time which they spent in Manila.

Commissioner Legarda has travelled extensively in nearly all of the countries of Europe, and speaks several languages with fluency. Paris is his favorite city; it was here that the accompanying photograph was taken during a recent visit. On four different occasions he has been in the United States. In 1893 he and his whole family spent several months in the Chicago Fair; in 1904 he was a member of the Philippine Commission appointed to visit the St. Louis Exposition.

Personally Commissioner Legarda is of middle stature, with black hair and mustache which are slightly touched with gray. One is charmed by his manner and by his conversation. He is reputed to have many friends, but no enemies. It is fairly well known that of all the men whom the Commission was likely to select, he was the one most acceptable to the Assembly. Mr. Legarda, with his almost perfect command of English, and his partiality for American institutions and American life, will be a most acceptable delegate at Washington. He is an excellent representative of the wealth, education, and culture of the Philippines.

In politics he has been one of the earliest and staunchest friends of the United States. During the days of Aguinaldo's rule he was for a time Treasurer and Vice-President of the Malolos Congress, but he soon realized the hopelessness of the Filipino cause, resigned his positions, and became one of the foremost leaders of the Federal party, which tried to induce the insurgents to lay down their arms and accept American sovereignty. In recognition of the value of his services, he was chosen as one of the three Filipinos appointed to the Philippine Commission, when civil government was organized in 1901; this position he continued to hold up to the time of his recent election. He is now a member of the Progressive, sometimes called the Government, party. This is the successor of the Federal party, but while it has declared in favor of eventual independence for the Philippines, it does not wish for it at the present time, but only when the United States shall consider that the Filipinos are fully prepared for complete self-government.

In a recent conversation, after his election was announced, Commissioner Legarda said that, although the Filipino people had made striking progress under American rule, especially along educational lines, it was useless to talk of independence, or of any time when the present Spanish-trained generation should be in control of Filipino politics. "I want independence," he exclaimed, "but how can we have it? That's the question. I do not want to stand the risk of possible civil war or anarchy, for I have property to lose."

In the House of Representatives, he said, he and the delegate of the Assembly would work together for the same objects, provided the question of independence were not raised. Their chief aim would be to improve the economic condition of the islands, for, largely on account of the cattle-plague, which has killed off about ninety per cent. of the work-animals, the situation is worse than it has been for thirty years. "One particular object," he said,

Congress provided that the delegates from the Philippines should be elected by the new Legislature, the Commission and the Assembly voting separately. The result is that one delegate, Hon. Benito Legarda, practically represents the Commission, made up of four Americans and three Filipinos, and the other, Hon. Pablo Ocampo de Leon, the Assembly.

Hon. Benito Legarda

Hon. Pablo Ocampo de Leon

"will be to show Congress the great need of lowering the duty upon Philippine sugar and tobacco."

When asked what he would do to raise the Philippine Assembly should send a petition to Congress requesting immediate independence, he declared, with emphasis, that he would oppose it and would show reasons why independence at present is practically impossible. If the petition should ask that some definite date be set when independence would be granted, he could only answer, such a proposal, he said, provided the date were made so distant, "say one hundred years from now—that the islands then would without any man set of doubt be ready for independence."

"Would you favor a resolution of Congress pledging the Philippine independence at some unnamed time?"

"Yes. I think it would have a good effect upon the people, for many are now suspicious of the real purposes of the American government."

Pablo Ocampo de Leon, the delegate who represents the Philippine Assembly, belongs to an old and well-to-do Filipino family. Like Legarda he was born and educated in Manila, receiving his degree of Bachelor of Laws from the University of Santa Tomas.

Mr. Ocampo—for so he is to be called, and not Mr. De Leon—has played a prominent part as a Filipino patriot. In 1898 he was imprisoned by the Spanish government because of his insurrectionary tendencies. Two years later, when the short-lived Philippine Republic was organized under Aguinaldo, he was elected a member of the Malolos Congress; shortly afterwards he was appointed to represent the insurgent government at Manila. Here he displayed such activity that the American military authority, who had by that time captured the city, exiled him to the island of Iloilo along with forty other supposedly dangerous Filipinos. After two years he was permitted to return.

From the time he came back to Manila until a few months ago, Mr. Ocampo took very little part in politics, but devoted himself almost entirely to his law practice. He was, however, for a time, the director of *La Patria*, the forerunner of the present bold, radical, and intensely patriotic daily, *El Renacimiento*. By means of the campaign which he conducted for the Assembly, and because one of the most prominent of the Nationalists. The party, as its name suggests, is founded upon the idea that the Filipinos are a distinct nation, that they are capable of self-government, and that the United States should grant them independence at an early date.

Besides Mr. Ocampo's generally recognized integrity, business ability and soundness of judgment, there were two or three circumstances which greatly aided him in securing his election. In the first place, he is practically a pure-blooded Filipino, "Filipino in heart and in face," as the expression goes. The majority of the Assembly were anxious to have their delegate a true representative of their race. This fact alone was enough to cause the defeat of other strong candidates, who were in part of Spanish origin. Mr. Ocampo was further favored both by his individual patriotic record and by his present conservatism. The Assembly leaders considered it good policy to send a moderate nationalist to Washington, and Mr. Ocampo is probably the most conservative among the prominent men of the party.

In talking over his probable work as a delegate, he said that he would very likely receive written instructions from the Assembly which would direct his action in the more important matters. So far as he could express a personal opinion, however, he felt positive that he and Commissioner Legarda, though they belonged to different parties, would be able to work together harmoniously on practically all questions relating to the Philippines. The most important subject at Washington would be to do everything possible to improve the economic condition of the islands, for, on account of cattle-plague and other misfortunes, the situation was worse than it had been for many years. To this end both delegates would try to secure the reduction, or, if possible, the repeal of the tariff duties upon Philippine sugar and tobacco. Both delegates, also, are greatly interested in the Japanese question.

The Passing of "300 Mulberry Street"

By FRANK MARSHALL WHITE

HE symbol "300 Mulberry Street," that for nearly half a century has been an emblem in the underworld of two continents, and, like "Scotland Yard," has figured in history and fiction, is about to lose its significance—the Police Department having more than quadrupled numerically since, in 1843, it moved its headquarters to the address familiar to all civilized criminals. In this new year of 1908 work is nearing completion on the edifice bounded by Centre, Broome, Grand, and Lafayette streets, which, doubtless, thereafter, will be given a name of its own to compare with among evil-doers.

It was the year that it took possession of the present headquarters—officially known as the Central Office—that the New York Police Department first demonstrated its capacity as a fighting force, by quelling the draft riots before the National Guard could be recalled from the front to assist it. The occurrences of the sanguinary three days and nights in July, 1863, that Manhattan Island was virtually in possession of the mob are almost as fearful as anything that is recorded of Paris during the Commune. The actual mortality has never been known, but it has been estimated that between 2000 and 3000 persons were injured, and at least 1000 killed, while the damage to property reached \$2,500,000.

More than fifty buildings were burned, including the Colored Orphan Asylum, two police stations, and three prominent "dark shade" offices, during this brief reign of terror. Negroes were beaten and stoned to death and hanged to lamp-posts, and other terrible atrocities were committed. The life of Florence Greely was persistently threatened, and desperate efforts were made to lure the Tribune building, which were frustrated by the police fighting against tremendous odds. John A. Kennedy, the superintendent of the department, who led the policemen against a mob overhauling their way of marching down Broadway with the avowed intention of burning 300 Mulberry Street, was dangerously wounded and shockingly disfigured, and many of his men were killed and injured. They routed the mob, however, leaving scores dead and dying in the street. "During that week," writes former Inspector Nicholas Broock, the historian of Police Headquarters, "there was never a moment but that the building was threatened with the torch, and was only preserved by the sleepless vigilance and hand-to-hand bravery of its defenders."

Eight years later Governor Hoffman came down from Albany and made 300 Mulberry Street his military headquarters during the suppression of the Orange riots. The members of the Hibernian societies of New York that had paraded on St. Patrick's day in the year 1871, considered it an affront when the Orangemen of the city announced their intention to march in procession on the anniversary of the battle of the Boyne, in July, and promised that no such demonstration should occur. The Orangemen swore that they would parade or die, and so threatening did the situation become that Mayor McKee Hall, through the superintendent of police, issued an order forbidding the procession.

When Governor Hoffman, in Albany, heard of the Mayor's action he took the Empire State Express (or its ancient equivalent)

to New York, where he put forth the following proclamation: "I hereby give notice that any and all bodies of men desiring to assemble and march in peaceable procession in the city to-morrow the 12th instant, will be permitted to do so. They will be protected to the fullest extent possible by the military and police authorities. A military and police escort will be furnished to any body of men demanding it, on application to me at my headquarters (which will be Police Headquarters in this city) . . ."

The Orangemen paraded, but were attacked by the Hibernians, and a mob along the entire line of march, and there was great loss of life. The police again won the day, taking the brunt of battle from the military.

Number 300 Mulberry Street has other associations than those connected with crime, however. History has been made within the walls of the old headquarters building. In the time of the Republican police commission, when two Democrats and two Republicans controlled the destinies of the department, the offices of the commissioners, who were always prominent politicians, were meeting places for the hewing of both parties. Indeed, in the '70s the newspapers frequently complained that the Customhouse, the office of the district attorney and the city marshal, and Police Headquarters were centers of party propitiation.

There are two entrances to the headquarters building; one is Mulberry and the other is Mott Street, the former being always under the surveillance of the reporters, who have offices in a building opposite. The Mott Street door is not as carefully watched, though newspaper men are continually prowling about the corridors, so that it is almost impossible for any one to enter or leave the building without being observed by the agents of the Fourth Estate. There are politicians who recall occasions when the reporters were decoyed into one of the commissioner's rooms, while John Kelly smoked in by the Mott Street entrance for a secret conference with Chester A. Arthur.

Arthur was a familiar figure at Police Headquarters up to the time that the assassination of Garfield made him President. Even while he was Vice-President he frequently called in Mulberry Street to discuss the local political situation with Stephen V. French, who, with Dewitt T. Wheeler, composed the Republican end of the Police Board of that time, the Democratic balance being preserved by Charles F. MacLean, now on the Supreme Court bench, and James E. Morrison. It was during the tenure of office of this Board of Commissioners that 300 Mulberry Street was the scene of one of the bitterest factional fights in the history of Tammany Hall. Election inspectors were then appointed by the Police Board, two Democrats and two Republicans being allotted to each election district. The Democrats were split into a Tammany and an anti-Tammany faction during the municipal campaign of 1879, and the contest that ensued over-estimated all-right ascensions of the board, Ellen Foot, now Secretary of State, and the late David Dudley Field being among the best counsel who left Police Headquarters after daylight in the mornings.

An earlier political fight that raged at 300 Mulberry Street was in 1874, when John Kelly attempted to force Governor Dix to remove Mayor Havermeyer, because he had himself refused to remove Police Commissioners Hugh Gardner and Oliver Charlack.

The famous Detective Bureau at Police Headquarters

who were under indictment for a technical offence committed in the removal of a Tammany election inspector. Gardner and Charlack finally resigned, and that the latter was not of the staff some politicians are made of is indicated by the fact that he died soon afterward, his death being hastened by the disgrace attendant upon his indictment.

A more recent political controversy at Police Headquarters resulted in the abolition of the bipartisan commission, and the establishment, in 1901, of the present single-headed one. The last four-headed commission was composed of Bernard J. York and John H. Sexton, Democrats, and Henry E. Abell and Thomas L. Hamilton, Republicans. That there is a single-headed commission to-day is believed in some quarters to be due to revenge on the part of the late Frederick S. Gibbs, Republican leader, directed against Hamilton and Abell, who had refused to do his political bidding. Whatever may have been his motive, Gibbs brought about legislation at Albany that swept his enemies out of place and

300 Mulberry Street"

Ex-President Grant and New York Governor Roosevelt rarely failed to visit Police Headquarters for the returns when they were in the city on the evening after an important election, and distinguished visitors from all over the country have been taken thither at one time or another to get election news from home. A person acquainted with the respective locations of the offices of the Democratic and Republican commissioners in the headquarters building might fix the result of an election—unless it should chance to be a very close one—by ten o'clock on any election night, merely in observation of the windows. If the windows of the Democratic commissioners

were dark it meant a Republican victory, and vice versa—for the members of the defeated party did not make a practice of remaining to congratulate the victors.

Many well-known politicians, aside from those already mentioned, have held the office of police commissioner at 300 Mulberry Street, not the least of these being Theodore Roosevelt, who was appointed by Mayor Strong in 1895, and served with General Frederick B. Grant, as the other Republican member of the Board, and Andrew B. Parker and Avery D. Andrews, Democrats, re-

(Continued on page 22.)

The new Headquarters Building, in the Block bounded by Lafayette, Centre, Broome, and Grand Streets

sacrificed Sexton and York with them. Incidentally the office of chief of police was abolished, and William S. Devory, who was corrupting that post and was no friend to Gibbs, also lost his job permanently.

Before the improvements in telegraph facilities made it possible for the newspapers to issue early bulletins, and rendered the introduction of private wires into the various political headquarters throughout the city a simple matter, 300 Mulberry Street, where the first official returns are received in New York, was a rendezvous for the big politicians of both parties on election nights,

The Man Apart

By CALVIN JOHNSTON

ILLUSTRATED BY ERNEST HASKELL

WHEN I was born, I know it was just like step-pie out of a mirror, for the first thing I remember was blinkin' into somethin' very bright, and hearin' a sound like breakin' glass. Then instead of fadin' like a shadow, I was somethin' real, and laughed into the dark dark face of old Jern.

Once since then I mentioned it to Jern, and he said that the sea and sky were very bright that day, and the shingle grated like glass when he drew up the boat he found me adrift in.

"There was a schooner went down out there the night before," he added quickly; "but, mind you, I ain't sayin' you're not right about bein' born so; just like the reflection o' somebody else. God knows."

Perhaps bein' born is all you can think of at one time, for I had lived till I was pretty old before I noticed the white sails out at sea, and the lighthouse on the rocks, where we lived.

Then long afterward came the first evening when I felt the storm and wasn't afraid, as I looked up at the brave, friendly light shinin' out over the reefs where the Atlantic beat. I walked slow and sideways, facin' the wind, till I got to the door Jern had opened as if lookin' out for me.

"The Nor'easter comes down like a reaper," he said, as I stood by in my drippin' clothes, "though, of course, you needn't be afraid of it."

He said this in a very solemn tone, and his eyes, that were all ways slow and dreamy, glittered a little bit.

We ate supper as usual without sayin' hardly anything, though he watched me as if thinkin' over somethin' he had to tell. Afterward we both sat listenin', till Jern made up his mind, he turned around, holdin' his pipe in his hand, and said:

"You are Solomon strange."

I had never had any name, except just Boy, up to that time, and he looked at me anxiously as to how I would take it.

"I like it," I said after thinkin' a while, for somehow it sounded like a part of that night, with its wild sea and hail.

He smoked his pipe a few minutes, before sayin' as if to explain, "I have my idea about you," and I nodded that it was all right. We were always very friendly, just like this.

"Would you mind readin' all them books over there?" he asked then.

Jern had taught me all he knew about readin', so I promised though I knew it would take a good many years to spell out the dictionary and all the other books left by the lighthouse inspector.

"Particular, anything about spirits," he added; "you ought to know that."

"I believe so, too," I said, and the next day I found one in the dictionary, though there was not any in the other books except a ghost.

I grew sadder after that, and began to feel I was somehow important with a name which was all my own, and spoke of it to a very wrinkled oyster, that I'd picked up at low tide, and was keepin' in a little cove for company. Of course there was plenty of other things to play with, but there's nothin' like a live one.

I loved to play ing with the waves, up and down the beach, and would hoist sail on an old wreck half buried in the sand.

I would do this whenever I felt noisy, because as I couldn't see my crew o' spirits, I took lots of shoulin' to make 'em hear, and Jern always looked worried if I laughed too much about the house. He never was cross, but seemed to think it didn't look well in Solomon strange.

After the lamps were trimmed in the mornin' we would break out every bit o' dust, and then he would sit smokin' and lookin' out to sea, sometimes talkin' in a low tone.

I often wondered who he spoke to, but could never see 'em, no matter how hard I looked. I guess his crew was a good deal like mine, only they must have understood better, for he would sometimes talk with eyes chinin', as if listenin' to their answers.

With so many things to look after, I didn't have a chance to get home-ome; besides, for a long time, I thought I had to tell the tide not to come any higher, which made Jern open his eyes.

The inspector came out to our rocky island twice a year, and his boat would bring supplies and some clothes, but once he forgot the tobacco. After wanderin' about very uneasy for several days, and talkin' to his crew a good deal, Jern pulled the old life boat down to the beach, and said we were goin' over to the mainland.

We could see this from our lighthouse, settin' low and blue in the water, but it took most of the mornin' for Jern to row over, and when we got there I was surprised to find how big it was.

We went up into the village, and never havin' seen many people, I took a good deal of notice of them, speakin' to each other on the street, or shakin' hands when they met.

They all knew Jern and nodded, but it seemed to me that they looked at him in a queer way, and I felt they whispered about him when we got past.

Not a word did he speak to anybody, so I could tell he was different from mainlanders, and didn't like them. When Jern went into a store, I stood outside, and saw a man carry another little box out of a yard across the street, and put him when he set him down upon the walk. When the man walked away I crossed over and asked:

"What did he do that for?" for I thought maybe he didn't know how to walk.

We ate supper as usual without sayin' anything

"Papas always put their little boys on the head," he said.
"No," I told him, "they put dogs on the head. The inspector has one."

He puckered his face at me, but Joro came out of the stope just then, and I had to follow back to the boat, though I thought of that little boy all the way, and found my feet doubled up when I got there.

Of course this trip gave me a lot to think about, and the next mornin' I started out from the lighthouse along the beach, through comin' to the end of it, I didn't stop as I'd always done before, but kept right on clamberin' over the rocks till I could see the mainland. There I sat and thought about all the things I could, but kept comin' back to one thing in particular, till I said:

"Well, he can pucker his face: I don't want anybody puttin' me on the head." As I sat there wonderin' why Joro should be so different from other people, with nobody to shake his hand, I heard an old gull scream above my head, and saw one of its ledges tumble down the rocky cliff almost to my feet. I know it had fallen out of its nest far above, but as I couldn't reach to put it back, and the old gull flew away to sea, I took it carefully in my hand.

Though very ugly, and scathed and ragged, I can't tell you how glad I was to put its head, and feet that, all warm and alive, it was my own to keep. I looked out again to the far, blue mainland, and from somewhere came a word I had heard, or read in a book.

"I shall name you Freeing," I said, and from that time on kept him shut up in a wooden cage that Joro made for us.

This made me more busy than ever, for he was always hungry, and I had to dig in the sand for blood worms all the time I wasn't eatin' my own meals. We were good friends at first, and he would stretch out his neck and squawk when he saw me comin'. For he thought I was his mother. I did dig my arms a little for him, but was afraid to try flyin' at that time.

One day late in summer I took him to the high rocks opposite the mainland, as I had done many times before, and was about to tell him again what I'd seen over there, when, giving his first great scream, he began beating his wings against the bars of the cage.

I was a good deal troubled and tried to pet him, but he kept beatin' his wings till he was almost dead, and fell down in a heap with his eyes shut.

Then all at once it came to me that it wasn't any joke for Free to be shut in a box on an island, when he had wings, so almost cryin' I took him out.

I was miserable to think he'd fly away, for I felt I just couldn't go back to the oyster now, but I held him on my wrist till his eyes opened, and then he gave a little flutter that carried him into the air. I watched, holdin' my breath, but after flyin' in a little circle, he settled down on my shoulder as if afraid, and tucked his head under his wing a minute.

Then as if his mind was made up to risk it, he suddenly screamed more shrilly than before and darted far out over the sea, with wide white wings. I watched him till he wheeled behind a point, and

then went home, feelin' very sad that he should fly away after all the sand-worms I'd given him.

I didn't look up till I got home, and then hearin' a little squawk raised my eyes, to see Free sittin' on the rail of the lighthouse platform, with his head on one side.

"Why, he was only jokin'," I thought, and when I coaxed him, he came to my shoulder with his wings beatin' my cheek, and opened his bill.

Joro said he'd never seen a gull haunt a person before, and shook his head, but I understood how Free felt about it, and was gladder then ever to have him for my friend.

"I'd like to mark him for my bird," I said, and Joro, who was very strong, cut into an old silver ring and bent it around Free's leg just above the claw.

"Wherever you meet him, high or low, he can't deny you now," said Joro. "Do you know all about spirits yet?"

"Not quite," I answered, and I knew he thought Free was one of them.

On bright days when I sat on the rocks, Free would visit me darlin' down the wind, or beatin' up against it with his wings flashin' like silver, as if to show me how good it was to be out of a cage, which I began to understand more and more.

He had a habit of flyin' around a pole and hidin', and I got the curious notion that somethin' caught and held him there; so one day I sailed along the narrow ledge of the cliff till I got to a broader space, high up and overhangin' the sea.

Free was sittin' on a stone that stood at the head of a little mound. This stone was very old and weather-worn, but lookin' close I could see letters on it.

As I read them, somethin' gloomy and cold seemed to wrap around me.

"Solomon Strange lies buried here," said the stone.

I looked up, for the daylight was growin' pale and a great fog from the ocean suddenly came over, and the muffled lightness he'd begun to tell out of it.

The stone now seemed only a shadow, and Free rise' with a hoarse creak flew straight away toward the mainland. As I could not see any thing, I thought for a while, and then understood everything about myself at once.

"There is nothin' else to it," I said; "I am the ghost of Solomon Strange," then I slipped back along the ledge, for I was not afraid of flyin' any more.

Joro sat in the lighthouse tower and reached out both hands as I climbed the steps to him; then he dropped them to his side without any word.

I felt so large and solemn that evenin' and walked aroun' so soft, that I know he suspected what I was, which I didn't mind a bit, though I said nothin'.

But the next afternoon he must have felt sure of it, for swift as a spirit, Free flew in out o' the mist with his head under his wing and a little paper that rose aroun' his leg with a thread.

I took it off and found it printed over, a little lap-sided as if I had done it myself.

"Whose tame gull with a silver ring comes to our cottage on the beach? Are you a little boy? I am a little girl who loves her paps. Pa caught the gull."

I sat and thought about all the things I could

Jorn watched me read, but when I offered the paper to him he shook his head and said, in a knowing way:

"No, Solomon, that's your business, and would have notion to do with it."

I went to sleep thinking about the little girl, and all night could see her with bright blue eyes and yellow hair playing on the beach.

Though I was afraid she'd feel put out about it, I felt she'd better know the truth, and the next morning printed:

"I am not a boy, but a strange ghost, on a piece of paper and destined to die. Free. I wanted to put in 'Solomon,' but there wasn't room."

Then I loosened the bird, who had been in the house all night, and he rose in circles after circles, his eyes coming to me bug after he was out of sight, for the fog was still heavy over the ocean.

I afterward knew he was telling me the truth.

Later, it lightened a bit, and I made my way down the beach and over the slippery rocks till I reached the cliff. Then suddenly the fog rolled back, and the day shone through hard and frosty, with a high windy sky, for the fall storms were on the way.

I walked along the ledge to the tombstone, for I wanted to see what else was written there, and after a while studied it out like this:

"He was a man who knew all about spirits, and if it hadn't been for his limp and a blind eye would have gone far in the world, what means his sudden death?"

I nodded my head then, understanding why Jorn wanted me to know about spirits.

For a long time I sat there, taking out the little girl's letter and reading it over and over. I remembered Free and somehow didn't even care to see him again. I wanted something else that couldn't be explained, and for the first time thought the island small and mean, and felt very much alone.

"I wonder if he puts her on the head?" I thought, and even pulled my own hair to see how it would feel.

Then growing in the same mind as I was during the evening I first feared the storm, I read the epitaph again.

When I got home the lamps were lit and a brown wind was flying up before the gusts, while the sea beat hollow, as if a great bell rang underneath the water. It was all of a night for show.

In the evening we sat together a while, Jorn not talking to himself, though he appeared to wait and listen, with the faint glitter in his eyes.

"Was I drowned when you found me in the boat?" I asked.

"No," he answered solemnly, "not drowned." He seemed about to say something else, then waited.

I went out and wandered over the lighthouse tower, and when the wind shook it like a tree, came back into his room. And I limped, and had one eye shut tight.

Jorn looked at me and held his lips tight, which had gone out.

"I had my idea about you," he said.

"Ghosts have to haunt," I told him, and walked straight on through. But I stopped at the door and said, "I miss you far in the world, like the words on the tombstone, for I wanted to see the little girl on the mainland."

Not once in his life was Jorn ever afraid, though his voice shook and he seemed pale as he leaned forward and spoke.

"Your time has come to go."

I drew back into the dark and went to bed, afraid of myself. I did not go to sleep, but he still, listening to Jorn's footsteps as he walked slowly back and forth, and for some reason troubled by what he had said.

He came to the door and looked in, holding a candle; his face

was still pale, but his eyes no longer glittered. Instead they seemed as deep and soft as the little girl's. I lay as if asleep, and he stood by me a minute, then took my hand that hung over the side of the couch.

"Boy," he whispered, but I was half afraid to answer, and he went on talking to himself.

"I see Solomon Strange out of the world, but I send this Lord-giver boy back into it to take his place; knowin' all about spirits, as 'davin' with 'em, too, which is a merthin' Solomon as never could."

He signed and stood by quietly for a while. "What will become of old Jorn, now?" he went on in a tremblin' voice. But who could have me? Since that time I live a man apart, with none to take his part."

I felt him put my hand over as softly; then the light faded from my eyelids and he was gone.

All that long night the picture of the mainland seemed faded from my mind, and even the face of the little girl grew dim, while I listened to the storm, and thought of Jorn's lights shinin' far out to sea.

Morning came with a blue shiny sky, like the day when I was born, and I walked out of the lighthouse looking for Jorn. Though the waves ran mountain high, I found him pulling the lifeboat down the beach with a new-like breakin' gloves. Still, I felt it was a bad day for ghosts.

He stopped when he saw me, and after a long look turned away his head. I took hold of his hand, something I'd never done before, and felt his big fingers close softly over mine.

"Jorn," I said, and as he looked down at me, held up my arm, he raised me as if I were dead, and I asked:

"Did Solomon Strange hate you?"

He considered a few moments, then seemed to think I should know all about it and touched an old scar in his throat.

"He drove at me here with a knife, and I struck him with my fist; that was all. People said I was right, but I am a stained man. You should take his place, though, and I'll owe the world nothing when I leave it."

He bent over as to put me down, but I clung around his neck. "I will not go away to be his ghost," I shouted. "I believed I wanted to go to the mainland to play with the little girl, but I know better now. I'm going to stay with you forever an' ever."

He thought it over as if not quite understanding, and then started to walk far down the beach with me in his arm.

Something led him to ascend the rocks where Free and I had thought of many things together, and we came in sight of the point that held the grave of Solomon Strange. There the rollers were breakin' in with wild spray and a noise like thunder, and my heart gave a great beat as I pointed before Jorn's eyes.

For the base of the point, long crumpled, had been shaken by the storm, and the strange cliff with the grave of Solomon Strange was far scattered in the sea.

"This is a sign, I think," said Jorn, quietly.

"Solomon Strange is gone," I told him. "Now any name is Jorn, and you shall be my papa," and I knew it was true, for he put his hand on my head.

From then till to-day he has not talked to himself, nor have his eyes glittered, for he looks on all that trouble no more and likes to have me laugh about the house.

Next morning, when we rose over to see the little girl in the cove, I believe people will shake his hand, as I do every morning, so he will get used to holding it out again.

I do not know about spirits any more, and believe it is sheer not to have ghosts in your family.

AMERICAN NAVY SECOND IN THE WORLD

By NEWTON FOREST

THAT the United States is the second naval power in the world today has recently been recognized by authorities on naval affairs abroad. Henry, who compiles the *Naval Yearbook* in England, each year, declares that the United States' step to second place among the naval powers is one of the most remarkable incidents relating to naval affairs of the past year.

Great Britain, United States, France, Germany, and Japan, is the order in which the list of the world's naval powers begins.

Great Britain alone exceeds the United States in fighting force afloat. To attain its position the United States, during the twenty last years which have elapsed since the building of the modern navy began, has expended \$309,359,150, or an average of nearly \$15,000,000 a year.

A comparison of the naval strength of Japan and the United States is doubly interesting in view of the recent departure of the American fleet of battle-ships for the Pacific, and its absence from which has been attached to this event. The American navy has on its list 29 battle-ships of 10,000 tons and over, while Japan has 13; our navy has 11 coast defense vessels, Japan 1; we have 15 armored cruisers, Japan 13. But in the number of torpedo-boats and torpedo-battle destroyers Japan is far ahead. She has 79 torpedo-boats and 57 torpedo-battle destroyers, while the United States has only 33 torpedo-boats and 21 torpedo-battle destroyers. On the other hand, Japan has only 9 submarines while we have 19. In the cost of battle-ships of our navy the *Colorado* and the *Kansas* lead the others, the former costing \$7,967,000, and the latter \$7,671,163. The cost of maintenance of each type of war-

ship is as follows: Battleships, \$406,587 12; armored cruiser, \$753,134 47; protected cruiser, \$353,002 20; gunboat, \$113,383 12; torpedo-battle destroyer, \$77,354 22; torpedo-boat, \$53,650 08; submarine, \$26,434 10.

The total number of ships in the American navy is 104; in the navy of Great Britain, 154; in the French navy, 569; in the navy of Germany, 210; and Japan has 194. It will thus be seen that while the United States has the least number of ships of these five powers, she is still second in rank by her comparative strength in battle-ship tonnage. Great Britain's tonnage is 821,200; United States, 406,140; France, 708,461; Germany, 348,461; Japan, 101,078.

The crews of the vessels of ships in the French navy is found to be the least that she has 221 torpedo-boats and 19 submarines, while England has only 71 torpedo-boats and 48 submarines, and the United States only 32 torpedo-boats and 19 submarines.

The personnel of the United States navy has always been considered high in standard, but in number it falls below those of England, France, Germany, and Japan. But the United States is one of the three countries among the five mentioned which maintains a marine corps. The other two countries which have this branch of the service are England and Germany.

The total number of officers in the American navy today is 2322, of which one is an admiral, 20 rear admirals, and 84 captains. The total number of petty officers and enlisted men is now 38,996, whereas in 1905 it was only 8726.

At present we are under construction for the navy seven battleships, two armored cruisers, three coast cruisers, five torpedo-battle destroyers, two submarine torpedo-boats, two colliers, and two tugs.

British Holidays—and Others

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

BIRMINGHAM, ENGLAND

HAT there should be any such thing as a winter resort in England sounds almost like a contradiction of terms. Most English people, I am bound to admit, scout the very idea. When they wish to hibernate they go abroad, to Pau, to Biarritz, to the Riviera, to Egypt, or to the snow and sunshine of the Engadine or Austrian Tyrol. It is an altogether British characteristic to be faithful in devotion both to places and people. The English change their habits very slowly. A man who has once won their affection keeps it to the end of his days. England is a land of old favorites. They more than hold their own on the stage, and in every branch of music, art, and politics. One of the differences between England and the United States is that while it is easy in America to make a reputation and difficult to keep it, in England it is difficult to make a reputation and impossible to lose it. And the same constancy which the English display towards individuals they also show in regard to places. Millions of them go to the same seaside resort for their summer holiday year after year, with

New Year's Circus at the New York Produce Exchange where Baskets of Food were given away to the Poor

One Phase of New York's Celebration of New Year's Eve—Broadway at Midnight filled with Noise-making Crowds

an discernible longing for a change. It argues, therefore, no deliberate choice or canvassing of this and that spot that all Englishmen who can afford it, and many who cannot, spend the winter months on the Continent. It is simply the result of habit. The idea that their own country could furnish them with all they need has scarcely yet occurred to them. It will no doubt in time. They will ultimately realize that the climate of southern Europe is changing, and that its bit of influence with none of the compensations of home is not worth shuddering at. The days when the good people of Cannes blushed at the sight of a frost are dead and gone. For blistering winds and driving showers San Remo is beginning to rival a Yorkshire moor. It is quite on the cards that the battle of the roses in Nice will ultimately be fought out with snowballs. Egypt, it is true, shows no climatic falling off, but Egypt is far away, horribly expensive, and overdone. Austrian Tyrol has not yet come into its own; it remains, unaccountably, a region to summer in merely, and still awaits the realization of its rare and real charms as a winter retreat.

Perhaps, however, the time is not far off when the English hibernated classes, having "done" Egypt and voted the Riviera

played out, and learned the Engadine by heart, will make the amazing discovery that right at their very doors, in this island which is assuredly one of the windest and rainiest corners of the globe, there are nooks which in their own way make as delightful resorts during the winter months as any they will find abroad. On the south coast, in the Isle of Wight, and in Devonshire there are many such nooks. They are not fashionable; they do not attract visitors from the Continent; those who patronize them are drawn mainly from the English upper middle class. But they are well worth going to, the particular one from which I write, Bournemouth, is also well worth staying at. A quarter of a century ago there seemed a chance of its becoming a really fashionable spot. The present King, then Prince of Wales, shared no great liking for it that he kept a suite of rooms in one of the hotels. But not even that attraction availed to give Bournemouth a permanent place among the reverberations of the aristocracy. Its reputation, as I have said, is still exclusively British and predominantly middle class. Possibly now that the Kaiser has drawn attention to the neighborhood—it was only five miles from here, at Highcliffe Castle, that he spent his recent holiday—Bournemouth may attain to a European renown, and become a rallying point for the great world. But for the time being it remains a purely British middle-class winter resort, and it is as such that I propose to consider it.

I find it, briefly, an altogether creditable performance. Any sort of holiday place depends at least as much on man as on nature. In the case of Bournemouth nature and man have formed a very happy combination. Each is worthy of and has assisted the other. The human element, so far as my present purpose is concerned, is represented by the members of the Bournemouth Corporation. I

Scene in a New York Restaurant of the First Class thronged with Holiday-makers to welcome the New Year

Francis Thompson: Poet-Journalist

By C. LEWIS HIND

Former Editor of the London Academy

I KNEW Francis Thompson before the year 1897, when he came to write poetry and after that to write prose. It is of the after that I wish to speak here—those ten dragging last years of his life, when he made no more poetry because the making of it was no longer an impulsive joy. His Muse had flickered out, and he was too feeble an artist to try to fan fire from her ashes.

But of the before, the period of his illimitable dreams, a few words must be said. I met him first, it must have been about 1890, at the only house in London that this vagrant and exclusive poet ever visited regularly, the house of Mr. and Mrs. Wilfrid Meynell, one of the few homes where poetry is regarded as a constant noise against the bar of the world. I had heard the name of Francis Thompson mentioned two years before his grant, ill-stirred, ill-nourished figure, crowned by an eager, unhappy, startled face that grew yearly more and more like an El Greco portrait, first passed those hospitable doors. Mr. Wilfrid Meynell, who was then editing a Roman Catholic magazine called *Henry England*, told me that he had discovered a genius called Francis Thompson; that this unknown poet had sent to *Henry England* a remarkable poem, with an easy treating of the relations between the Soul and the Body; that the poem and essay had been pigeonholed for six months; that he had recently published them, but that he wished to pay and commend the author, and so, as the only address on the envelope was the dirty scraps of paper upon which the poem was written was, "Post office, Charing Cross." You might as well seek daffodils growing in Broadway as the address of an obscure British poet from the harassed officials of Charing Cross Post-office. But Mr. Meynell did not despair. He hunted and found the poet's address at a shop, where the miserable and despairing outcast poet bought his landman, retrieved him from the unwise Thames arches where he slept, and from the night Second, where he sat in a few penny holding board's hands, with a Latin classic crumpled into one of his coat pockets and an Elizabethan masque into the other, and brought him into light, warmth, recognition, and such love as was possible. Perfect love, I fear, Thompson never knew. Mr. Bernard Shaw's poet in "Casidius" voices the feelings of all such wanderers and star-gazers who, dazzled by infinity, miss the human fire-line of earth.

Mr. Meynell is too modest a man ever to tell the whole story how he saved a great poet and made the world richer. It was through him that Thompson enjoyed periods of peace as a guest of the Promethean of a distinguished magazine, the *Century*, and the *Pantheon* and *Crawley*. Thompson was willing to write his autobiography. A year ago he told me that he had begun it; the fragments may have been found among his possessions. Possessions! He never owned anything but the frayed brown ulster that he wore with summer, one suit of clothes, and a dreadful pipe—his constant companion.

Thompson wrought his poems, but there his impulse and energy ceased. He was a babe in the business of the world, or, rather, he was supremely indifferent. Not only did his friend food, cloth, and harbor him, but he also found a publisher, and saw that his books were introduced to the few and fit. Some of the poems in these volumes were inspired by the poet's dumb love for the beautiful children of his host and hostess. The muses will never cease for Thompson's poetry. It is too strange, too gorgeous, too unworldly, too secret, too overcharged with imagery and the symbolism of his faith. But another it, and the soaring, plunging, uncontrollable Thompsonian song becomes a possession forever. Mr. George Meredith, Coventry Patmore, and Henley fell under his spell, as Thompson himself was dominated by the mystic personality of Coventry Patmore. I have heard him speak of no other man with the reverence that he whispered the name of Coventry Patmore, unless it was some great English recluse. That was one of the strange hints in the mind of this genius. One day I discovered, to my chagrin, that he had sent about the details of English cricket than the sporting editor of a sporting English newspaper. He would talk cricket by the hour; under certain conditions he would quote poetry by the night; but he would rarely speak of his own verse. It was too sacred to him. He had taken the tongueless vows.

His *Nine Poems*, published in 1897, may be regarded as his poetical swan-song. From that year onward it seemed to him that he was earning his living by journalism. Anxious, I think, the right word, to escape, that he had given the poetic impulse ceased, life was really ended for him. He had swept triumphantly down the mighty river, and he must now paddle in the gritty, brackish Delta until the ocean be ready to engulf him.

It was in that Deltaic period that I knew the poet intimately, seeing him two or three times a week during the seven years that I edited *The Academy*. It amused him to write articles, and to know that his landlady was being paid, although such matters were of no real importance to him; but the weekly wage gave him pocket-money to buy the narcotics of his choice, and that was important. It was useless trying to cure Thompson of the drug habit. After a while we gave up the attempt in despair. That wretched fume, distracted by all the narcotic ills of which the human body is capable, could not sustain the fire of his fierce poetic spirit. He took one of his body, and I do not believe he ever thought about it. The decreencies of civilization bored him; his thoughts few to

"Where seven-voiced psalteries meet;

"And all the gods move with their hand in hand,
And eyes that knew not trouble and the worm."

In memory I see him one miserable November afternoon commencing with the Seraphim, and frolicking with the young-crowned Cherubim in Chancery Lane. The rain was steady and cold; a thin, icy rain was falling; the yellow fog swamped the pedestrian's marching down the lane; and, going through them in an armor-pat, I saw Francis Thompson, wet and mud-spattered. But he was not unhappy. What is a day of unpleasant weather to one who lives in eternity? His lips were moving, his head was raised, his eyes were kindled with emotion, for above the roof of the Chancery Lane Safe Deposit Company, in the murk of the fog, he saw his visions. They were his reality, and the visible world.

He was on his way to the office of *The Academy* with the manuscript of a book review, and on his damp back was slung the weather-worn satchel in which he would carry away volumes for the evening work. In the first year his monthly cheque was posted to him in the ordinary way, but that method did not work. When I was in funds he contrived to deliver his articles; so I adopted the plan of sending a weekly cheque to his landlady, and giving him, whenever he called, a small sum in cash. That suited him; it suited us. A Thompson article in *The Academy* gave distinction to the editor, and the editor's price was considerably less, even as his concern with cricket. No the match was filled with military manoeuvres, and retired generals concerned in the armchairs of service clubs—wondered. There was a man who manipulated words as they manipulated men.

I reviewed Henley's *Collected Poems*, and Henley, who was living at Russell Hill, asked me to bring the poet to him. That was a memorable afternoon, but it did not begin auspiciously. Thompson was an hour late in calling for me at the office; when we reached Russell Hill rain was falling, and he was drenched. He was a stout, solid, well-built man, and he was alarmed by my guiding him to a train. Suddenly he became rigid, his body averted, and a film came over his eyes. It seemed as if his soul had fitted temporarily from his body. A minute or two passed; then he recovered, lighted a cigarette, and did not refer to the episode. We arrived at Henley's house two hours late. The elder man was a little brusque at first, but Thompson, who was much excited at the prospect of meeting Henley, seated himself at his feet, and they talked—till half-past eleven should have been present. Flattery to the soul of the poet, and the elder man's mind recovered last afternoon, perfectly sincere flattery, for Thompson was a Husky in intellectual recitance.

Once or twice in those seven years of our intercourse a flame of his old poet fire blazed out, and once I was able to divert the flame into the pages of *The Academy*. When Cecil Rhodes died—that great dreamer and great man of action—I telegraphed to Thompson to hasten to the office. That was on a Monday. He appeared on the Tuesday. I asked him point blank if he would write an ode on Cecil Rhodes for the next issue of the paper, and without waiting for his refusal talked Rhodes to him for half an hour, roused his enthusiasm, and he departed with a half promise to deliver the ode on Thursday morning. Thursday came and nearly passed. I sent him three telegrams, but received no answer. It was necessary to go to press at eight o'clock. At half past six he arrived, and proceeded to extract from his pockets a dozen and more scraps of crumpled paper, each containing a fragment of the ode. I placed them together, sent the blurred manuscript to the printers, sent him money for his dinner, and excited him to write the ode. He would begin in an hour to read the proof. He returned dazed and incoherent, read the proof standing and saying as he read, and murmured: "It's all right." It was all right. I am prouder of having published that ode than of anything else that the *Academy* ever contained.

In 1904, when I resigned the editorship of *The Academy*, we no longer met regularly; but I saw Thompson at infrequent intervals at Mrs. Meynell's house. He would come to dinner at any hour that suited his mood, take his bite and sup, and pace the room with his back in his hand, striking inaudible measures, never keeping his pipe alight, rarely taking part in the general conversation, but ever courteous and ever ready to laugh at the slightest pleasantry. We did not encourage him to talk. Never an exhilarating talker—except on the few occasions when the need of the friend and the play were prepotent—latterly his talk became almost intolerable. He would labor a minor point until our heads ached, pause politely when the general conversation turned to another topic, and at the first opportunity, he was to tell us for the tenth time something that was not worth telling more. But that was the Thompson of that better year—poet and temper-tossed devil, waiting for dissolution. The real Thompson as he of the poems made in secret—him to his forbears, the mystical English poets.

After his death, from our sight, leaving great verse said a little clan. We who knew him and tried to love him, are glad, for his own poor sake, that his release has come, that at last "his little trouble is ended in a little peace."

Music and the Opera

CHARPENTIER'S "LOUISE"

By LAWRENCE GILMAN

USTAVE CHARPENTIER'S "musical romance," "Louise," was produced at the Manhattan Opera House on January 3, for the first time in America, with these principals in the cast: Miss Mary Garden as Louise, Mr. Dalmores as Julien, Madame Brasseur-Gianoli as the Mother, and Mr. Gilbert as the Father. Mr. Caspennini conducted.

In this brief record there is matter to inspire several homilies; but one must, for lack of space, forbear. Let it suffice to observe that New York, one of the half-dozen great centers of operatic activity in the world, has for eight years been ignorant of one of the most successful, widely discussed, and noteworthy of modern music-dramas; a work that has been in the active repertoire of the Opéra-Comique at Paris since its production there on February 2, 1900; that has been produced elsewhere in France, in Brussels, and in many cities of Germany. Yet we have had to wait for a performance of this remarkable work upon the enterprise and the courage of an unshelving impresario, Mr. Oscar Hammerstein, who has now presented it as one of the series of new operas the production of which is constituting the most important feature of the Manhattan activities.

Copyright by Mabbie

Mr. Dalmores as the "Louise," Julien

In "Louise" is embodied the Paris scene intimately to Charpentier, a confirmed and militant humanist. Its story is a simple one—the text is Charpentier's own—yet it may be briefly outlined: Louise, a pretty sewing-girl, is used by Julien, an artist whose studio adjoins the attic home of Louise's parents. There are an amiable bourgeois and his shrewish wife, who are far from looking with favor upon their daughter's speculations and supposedly dissolute suitors. Unable to gain their consent to the desired marriage, Louise consents to Julien's reiterated proposals to sleep with him, and she leaves her home and her company of the workshop to take up her abode with her lover in a little house on the *Rue Montmartre*. They then for a time know happiness, which achieves its climax on a night when Louise is effused and crowned, amid frolicsome revels, as the Muse of Montmartre.

Charpentier here reverts to a picturesque custom of the *Rue Montmartre* celebrated by him in his "Couronnement de la Muse," composed in 1897 for a Montmartre festival and produced at Lille in June of the following year. But the felicity of the pair is short-lived. Louise is visited by her mother, who pleads with her to return to their home, as her father is ill and can be comforted only by her. Louise consents, on condition that she be permitted afterward to resume her life with Julien. One again in her attic home she meets with reproaches and exhortations. She remains deaf to the entreaties of her father, who pleads with her to re-join her lover, and seeks to reawaken in her the filial devotion which she can no longer feel. At length the growing exasperation and genuine grief of the father culminates in an outburst of vindictive rage, and he drives her from the house. In quick repentance he would summon her back, but she has gone. Heart-broken, he anathematizes the seductive and pitiless city which, even through the attic window, spreads its reefs and avenues in the moonlight.

Charpentier has himself set forth his poetic and philosophic intentions in this opera. "Centring about a dramatic treatment that is, in its essence, drawn from life," he has written, "I have tried to write the poem of our youth, the youth of its poets and artists; to paint the desires and the enthusiasms of our twenty years, when we dream of conquering the great city, and the heart of the damsel over the way, whose curtains are opened sometimes to show her smile. 'Louise' is the little world of the humble, the suffering, the hard-working, seen in passing; the curious gaze of the wretched listening to the sounds of the city in its joy. 'Louise' is the heart of the children who forget, for the sake of a passing stranger, all the affection of parents. It is likewise the heart of the father who cannot bring himself to see in his daughter a woman, a being who is not his property, for whom he is no longer all-sufficient, and who demands the right to choose freely her portion of sunlight, her portion of love. 'Louise' is, further, the dancing, magic city, the great city that fascinates Louise and Julien with all its promises of unknown happiness; the city destructive of the heartache, that, through the symbolic voice of its streets, celebrates by turn the hopes, the distress, the triumphs of love, creates the atmosphere of the piece, intervenes directly in the action, bewitches Louise, vanquishes the family."

Such, in outline, is the drama; and such its philosophic burden, which there is not the smallest need to stigmatize as morbidly odd. Charpentier in this work is no more sent upon making vice lovely than upon making virtue detestable; his attitude is an indistinctly detached and impartial one. For the play he has found a musical investiture that is at times both vivid and fitting. His experimental apparatus is that of the modern music-drama—here are the symphonic orchestra, the system of representative themes, the detailed enmeshment of moods and situations, gestures and events; the apparatus of the uncompromisingly romantic music-drama of Wagner applied to a dramatic action of entire modernity and thoroughgoing realism. The result is striking, and, if one is prepared to concede that a music-drama which derives its inspiration from contemporaneous life is a viable thing, it is aesthetically successful.

Charpentier is a musician of parts. As a composer he has vivacity, fancy of a fresh and occasionally poetic order, aesthetic fecundity, a definite feeling for harmonic effect, and admirable constructive skill. He writes ingeniously and often brilliantly for the orchestra, and his sense of drama is lively and acute. His manipulation of the texture of the play is throughout effective and sincere—always faithful to the text, and often piquant and surprising in detail. On the other hand, his inspiration, his specific ideas, have, it must be admitted, little distinction and less originality. He is often indebted to the inimitable Wagner; again we are reminded of Puccini; and the voice of Massenet is also heard. Despite his undeniable refinement of thought and style, he lapses easily, especially in passages which call for a desecration of amorous exaltation, into a manner that is both sentimental and banal. The note of sensuous ecstasy and allurements, no less than the note of sincere passion, he seems to be incapable of sounding. His love scenes, as such, do not sway one, do not (can must say it!) "convince." In such music as that of the opening scene of the second act, where the street cries of awakening Paris—the call of the ragsmen, the rattle of chairs, the vendors of artichokes, green peas, potatoes, brooms, bird-seed—are caught up and transformed in a kind of tonal apothecosis which seems to Julien to be the "Sang of Paris," Charpentier is delightful, individual, truly and admirably poetic. Also in his voicing of the humbler, as well as the more poignant and

FORGING ANOTHER LINK BETWEEN NEW YORK AND BROOKLYN

Following the Blackwell's Island Bridge work is now being hastened on the next one to connect New York and Brooklyn, which will span the East River at a point between the Brooklyn and Williamsburg bridges. It will be known as the Manhattan Bridge.

TAKING THE LID OFF THE OLD CUSTOM-HOUSE

The historic old Custom-house, at the corner of Wall and William streets, New York city, is undergoing the necessary alterations for occupancy by the National City Bank. The cupole has been removed to allow for repairs in the great dome.

The Season's Plays

NAZIMOVA AND MRS. FISKE IN NEW ROLES

By "I"

ALl of the hopelessness and tragedy of the world seem concentrated in the three-act drama, "The Comet," in which Madame Nazimova recently appeared at the Bijou Theatre. The play is the work of Mr. Owen Johnson, and its action takes place in the brief season between morning and evening in the house of a physician in the Spanish Pyrenees. With the physician live his son, a young man all adre with poetry, self-love, and assurance, and the physician's adopted daughter, who is the poet's sweetheart. The youth rebels against the narrowness of his life and its obscurity in the small Spanish village, and is possessed with one idea alone, to fare forth into the world and prove what a great genius he is. He feels that it is selfish of him to remain cooped up in the mountains. And just as he is picturing in the liveliest way how he intends to take flight at once and show his talents to the world, *The Comet* flashes in upon his life. He sees her rush by upon the highway in her coach, the postillions flogging the horses into a whirlwind run, and she, "The Woman of a Thousand Years," sitting crumpled in the swaying vehicle, her limbs resting in her hands, crying, "Faster! faster!"

She comes to the physician's house—she is, in fact, the long absent sister of the adopted daughter living there. Once the youthful poet sees her face to face, he loses head and heart, and so complete is his smothering that he emphatically renounces everything else every one saw *The Comet*. To her he pledges his ever-sustaining love and love-words that she fly with him. She, whose life has been devoted to revenge upon men, and who has both dragged herself in the mire and climbed to dizzy eminence to accomplish her ends, plays with him and simply caresses him the more sweetly. However, she accepts her youthful devotee, and just as they are about to leave the house the physician returns. Instantly they recognize each other; it was he who first set her feet upon the evil path. He demands that the woman shall not take his son away to destroy him, and orders *The Comet* from the house. The boy is determined to follow her, whereupon his father lays his own life bare and the son totters upstairs to his room and blows his brains out.

The role of *Luna, The Comet*, is one which in its intensity, its tragedy, and its mysticism is admirably suited to the remarkable dramatic talents of Madame Nazimova. She endows the character of the "Woman of a Thousand Years" with a weariness and hopelessness which are striking in the extreme. She presents, too, the diabolically curious fascination which had made *The Comet's* name a by-word and a curse in Europe. It is decidedly surprising in its suggestion and doubly powerful in its repetition. There is, now and then, something which forever recalls Madame Nazimova's *Heide*. It should be said, too, that the English of this actress has much improved since last season, and her voice has lost much of its occasional stridency.

The role of the young poet, *Francis Armand*, is taken by Mr. Brandon Tynan, who effectively meets its requirements, although he lacks a certain convincing quality in the first act. *Dr. Rosseau*, the physician, is played by Mr. Dodson Mitchell, but there is little to the part.

Mrs. Fiske has come back (i. e., returned, not retubulated) with the hozen gloom of "Roosersholm," and New York has submitted willingly to hypnosis. The deep, dark, gloomy thing in four acts has been played here before, and although Mrs. Fiske and her company shed all possible light into the foreboding crevices, it is to be heartily commended to those who are in the depths and expect the worst.

It is a pleasure to say, at the outset, that as Madame Nazimova's English has improved, so has Mrs. Fiske's, and the latter now can be readily understood. She has put away from her the unfortunate mannerism of running all her sentences into one another.

"Roosersholm" deals with a dead mislabeled wife, a scheming woman in the household, a husband whom she loves, and ends with a double suicide. The only sunlight is the electrical kind which shines through a window on the seaway.

Mrs. Fiske is *Rebecca West*, and she is by far the happiest person in the cast. She goes about very quietly for three acts, he cause her time does not come until the beginning of the fourth act, when she confesses that she poisoned the mind of *Rosauer's* wife and drove her to suicide in order that he might be rid of her. Then Mrs. Fiske really does a bit of good, convincing acting.

Bruce Meliss as *John Rosauer*, who had never been known to smile, is utterly smothered in his role. The tragedy of seriousness does not sit well upon him, at least not the "Roosersholm" kind. He is an excellent actor, capable of giving strong parts, as every one who saw his *Joan in "The Silver Bow"* will remember, and it seems a pity that he must be let down into the darkness of "Roosersholm."

The best acting in the play is done by George Arliss and Fuller

Mellich, the first as *L'Eric Arandel*, the outcast; the other as *Rector Kroll*, the vice crusader of the piece. Mr. Arliss's part is little more than a brief character sketch, but it is expertly done. Mr. Mellich is really *Kroll*, than which no more can be said.

"*Miss Hook of Holland*," a "musical comedy," has come from overseas freighted down with a full cargo of names that receive adequate display in the Criterion Theatre bill. The musical millinery is by Paul Rubens, and it reproduces the Amsterdam fashions in wooden-shoe melodies with the faithfulness of all things

Madame Nazimova as "The Comet" in Mr. Owen Johnson's Play of that Name, at the Bijou Theatre

English. For Miss Hook was born in London, and the delightful George Hinton started her there on a prosperous career.

The sedate looking and the pretty angles that made the performance a hit on the other side should make it a mildly pleasing success on this. Thelma McDonald helps, and so do Georgia Vaine and Florence Nash.

The piece is mounted handsomely, and in the scene of the last act, a distillery tap room, the bottles in their diamond framed racks suddenly take on an illumination that is suggestive of New Year's eve on a certain well-known street.

Speedy Autos for Use of Chief and Officials. These Machines are a great Convenience, and are quicker than Horse-driven Wagons

THE RIVAL OF THE FIRE-HORSE

A FIGHTER OF FLAMES, THE SUPERIOR EFFICIENCY AND ECONOMY OF WHICH MARKS THE PASSING OF THE HORSE-DRAWN ENGINE OF PICTURESQUE FAMILIARITY

By CHARLES A. SIDMAN

THE automobile fire-engine is making no uncertain progress in its work of banishing from city streets their most thrilling spectacle—the splendid fire-horse, galloping three abreast before a glittering machine. Self-propelled fire-extinguishing apparatus has been developed to so high a degree of power, speed, and reliability that its use is spreading throughout the chief cities of this country, and it is a matter of only a short time when the plunging fire-horse shall gallop off the stage forever.

There was much lament from lovers of the picturesque when the red-shirted ramps of the old volunteer fire-fighting organizations, who dragged the ancient tubs with hand pumps, gave way to the trim, alert, efficient firemen of the paid service with their horse-drawn steam apparatus; and at the first glance one is apt to think that now the banishment of the horse will destroy the last element of romance in the hazardous game of fire-fighting. Yet there is a fascination in the sight of the new horseless engines. One feels a

thrill on beholding the advance of one of these beneficent, glittering monsters of steel, weaving in the narrow confines of a street as big as a locomotive, gliding as smoothly as an airship, and at twice the speed of the best horse. Each one of these new engines has at least four times the power of the horse-drawn machines that they displace. No wonder the chiefs call them their heavy artillery.

The type of engine now in use in Boston, Portland, Hartford, and other large cities, is regarded as the most powerful in existence. The latest style of engine weighs 18,000 pounds, and has a pumping capacity of 1420 gallons per minute. It will develop nearly 100 horse-power, and has a speed of about twenty-five miles an hour. Fed from boilers situated in the cellar of the engine-house, steam is kept continuously in the engine boiler. The instant an alarm comes in, this steam connection is automatically broken, the fire under the engine-boiler is lighted in the same manner, and by the time the fire is reached the steam gauge

One of Boston's self-propelled Fire-engines

regulators one hundred and twenty-five pounds pressure. By simply withdrawing a key from the driving gear the engine is made ready to throw floods of water upon the flames.

The first engine of the self-propelled class was introduced in New York in 1840. This machine was unique. The boiler was of the tubular type with a steam dome, and in appearance conformed closely to the locomotive of early days. The steam and water cylinders were directly connected by one piston, made of one solid bar, and were arranged horizontally along the front end of the boiler, much as in the locomotive of today. When the engine reached the scene of action the rear wheels were jacked up from the ground and acted as balance wheels for the engine. This machine weighed about three thousand pounds and was efficient.

Several types of steamers were then experimented with. In 1870 the City of Hartford placed an order for a self-propeller which is still in service. As the city grew, the fire-commissioners conceived the idea that an extra large steamer was the ideal in view of the growth of the city, and in 1890 an order was placed for an extra first size self-propeller which should weigh 17,000 pounds. New problems confronted the makers. A stronger axle and a stationary one was necessary to withstand the strain of so great a machine. A new type of differential located on an intermediate shaft and geared directly to the main shaft was adopted. Double endless side-chains engaged sprockets on the rear wheels, the whole driving mechanism resembling closely that of the automobile of today. There have been but few changes in the machines since then, the newer machines having a capacity of only one hundred gallons per minute more than the older machines.

To keep the engine from shuddering when turning corners, or swerving suddenly to avoid obstructions a special life, with ribbed shafts, was devised. In severe weather, or when the snow is very deep, the steering-wheel is taken out and a pole is substituted. Hoses are attached to the engine for the purpose of getting and holding water, as the engine supplies its own power. In such cases when responding to alarms, the horses have to keep moving or be pushed along by the impetus of the machine.

The best method of extinguishing fire is by the copious use of water. The driver the fire, the greater the quantity of water, fought with maximum force, that is necessary to extinguish it. Until the successful invention of the self-propelled steam engine, the maximum amount of water and pressure that could be obtained with the horse-drawn engine was limited to the weight of an engine that two or three horses could haul quickly through the streets, thus limiting the handling of very large streams to the amount of pumping-power that horses could drag. With the steam-propeller these limitations are obviated, for there is no reasonable limit of weight that can be propelled by its own power. Owing to their great weight, their parts are of such strength that constant wear of certain parts, involving an expenditure of time of water per minute, can be maintained for any reasonable length of time, no the particular conditions may demand.

These self-propellers can be named—that is, in case of a very large fire, when a powerful body of water is required at any point, two of these engines can throw the water from four lines of hose into one stream of almost any reasonable size of nozzle, and receive the benefit of the amount of water that these two engines, with a combined capacity of 2000 gallons a minute, can give. Slightly, there can be ejected from three to four tons of water per minute for a considerable length of time. The force of these streams was shown at a big elevator fire in Boston several years ago, when a sliding door was torn to fragments wherever the water struck it, and holes were dug in the sides of the building, through which tons of grain escaped and were saved in a damaged condition.

These propelling-engines are under perfect control in the street. When going at their greatest speed there can be stopped in their own length. They can be turned around in a circle, their own length being its diameter. They take up less room in the street, in both length and width, than those drawn by horses, and what is better still, by their great speed, can be driven to a fire in much less time.

Many motor fire-engines are in use in Europe, and Hannover, Germany, was the first city in Europe to install a complete system—motor engines, motor hose-carts, and a hook and ladder unit. This system has passed the experimental stage, as the apparatus has now been in service in Hannover for a period of five years or more. It

Combination Chemical and Hose Wagon. Carries 2 Tanks, 1000 Feet of Hose, 200 Feet Chemical Hose, Hand-extinguishers, one 52-foot Ladder, and one 20-foot Extension Ladder

has given entire satisfaction, and is more economical than the horse-drawn engines and carts formerly used.

Streets in European cities are better kept than those in this country. Strict construction laws have been enforced to guard against fires. Labor, fuel, and alcohol are cheap; coal is moderate in cost and of fair quality. Most of the buildings are comparatively modern, a large number of them being of the "slow-burning" type, while many others are "fireproof."

The automobile equipment in Hannover consisted of three machines: a carbonic-acid machine, with a crew of five men; a hydrant wagon, carrying seven men; and a steamer, with a crew of six men. The carbonic-acid and the hydrant machines are driven by electricity, while the steamer is driven by steam. The relative cost of the horse-drawn equipment and the automobile-service in Hannover has shown a balance in favor of the automobiles of over \$14,000 for the five years in which they have been in service.

The carbonic-acid machine, which weighs when loaded, including the crew, over 10,000 pounds, can make a maximum speed of about nine miles an hour, one battery-loading sufficing for 15.5 miles. The machine carries two hose reels, each with a crank on the side, and above these a hook and ladder hit. There are fitted to the machine solid ladders that are guaranteed for over 6000 miles run. The cost of running to each fire is figured at \$3.75, including carbonic acid, spirit, and vinicout.

The hydrant wagon or hose-car also has a speed of nine miles an hour. The battery is under the lengthwise seats, but well back. The front-end box is used for tools. There are four ladders forming the backs of the seats; the wagon box has also a double bottom in which there are two hook ladders and a pole ladder. Below the wagon box is a chest for coal for the steamer.

The steamers of the European type are very different from ours. There are five seats, besides standing-room for one. Their best speed averages about twenty miles an hour. The pump and its engine are each double cylinder, vertical, inverted, double acting. The motive power is a less horse-power reversible engine for the drive. This is controlled from the driver's seat, and is driven with sprockets and chain.

When an alarm is rung, the engine is run by compressed carbonic acid gas from two cylinders of twenty-two pounds pressure. The boiler is heated by denatured alcohol, sprayed into the fire-box into compressed charcoal briquettes, so that on the arrival at the fire full steam is up.

This steamer does splendid service for short distances, but its radius of action is shortened by lack of capacity for coal and water. Experiments were carried on with a view to overcoming this difficulty. A tender was provided which carries about 220 pounds of fuel and 7500 gallons of water. The great objection to this steamer is that the capacity is so small (only 264 gallons per minute) that it would be of little use in a great fire.

Some of the foreign cities have located engines whose capacity was "the largest in the world." London has declared that its 500-horsepower engine is without doubt the largest. The machine is of fifty horse-power, and can throw a stream of water to a height of 150 feet. Over ten years ago we had in the United States a self-propelled fire-engine that could throw a stream upward more than 300 feet, and had a capacity of over 1300 gallons per minute.

But to say a final word for our own type. Not only is the self-propeller quicker to get to a fire than a horse-drawn engine, but it is cheaper to run.

Mrs. Cobden Sanderson, one of the Leaders of the English "Suffragettes," speaking on "Women and Socialism" at Labor Hall, New York, under the Auspices of the Socialist Party

Mrs. Borman Wells, another Englishwoman who has come to this Country to carry on a Propaganda for "Votes for Women," addressing an Open-air Meeting in Madison Square

TWO ENGLISH VISITORS WHO DEMAND "VOTES FOR WOMEN"

ee Years with the Lamas

BERTHOLD LAUFER, formerly lecturer Columbia University, New York, has been appointed Assistant Curator of the Ethnology in the Marshall Field Museum, Chicago, and will organize there a department entirely devoted to this branch of anthropology. For this purpose now making preparations for a three-year expedition in Central Asia and Tibet systematic and extensive investigation of numerous native tribes inhabiting little-known areas, and a study of their ages, daily life, manners and customs, and religions. Special attention will be paid to the flourishing epic poetry of the people, and to the history of Lamaism, its peculiar developments of mystery, painting, sculpture, and architecture, rich harvest in the way of new research.

Dr. Berthold Lauffer

ctions, and photographs will come to him.

A fund of \$50,000 has been contributed by Chinese women for defraying the expenses of this expedition. One of the chief features of which, besides the anthropological investigation of the inhabitants and their life history, illustrated by mental and industrial objects, will be collecting of an extensive number of tea books, ancient and modern, to form first and most comprehensive Tibetan library for the United States. The prehistoric and Tibetan books are nearly a yard and four to six inches in width, being read from wooden block type. Many are real hundred years old. Each of the manuscripts in Tibet possesses a preface, together with an immense library. These, which contain a great number of volumes relating to the history and times of Lamaism, many rare and valuable, will be obtained which will throw new light on this hitherto obscure life and their culture. Besides exploring and collecting in northern China for a year, and also in India, special effort will be made to penetrate the sacred capital of Lhasa. If successful, Dr. Lauffer will be the first foreigner since the British armed force. Here valuable information and early art, ceremonial and religious objects at present almost unknown to the world, which, being desired solely anthropological purposes, will be secured, and doubtless will be allowed to leave country. Dr. Lauffer is a Tibetan scholar, and he writes the language as well as Chinese, and has previously travelled and

carried on ethnological explorations in China, Siberia, and the Amur region. Going on a purely peaceful and scientific mission, and to spend money in the country, and being able to fully explain in their own tongue to the Tibetan officials the exact purpose of his visit, Dr. Lauffer thinks he will not meet with the usual armed interference which has been the fate of previous travellers. Dr. Lauffer sails this month for Europe to begin his journey to Central Asia.

The Henry Hudson Bridge and its Remarkable Features

In the issue of the WEEKLY dated January 8 was published a full-page drawing by Mr. Vernon Halsey Bailey, of the proposed new Henry Hudson Memorial Bridge which is to span the Harlem River at Spuyten Duyvil. In this drawing it was intended to call the attention of our readers with particular emphasis, since the building of the bridge will not only constitute one of the most interesting engineering feats ever undertaken, but will be of great architectural importance to the city of New York.

This bridge is planned to unite the Island of Manhattan to the mainland by the spanning of Spuyten Duyvil Creek with a single arch of armed concrete measuring 303 feet from center to center, and with a 147-foot rise, thus greatly surpassing the largest span now existing in the world, which measures 255 feet.

The Bridge Department, under Commissioner J. W. Stevenson, is to be congratulated upon the masterful handling of the problem, and the integrity with which it is to be carried out, under the staff in charge, consisting of C. M. Ingersoll, Chief Engineer; W. H. Burr, Consulting Engineer; L. S. Morse, Engineer in Charge; and Whitely Warren, Architect.

Transplanted English

If language is a true measure of conquest, as has been contended, then Anglo-Saxon speech is rapidly conquering the European continent.

It is a matter of interest to many to observe the increasing number of English words incorporated into colloquial French. This new but solid and fertile form of English invasion has led to the publication in Paris of a list of words that have become more than "acclimated" and naturalized by general use in France. Many refer to sports and sporting, and in this group words adopted from the English into French are turf, trotting, Tattersall, race, maiden, milord, carriage, and gentleman rider.

English drinks have no great vogue in France, but the French have adopted several of the English words that distinguish them: gin, putch, and grog.

They have also taken the following English words:

Lightweight, lawn-tennis, Irish stew, home, handkerchief, etc., "all right," cocktail (which the French define as American, not English), bridge and bridge whist, bull-fight, mock system, ballet, blacking, event, dining car, destroyer, drag (mail coach), dandy, escort-com, commissaire, full hand (speaker), flyer, featherweight, five o'clock, lochee, hunter, jockey club, keepake, kickersawker, lunch, macadam, mutton chop, outsize, outrider, paddock, pedigree, peckles, potter, pudding, quick beginner, racehorse, eagle (overcoat), rocking-chair, rice beef, sandwich, self-made man, shaker, sleep-car, smok, train, tipster, trout, top weight, tramway, troley, tree, hamlet, tub, wallflower, waft, water-proof, and whiskey. Some of the English words adopted into the French language come by way of the United States, and one of these is the word "buff," of which in Paris this original description is given:

"An English word to which Americans have given a particular meaning. It is used in the American game of poker to designate the position of a player who wishes to discourage the continuance in the game of his adversaries, and to induce them to disregard the chance to recoup their losses or to add to their winnings by 'raising.'"

A French verb has been formed from English: the verb *lever*, i. e., to exert without the forms or authority of law. This word has been scarcely adopted in French, but golf, grouse, guarded-party, and gentleman have been.

In Italy, too, may be seen the influence of the English tongue. "High life," pronounced "big beef," has long been in use in that country. "Lo sport" and "il verbi" are every-day terms in the Italian kingdom; the press talks casually of "il globe-trotter," and "il reporter," and "meetings" has usurped the place of all Latin synonyms; and in Italy gets its plural regularly—"meetingi," like any other good language. No enterprise showing itself "The Handy Things Company," advertiser an ice-cream-freezer "The Easy."

An Angliken introduced into Italy a few years ago created little short of a literary tumult in Rome. The first subway in the Eternal City, a short passage under the Quirinal hill, was opened to the public, who promptly christened it "il tunnel." Patriotic indignation was awakened. "Tunnel" had been accepted, but angry professors and students besieged the Roman papers, demanding to know what had become of "trifoglio," or "galleria," good Italian words, and where this English madman was to end. Nevertheless, "il tunnel" thus far holds its own.

A writer to an important Roman journal not long ago published an article bearing the singular title "At Fiat" in which she described the meaning of these two mysterious words, among the less familiar of these English phrases relating to domestic life, such as "home," "comfortable," "cozy," "luxurious," "five o'clock tea," and the like.

"At Fiat" she explained to mean living "a pitto," like certain trimmings placed "a pitto" upon a gown, and she discovered the term to have a deep psychological significance implying a mode of existence in strata which English people delighted in. "They were continually talking of living 'at fiat.'" The writer, on the contrary, found far greater charm in English country life, especially in the flowering vines planted about the simple "low window."

BRITISH HOLIDAYS—AND OTHERS

(Continued from page 22.)

gladly and gracefully take off my hat to them. I suppose that like other elected bodies they have troubles with their constituents, and are possibly divided among themselves. But of all that the visitor knows nothing. What he is concerned with is the general result of their municipal work; and it does not take a day's acquaintance with the plans for him to pronounce it admirable. Everywhere he sees the signs that the local government of Bourne-mouth knows its business, has recognized and accepted the fact that the neighborhood's main source of wealth is its visitors, and has laid itself out not only to attract visitors, but to give them the pleasant, most varied and comfortable time they have ever had. That clearly is the policy of the local politicians—a policy wisely conceived, and carried out with an enterprise, foresight, liberality, and sense of the artistic effect that puts the mayor and corporation of Bourne-mouth on the highest plane of municipal efficiency. Complete success in any undertaking is always a refreshing spectacle; it is one that visitors to Bourne-mouth may contemplate and enjoy at leisure. The problems that had to be solved were not, of course, so intricate and exacting as the problems of a big manufacturing city. None the less, they cannot have been without their own peculiar difficulties, and the triumphant solutions that have been found for them argue a very high order of executive ability and a very natural capacity for looking ahead and planning in advance.

Bourne-mouth stands on the south coast, close by the Isle of Wight, and a little over a hundred miles from London. It is the creation of the last seventy years. When Queen Victoria came to the throne the land on which it stands was scrub, heath, and pine wood. Even as late as the thirties Bourne-mouth, which is now a town of over twenty thousand people, was little village of some 150. In its mild climate and its pine woods the assurance of future leisure, and it has been the great merit of the aldermen and councilors of the Bourne-mouth Corporation that they have developed the place without destroying a single one of its natural beauties. They have encircled the village, but they have preserved the pines. They have sanctioned hotels, they have built innumerable roads, they have provided over the growth of a town and have equipped it with all the latest conveniences, but they have done so without sacrificing its essentially rural character. This is a very great achievement. The crime of crimes in Bourne-mouth, in my opinion, is the cutting down of a pine-tree. Here is a conservation of natural resources such as would satisfy even Mr. Roosevelt. And its results are exceedingly agreeable. Even the shopping streets are tree-lined avenues, while the residential roads make to the eye an appeal as of veritable forest glades. Wherever you turn, the fresh green of the pines meets your sight and their fragrant health-giving aroma is wafted in your face. The corporation set the example of preserving them; private builders and

residents have followed it. There is not a garden but has been reclaimed from the forest or the scrub, and keeps the characteristics of both. The drives up to the private houses are fringed with pines; the public squares, the public gardens, intersected by faultless pathways, are otherwise remnants of the forest primeval, and the careful planting of the arbutus-tree, holly, laurel, gladiolus, dandelion, arbutus, and other evergreens gives to the whole place a warm and cheerful appearance that Winter cannot destroy.

One of the features of the place is the number of little ravines—ranches is the local name for them—that run from the water's edge half a mile or so inland. The corporation has done no better work than in taking hold of these, and in planning them with evergreen, in setting an infinity of walks up and down them, in turning them into little lawns of its beautiful and beauty. One comes to be excessively grateful for its thoughtfulness and efficiency. It has laid out roads along the cliff's edge and skirting the ravines, and it keeps them in perfect repair. It has watered its lawns and shelters with a prodigal hand at every season of want. It has built a magnificent pier. It owns and operates one of the most convenient and smoothest-running trolley systems I have encountered in England. It maintains an admirable orchestra that plays and plays well, every day in the year. The public gardens, which are kept up with a carelessness that would put many a private garden to shame, occupy, I should think, a larger area in proportion to the size of the town than in any other municipality. The corporation also owns and operates two golf links, both of them thoroughly sporting courses, and except that it has not yet risen to the height of allowing play on Sunday, considers them as efficiently as any private club in the country. Moreover, the restrictions and charges it imposes on hackmen and bath-chairmen and the presence of public navigators engendered themselves in the judgment and approval of every visitor who has occasion to profit by them. So that Bourne-mouth, with its mild air which the pines never allow to become enervating, with its amazingly low death rate (some 7.00 among the residents), its generous spaciousness of beauty, its admirable situation, a base from which the neighboring country with its wealth of historical associations may be explored, and its complete provision of all the pleasures that go to the making of a seaside resort, has little difficulty in establishing its claim to be a first-class winter resort. I can confidently recommend it to Americans who wish to see how England does such things. There is a hotel, too, the excellence of which almost revives my faith in English inns, or rather would do so if its manager were an Englishman, which, happily for the success of its establishment and the comfort of those who visit it, he is not. There, besides an admirable situation and a well-trained service, Americans will find what outside of the best London hotels it is almost impossible to find in England—they will find food that can positively be eaten.

THE PASSING OF "300 MULBERRY STREET"

(Continued from page 17.)

signing in 1907 to accept the Assistant Secretaryship of the Navy. It was at Police Headquarters that Roosevelt made his acquaintance of Jacob A. Riis, which, while it has been of advantage to that staunch friend of the submerged tenth, has been an infinitely greater blessing to the very poor of the city. From the association of these two at 300 Mulberry Street grew the Tenement-house Commission, and it is an appeal as of veritable forest glades. Wherever you turn, the fresh green of the pines meets your sight and their fragrant health-giving aroma is wafted in your face. The corporation set the example of preserving them; private builders and

Other names, well known for good or evil, on the register of police commissioners serving in the present building are Fitz-John Porter, George Moore Smith, Joel H. Ehrhardt, John E. Voorhis, Sidney P. Nichols, Frank Miles, Francis V. Greene, William McAdon, William F. Smith, James J. Martin, and John C. Sheehan. There are fewer ex-police commissioners of New York alive to-day, in proportion to their number, than ex-Presidents of the United States, and there are one or two of those former officials the average citizen might attend with some degree of cheerfulness.

It was at 300 Mulberry Street that Thomas Byrnes, at the head of the Detective Bureau, made an international reputation as a thief-taker, and here that he originated the mysterious "third degree" that has been the undoing of many a criminal since. At

least two words have gone into the vocabulary of crime from 300 Mulberry Street. To give a prisoner the "third degree" carries a meaning in police circles throughout the English-speaking world. A "gold brick" means a 60-63 bargain, and "to gold brick" a person is synonymous with tricking him wherever man has risen above the level of the savage. The original gold brick is to-day, among other relics of crime, in the museum at Police Headquarters, and it is the memory of the grotesque Nat White, who invented the "game" in which it has long played its part. Specimens of the copper badges worn by the old municipal police are among the curiosities at 300 Mulberry Street, and from those policemen of to-day gets his nickname of "Upper." Among other mementoes of the past are the old belt buckle, upon the shape of those worn by the firemen of to-day, with a big leather label on the front, wherein was inscribed the rank of the policeman of sixty years ago, whose our forebears consequently called "Leather-heads."

Some tens of thousands of criminals have passed in and out of 300 Mulberry Street since the building was opened for business in 1863; and while a few have names that will live in the annals of crime, the great bulk of them have already had too much written about them.

THE SEA-FIGHT OF THE FUTURE

By EARLE HOOKER EATON

(Surgeon-General Riis insists that Certain Ships of the Navy shall be Commanded by Doctors.)

HE stood beside the running ladder,
The surgeon in command,
And sternly gripped, with show of power,
The scalpel in his hand.
Upon a distant smoky blur
The doctor's eyes lighted,
And in a trice he shouted, "Sir,
The enemy are sighted!"

The doctor, glancing over the sea,
The eyes were leveled,
"Don't be then get too near," cried he,
"Till we've been vaccinated!"
His chief of staff, with flashing lance,
And other of carabin,
At once exclaimed, "We'll take a share
In either fight or frolic!"

"They're coming down, our hated foes,
This time for consultation,
What remedy would you propose?"
He asked, then took his station,
The doctor clenched and shook his fist,
"We'll use our shining spoils,
And when that's done," he grimly bowed,
"We'll give 'em iron pills!"

In half an hour the hostile fleet—
Which needed change of air—
Had beat a swift and safe retreat
That made the doctor swear,
"I'd like to charge the foe this debt;
But such a call is it?
Tis not an office visit, and yet
"Is surely not a visit!"

Music and the Opera

(Continued from page 25.)

gle, emotions of the play, as in the first I had acts, he paints with a stroke that deft, vigorous, and more, is not profoundly strong—for that he never is. He is at the summit of his power in the concluding act, the scene in which the father of wine, in the blindness of his rage and anguish, rejects his daughter into the midnight sets of the deserted city. But here, it is added, the potency of the moment, overwhelming alike in its tragic force and its deep and elemental pathos, resides more in the contrivance of Charpentier the dramatist than in Charpentier the composer.

If the performance of this singular work the forces of the Manhattan Opera House is an opportunity now for only the brief transient that it was three admirable recital beyond hope and expectation, for a work of its accomplishment was a similarly difficult and trying one. Also when's *Louise* was truly conceived and executed rendered—this delectable singing now is here at her best; Mr. Dalmores as Jovet-Julin was, as he always is, elegant and delighted in song and action; Mme. Broderick as the mother was so very skilful and vigorous, while Mr. Ibert lifts himself into a region of interpretative art to which he was hitherto stranger by his superb portrayal of the part of the father, whom he made a figure of id and communicative vitality. Mr. Ibert's orchestra has provided for the opera an propitious and harmonious setting. Mr. Ibert, who had prepared the performance with scrupulous care and entire devotion, exercised over the representation a control that was both masterful and adroit.

One Way

A story, said to be characteristic, is told on Arkansas judge. It seems that when removed court out of the town on a circuit it was found that no post, ink, paper had been provided, and, upon inquiry, it developed that no county funds were available for this purpose. The judge received himself somewhat forebodingly, then he saw money from his own pocket. He is about to hand this to the clerk, when a sitting lawyer, a high-priced, imported one, brought on to defend a case of some importance, spoke up, in an aside plainly audible over the noise.

"Well," he remarked, with infinite contempt, "I've seen some pretty bad courts, but this—well, this is the limit!"

The old judge flushed darkly.

"You are fined twenty-five dollars for contempt, sir! Hand the money to the clerk!"

"Said, and when the pompous visitor had fully complied, he continued:

"Now, Mr. Clerk, go out and get what you, ink, and paper the court may require, if it there is anything left over, you can give the gentleman his change."

Willing To Do Likewise

LAWYERS. "Remember that you agreed to have the treatment in the same condition as you found it."

TUNNEY. "All right, I understand that a man who occupied it before I did left it in three months' rest."

Helped Him

A PHYSICIAN out West was sent for to find a small boy who was ill. He left a prescription and went away.

Returning a few days later, he found the boy better.

"Yes, doctor," said the boy's mother, "the prescription did him a world of good. I left beside him, where he could hold it in his old most of the time and he can almost hold it now. You didn't mean for him to swallow the paper, did you, doctor?"

\$500.00 BRUSH

Designed by Alexander F. Brush, designer of the Simple Cylinder Locomotor.

Seats two—that's all. Goes fast enough—that's all. Costs less to run than a horse.

Speed up to twenty-six miles per hour; goes twenty-five miles per gallon of gasoline. Vertical motor and other appliances under hood—a coat of invisibility. Wonderful hill climber—goes anywhere wheels will go. Heavy-duty, reliable, low maintenance, almost automatic, almost vibrationless and makes the only carriage. Sold three standard, portable Klean cars.

More runalongs of Brush's design are running than of any other designer in the world.

FIRE-FIGHTERS and THEIR PETS

By Alfred M. Downes

Secretary of the New York Fire Department

This book describes the intimate, inside life of the fire department—describes the training, the discipline, and the pastimes of every-day life in the engine-house. The mascot every company owns—a dog, cat, or monkey, perhaps—is presented as a loyal member of the company, loved by the men and sharing the heroism of their acts. Famous New York fires like the Windsor Hotel and the Hoboken docks, have been reproduced in thrilling detail to give some idea of just what the fire department does when these disasters come, as well as what magnificent deeds are done by modest, nameless heroes. This is the first time the full story of the firemen has been written in one book.

Illustrated with many Photographs. Price, \$1.50

Ancestors

By

GERTRUDE ATHERTON

Author of "Rulers of Kings," "The Conqueror," etc.

A GREAT American novel of the old San Francisco. Mrs. Atherton has presented California with all its ancestral beauty and pride embodied in a high-bred young girl. The city, with its teeming life, glows and lives in these pages, and is really as great a part of the drama as are the characters in the foreground, leading to a moving and impressive climax in the San Francisco earthquake. The greatest work Mrs. Atherton has done is *Ancestors*.

"*Ancestors* is an able book. The forward movement is so swift as to carry one on with a sense of growing excitement; the story proceeds breathlessly. And the greater achievement is to end with an account of the recent earthquake without producing an anti-climax."

—*New York Evening Post*.

"Gertrude Atherton has many times shown her capacity for dealing with big elements, and her new book, *Ancestors*, is one more proof of her power."—*London Tribune*.

"*Ancestors* will restore many a discouraged reader to the hope that modern American novels need not of necessity be lacking in those great intellectual qualities which are a source of stimulation and power in fiction."—*Milwaukee Sentinel*.

NEXT WEEK

IS NEW YORK EQUIPPED TO FIGHT FIRE?

By WILLIAM INGLIS

Recently a 12-story factory and office building in the heart of the city was swept by fire. Three firemen lost their lives, and the property loss was estimated at from one to five millions of dollars.

The fire was marked by the failure of water pressure and the bursting of rotten hose.

Incidentally, two great street transportation lines were crippled for days.

The reasons for this disquieting state of affairs are given in detail in next week's

HARPER'S WEEKLY

HARPER'S MAGAZINE

FOR FEBRUARY

THE SEARCH FOR A NEW CONTINENT

An expedition, backed by The Royal Geographical Society, HARPER'S MAGAZINE, and The American Geographical Society, started out last year to discover a new continent favored by many scientists to exist in the arctic circle. Mr. V. STEFANSSON, of the scientific staff of the expedition, has recently returned, bringing with him an interesting account of the unusual adventures of the expedition, together with many striking arctic photographs, which appear in February.

MR. HOWELLS IN YORK, ENGLAND

One of the most delightful of Mr. HOWELLS's sketches of travel in England. A charming picture of places and people in the famous old cathedral city of York, one of the most picturesque of English towns. Illustrated with drawings by Ernest Haskell reproduced in tint.

THE ARISTOCRACY OF THE PARTS OF SPEECH

Another of Professor THOMAS R. LOUNSBURY's invaluable papers on the usage of the English language. The pronoun, says Prof. LOUNSBURY, is the most exclusive of the parts of speech, and it is with the history of the pronouns that this paper deals. An article full of new information and unquestioned authority.

IN THE HOME OF THE HABITANT

HOWARD E. SMITH, a young Canadian painter, writes of the quaint life in a Canadian village not far from Quebec, where many of the picturesque customs and manners of old France survive to-day. Mr. SMITH has made a large number of striking pictures of these unusual scenes, some of which are reproduced in color.

AT THE UNIVERSITY OF PARIS

President CHARLES P. THURGOOD, of Western Reserve University, writes of the University of Paris, one of the great institutions of learning of the Continent. His views as an eminent educator and a keen observer are of great interest and importance.

THE NATION'S BREAD

Professor HARRY SWINDE, of the College of Agriculture of the University of Minnesota, has made a study of the bread we eat. His studies were made for the government, and the results are most interesting. He shows that the patent flour which we all use is, after all has been said, the best. It does not, perhaps, contain as much apparent nutriment as coarse flour, but it contains it in such a form that we can more easily digest it. This is only one of many interesting points.

7 COMPLETE SHORT STORIES

Variety of type, high literary quality, and great interestness are the notable qualities of HARPER'S short stories. Take those in February for example: "Dona Victoria," by PERCEVAL GERON, is a love-story of Portuguese Africa, a romance with a tragic conclusion; GEORGE HIBBARD's story, by contrast, is a love-story of to-day, of a delightful American girl and a contrary young man, and of a kindly old ambassador who settles their difficulties by his diplomacy; ELMORE ELLIOTT PRARE's story is a love-story, too, but of still different types—of a mountain girl and man in the South, and of the girl's reformation; FREDERICK CHESLEY writes of a boy's curious collision against his mother, and GEORGE SCHNOCK, whose stories have already put the author in the first rank of American story-writers, tells a strange, grim, yet happily-ending tale of some quaint Pennsylvania country people; FANNY KEMBLE JOHNSON contributes a touching and uplifting story of a young man's heroism and self-sacrifice and his father's loveless selfishness; and OLIVIA HOWARD DENBAR, in her story "A Prophet Honored," tells of the return of a humorous writer to his college reunion, and of his vain endeavor to assert himself as a man of serious purposes. The humorous story of the murder is THOMAS A. JENNINGS' "The Moon-Mirror Light & Power Co." a tale of another remarkable invention of the versatile Beverley.

COMMENT

Is Bryan Defeated?

IN the light of to-day no one can any longer believe that BRYAN is the inevitable Democratic candidate for President. There has not been a moment since his opening speech on his return from Europe when the majority of Democrats have really desired his nomination, or when any intelligent and well informed member of the party has not believed that he would, if nominated, lead the party to a defeat more ignominious, more humiliating, more contemptuous, even, than the overwhelming disasters of 1896, and 1900. There have been apathy, hopelessness, almost despair, especially in the South, and predictions of BRYAN'S success in the convention have been general. The listlessness brought about by the feeling that the old candidate was inevitable, that he was to be personal, gave tone to Democratic utterances, and deprived of hope many citizens, Democrats and Republicans, who have desired the return of rational government, of dignified observance and administration of the law, and who cannot expect or hope for either from the Republican party. But as the inevitable seemed about to be accepted by those who had contended longest against it, the great, though scattered, opposition aroused itself. Strong voices spoke, and they have awakened Democrats to an activity that is full of promise. It seems now as though BRYAN could not possibly be nominated at Denver, as if the party had suddenly determined to assert its unquestioned power, and as if it really intended to take advantage of its opportunity. In every State of the Union there has long been strong Democratic opposition to BRYAN. It is now a matter of elementary knowledge that BRYAN cannot obtain the votes needed to elect a Democratic President. That he would be defeated at the polls has been admitted by men who have intended to support him if he were nominated; that he will be defeated in the convention is now the expectation of hosts of Democrats and many others, who for months have been gloomily looking at him as inevitable and at his covering party as doomed.

What Are the Facts?

BRYAN had his day in court, and it has been a brighter day for him than he can possibly enjoy again. Of the two trials of BRYAN by the American voters, the verdict of the election of 1896 was the more favorable to him. Then BRYAN carried ten Northern States, of which Kansas was the largest and most important, and his own State of Nebraska the

second. Of the eight others, most of them were what have been familiarly known as "mining camp States." The ten together gave to BRYAN in 1896 forty-five electoral votes and a popular vote of 692,000, as against a popular vote for McKinley of 400,000. In 1896 BRYAN received from the whole country 145,000 more votes than he received in 1900, and twenty-one more electoral votes. In 1900 all the Northern States voted against him, with the exception of Colorado, Idaho, Montana, and Nevada. Losing his own State of Nebraska, he secured only thirteen of the forty-five Northern electoral votes which he had received in 1896. The best that BRYAN could now do in the North would be to recapture the small States that left him in 1900, and which since then have become peculiarly Rooseveltian. The recapture of even these is not probable, and no practical political forerunner would count upon any of them. Even if by some chance BRYAN should recover them, he would obtain only about twenty-seven Northern electoral votes, while he needs about ninety. The wildest BRYAN visionary cannot specify any Northern State from which any part of this lack is to be made up, and sustain his dream by any reasoning that would appeal for an instant to any rational man.

Recent Protests Against Bryan

THE WEEKLY quoted in its last issue a notable editorial from the New York *World*, presenting the facts and arguments which demonstrate that WOODROW WILSON would be an available Democratic candidate, and would be strong where BRYAN is weak. A few days before, the *World* reviewed the career and presented the opinions of Governor JOHNSON of Minnesota. He too, it was shown, would be a stronger candidate than BRYAN. In the mean time the Ohio Democrats have announced that they will send to Denver a solid delegation in favor of the nomination of JESSE HARRIS. Delaware is committed to JOHN GAY. There are other States, especially Southern States, that will probably attend the convention with candidates. MARSH HENRY WATKINSON is likely to awaken to the fact, and it will be a happy awakening for him, that opposition to BRYAN is not belated. The *Charleston News and Courier* reiterates its opinion that "with Mr. Bryan as the Democratic candidate there would be no possible chance for success at the next election." At the dinner of the National Democratic Club of New York the chief speaker of the occasion was one of the most respected and one of the most loyal Democrats of the State—MORRIS J. O'BRIEN, formerly Chief Justice of the Appellate Division of the Supreme Court. Amid the applause of the company he gave judgment against BRYAN'S claims. He declared that the party should cease from endeavoring to promote the fortunes of one man, and should find a leader who would stand for "sound and sane" Democracy. At the same dinner there was read a letter written by GROVER CLEVELAND, who has come to be the symbolic figure of the reviving party. His pronouncement against Bryanism was received with cheers. His assertion that the country needs "conservation, revivification from nervous prostration, reinstatement of constitutional observance, buoyant but sane the less safe and prudent Americanism, scrupulous care of every person and every interest entitled to care, and a 'square deal' that incurs exact and honest equality before the law and under constitutional guaranty," was accepted as a criticism of both ROOSEVELT and BRYAN. Some of Mr. BRYAN'S most intelligent friends, notably Michigan Democrats, are beginning to doubt his strength, and will they say, for the opposition thus far developed on the mere surface commands a sufficient number of votes to prevent his nomination. At present the Denver convention promises to be a real party council, and whenever the party sits down to talk over the matter, BRYAN cannot possibly be nominated. Men do not commit suicide as the conclusion of a deliberation.

The Aldrich Currency Bill

THE ALDRICH currency bill was reported on time, and, so far as the Senate is concerned, is scheduled to be passed. As Speaker CANNON is said to favor the measure, it is likely that it is also to go through the House of Representatives, and, this happening, the President is certain to sign it. It is a bill prepared for the purpose of meeting and overcoming heretofore insurmountable objections, especially from the West

and the South, and is probably as sound a piece of financial legislation as can be passed through the two Houses of Congress at this session. It is well, however, that its real value be understood, and that the country should comprehend that the bill does not provide for a scientific currency, nor constitute one that is as elastic as this country ought to possess. The reason is that its movement out of and back into the banks will not be automatic. Whether the whole or any part of the \$250,000,000 emergency circulation provided for is to be issued at any time depends upon the agreement of the Secretary of the Treasury, the Treasurer of the United States, and the Comptroller of the Currency. This is better, of course, than that the power to determine when the emergency has arisen shall rest with one man. The currency provided for is still to be bond secured paper, which is a system in which very few, if any, bankers, and no economists, have any faith. The bonds which may be employed for securing the issue of notes are not to be United States bonds alone; there are to be included with these municipal and State bonds and other first class securities, such as the laws of New York and Massachusetts permit the savings banks to accept. A tax of six per cent. is to be imposed upon the currency in order that the banks will be eager to surrender it when the emergency is passed. There will be a contest against the bill when it reaches the House of Representatives, for Mr. FORDE expects to counter with his own bill. This measure provides for an asset currency and for the redemption of bond and faith secured notes. Notwithstanding its defects, the ALDEN bill, if enacted, will be a valuable addition to our banking laws. With it we shall at least be relieved of the necessity of resorting to expedients, illegal and doubtful, for the relief of such money famines as we had in 1893, and as we have just experienced.

The Supreme Court vs. Roosevelt

The United States Supreme Court has declared the Employers' Liability Act unconstitutional, and has thus upheld the judges of the lower Federal courts who offended the President by disagreeing with him. On this important legal (or is it political?) subject Mr. ROOSEVELT has been very active and aggressive in demanding this now overthrown law, so aggressive, indeed, that he has invited a good deal of censure by his attitude and his words. He has warned the railroads, for example, that it would be bad for them if they criticized the law, and by lecturing, even hectoring, judges who have differed with him on the constitutional question involved, he has outraged the sense of propriety of all men who comprehend the significance and the value of an independent judiciary. He has further unconsciously betrayed his own incompetence to deal with such a question by insisting that such a law should be upheld unquestioningly and without regard to its constitutionality. Now the Supreme Court has decided that the law is unconstitutional, notwithstanding that the President has said that it "must" be passed, and must be made "drastic" and "thorough." It would be of great value to the country if the decision should result in compelling Mr. ROOSEVELT to recognize the supremacy of the law, and of the judges as the interpreters of the law.

The Decision

Seven of the justices hold that the Federal government has not the power to regulate the relations of employers and employed unless they are actually engaged in interstate commerce, and unless the law seeks to affect their relations when they are so engaged. Five of them hold that the law under consideration was so broad and general in its terms that it included persons not engaged in interstate commerce—as, for example, persons employed on an interstate railroad, but working solely on a local branch; persons employed by the same or a like road, but working in a repair or a construction shop, or in a clerical capacity, or in an elevator or a warehouse; or a person employed by a telegraph company to deliver or transmit both interstate and local messages; or persons employed by an express company engaged in both interstate and local business, or on a trolley line moving almost wholly within a State and for only a short distance in another State. It was assumed by the seven that such employment would be wholly without the jurisdiction of Congress. Two of the seven, however, believed that the net under consideration

could be divided so that it might be made to apply to persons engaged only in interstate commerce. From this view of the statute the five justices differed, and so the court held that any Federal law which directly or indirectly seeks to regulate or affect the relations of employers and employed engaged in any but strictly interstate business is unconstitutional and void. On this general proposition seven are agreed, while four of these, and perhaps five, seem to hold that Congress may not regulate any such relation as that of employer and employed engaged in interstate or any commerce. The court has thus rendered a very important decision—a decision which, joined with that in *Kansas v. Colorado*, upholds the legitimate rights of the States with the power and clearness with which MARSHALL upheld the rightful power of the Federal government when that was attacked. Justice WARREN's opinion in the latter case deserves to stand alongside of Justice BRADLEY's in the earlier case. It will be very difficult, in view of this decision, for the President and his advisers to frame a constitutional employers' liability act.

The Riding Test

It may be thought that the army riding tests are objectionable to officers of the line. They are far from being so. Officers of the line are eager to be fit for any military duty which they may be called upon to perform. With staff officers, like engineers, quartermasters, and others similarly situated, the case is different, but the line officers believe that they should know how to ride and that they should practise riding. They also believe that they should know how to shoot and to fence. They object to be called upon to endure a practice ride, however, when for all the years of their service the government has given them no opportunity to keep in practice. The President has advised the making of some provision for better army mounts, but better still would it be if Congress should give to all officers who may be called upon to ride, including infantry company officers, an allowance for forage. This is done in foreign armies, and if it were done here, officers would keep their own horses and would ride them. To call suddenly upon a poor captain in rick from fifteen to forty-five miles presupposes that he has kept in condition and in practice; but, as a matter of fact, the government has refused to make any provision that would enable him to maintain a horse; nor has it kept any horse of its own for his riding. The President might as well call upon all officers to display skill in revolver shooting—an essential accomplishment for officers—although there is not a revolver range in the army; nor is there much, if any, provision for fencing outside of West Point.

An Argument for Wilson and Johnson

The Philadelphia *Inquirer* is convinced by Governor JOHNSON's insistence upon the tariff issue that he ought not to be President. It asks if he is fit to be President of the United States? The question and its answer are applicable to WOODROW WILSON or Judge GRAY or JESSE HANCOCK as to Governor JOHNSON. The answer of the *Inquirer* is: "He is not. He is convicted out of his own mouth." He is "a rank tariff revisionist." The *Inquirer* does not seem to know that the national Democrats are seeking a candidate who will be cursed by none of the essential Republican sins, but, on the contrary, blessed by non-Republican virtues. Therefore some "rank tariff revisionist" who has never faltered in his faith is precisely the kind of a candidate for whom Democrats are looking.

The President and the Admiral

The documents in the case of the President vs. Admiral BROWDER, so far as published, have been interesting reading. Very few compliments have anywhere been offered the President on his handling of the Admiral. By something closely approaching general consent it is held to be a defective feat of castigation, more harsh than the occasion warranted, not altogether dignified, and mistaken in some of its assertions. It is even a question whether the Admiral had justly incurred a Presidential rebuke at all. The President said in his letter of reprobation that there was "no room for difference of opinion as to the gross impropriety of the Admiral's conduct in resigning sooner than carry out the orders of his superior officer in such a matter." But there certainly is room. The lay intelligence the issue was one on which the Admiral

might properly record his divergence from the Presidential decision by asking to be relieved from his office. His retirement upon no plan, hindered no official purpose. The only bad effect it had was to make the President mad. Possibly the manner of his getting out failed to conform in some particular to naval etiquette. Perhaps he should have issued the order, and then asked to be relieved without stating his reasons. As to that, we do not know, and if the method the Admiral actually followed is not entitled to all the sympathy we give it, still it was not "grossly improper," "childish," or "in the highest degree reprehensible," nor was it inspired by "personal pique, wounded vanity, or factional feeling." The Admiral undoubtedly had the good of the service quite as much at heart as the President has, and resigned his appointment because his sense of duty constrained him to. Of course his resignation should have been accepted, and in accepting it the President might properly enough have disabused his love for him, but we cannot see that the good of the service at all required that he should be kicked downstairs.

A Hard Nut to Crack

The President is not a good sealer. He is too hearty and miscellaneous about it. His weapon of reprobation is a blunderbuss and seldom makes a nice job. Too bad! His position on the question on which he and Admiral Bessieux differ is quite a different matter. He says a hospital ship is a hospital and a doctor should command it. The Admiral (and the navy generally) says a hospital ship is a ship and a navigator should command it. To landmen like us the President's view commands itself, especially as set forth in his letter on the subject to the Secretary of the Navy. But the truth is that a hospital ship is an amphibious beast, of a mixed moral nature, in the sea but incompletely of it, contrived to further the ends of war, and yet consecrated to works of peace and mercy. It ought to be commanded by an amphibious officer, and that is what the Department is trying to invent by conferring maritime and military rank on surgeons. Yet the difficulty of making the invention work is bound to be very considerable. The two most signal professional autocrats that our civilization has produced are the ship captain and the doctor. Each of them, in crises, has life and death powers in his own domain. How to make a single ship hold two such fountains of authority is indeed an awful problem. Even if the doctor is put in command, as seems to landmen so reasonable, his rule is incomplete, since the President's order prescribes that the hospital ships in the navy shall be placed under the control and command of the navy doctors, "their navigation being exclusively controlled by a competent sailing master and civilian crew, the sailing master having the complete responsibility for everything connected with the navigation of the ship." If it was necessary, then, to navigation, to put the doctor in irons, the sailing master could do it. It is a hard nut to crack. To our mind the President's method of cracking it is as good as Admiral Bessieux's, but we presume we are wrong about it, and we are pretty sure that Congress, which is going to try to crack the nut, will crack it wrong. There seems to be no way about it that is theoretically perfect, or will dispense with common sense in operation.

The "Thunderer" Changes Hands

The sale of the London *Times* was a piece of news that approached pretty closely the dimensions of an event. Some trials the "Thunderer" has had, beginning with the Parnell trial, when it paid a huge price for the privilege of being obstinately and somewhat credulously wrong. Its sortie into the book-selling business was doubtless actuated by emulations resulting from the expensiveness of this experience. Whether its book-selling ever was profitable has not been disclosed, but it got the paper finally into a row with all the publishers, and into a loss of book advertising, which cannot but have been a very substantial financial grief to it. These were fairly grievous woes, but might have been digested by a concern of unimpaired constitution. But lack of every other tremble of the *Times* there has been, we suppose, the fundamental difficulty that too many people have learned to read. Being readers, they have to have newspapers and want cheap ones, which get enormous circulations and harvest the profitable favors of the advertisers. It is elsewhere set forth in

this WEEKLY of how large a family of busy periodicals and newspapers Mr. C. ARTHUR PEASEON is the parent or proprietor. It is to his string that the *Times* is now added, though he is only one of the buyers, and the new directorate includes a representative of the WALTER family whose own the *Times* has been for three generations. It is given out that though the business management of the concern will be renovated, the paper will not be changed in form, price, or character, nor tied up to any party, though it is credited with a disposition at present to advocate Mr. CHAMBERLAIN'S protection schemes. Very possibly, therefore, the *Times* is good for future doings as great as any in its past, though to have it pass from its traditional WALTER associations into the new PEASEON guidance is a good deal like having steel armor fade out before firearms, and stone embarses take their dismissal from modern guns.

Newspapers and their Prospects

The last quarter century with its improvements in printing presses, its typesetting machines, and its cheapening of white paper has been a nerve-racking period for the old established newspapers. Any paper that had formed habits has had to keep them in a constant state of revision, and very few of the older papers are there in the world to-day that have more than a faint family likeness to themselves of twenty-five years ago. There may be changes just as violent and disconcerting to tradition in the quarter century to come, but in some particulars the pendulum seems to have swung about as far as it is going. Existing newspapers are hardly likely to be so much exposed as they have been to the competition of newcomers at a lower price. The one-cent paper's field must be fairly well filled by this time. Most journals that had anything to fear from that competition have already had their fears realized, and news and general wisdom can hardly be successfully offered for less than one cent a copy unless our government can be induced to issue a half-cent coin. White paper seems likely to be cheaper pretty soon, and the chances are rather favorable for a return to two cents of many papers that now feel constrained to sell for one. Size, too, seems to have got all past the point of greatest expansion. Newspapers are not trying any longer to issue as many pages as they can. The price of paper and a recurrence of common sense have checked that nonsense. Our papers are not likely to be bigger or cheaper than they are now. The effort to improve them, which never flags, is likely, therefore, to be directed to betterment in their quality; getting better brains into them, writing and editing them better, and providing them with more reliable news.

The Smokey Automobiles

MAYOR McCLELLAN in his annual message made some good recommendations as to the regulation of automobiles. He would have all automobiles equipped with adequate mufflers which should never be cut out within the built up parts of the city, within which also he advised to prohibit the use of the confusing acetylene headlights. More important than either was his recommendation that, "except for the first ten seconds after starting the engines of an automobile, no smoke should be allowed to come out of the exhaust pipe." The smoker, said the Mayor, is wholly unnecessary, and is simply an evidence of carelessness and incompetence. That is quite true. It is due to a careless use of lubricating oil. It is very objectionable and offensive, and in the streets of a crowded city is an impudent nuisance which should not be tolerated. To keep the air of cities as pure as is possible is only less important than to furnish a pure water supply. Paris and London both prohibit smoke from automobiles. New York should do the same, as should all American cities where there are automobiles enough to make their habits in this respect a matter of moment to the public health and convenience.

New Jersey Is Awake

An editorial copied elsewhere from the Newark *Morning Star* attests the growing fervency of New Jersey's interest in WOODROW WILSON as her candidate for President. New Jersey has no other candidate, nor has any State a Democratic candidate who appeals for such persuasive reasons, and on such conclusive grounds, to so many indispensable sections of the country.

A Candidate from the East and South

THE New York *World's* commendation of Governor JIMMISON of Minnesota to the attention of the next Democratic national convention was followed a few days later by an editorial article setting forth the special eligibility for the Presidency of Woodrow Wilson of Virginia and New Jersey, now and for some eight years president of Princeton University. After a concise and effective exposition of the facts in Dr. WILSON'S life that make him at once a fit and an available candidate for the Democratic nomination, the *World* proceeded to cite as vouchers for his political opinions and statesmanlike abilities a number of extracts from his writings, the best known of which are *Congressional Government*, a *Study of American Politics*, *The State*, *Elements of Historical and Practical Politics*, *Democracy and Efficiency*, 1885-1890; *A Life of George Washington*; and, finally, an elaborate and comprehensive *History of the American People*. As we said two years ago in this journal, no one who reads understandingly the record of the country's extraordinary growth, which in the last named work flows with apparent ease from his pen, can fail to be impressed with the belief that Woodrow WILSON is, by instinct and education, a statesman. We repeat what we then said, that the grasp of fundamental principles, the seemingly intuitive application of primary truths to changing conditions, the breadth of thought and the capacity at reasoning exemplified in the pages of that book, offer conclusive evidence of sagacity, insight, and elevation of intellect and feeling worthy of Virginia's noblest traditions, as was also the eloquent appeal addressed in 1905 by President WILSON to his brethren of the South, in which he called upon them to arise from the ashes of prejudice and lethargy and come back into their own.

There is a good deal more to be said for favor of Woodrow WILSON'S candidacy for the Democratic nomination than was brought out in the *World*. In the first place should be noted certain considerations suggested by the facts that he is by birth and rearing a native of Virginia; that he was admitted to the bar in Georgia, and practiced in Atlanta until he received the law for the calling of an educator; and that the lady whom he married was a native of Savannah. There is no doubt, then, that he would be accepted all over the country as a genuine representative of the South, although, like JAMES MADISON, he was sent as a young man to Princeton, and is now the president of that university. Is it not expedient that the next Democratic nominee for the Presidency should be a son of the South? Is it not admitted by many large minded Republicans, as well as by all Northern Democrats and all Independents, that the South, although nominally restored to the full privileges of States in the Union when she was allowed to send Senators and Representatives to Congress, still partially discriminated against so long as her sons are practically debarred from the highest honor in the gift of the Republic? Shall we ever witness a veritable union, not of law, but of hearts, until, with the cordial concurrence of a large part of the North, a Southern man becomes Chief Magistrate?

Another truth that cannot be driven home too often or with too much emphasis is the complication of the question of nominating a Southern man for the Presidency with the imperative necessity that the first post bellum Southern administration shall be indubitably successful. To insure such success it is indispensable that the temper of the Republicans, if beaten in 1908, shall be resigned and acquiescent, for they will remain masters of the Federal Senate, and, if vindictive and defiant, could paralyze all the efforts of a Democratic Chief Magistrate and a Democratic House of Representatives. Once more we repeat what we said in another place nearly two years ago, that if a Southern President is to leave behind him a bright record of constructive statesmanship and useful legislation, he must have the good will, if not the active support, of the whole country; and such good will is only to be gained from a devotion, deep implanted at the North, as well as at the South, that both sections can count upon his sympathy, and, above all, upon that intimate acquaintance without which sympathy is fruitless. Such a conviction unquestionably exists with reference to Woodrow WILSON. Is such all embracing sympathy, such intimate and comprehensive knowledge of the views, wishes, and interests of all sections of the Republic, just now possessed by any other distinguished son of the South?

There is another point of view from which the nomination of Woodrow WILSON might not only exercise a healing and unifying influence upon the sections, but also have a treble and invigorating effect on the whole electorate. The American voter is pretty tired of military men, professional or amateur, considered in the light of candidates for the Presidency. He is also just a bit tired of lawyers, and even of judges. He has become alive to the fact that, as things are now, the intellect of the nation does not flow solely or mainly through military, forensic, judicial, and legislative channels. He knows that in our day industry has its great captains, and education its field marshals. Now will any man now deny the right of eminent and fruitful workers in the educational field to challenge the highest office in the gift of the American people on the score of merit and of availability. As a matter

of fact, even in the past may be found precedents for the selection of such men for distinguished functions under the Federal government. GEORGE EASTMAN, who was Secretary of the Navy in the peak administration, and subsequently represented the country in London and in Berlin, was by profession a college tutor and a schoolmaster. EDWARD EVERETT left the presidency of Harvard College to become Secretary of State. ANTHONY D. WHITE, formerly president of Cornell University, has been invited more than once to occupy the highest posts in the nation's diplomatic service. As we pointed out twenty months ago, no one has ever disputed that the statesmanlike duties assumed by these organizers, directors, and inspirers of the higher education were admirably discharged. Why, then, should not the Democratic party in 1908, when seeking a nominee for the Presidency who will not only do better, but command, sooner, turn its eyes in the same promising direction? It certainly could find in Woodrow WILSON, the president of Princeton University, a man richly qualified for the headship of the Federal government by great natural ability, by long and distinguished administrative experience, by the illuminating and invigorating trend of his studies, by his exceptional popularity, and by his unique power of securing the confidence, the sympathy, and the support of all sections of the Union.

There is still another point of view from which the name of Woodrow WILSON deserves careful consideration in connection with the next Democratic nomination. He is the only widely known and eminent American citizen who at the present time is a resident of New Jersey. Now there is not a State in the Union, not even Virginia nor Massachusetts, that has so much State pride as New Jersey. Perhaps for the reason that unmodified New Yorkers sometimes speak of her with condescension, New Jersey passionately covets the recognition and appreciation which she believes herself to deserve. New Jersey has never had a President of the United States, and if one of her native born or adopted sons should be nominated for that great office by a national convention, the difficulty of his appointment would vanish, not in averting his ennobling of the State, but in preventing him from securing a unanimous vote. In 1908 only a Jerseyman will be absolutely certain to carry New Jersey, though we do not dispute the *World's* assertion that Governor JIMMISON would run considerably better than would Mr. BRUNN in that State.

What is true of New Jersey is measurably true of New York also. There is a multitude of Princeton men in the Empire commonwealth and its metropolis; and wherever you meet a Princeton man you meet a stately, devoted, and indefatigable champion of Woodrow WILSON. He could rely with almost equal confidence on all college graduates who are alive to the magnitude of the services rendered to the nation by the organizers and administrators of our great universities, and who believe that the time has come for such services to receive due recognition. For this reason, and because the breadth and warmth of his human sympathies, together with the soundness and equity of his political and economical views—he is a tariff revisionist—would commend and endear him to the great mass of the people, we believe that Woodrow WILSON would be more likely than any other Democrat to carry New York by a handsome majority.

We scarcely need recall the effect of nominating a son of Virginia for the Presidency on the States which in state affairs days were spoken of collectively as constituting the "South." There is not a doubt that Woodrow WILSON could win back for the Democracy every one of the Southern States now or lately lost, namely, Delaware, Maryland, West Virginia, Kentucky, and Missouri. All the rest of the Southern commonwealths he would hold in a vice of steel. On the score, then, of availability, equipped with the qualifications of high character and eminent ability, what Democrat can possibly vie with the President of Princeton University?

Conversation as an Art

CONVERSATION as an art, and not as the haphazard indulgence of an instinct, has been a subject much mooted of late. Lord RIBblesdale in *The Nineteenth Century*, Mr. PRICE COLLIER in *The North American Review*, and that felicitous writer of "mildities" for the *London Spectator* have all offered their quota of criticism and comment upon the art, while a book by Mr. FRANK WATSON, *Culture by Conversation*, adds to the data gathered that "the study of books for a specific purpose never yet formed the mind of any man." Lord RIBblesdale was weary over any one who prepares conversation, believing that only those should attempt it, apparently, who baffle as naturally as a champagne bottle when the cork of solitude is withdrawn. Mr. COLLIER pleads somewhat wearily, and with a melancholy undertone, of much suppressed emotion and foreboding for a half hour's preparation for the dinner table talk, saying, "A comment upon one's reading may be a cup of cold water to men and women thirsty and drowsy with their own tasks and trials"; leaving out of account that large tract of

society where the mention of a book would set somewhat as a bomb exploding in the middle of the table, with disaster and silence and disintegration resulting after the explosion. "It was once at a dinner," said an accomplished diner out, "apparently of undertakers hired to mourn over the jolts and birds in the dishes, when the crilling fell, and we all sprang up as merry as crickets." If you could not provide an incident to break into the decorum of the regulation dinner party, conversation might well be left to take care of itself—indeed, as the ready DIANA remarked, being *prime* shots at dinner.

Talkers, however, like poets, are born and not made, and it is a question whether the art, cultivated as Mr. CORLIAN suggests, by an arduous course even as cranting from old magazines a half hour before the ordeal, would bear fruit. A cheerful countenance and a gay voice will carry off much futile comment, and the wisdom of Solomon would possibly have failed to lighten the weight of a melancholy mood where talk is tedious.

"To be able to furnish pleasure that is harmless, pleasure pure and unalloyed, is as great a power as a man can possess," said the pensive doctor, and it is just this that the best good talker accomplishes. These words murmur back to the dim, æthereal figure, the pale face and long silver hair, the prophet Alcott ran vouch for this, no less than those who have dined with MARK TWAIN and the late ROBERT LOOMIS.

But dinner table talk, apart from genius, which cannot always be had at dinners or in magazines or in the world at large for the asking, is more a matter of practice than of cramming. Conversation requires not so much manners as a manner, and who dines amongst strangers three times a week is more apt to carry away the conversational graces than who does so once in three weeks. The main thing is to know the tastes and tendencies of the fellow diners. Argument is fire, most competent to burn as a rebel, as it has been called in a famous bore, and wounded susceptibilities and hurt prejudices are disastrous to any sense of pleasure. Wit, that pure fire from heaven, lessens all difficulties, but it is as rare as a rare tree on genius. Tolerance, kindness, and simplicity go a long way toward making general conversation a bearable evil; conceit and *ex cathedra* speech are the surest damper.

Constant and region talkers, such as exercise a prolonged predominance over the whole company, do not commend themselves gracefully to the memory, as witness CARLYLE's grumbling recollections of CORRIEHO, or the girls that still are current about poor MACAYLAY, who it seems was so determined to hear his own voice at all times and at all costs, that he visited a book of MITHRAS's "Paradise Lost" alone on a stormy channel crossing. All monopoly is offensive, and he is certainly the most graceful and gratifying talker who can take up our little hint or suggestion and develop it fully, aggrandize and amplify it until it returns to us a crown and a credit.

At the same time it would be difficult to concede to the author of *Failure by Conversation* that the best minds are formed by conversation, or the profoundest minds given to discourse. Who that has wandered through the CARLYLE house on the Chelsea Embankment can forget the anecdote which the old Scotch keeper rehearses so punctiliously day by day, and yet ever with fresh gusto? "In this room it was, sir, that Mr. CARLYLE and Mr. TENNYSON spent a long evening, each smoking his pipe and neither of them speakin' a word. And after three hours, when Mr. TENNYSON rose to go, Mr. CARLYLE said to him, 'It's a grand evenin' we've spent, ALFRED, a grand evenin'.' And Mr. TENNYSON, he just said, too, 'A grand evenin', and went out.'"

One can but fancy MITHRAS or DANTE adding to the gaiety of a dinner table; KEATS was impossible at table altogether, and SHILLER was distinctly a *table talker*, as Mr. HENSON, the essayist, is some of his intimate disclosures, proclaiming himself to be. It has been said that to hear Mr. HENRY JAMES talk is much like hearing proof corrected aloud, though one or two of his comments at a ban dinner while he was last in this country shed illumination and delight upon his female hearers. On being demanded some comment upon American women as compared with those he dined with in England, he first said that they all looked as if they did their own hair and did not take time enough over it, and later that they lacked "mystery and magic."

The most brilliant talkers in fiction are doubtless those who walk through the pages of GEORGE MEREDITH's novels, and in the dearth of knowing whether Mr. MEREDITH's own powers more nearly match those of the witty DIANA, or are of the epigrammatic caste of ARTHUR HADLEY, it is pleasant to be in the secret of a manuscript volume, called *Days and Hours*, lying in hiding in England, which is as near as less than notes taken by two frequent guests at MEREDITH's table of that great conversationalist's utterances.

PATER had a manner and a method, and has left behind him a glowing track of delightful anecdotes. RUSKIN seems to have had the social gift up to a certain point, but one never could quite tell when a storm was imminent.

On the whole, the conclusions to be drawn from the subject are as various as life itself. It is fair to believe that if one have wit

or genius or reason one can win through the ordeal of the most awe inspiring dinner talk, but if one belong to the class of Mr. HENSON and MERLEY and require but one listener, and that a sympathetic one, one is still in good company, and Mr. HENSON WATERS to the contrary, one need not relinquish all claim to culture.

Personal and Pertinent

CYRIL ARTHUR PEARSON, being born an Englishman in the English parish of Wuskey, the son of an English clergyman, came to the United States eighteen years ago, when he was twenty-four years old, and was inculcated with a kind of Americanism which has its virtues, and like its view. JOSEPH CHAMBERLAIN is reported to have asserted that PEARSON was the greatest hostler he had ever encountered outside of America. To be a hostler is to be, in the minds of some Englishmen, one of the greatest of human products. In England perhaps they have too few hostlers. In America it may be that we have too many. At any rate, PEARSON is a hostler. Being born in 1866, he came into existence in a place which, in order to be definitely placed, has to be spoken of as near Wells. He is not a university man; but he had schooling at William of Wyckham's fine and ancient school at Winchester. After coming out of there, instead of "going up" to Oxford or Cambridge, he went at life with glowing courage and practical sense and became the proprietor of a large share of public opinion. He started *Pearson's Weekly*, and then brought into existence *Home Notes*, *Pearson's Magazine*, *Trade's Review*, and other periodicals. Then, in 1900, he started the *Daily Express*, a halfpenny morning paper. Since, there have sprung from his brain the *North Mail and Evening Mail* at Newcastle-on-Tyne; the *Gazette*, *Express*, and the *Evening Dispatch* at Birmingham. He controls the *London Standard* and the *St. James's Gazette*, and he has edited this with the *Evening Standard*. He has recently said that he owns "nine daily newspapers, four weekly newspapers, and eight—or is it nine?—yes, also weekly periodicals, and six monthly things." Now that, with the aid of a syndicate, he has taken from the historic WALTER family the management of that particular section of the British Constitution which is known as the *London Times*, he and HARRINGTON express about the whole of British public opinion. A year or two ago it might have been doubtful if money could buy any one of the institutions of the British Empire, but PEARSON has done it. Things are changed, but the changes are going to be greater. PEARSON is vice-president of the Tariff Reform League, and so one may count on the *Times* becoming the advocate of "CHAMBERLAIN'S tariff policy." It is said in England that PEARSON is "not in possession of his health," on the other hand, the WALTERS used to believe, and many believed with them, that they were in jeopardy for the health of the nation. PEARSON is very rich, and seems to be on the way to be richer.

WOODROW WILSON AS CANDIDATE

(From the *Newark, N. J., "Morning Star."*)

The imposing personality of WOODROW WILSON, president of Princeton University, looms up larger on the Democratic horizon as the date for the national Democratic convention approaches. And it is now certain that this commanding figure will be a formidable, and maybe the winning, candidate for the Democratic Presidential nomination at Denver. The growing favor of thoughtful Democrats for WOODROW WILSON is evidenced in the constantly increasing number of representative Democratic newspapers that are turning to Princeton for the *Man* who shall lead the Democratic hosts out of the wilderness of false doctrines and social lies. To a man who can as President give to the country a sane and safe administration, as well as a progressive one, with neither a tendency to the dangerous radicalism that imperils our national institutions nor a relapse into reaction to restore conditions the nation has now been released from, WOODROW WILSON represents the kind of conservatism that distinguished the fathers of the Republic. The judgment of history is that these men of pure and lofty ideals, who humbled the power and pride of the British monarch, embodied a wisdom and foresight and a progressive conservatism almost without example in the annals of the world. Of the same type is the great educator, historian and publisher who presides over the great college of New Jersey, and whose interest in public affairs is that of a statesman, scholar, and, prominently, the patriot. WOODROW WILSON is a descendant, of Virginia birth, and his shining personality therefore belongs to both the great sections of our country. We know him, and honor him, as a Jersey man. The Democratic party of the country is confused by the alternative of nominating a twice-defeated candidate, thus inviting a third defeat, or naming a man like WOODROW WILSON, whose candidacy would solidify the party and win over many Republican voters. New Jersey will, in all likelihood now, present WOODROW WILSON as its candidate, and it will be affirmed that the Democracy of this State could not make a better appearance in any national convention.

Correspondence

THE GOVERNMENT GUARANTEE OF DEPOSITS IDEA

Bureau Agents, Boston Bureau, December 11, 1907.

To the Editor of *Harper's Weekly*:

Sir,—Some legislation should be passed by Congress at this season protecting the American people against loss of deposits in national banks. If the government would guarantee the payment of deposits of national banks there would never be another run on a bank. If a bank anywhere should get into trouble through some misadventure, or otherwise, the people in that locality, instead of clamoring and falling over each other to get their money out and hide it, they would naturally support the bank and put more money in it. If the depositors knew that the government was standing behind the banks.

If there was such a law and any bank should fail, the Secretary of the Treasury could order a bank examiner, or other official, to immediately draw on the Treasury and pay the depositors, wind up the affairs of the bank, and whatever assets the bank had could be converted into money and placed back in the Treasury. Should the government lose a part or even all of the money paid out to the depositors of such a bank, then the people would be away about, as millions of dollars are lost every time there is a panic. Payment of deposits should be guaranteed by the government just the same as national bank currency, and then we would never have another panic. Of course, gamblers, speculators, and plunders would fail occasionally, but the banks and the people would take no interest in it, and panics would be like the old wild west movie, a thing of the past. I believe the country would stand for such a law, as it would protect millions of big and small depositors and it would give great stability to national finance.

Our government does not think anything of spending millions of dollars on ship canals, battleships, public buildings, exhibitions, sea walls, and civilizing the heathen, and yet Congress seems faint hearted about passing laws to protect the bank deposits of our people.

We will appropriate a million for any old thing. We even appropriated \$850,000 for a bridge across Rock Creek in Washington, D.C., a little stream that a thirsty cow could drink dry in a few minutes, but we get tender footed when we are called upon to legislate on a subject that is of great importance to the people, for fear there might be a small loss from the Treasury.

We make appropriations of millions of dollars for the protection of our river fronts. We put in the riprap in the fall, and they are washed away in the spring, and yet we scort if we have to insure depositors from not thinking anything of it.

We have been known to appropriate \$1,000,000,000 during one sitting of Congress to pay national expenses, and yet we shake in our shoes at the bare thought of placing our finances on a sure and stable basis.

The money in the public Treasury belongs to the people, and it could not be put to a better use than to protect the people from loss. Deposits being considered absolutely safe, there would be very few bank failures and the few that might occur would, as a rule, be able to reimburse the government in full after their affairs were settled. But suppose there was a local, small difference from what it made? Like fire insurance, we should, if necessary, pay for protection. If a bank fails no one looks to see if he has a ten dollar bill bound by that bank, as the government agrees to make good, and it would be the same way if deposits were guaranteed—no attention would be paid to the matter and business would go along as if nothing had happened.

The Shaw plan of issuing more currency, or having an elastic currency, is times of trouble by national banks, would not help the matter a particle. Suppose a national bank with a capital of \$100,000 and deposits of \$1,000,000, and that bank should issue \$250,000 more currency, how long would it last if depositors were making a run on that bank? Not more than twenty minutes, providing there were clerks enough to pay it out, and it would all be hidden in an hour. That is not the remedy. This is no time for palliatives; strike at the root of the trouble and settle the matter permanently for all future time.

Mr. Bigley's (Comptroller of the Treasury) idea of patterning after Germany and France, and having a central bank to issue money, is no good. The same objection applies. We have plenty of currency now if the people would not hide it, and the only way to protect them from hiding it is for the government to guarantee deposits. Should the people lose a million a year in protecting deposits in national banks no one would feel it, as it would not be one dollar per capita for a hundred years' protection. According to the history of losses sustained by depositors since the establishment of national banks would not amount to a hundred million dollars in a thousand years.

We voted \$50,000,000 in fifty minutes and placed it in the hands of President McKinley to rescue Cuba from Spain, and incidentally incurred an expense of several hundred millions more.

We pay out millions yearly for life and fire insurance to protect our families and property, and yet we get cold feet when we think of protecting our bank deposits, which is of the utmost importance to the people and of the greatest consequence to the commercial and business interests of the country.

We have been wrangling over having national banks to secure the people against loss of deposits for fifty years, and nothing has come of it. We should not depend on the honesty or clarity of national banks. We are no paupers. We can protect ourselves with our own money.

I am, sir,

E. J. DEBOLL.

This is old Dr. Bryan's new idea—this of a government guarantee of national bank deposits. Our correspondent has disclosed effect-

ively the whole attitude of mind from which it gets support. It is paternalism of the most preposterous kind. It is not hard to start a national bank and does not take very much money. Start one; it should be easy to get depositors, if the government will guarantee them against loss. They will not care who the bank officers are, they need not. They will not care to whom their money is loaned; they need not. Let the bank examiners attend to that. Let the money go where it is needed; the government has plenty more. Our correspondent does not see that the power that guarantees the deposits should also—must also—control the loans, and that the only intelligent way out of it would be to have the government own and operate all the national banks. Very likely he and thousands of others would be glad to have the government do that very thing—and own and run the railroads, and buy the cotton and tobacco, and sell the beef, and make the soap, and employ folks out of a job. All these services, and most others, belong in the same category with this proposed governmental duty of guaranteeing bank deposits against loss through bad loans by bank directors. Lose a million dollars a year by such a guarantee? Why not a thousand millions? It would not be an imprudent loss in a year—like 1907—of contraction of credit after a period of huge expenditures, inflated by the government guarantee.—Editor.

PROPER LIGHTS OF THE ANTI-RUM MOVEMENT

One, December 15, 1907.

To the Editor of *Harper's Weekly*:

Sir,—As I see the local option movement it reaches too far into absolute prohibition, and is no better than enforced State legislation, as it is in some Southern States. I do not think the majority should decide that a minority must not be able to buy intoxicants at retail, and use them in their own way and at their own homes. I think every man should be master of what he wants to drink, as well as what sort of food he wants. Some temperance reformers, who always say so, would not want rum under bars because there are too drunkards in England and Ireland. Of course, tea and coffee both are intoxicants, I think; not as alcohol is, but, used to excess, tend to seriously affect the nervous system. If the temperance movement was narrowed right down to the issue which the open saloon presents, I would, to my humble view, be better than to clamor for absolute prohibition, against make and sale in any form of intoxicants.

Wipe out the saloon everywhere, for that is what has played havoc and fed in every town and city, leaving the right to buy intoxicants as any other commodities.

With the reason extenuated, the question "does prohibition prohibit" will not be discussed.

I have patronized saloons all my adult life, and do now, some, but I am in favor of their utter extermination; they are a menace especially to youth.

I am, sir,

A CIVIL WAR VETERAN.

CAPTAIN AMUNDSEN A NORWEGIAN

New York, January 8, 1908

To the Editor of *Harper's Weekly*:

Sir,—Among the notices in the "Personal and Fictional" column of the WEEKLY, dated January 11, there is one in which you comment on "a Danish sailor," Captain Roald Amundsen, who survived, etc.

Captain Amundsen is a typical Norwegian sailor, born and bred in the land of Leif Ericson and Norsemen. His 13 foot ship of Northwest Passage fame, is "made in Norway," like the "well known Viking ships discovered long ago," and recovered today—not in Denmark, but in Norway. Roald Amundsen is an ardent and highly devoted patriot, and he never tires of telling with what proud emotions he and his hardy crew looked up to the old Norwegian flag that fluted under the gaff of tiny *Tjos* on that historical voyage. And of course Norway is no less proud of him for the home he has reflected on that country.

Honour's Wraxley certainly always intends and wishes to give "honour to whom honour is due," and will not, I hope, brand this natural correction as immaturity.

I am, sir,

TOM W. SCHREINER.

PROHIBITION IN THE SOUTH

Lexington, Ky., December 28, 1907.

To the Editor of *Harper's Weekly*:

Sir,—I am greatly surprised to read in your correspondence column in today's issue the letter entitled "Prohibition Movement in the South." Such sentiments seem to have but one purpose—the awakening of old North and South prejudices.

Prohibition in the South wishes aims at our surpluses our governmental revenue. I refer you to our \$87,000,000 surplus of the last fiscal year.

The movement started and has continued, as a measure of self-protection. It has been strengthened by the fact that the people are realizing that the liquor business diverts land, labor and capital—the three factors of production—from producing articles which would be good for the country, into producing articles which have a harmful effect. The people see that liquor revenue is collected from the consumer without offering a solution to the question of intemperance.

I am, sir,

A KENTUCKIAN.

The Work and Play of the Fleet

By ROBERT DUNN

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY" ABOARD THE BATTLESHIP "RHODE ISLAND"

OFF PORT AU PRINCE, TRINIDAD, December 27.

FIFTY unadorned songs from give me the British Crown Colony. At home, some per sons washed their selves up almost to the point of sunburn over the cruise of this Armada; but its entrance through the

Dragon's Mouth to anchor five miles off Port au Prince has made less ripple on the surface of life in this metropolis of the outer islands, than a band of tourists on a sixty three days' cruise—"63 and up"—could have caused. You see, only lately the *Breadbasket* took a practice run over here (at seventeen knots average speed, by the way); and the British Colonial, who likes his lion taming so hard that even the Londoner will put cotton in his ears, respects a Yankee fleet no more than a squadron of tramps and luggers. Why (thinks he), none of their ships mount more than four 12-inchers, or is more than 16,000 tons, or can steam better than nine-knots, and you have no discipline, because smoking is allowed on the quarter deck.

Trinidad carries the cosmopolitan lion of the tropical seaport to the point of weary consideration. And what a slumgullion of peoples it be!—black men, African, and East Indian; remittance men and thin bank clerks from Liverpool who play billiards at the tourists' hotel; and police inspectors with rooster feathers in their hats; and effeminate little Venezuelans, suspiciously sneaky, and rich American consuls from the arid rubber beaches of the Upper Orinoco. It is the Newport of hot South America. And on top of all comes a very green Christmas—in open trolley cars—with the mercury at 85°. But the streets, half like the foreign quarter of an Eastern treaty port, and half like the backdrop of a comic opera scene in Spain, are filled with shoppers just as at home, who buy Panama hats at cut rates over the wildest counter with imitation spruce Christmas trees dyed a most poisonous green. And Jack, the sailorman, drives around six deep in the town's best hotels, trying to make the more thrifty Colonial sit up and take notice of him.

Yet Christmas with the fleet was a very homelike, family affair. The day before, Jack had looked the port pretty well over, the *Wassermann's* ball team had sampled the race course, which is the first thing any three Englishmen gathered together in one place construct; and the officers had sung rag time in the parlor of the tourist hotel. For some days before we received many messages like these were flashed from ship to

"Cleaning Ship after Coaling" on the "Rhode Island." One of the last Rites before leaving Trinidad

bridge supports councils concerning the comparative merits of Ritz and Alderbrook in working out latitude. It has been dire to imagine how we alone of all the fleet, though we follow our two squadron flagships so lamely, ought to founder if a midshipman made a ship in his time-sight formula, and loosed us on the Avea Hook. In the Strait of Magellan-of Matilda, as the jokers have already renamed it—we expect to annihilate all snow peaks and get our position with the artificial horizon.

So the navy man is the last to snail or anticipate trouble, or to borrow it in the form of ideas of leaving the Atlantic seaboard unprotected, or of springing shattering fuel bottoms on the lone Pacific drydock at Bremerton. His life on the battleship of a fleet is being less never been justly shown; few outsiders have the chance to observe it, and exposition is dull writing. But, continuous, irregular, monotonous, precise, it is a revelation of the soldierly credo, the day spirit of work,—one only less striking than the self immolation of the men who sacrifice it.

"General Police." Regular Cleaning of Mess Tables and Benches. In the Navy, "to Police" means "to Clean."

Raceboat Crew practicing on improved Rowing Machine

"I hope you don't mind this shop talk," you hear across a mess table deep in the devising of schemes for making turret ammunition belts safer; "but I'm afraid it will be a good deal like this the whole trip."

An orderly brings in the coal report, showing how many tons each ship has burned during the previous twenty-four hours. This is signalled to all at noon. Which uses the least coal is a matter of sharp rivalry, and the figures vary from some seventy to one hundred and thirty tons. (We are generally third, with a bit over ninety.) To-day, for example, the — has won with sixty-eight.

"Oh, well," comes consolation, "they haven't had their fresh water condensers fired. They don't bathe much, over on the —."

And it is something to learn that it is better for the engines of a ship to travel all the time at about two knots less than top speed, than at the ten knots (lately increased to eleven) which coal economy and the older and slower ships demand, and that a midshipman, somewhat rusty in navigation, found that his observation landed him in the middle of Wisconsin.

Just so much does this cruise, in its spectacular or political aspect, affect those who most closely bear its responsibilities. But way back on the day we left Hampton Roads, when the President's farewell was read, that after a short stay on the Pacific coast we should return to the Atlantic rim the Mediterranean, the navy man cheered; that is, who of him are not married, cheered. The news likely meant visiting Japan. Well, the Philippines will be very

hot when we get there, and later at Calvo the season will not yet be on. Still, and after everything, the navy man cheered; and take my word for it, he did so simply because he was glad of the billet, glad as any stay at home would be, to take a look around the world. Perhaps.

As for the alleged danger of risking our ships on so long a hike, it is a mystery to all of us why a battleship should not be considered as much master of itself while going to Botany Bay as to Cape Cod Bay—if it is fit for inclusion in a fireless navy. And I gather that the only difference, so far, is every mind aboard, between this cruise and the annual trip to the Cuban ranges, when standard time is kept, is that now we change the clock every day—which is very annoying if you forget to set your watch, because it makes you late for dinner!

Most of the way we have travelled in line of squadrons, natural order, which it appears will be our customary formation for deep

sea going. All the way around the Horn. Part of the second day out of the Roads we moved in line of divisions, open order. We would change to column formation, open order, which simply places one squadron behind the other. It is easier to keep than the closed column, in which each ship points exactly bow to stern. On the third day out, Wednesday, the 18th of December, the Commodore ordered that every command (travelling in natural order) dip its red and white position pennant whenever it varied, by more than forty yards, the 800-yard interval from the vessel stern on ahead, and keep it dipped until right position was regained. Evidently even this did not succeed in keeping us all properly symmetrical in the admiral's eye. Sometimes a division assumed the indented column, usually an anchorage formation, in which the relative distance between the ships is an equilateral triangle, four hundred yards on a side. And all maneuvers would be most beautifully made by the "rectangular method."

This is too bewildering to describe in detail or illustrate by diagram. Everywhere lines of blue pennants flutter to the mastheads.

Each vessel turns majestically, as if on a pivot axis, and the sixteen fold together, with eagle calculation, into a wilderness of pious and sterns that seem to search for new points on the compass card, of great funnels and dilute Porcelain coal. On the bridge, a midshipman with "Commander Fife's" stadiometer, keeps warning the navigator our distance from the Georgia. Then, out of the chaos gradually, is some such way as magic lantern slides dissolve into obliteration, a new symmetry is wrought. At any rate, we are pointing with and after our flagship, and find ourselves suddenly part of a column. Now, at a certain point on the ocean, each vessel turns sharply, like a man going around a corner; the whole column swings as a trained chorus wheels up stage.

Signal Boy "Shooting" a Flag Message

Life would be Dull without the Band

The Fleet Formations which were Maintained with extraordinary Accuracy by Admiral Evans's Ships

But sometimes our flagship displays the grace of a playful sea lion; or we, being the latest to the fleet, or at least thinking we are, try to "walk aboard" (run down) the *Yves Jersey*, which is sent us in line, and often so near that you could talk across. The engines pause, we pitch in the wash from some sister ship (stronger than the swell of the tropic sea), and finally, far down at the end of the overly perfect line, you can spot the *Kearsarge* by her old faded-red ensign. But hardly once has the fleet refused its turn last rate, or a black speed cone sunk from its yard arm; and were the wake of each vessel in definite, some curved, symmetrical design, maybe like interlaced parabolas, would be left etched upon the waves.

Every morning, from your port hole, you see, in quite the same position as the day before, the *Kearsarge* at sea, exactly ahead, 1000 yards away. At "quarters" (general muster at 9.30 A.M.)—if the jacks are all lined up on one side of the deck for inspection, look across to the *Yves Jersey*; there unobscured are the same men, gathered on the same side of the deck, under the eyes of the same officers with the same little notebooks, all at the same task. Such regularity, such reduplication, running through the fleet as one knows it does, begins to seem uneasy. Then you see the second squadron, unchanging in its position relative to us, and it seems you suddenly that all those eight ships there must be anchored, and

that we have our back down, too. Of course, such similarity was broken on the afternoon of that unlucky December 20th when the *Missouri* hit out by herself for San Juan, having a mass drawn with peritonitis, and the *Illinois* followed her with a pneumonia case during the night, and diphtheria broke out on the *Louisiana*.

In the agreement signed by the nine civilians who accompany the fleet you promise among other things, to refrain from ever giving out for publication "any military information that might be of value to a possible enemy, such as detailed descriptions of mechanisms or method of drill, method of handling fire-control, scores of target practice," etc. Ever since this agreement was signed I have been anxious to learn just a slough military secret, in order to keep it as a touch-

Lieutenant Cole Lieutenant Commander Gies Captain Davis

Captain Davis, in command of the "Ohio's" Marine Corps, one of "Harper's Weekly's" Special Correspondents with the Fleet, sends this insight on the voyage through the tropic seas:

"Six of us in the 'Ohio's' messroom: Gies, Gorton, Mayers, McKeefield, Cole, and Davis, have formed a Bald Headed Man's Club. We have had our hair clipped as short as the barber could get it. Gorton has a wonderful hair tonic which we are all using, and he says by the time we reach Prince we will all be *Climacian* beauties. We are certainly beauties now. Three of the Club had their hair when it came to having a photograph taken, but the three bachelors, free and irresponsible, faced the camera with glie."

the ordinary hot-holder; and among the bundles of white pipes, each bonded with a separate color according to its use—which have always made a battleship appear to me less a floating fortress than a masterpiece of open plumbing—you see some certain broken joints with projecting skins of gray incalculable size.

Concerning the motives and the purposes of this much debated cruise the navy man has, from the first, kept his mouth very tightly shut. The reason grows plainer as the days advance; he has never permitted himself to regard the cruise as anything out of the logical order of his day's work. It is all the same to him—all part and parcel of the day's work. He is not, naturally, impressed by the spectacular aspect of the race, since fleets are a familiar phenomenon to him. As for any question of "danger" or "risk," why, that too is part of the day's work.

Well, tomorrow we go out to sea to regulate our compasses, which, as every one knows, has been a most mystic rite ever since the days of Columbus.

Under the Eye of the Speaker

BY AN OLD MEMBER

ILLUSTRATED BY DAN SAYRE GROESBECK

A last we are moving. Nearly two months of this session have passed and we have done nothing, but now we are going to do nothing. How much—read the answer in the Speaker's eye, which Representative Jerry Sullivan, the new member from Kansas, true to his Milesian blood, says holds the House. In the hollow of his hand. Well, the metaphor is a trifle mixed, but it's illuminating. The Speaker has his hand on the House, and his eye, like the wind, roves where it listeth. The member unable to catch the Speaker's eye—and the extraordinary facility with which the Speaker can look straight at a man and yet not see him is remarkable enough to serve as a clinic in an ophthalmic hospital—might as well be doing the morning milking into a sieve, as a philosopher murmuring for all the legislative tricks he can hope to get.

And what a genial, overflowing with the milk of human kindness and the honey of good nature Speaker this is to be sure! And how polite the members are to "the eyes and ears" of the House. The philosopher's stone of the era of political good feeling (so far as the House is concerned) has at last been discovered. Recipe: Take a Presidential year, whisper into the ear of an old gentleman that he is to be the next President, and gently let him simmer in the decision of his own vanity. He will keep fresh and sweet for at least six months, or until the end of the session. After that—but who cares what happens the day after tomorrow? In politics there is only the present, and the future may care for itself.

A very popular man is this Speaker of ours, but if he is half as philosophical as he is credited with being his popularity must arouse his sense of ironic humor. For popularity in Washington is as evanescent as a blush on a coquette's cheek. This time a year ago there was a man whose popularity was so all-pervading that we stumbled over it at every step, and he had only to raise his little finger for us all to dance—yes, I'll confess it, I was one of them; and we told each other how much we delighted to dance. This year the wind of popularity has veered. Now we are dancing to another tune. We listen to the voice of the people, and the voice of the people isn't so tumultuously unanimous in its swelling Rooseveltian chant as it once was.

Life was easier for us then than it is now. We wouldn't confide in our constituents, but it is the truth that members of Congress, like women, need a master, some one to whom we can look up to and for whom we can have a little fear, even if it is mixed with a little affection. We had it last year. We knew we had a boss. No faithful wife ever quite admits that—does she—but she is conscious of it all the same, and so long as the snaffle doesn't press too hard she rather enjoys feeling the gentle pressure of the rein and takes pleasure in the firm hand that guides it. But if it bears too hard, then it generally guides straight to the divorce court. We are about to sue for divorce, which is easy, but after that—there's the rub. We all want a place on the band wagon, but which one? Are we to ride with Taft, or Cannon, or Hughes, or Fairbanks, or Knox? A plague on all those candidates. Why can't they settle it among themselves and leave us members at peace. We haven't turned our backs

on the White House. Deliberately. So far as Congress is concerned the President's power is broken. We are as brave as an army in lockram. We have banded together to fight Executive usurpation. We have come into our own again. The House of Representatives is determined to exert itself—provided the Speaker permits it. It has been many a long year since we have had a Speaker who is an accused candidate for the Presidential nomination. It has been an equal number of years since a President of the same political faith as the Speaker has attempted to dictate the choice of his successor, and that choice is the Speaker. And history also has to run back a good many years to recall the time when the Senate has offered four candidates for the Presidency and the cabinet two. Well, we don't see that that's our

We have begun a political session when legislation and the welfare of the country will give us far less thought than how we can advance the fortunes of the candidate to whom we are tied by personal considerations of the belief that he is the winning man. I may just as well be frank about it. Few of us care a button for the individual. The great majority of us would just as soon have Taft as Cannon. Fairbanks as Fairbanks, Knox as La Follette, because it really makes little difference to the average member of Congress who is in the White House. The one thing is to be right from the beginning, or at least not to have gone so far wrong that there is no way open for retreat. That is why most members of the House at the present time are shouting so lustily for Cannon. To a man we are against the President. We have had enough of him. Nor do we particularlyanker after Taft, although we'll all be very enthusiastic for him the moment it can be mathematically demonstrated that he has a bare majority of the delegates to the convention. We don't ask for anything more—just a bare majority. Surely no one can accuse us of insisting upon the pound of flesh.

Whether he wins or loses, Mr. Cannon makes the first move. It is a great thing to be Speaker, to have a man in nearly every Congressional district in every State in the Union proclaiming your virtues and your abilities for that is what we have all done. We had it. Mr. Cannon makes up the committees. His power is autocratic. He can promote or degrade a man by a simple nod to his clerk as he inscribes that man's name on the committee list. From that nod there is no appeal. It is as swift as death and as remorseless as fate. And committee phases mean so much, so very much more than any person outside Washington can conceive. Men have been made at a bound by landing on the right committee, while others have had to struggle for years to overcome the stigma of having been placed on an obscure committee.

Hence we have all been exuberant over our "Uncle Joe" since last March, although, to be truthful, we have done it with a lag. We like him. He is our kind of man. We never took kindly to Tom Reed; intellectually he towered head and shoulders above us, and he held us off at arm's length. Nobody ever saw Reed slap a member on the back and tell him what a fine fellow he was. That's Cannon's way. His way is good enough for us. If he lands in the White House, I suppose we shall have to call

What the new Member sees—with
a Mixture of Fear and Affection

him "Mr. President," but it will seem much more natural to call him "Uncle Joe" and to see him putting a cigar with his vest unbuttoned. That's another of his ways to which we are accustomed.

One of the cloak room stories relates an incident that happened about Christmas time. A member who had a grievance against

And the Members think they are playing the Game of Political

the Speaker because of his committee assignment insisted that Mr. Cannon had displayed something more than partiality for the Illinois delegation and for "others whose names stood for material help in the coming campaign."

In his most perfect case of the soil manner he whined:

"Well, out in my country it isn't considered a crime to buy your own children pants before you put neckties on your neighbor's Christmas tree."

Some news are born to trouble. There's Mann, of Illinois, as a shining example. The Speaker delegated him to allot the committee rooms in the new million dollar office building, and now Mann reveals a story of his boyhood.

An elderly lady, on a boat for the first time in her life, timidly asked the captain if there was any danger of the vessel going down.

"Not a bit," he replied, cheerily.

A little while later she again asked the same question. "I told you there was no danger," the captain answered somewhat testily.

"Oh, I hoped there was; I'd rather die than suffer in this way."

Mr. Mann thinks it would have been less trouble if he had been defeated. Most members object to having their committee rooms moved from the Capitol to the annex office building because of the inconvenience, but Congressman Southwick, of New York, presented the most unique objection to the new quarters of the Committee on Education, on which he has figured as chairman for years. He ended the Speaker's thundering demand for order the other day and, standing in the aisle, addressed himself in ordinary conversational tones to Congressman Mann.

"You've got to find me a new room," he demanded.

"What's the matter with the one I gave you?" questioned the long suffering office building manager.

"It's big enough, but—" began Southwick, a little embarrassed. "I should think so," returned Mann. "I always wondered how you managed to hold a meeting of your committee in the smothering draught here."

"Oh, that was a special dispensation," grumbled the boyish Southwick. "You see, whenever a new man was put on the Committee on Education he'd look up the room and stick his nose in to ask whether this was the headquarters he'd been assigned. Then I'd wheel around from my desk and growl: 'Yes, but this committee only meets on the call of the chairman, and I'm the chairman, and I never call a meeting because the room's too small! Look around well, as you'll never see the inside again.' And they'd go away and not bother me and the knights of my backroom."

"Your backroom?" questioned Mann, curiously getting the better of his impatience.

"Yes, my backroom," emphasized Southwick. "It hasn't any shelves nor books—just as few lux inside, and that's the reason I don't accept my present accommodations over in the new building, unsatisfactory though they are."

"Are you crazy, Southwick?" asked Mann, somewhat abruptly.

"I'm not as foolish as you are dense," the New York Congressman retorted. "What do you suppose I keep in that box, a piano or manuscripts? Nothing as dry as that. The boys couldn't do without the comfort and courage they find in that pet backroom of mine. Well, you have given me a room next to Littlefield, won't fight, M'ed, and tore up the State of Maine in the cause of prohibition."

That's a long and eloquent speech, Southwick; better than anything you've ever done for the glory of your constituents," smiled Mann. "And I'll see what I can do."

Talking of rooms, most of us are satisfied with three or four in a hotel and look with unsatisfied longing on a house, but there's one of my colleagues who requires three houses to shelter himself and his family.

"You look as happy as a man who had never gone into politics," said Daboll of Pittsburgh to the always smiling Frank London, of Illinois, the son in law of the late George M. Pullman, which is perhaps reason enough to make any man smile.

"I ought to; I've got my family with me this year," replied London. "It took three houses to do it," he continued. "First we rented Mrs. John A. Logan's house for the family. Then when we found there was more room than partitions in the place, we rented another house across the way for the servants, and then we found we had forgotten the children's tutor and his family, so we again searched for the neighborhood and annexed another three story property, and there we are as cozy as can be. But perhaps it's just as well there are only three children in my family. I wonder what I should have done if there had been half a dozen!"

We are a free show and always draw an audience. The diplomats, when they have nothing better to do, come to look us over as a matter of duty rather than as a diversion. Sir Michael Herbert, who was British Ambassador here a few years ago and had a pretty turn for wit, shortly after his appointment was a guest of the Tantalus Club, which was composed entirely of members of Congress. As he rose to reply to the toast to his health he was greeted with applause. "I am glad I am known," he said, "but you are equally well known to me, by name at least. You see, I read the Congressional Record every day."

There were two diplomats in the House gallery the other day, and as they went out one said to the other, quite apropos of nothing, "My dear colleague, do you remember what Voltaire said—doctors are people who pour drugs, of which they know little, into a body, of which they know less?"

His companion laughed. "Do you remember," he asked, "what a countryman of Voltaire's, a very distinguished physician, said to a patient who had a slight attack of indigestion and was convinced that he was dying of heart disease? 'I haven't as yet made the diagnosis, but do not alarm yourself needlessly, for we will be able to discover everything at the autopsy.'"

Then they both laughed. They had been listening to a man expounding a scheme for currency reform.

Uncle Joe's Make-up

Uncle Joe looking up the House for the Night

A Crowd of evicted Tenants outside a Henry Street Tenement

"Low Rent or No Rent"

THE TENEMENT DWELLERS' REBELLION IN NEW YORK

By VICTOR ROUSSEAU

FOR six weeks New York has been in the throes of a rent rebellion. Starting among the crowded tenements of the lower East Side, it has spread like a fire wherever the poor are clustered: northward along the river front to the new slums of Harlem, eastward across the Williamsburg Bridge to Brooklyn. It has leaped over the business section where sporadic outbreaks have occurred. In Jersey City and Wiesbaden, tenants are organizing in Chicago. Two years ago the idea of a rent strike was first mooted in the crowded slums of the East Side. Spasmodic attempts were beaten down by the landlords. They pointed to Manhattan Island upon the map, narrow and overcrowded. Homes were to be had almost upon sufferance. For every tenant who might depart fifty came crowding through the gates of Ellis Island. The landlords could afford to laugh.

Today the landlord laughs no longer. He thinks of the new Williamsburg Bridge, the tunnels under the East River and Hudson, the Brooklyn Subway, opened almost simultaneously with the climax of the rent rebellion. He knows that in the Bronx stand rows of new, empty apartment houses, desperately offering one and two months' free occupancy to tenants who will move in. Houses have been built more quickly than can be found carpenters to move into them. The population of Manhattan Island has burst its chains.

That is why the people have gained many notable victories in this struggle: why in many instances landlords and "leasers" come humbly to the Committee of Ten at the Socialist party's headquarters and sign agreements for a reduced rental. This positive resistance of half a million people has been carried to a partly successful conclusion by sheer inertia of numbers. You cannot physically dispossess five hundred thousand of New York's inhabitants and fling their goods into the gutters.

Partly successful only, for it is the "leaser" or sub-landlord who has surrendered rather than the owner of large blocks of tenement houses. The leasers have come to the headquarters of the Socialists to the number of about twenty daily. In addition they have often compromised privately with their tenants. In some instances, frightened by their threatening demeanor, they have surrendered even in the courtroom.

The landlords themselves acknowledge the justice of their tenants' grievances, but lay the blame to the economic conditions which exist on the crowded East Side. They say that a rental of twelve or thirteen dollars a month for two small rooms, or sixteen for a suite of three, scarcely more than recoups them for their investment. In Clinton, Cherry, and Muldoon's Elmdrider streets whole families exist in tenements of two or three tiny rooms. Many of these are compelled, in addition, to take in lodgers. For such the only possible accommodation is upon the floor: attempt at privacy is out of the question.

"We pay thirteen dollars a month for these," says a young Hungarian woman, crowding against the wall to allow us to pass between the table and the cooking range.

"These" are two rooms together about the size of a median hall bedroom; or rather one room, divided into a major and a minor portion

by means of a curtain. In the smaller section there is just room for a bed, but one could not fall out on the farther side on account of the wall. Nor could one step round by the foot of it. The air is foul and stagnant. There is no place through which it could escape unless one used a suction pump from the outside. If you stirred it up with twenty electric fans it would only beat against the surrounding walls and ceiling and subside once more into its capacity of six by five by seven cubic feet. The larger section contains a lounge, a table, a small chest, four chairs, and a cooking range. Through the steamcoated windows one can see a few feet of courtyard shrouded with rows of draped clotheslines; and beyond, the dingy, dripping walls of the next tenement block.

"They are just married," says the interpreter. "She says thank Heaven there are as yet no children. Her husband is sick with consumption. The doctor told her that if he sleeps in there"—pointing behind the curtain—"he is going to die. She does not know what they will do."

An infant's wall comes from the adjoining apartment. We enter; nothing is visible till we have taken off our glasses. The air, saturated with moisture from the exhalations of its inhabitants, dims them as quickly as they can be wiped clean. Water drips from the lens of the camera when it is opened. A whole family lives here. The father displays with pride his youngest, a pale, anemic infant, already debauched from its surroundings. The atmosphere is filled with a mixed odor of soapy linen and cabbage, and one suspects that there is a pickled herring inside the closet.

The greater part of the East Side's earnings goes in the rent. He pays more, inch by inch, for his wretched, insanitary rooms than the inhabitant of the brownstone district. If he moves out he must allow for subway fares; and as a rule his business begins at daybreak and ends at bedtime. So he remains—and strikes.

So long as prosperous times cut their faint reflection over the East Side, these people were content to struggle along, living on stale bread, fish, and the produce hawking round by the poor man. Then the panic came. Business fell off. In the falling and far trades alone some fifty thousand men were thrown out of employment. A no rent agitation was mooted.

Who are the leaders and inaugurators of this movement?

In the beginning there were none. It sprang into being full fledged from the misery of existence. Then the Socialist party, which numbers nearly all its adherents in the slum region, called a meeting at the headquarters at 313 Grand Street. A Committee of Ten was formed, under the direction of Eugene Secretary Kaplan. Kaplan is a typical young Socialist leader, clean shaven, flat, and suave. Another of the committee is Miss Florence Margolis, a school teacher. Other women have organized meetings and led the cheap rent crusade—Zella Arkon; Pauline Newman, who works in a shirtwaist factory. When you attempt to exploit these as Juana of Arc everybody laughs at you. "It is the Socialist Party," they answer. "We have no leaders."

A general strike was urged. Landlords were notified that they must reduce their rents or none would be paid. Dispossess warrants were taken out. The nearest that the city marshal had deposited the tenants with their goods upon the sidewalk, these were taken back into the rooms of other tenants in the same building. Pickets were stationed in front of tenement houses to warn away inspec-tor's inspectors. To meet such tactics demanded wholesale evictions or compromise. Many landlords came to compromise and ended with submission.

A typical Group of rebellious Tenants applying for Advice at the Headquarters of the Socialist Party, in Grand Street

This Eldridge Street Family of Nine pays Sixteen Dollars a Month for three tiny, dark, and unventilated Rooms

"Exhausted by toil in dark and ill ventilated shops," reads the Socialist manifesto, "we turn for our short rest to homes that are small, dark, and loath, unfit for cattle, much less for human beings. For these miserable holes in which we are forced to live we have to pay rent which takes the greater part of our wages. . . . The quarters provided for horses and dogs are in many cases superior to those in which we raise our children."

It is not in the courts, nor in the crowded tenements, that the battle is being fought, but at the Socialist headquarters in Grand Street. Every morning one may see this small room filled with a dense throng of jostling humanity. Here and there some man or woman is addressing a little circle of auditors with frantic gesticulations, and these form vortices among the human ebb and flow, constantly changing as some newcomer gathers to himself a crowd of listeners. Tobacco smoke hangs in a gray haze under the ceiling. Crude pictures cover the walls. Women sit on the benches round the apartment, some wearing hats, some having their ritual wigs covered with shawls or mantillas. Men move hither and thither excitedly, gazing alternately at the empty desks along one end of the room, where the committee will shortly meet to confer with all and offer arguments for signature, and toward a closed door behind which the Ten are now conferring with landlords.

"You must take off two dollars," says Executive Secretary Kaplan. It is clear at a glance that the case of the tenants lies altogether in the hands of the committee.

"I give one dollar," protests the landlord, glancing into the hostile faces around him. "I cannot afford more."

"Two dollars," says Secretary Kaplan.

"Two dollars," says Committeewoman Margolies.

A moment later the door is opened and a messenger runs into the larger room. He forces his way through the crowd to a blackboard on one wall, which bears, in large letters of chalk, the words "Petition Free," and beneath them a long list of landlords who have capitulated. Yankele Iukowita, of 303 Eldridge Street, is added to this. He has slated two dollars. An excited crowd gathers around.

Presently the committee files out to the door, and the vortex rages dissolve into a tidal bore. A barricade of chairs and boxes is formed in front of the door to keep the human inundation back.

"Shall the leader turn out my children?" screams an aged woman in Yiddish, clutching the secretary by the arm. Her shawl has fallen from her head, and under her wig, grotesquely black, a few gray hairs straggle out over her forehead. Beside her a bent old man with a hooked beard gesticulates furiously, but his voice is lost in the uproar, and nobody can hear him. He seizes the

secretary's left wrist and strokes his head bloodily. Another drags at the officer's coat, and presently he is submerged, still struggling in this flood tide of humanity. Everybody is shouting at once. And then these individual men and women, hitherto pre-senting the appearance of a blind, classic aggression, begin to strike the observer rather as a completed picture, a homed voiced entity—the mob, rushing up from its secret, subterranean world of toil and suffering in futile vindication of the right to comfort, flung into the light by some volcanic fury of protest.

But they are not united. They are not organized. That is why the strike, spasmodic in its inception and sporadically controlled, resolved itself only into a series of local battles. Therefore the landlords, those who could afford some losses in order to hold out, resisted successfully the claims of the Socialists, which could be refuted only by moral suasion and the imposing but specious threats which they put forward. The landlords organized and the strikers began.

There was the same absence of unity in the attitude of the residents during these proceedings. A futile demonstration in Rutgers Park, ordered, then countermanded, and finally dispersed by a dozen policemen, was followed by leaderless demonstrations against the city marshals who had charge of the dispossessions. All day the streets would be filled with little groups of excited men, interspersed with spots of bright color formed by the women strikers' red shawls. One felt a sense of something impending, some outbreak which might but never did arrive. Somebody spread rumors of an eviction; the groups coalesced, and from all parts of the network of mean streets between Williamsburg Bridge and the Elevated men came running in the same direction until stopped by the crowds in a choked street. A family was being evicted from the top story of a tenement. A red flag which had waved defiantly in the air was torn from the pole, flattered into the street slowly, and became an old red petticoat, stained and torn in a dozen places. Between two files of police a marshal was carrying out the impediments of the family—a stove hissing and spluttering from the effects of an overturned jug of water; a table which stood unsteadily upon three legs; two broken chairs; a heap of garments and bedding; a bed, and then its four brass corner knobs; some crockery; a copper samovar, probably some relic from Russia. The family came out of the doorway, the woman gesticulating and shouting at the marshal, her children clutching at her skirts, and the men, seemingly cowed, and hurried out by the police in attendance. The crowd surged forward uncertainly; the police raised their clubs threateningly; and then everybody was rushing down the street again, leaving only the people at the windows of the neighboring tenements. Later it was reported that the neighbors had looted the family and their furniture. And so the war went on, gradually feeding out in a series of compromises.

But the rebellion has had some measure of success for its justification. It has jolted the landlord system, perhaps beyond recovery. Then, again, there is the new Brooklyn Strategy.

The Band of Beau François

A CHAPTER OF HISTORY FROM THE DOCUMENTS
OF THE CRIMINAL COURT OF CHARTRES (1798-1800)

By STODDARD DEWEY

ILLUSTRATIONS FROM WOODCUTS IN A RARE FRENCH PERIODICAL PUBLICATION OF 1833

INTO the Horse-Market of Chartres on the 4th of October, 1800, through a crowd kept back by troops of the National Guard, the gendarmes led forth twenty men and three women to the guillotine. The condemned were robed in red shirts cut low at the neck. They were executed by sentence of a single criminal trial, which also sent seven men and thirteen women to penal servitude for terms varying from two to twenty-four years, and two more to a house of correction, while eight men and ten women had died between sentence and execution.

These were the first "batch" of Citizens Napoleon Bonaparte, the new military First Consul, who was restoring civil order to France. They were a small fraction of the Band of Beau François.

This had been a name of fear up to the gates of Paris from the beginning of the Revolution. Since 1790 more than one thousand arrests had been made in connection with the band. At different times and places forty of these criminals had already been guillotined; three had been shot in Paris; many had escaped, a few had hanged themselves in prison, and the unassisted civil authorities had set loose as many as they dared. The unnatural summer heats of 1798 and 1799 made a further

a French Claude Duval and the last of his kind, who robbed only on horseback and armed to the teeth. Poulailler was taken in 1783 in one of his raids near Paris and strung up on the city gibbet.

His steersman was own son of Jean Bonard, a youth little over twenty, brought up by hand in the wild, and a Hercules in strength, as befit his post. After the fashion of his kind, he took a name of the "plain"—Fleur d'Épine (Thorn Blossom)—a name already borne in 1760 by a famous companion, who was perhaps his relative and whose tradition he revived. Within a year he brought back a band more numerous and united than ever to the paternal Forest of La Motte.

Fleur d'Épine found Beau François one day striding across the plain with the fresh rabbit-skin he was selling during over a week on his shoulder. The two were now the same age, and Beau François soon became the chosen comrade and trusted lieutenant of Fleur d'Épine, whom he more than matched in strength. His good looks, another important element of his success, gave him his name of the plain; his real name was never ascertained.

Among the ancients whom Beau François found in the band and kept with him to the end, there were one dragon of the Queen and several of the King and a cannoner. There was Itron

The President and the Pie

sorting by pestilence among the seven hundred wretches huddled together within the narrow, grimy walls of the three ancient prisons of Chartres.

A sort of grand jury—a new institution which did not last in France justice—finally presented its indictment on the 20th of September, 1799, after a seventeen months' sitting. For ten months more, until rendered and sentence on the 29th of July, 1800, the trial jury listened to more than four hundred examinations on ninety-five different crimes imputed to members of the band.

The first mention of this band of brigands—one of many existing in France under the old régime—dates from 1770, when they were led by Jean Bonard, a young man of twenty-five, born near Chartres. His good greynose was the Forest of La Motte, close by Méreville, where tourists now visit the château. He was captured and broken alive on the wheel. His lieutenant, Robillard, moved the headquarters of the band fifty miles eastward to the Forest of Montargis, where he too was taken in 1783 and London on the wheel, while seventy of his men and women were either broken on the wheel or hanged or sent to the galleys. Many escaped to crop up in the band of Poulailler,

the half-drunken Robillard of the family of the last leader; one of them, a widow Brigitte, had been twice branded with a V for volence (steal) and shut up for life, as was supposed, after the Montargis affair. Then there was La Grande Marie, who went with the men and dressed like them when robbery and murder were in the wind.

Beau François's chief rival in the band was Charles de Paris, whose real name was something he was an old worker of the plain, proud of the nickname of "Ménier" bestowed on him by the band after he had invited them to rob his aged mother at a time when business was slack. He was Fleur d'Épine's lieutenant for the city of Paris and surroundings, and played a part of his own in the Revolution.

Fleur d'Épine allowed no marrying in the band without his consent, and he had an invitation prior to make the contrary binding by a ceremony. When the happy day came for Jean François in 1788, the curé of the band was François Lejeune, an old man and tiller from Normandy.

The bride was the sister of two sisters named Hugon, the prettiest girl of the band; her name of the plain was La Belle Rose. She was a few years older than Beau François and short, while he was tall; but, with her trim figure and black hair and eyebrows, she matched well his tall form, frank blue eyes, and ruddy good-natured face. The marriage was celebrated

in the Forest of La Motte. Before the assembled band Beau François stood up in his blue, brass-buttoned coat and waistcoat, gray ruffled breeches and white stockings, with silver buckled shoes, his cocked hat and switch in one hand, while with the other he grasped the little finger of La Belle Rose; she kept to her favorite gown of gray finesse with blue spots, falling in long folds to her feet.

In front of the couple Fleur d'Épine, with one of his lieutenants, held sticks towering ends a few feet from the ground. The curé donned his black robe, pretended to read from his book, and then put the question of mutual consent to Jean François, *avez-vous de la guerre?* (Tramp man, will you have the tramp woman?), and to the bride the other way about—*Gardez-vous de la guerre?*

To each, as soon as the sacramental yes had been answered, he cried, *Monte, garce!* (Jump, you tramp!); *Sente, garce!*

Beau François leaped over the sticks and they were received gallantly that La Belle Rose might step across. This was the traditional marriage rite of the wilderness, and the obligation had always been held lasting. But one of the band said at the trial, "After the Republic brought in divorce, man and woman among

The Marriage of Le Rouge (Redhead) d'Aunee and La Belle Victoire

us left each other when they chose." Beau François and La Belle Rose stuck together to the end.

The day of the marriage a president of the Parlement de Paris, against all advice, wandered from his neighboring chateau into the forest fastnesses. He was seized by the sentinels of the land and brought forward to enliven the feast. With great good humor and ceremony Fleur d'Épine made him sit down on the ground and levited him to eat of a monstrous meat pie.

"It is made of a mounted police sergeant and a child of eighteen months. The sergeant is tough, but you'll find the baby tender."

The magistrate slunk back, and Fleur d'Épine, with terrible voice, commanded, "Eat, or I'll have president's patties made on the spot!"

The president ate, and later boasted to his friends that he had lifted a leg in the *brigande* dance.

To these "Pingers," as they called themselves, the common people gave another name. All over France they were known as the "Chamfrours," from their use of fire. Five flinty taught the trick to the band when Beau François was a new recruit, at a general meeting called by Fleur d'Épine to consider ways and means.

"It's all very well to go buttering in the doors of lonely houses at dead of night to the cry of 'à la bougie!' But what if you don't find the yellow boys when the door is down? When Louis XV. was king, and I was young and tramping with the old men of Cartouche's band, this is how we managed the individual who wouldn't tell where the money was hid. We began by holding a lighted bundle of straw to his legs, and if that didn't work we slit the soles of his feet with a knife and fired the wounds."

The Revolution came and Fleur d'Épine showed himself a man of the times. The band shouted with the crowd and plundered all parties impartially. All over the grain country of La Beauce, in the vast triangle from Chartres to the left of forests round Orleans and back to Etampes, it spread out its network.

Charles de Paris went in for politics professionally. In 1791, while the revolution was still playing with the king, he began dressing up as a police commissary, followed by a clerk with bundles of the papers dear to all *républicains* in France, and accompanied by a dozen members of the band on horseback in the uniform of National Guards. With ease in gathering up the spoils they pillaged conscientiously the farms and châteaux nearest Paris—in the name of the law.

Fleur d'Épine met a fate satirical of his topiary times. He was coming up one July day from Angerville to Paris to get rid of some broty, and stopped to drink like an honest man in a country inn. It was only a few days before the final downfall of the king, and the men of the new order, masters as they were, had gone crazy with greed and suspicion. Fleur d'Épine was arrested as a "suspect" and thrown into prison. There, in September,

the friends of Danton—"men of prey" as Camille Desmoulins's secretary called them at the time, victims of the *adverse* *révolutionnaire* as their defenders now say—manacled him quite as if he were an aristocrat with goods to plunder, along with priests and courtiers and noble ladies.

Beau François now ruled alone in the plain, and the band was too happy all through the years of Terror, down to 1793, to have much of a history. Soon after the massacre of Fleur d'Épine, in 1792, an old brigand, Franche Montagne, with a lifetime's experience of bloodshed, was seized with the panic fear which was epidemic in all France. He ran madly from the band in the midst of an expedition, and Brother Cul-Sac and a squad were charged with making an example of him. They caught up with him in the Forest of Boissecourt, cut off his ears, which they sailed to a tree as a warning for the others, and then burned him alive.

About this time there is passing mention of the band scurrying up to Paris to share in the Commune's free distribution of bread and in Danton's two frames a day—in depreciated money of assignats—given to "all citizens living by their labor and attending the Revolutionary meetings, so that the people may take part in politics." The ancient of the band had the satisfaction of seeing the captor of their old leader, Poulailhe, marched to the guillotine.

The companions of disorder flocked around Beau François, and he demurely asked them, "Each must do like all the others," was one of his democratic principles. "If we Pingers rob each other we shall not last long," was another.

One day at the Percheron—a pleasure garden where the church of the Trinité now stands in Paris—Beau François got talking with four likely men. Three were brothers, assassins, whose business the Republic had ruined. The fourth, a man of forty, had lately joined them in a new trade. They were spending together the proceeds of a successful robbery with murder.

"I came up to Paris because I was in need of distraction," said this fourth man.

He had been an orphan and beggar from childhood, and, at the age of fourteen, was recruited by a woman for the Pingers in Angoulême. Out of disgust, or perhaps fleeing from justice, he got off to the French colonies in India, where he remained seven years. He was caught stealing again, was branded and returned to France, where he recuperated his fortunes by killing and robbing an old servingwoman who had shown him charity. For five years he pickpocketed, more or less honestly, and then threw himself into the army of the Revolution. Even its loose discipline was too much for him, and after an attempt to kill his lieutenant, he was condemned to ten years in chains. After six months he managed to escape from Brest and scoured for money with which to begin life anew.

Beau François listened and laughed at the four men as petty robbers. "I have a whole army down in La Beauce, and my Pingers are masters of the country."

A Night Attack by the Band

This fourth man followed him, and soon distinguished himself in the band, where he was known as Giron Normand. He acted as leader when Beau François next fell into prison.

This was not the only experienced recruit. Petit Beauveron, for example, was a graduate of the old régime. In 1783 he had been flogged and branded and sent to the galleys for five years; his brother had already been broken on the wheel for highway robbery. When he was set free he went back to his old trade and was finally caught again; he had stolen a "silver saint's arm" in a church at Angoulême and was sentenced to be hanged. But the Revolution came to restore him to society and Beau François.

In the band, as it came under the observation of judge and jury, there were a number of very young men and women whom Beau François particularly favored. The training of all these was entrusted to Nicolas Tinefin, who had been "schoolmaster" of the band for generations. From him they learned the "patter" as well as the "work" of their trade, and he put them on their guard against the dangers of law and order and other incidental aspersions in society.

Beau François spent his leisure in reconnoitring. He and La Belle Rose each protested before the judge that, when the Republic brought in civil marriage, they had had their union legally

were valid. On the 10th of December Le Rouge d'Aunepain, in the course of a night attack, was shot by a farmer, with the result that he inflicted such exquisite pain upon him that his cries aroused the neighborhood and the brigands barely escaped with their lives. The "redhead's" credit was lost, and Beau François promptly disengaged him. But something had to be done at once to raise the wind.

Beau François in person organized an attack on the farms of Millonard; the farmer Fousset was known to have large sums of money which he had gained from the confiscated properties of nobles and churches. Twenty of the best men of the band were chosen for the work. Circumstances were not favorable the first night the buildings were surrounded; but a week later, on the 4th of January, 1798, the doors were forced, serving men and women and the members of the family were kicked into a cellar with the door fastened over them, and only the aged father left to answer these housebreakers demanding his money. He was obstinately silent. Beau François looked on admiringly as Mana l'ouze—a new recruit from the Revolutionary army—bared the beard from the old man's face.

"He is a good Plagier," he remarked to Giron Normand: "his hand never trembles."

While the tortures were going on, Duchesse calmly ate some pork and cabbage which he had found. The farmer refused to talk even under torture, and the brigands were forced to leave him for dead and make off with what they had found. His feet and hands had been cut and burned to the stumps.

After their departure the old man came to life, and, hearing no one, wriggled his body over the smoky ground to the nearest house, fainting repeatedly on the way. It was early morning when he awakened the inmates by rapping his head on the door sill. The country was aroused, and the nearest judge of the peace with his gentlemen, came over from Arzenay, three miles distant. The farm was within the limits of his brother judge of Orgèves, and as the affair was left to him. Farmer Fousset died after a week's time.

The story of the crime, with all its brutality, spread far and wide. The Directory had already escaped a popular movement in favor of Napoleon Bonaparte only by sending him off to Egypt. It was now obliged to let in self defence. The government commissary at Chartres was put in charge of the "Affair of Orgèves," as it was destined to be known.

The hunting down of the band was entrusted to a remarkable man, Pierre Pascal Vasseur, a simple quartermaster of the gendarmes. Never was there a more adventurous undertaking, and it would be well worth raising in his own strong, richly colored language. By the 31st of January he was able to present to Citizen Yougères, the capable judge of the peace at Orgèves, two members of the band, "one male and the other female." These put him on the track of the main personages and their haunts.

After one hundred and twenty-seven days of beating the country far and near, with adventures of every kind and many sublimely capricious, Vasseur was able to lead an expedition by night into the savage ravines of the Forest of Ménéville, where Beau François was camping on his way to a new venture which was to restore the fortunes of the band. This was a nothing less than the simultaneous firing of four farms a dozen miles away, and under cover of the confusion of the citizens of Chartres and Farnville. The brigands had such confidence in their retreat that they had posted no sentinels. Beau François knew when he was taken, and knocked the rifle from the hands of Giron Normand as he was firing at a postman.

After the capture of the heart of the Directory it was decided that the band should benefit by all the rights of Man, including the new system of juries. Before the grand jury's work was done Beau François had escaped.

It was during the July heats of 1798, and among the sick and dying in the Chartres prisons he too refused to eat and grew pale. Far fear of a general posthumous orders had been given to remove to a separate infirmary, just above the great door of the prison courtyard, all who showed signs of sickness. Beau François was admitted with the others, and on the night of the 5th of July he cut a hole through the wall with his knife. It was just large enough to let him slip through, stripped to his shirt.

This was the last of Beau François, so far as the great trial went.

The great execution took place on the 4th of October. On the 22d of November following Citizen Youché, Napoleon's chief of police, reported to his master that three hundred bandits had been captured in the forty-seven departments of France. The chief of these was Miguel, called Grand Gare; his lieutenant was François Ursot, one time chauffeur. This was the name under which Beau François, years before, had been branded on the shoulder in the galleys at Rochefort. M. Francis Ponsk Livetant, who has studied the case, thinks he was never taken; "doubtless he ended his days esteemed by his fellow citizens and in peace"—not an incredible ending for a bandit of the Revolution.

The Capture of the Band

ratified by the Mayor of Blois. About that time Marie, called Manette, the sister of La Belle Rose, entered on a free union with a Jean Auger, known as the "fat Gaudinier"; he was the closest companion of Beau François, resembled him in person, and they often shared the same name and were thought to be brothers. These four stuck together through thick and thin, having, as the jury report expressed it, "goods, profits, and shelter in common." Some of the witnesses mention a child carried by La Belle Rose in a sling hanging from her back, but it does not appear in the prison records.

The two sisters were always costily dressed as travelling sellers of women's articles. Beau François also did himself up as a hawker, with packages of ribbons and cloths, thread and needles, handkerchiefs and trinkets. He was everywhere known and feared, and in the great lonely farms of La Beauce he was waited on as one in authority under the new order of things. When the real authorities questioned them, he and his men always had ready to hand passports for the names they had chosen and for any purpose—for example, "to go to different parts to look for work." One of the band when arrested had ten of these passports in his pocket. They were procured through the most important confederate of the band, the innkeeper Doublet, of Chartres, who had influence with the new government.

The Terror subsided, and the people of Paris began settling down out of sheer weariness into something like law and order.

The year went on until autumn, when Beau François was caught changing counterfeit money at the fair of Saint-Germain-en-Laye. The local court condemned him to fourteen years in chains. No one dreamed that he was the famed and feared Beau François, Giron Normand now led the band, but his rough and ready methods were often unsuccessful and the companions were dissatisfied. Murders were reported in January and April, and there was no safe travelling except in armed bands.

On the 15th of July, 1797, after an imprisonment of nearly a year, Beau François made his escape, and the band welcomed him back as their sole leader. His return was celebrated by a night attack, in which La Girasole Marie sawed off the heads of a farmer and his wife. But more and more the insubordinates were organizing among themselves for defence, and the authorities

Hypnotism for Humanists

AS SET FORTH IN THE REMARKABLE NEW WORK
BY JOHN D. QUACKENBOS, "HYPNOTIC THERAPEUTICS"

HOW marvelously man's beneficent forces can be improved by hypnotic suggestion, and how by the same agency mental ability can be raised and many diseases can be cured, are set forth attractively in *Hypnotic Therapeutics*, the latest book written by Dr. John D. Quackenbos.

"Men," he says, "is potentially superhuman; and suggestibility, or sensitiveness to that inspirational appeal which compels output of superhuman attributes, is largely a natural characteristic of all normal men. The secret of transfer, the law of superior expression, is the key that unlocks the way in millennial practice."

Of vital interest in Dr. Quackenbos's theory of treating those that are soulless, he says:

"It is in the treatment of moral disease that the most awe inspiring results of transliminal domination are manifested. From the ethical viewpoint, suggestion is a summoning into control of the true man; an accretion of insight into life and its obligations; a revealing—in its beauty and strength and significance—of absolute, universal, and necessary truth, and a portraiture of happiness as the assured outcome of living in consonance with this truth. It is not a mere pulling up of weeds by the roots, as described in *Metempsychosis*; but it is a sudden overwhelming and starving-out of character defects and mental weaknesses by a tropical growth of ethical energy which weds immediate outlet in the activities of a moral life.

"Auto-suggestion is a simple means whereby simple men may become better, wiser, happier, more godlike. The life beautiful in which reach of all through this natural method, for man's objective constitution is not incompatible with the incoming of God and the outgoing of noble effort stimulated thereby. Given a few thousand properly equipped, earnest persons, concentrated to the work of disseminating this creed of self-help among the people of the earth, and given willingness on the part of humanity to be uplifted and purified through this instrumentality, and the regeneration of the world becomes an easy problem.

"And more is possible. We know nothing as yet—we have but gathered a few pebbles at the water's edge of the great tarts of the future; vast reaches of sand remain to be sifted in the interest of humanity. And man is as much at liberty to question nature in ethereal spheres as to seek her secrets in the laboratory or read her laws in the heavens. The discovery of a new star or the element or micro-organism of absorbing interest, but such interest pales into triviality beside that involved in opening the way to a perfect comprehension of man's relationship to Deity, to destiny, to his disembodied fellows, and to other spiritual personalities that are not of this fold. Metempsychosis seems destined in the twentieth century to demonstrate immortality on reputable scientific grounds by establishing the laws of telepathy and transmuting into the earth-life superhuman perceptions (clairvoyance), to determine the possibility or impossibility of human communication with disincarnate souls (a question left unanswered by the New Testament writers), in effect that adjustment with natural law which will banish disease, and to give us euthanasia (painless dying) as the fitting close to every human life."

The author relates a marvelous recovery from death of a young woman who in June, 1905, had been reduced by pneumonia to the point of death—temperature 107½, pulse 160, respiration 60. In her delirium the girl called for Dr. Quackenbos. Her friends sent for him. This followed:

"As I looked at the girl an inspiration came to me. I took her by the hand, learned her first name from the nurse, and said, with great incisiveness, 'Adeline, where are you going?' 'You cannot die.' Come back, you have work to do on earth. Come back at once.' In answer to the summons, the astounded eyes resumed their natural gaze and became riveted on mine. The voice that had for days uttered only the ravings of delirium now spoke coherently. 'It is too late,' it murmured. 'It is too late,' I rejoined. 'Do not dare to say it is too late. Stay where you are. Assume immediate control of your physical functions, and get well. You are going to recover!—all this is an imperative, forceful tone. The directions were immediately accepted and implicitly followed. A change for the better supervened. Gradually the mental mist cleared away, the physical strength returned, and today the young lady is perfectly well, filling an important position in the musical world."

The testimony of the patient is interesting:

"Of course, I do not want to understate the splendid efforts of my own physician and those who had the case in consultation with me. They brought me through after the crisis; but, on the other hand, there is no doubt in my mind, or in the minds of my friends, that if Dr. Quackenbos had not appeared just at that critical time, I should not be here. I am quite satisfied that he recalled me to life by inhaling me with the wish to live and the conviction that I still had work to do."

As to Christian Science Dr. Quackenbos writes:

"Compassion among the sham is the justly theophoric known as Christian Science, stigmatized by Dr. Gordon as 'a sort of

witches' children in which every conceivable heathen and Christian heresy is found nothing and nothing to produce the subtle essence called mental medicine."—Christian Science, anti-Christians in its pantheon and in its refusal of the articles of our faith; anti-scientific in its bungling, barbarous, and dishonest handling of disease. In common with faith and prayer cure, metaphysical healing, spiritism, and osteopathy, it exploits auto-suggestion, which is ignorantly administered to effect its needlessly wonderful cures. This course of impostures, each claiming to be exclusively genuine and denouncing its several competitors as imitations or frauds, constitutes a sort of intellectual baroque and which figures as the voodooism of the ignorant and half-educated classes in America.

"Eddies are asserting that the world is close to the reception and adoption of a truth so strange that at present we have not the words to formulate it properly. This is that nothing exists except as an action of thought. That its essence, its reality, its actuality, is only as an expression of thought. That the reality of all objects, as of drugs, is absolutely nonexistent. That there is no such thing as poison; that arsenic kills because it is believed to be poisonous. So a person prokilled with diphtheria is not sick, but only thinks he is. On this principle the hopelessly deaf are treated by screaming in their ears, 'You can hear!'; and the sick is emphatically assured that he has never tasted liquor in his life. Tumors, ulcers, inflammation, pain, deformed spines, and other ailments, declares Mrs. Eddy, 'are all dream shadows.' And all are to be treated with the same psychic prescription—viz.: 'Erase the images of disease from the mind by keeping directed in thought that man is spirit, not material.' Such proscribed keeping in objective thought soon impresses (in accordance with simple scientific laws) the automatic self with a belief in the halcyon—both fails to cure either tumor or deformity. In like manner, Mrs. Eddy's book has been found a most efficient stimulant of auto-suggestion by inferior intellects, who imagine that its learned nonsense, which they cannot understand, must for that very reason be replete with meaning—and whose superstitions instincts attack the same virtue to its psycho-therapeutic formula as the Southern negro believes in reason in the conjunction of their voices. The patient's credulousness in respect to the cure is fortified with faith in the Christian Science system of furnishing relief; it then suggests the desired relief to the secondary consciousness, which, through its regulation of the ordinary physical processes, tends to produce the desired result. There is thus no difference between the philosophy of the cure as effected by the suggestionist and that of the Christian Scientist. It is nothing but a revealing telepathically, to quote Professor James, and upon a mental strain quite below the level of immediate consciousness (the plane of the normally subconscious mind), a healthier and more energetic attitude, from another person whose thought is focused on the subject with the intention of impressing the attitude. In other words, it is nothing but simple suggestion, the name of which in the treatment of nervous diseases Mrs. Eddy learned years ago from a New Hampshire physician. And certainly there is nothing in her philosophy that has not been far more luminously presented by the great idealists from Berkeley to Fichte and Hegel." Her followers are amazing wealth by cleverly exploiting the curative possibilities of self-delusion.

"In the case of Christian Science, however, the force of ordinary suggestion is supplemented by the claim of a new revelation revealed to the arch-hypnotist who writes herself the author of *Science and Health*, whereby she is invested with the secret of Christ's miracles and clothed with the power to perform them. 'God has been fitting me' she claims, 'and I am now fit for the reception of a final revelation of the absolute principle of scientific mind-healing.'

"No case of organic trouble has ever been cured by Christian Science, or ever will be. On the contrary, scores of perfectly curable cases have been lost by its fanatical use by the underwriter. The methods in vogue among its leaders of treating the critically or hopelessly sick by appeal to the transliminal self are un-Christian and inhuman—so much so that repressive legislation is widely demanded for the protection of society from a legion of charlatans whose existing laws do not sufficiently restrain, and who are thus left at liberty to assume responsibility for the most dangerous forms of disease. In some States it is regarded as a misdemeanor to give Christian Science treatment, and refusal to call in proper medical or surgical aid in critical cases is nothing short of homicide."

It is impossible, the author declares, to compel a normal person to commit crime by means of hypnotic suggestion, and yet:

"In consideration of its abuse the use of hypnotic suggestion should be restricted by law—in its employment for the cure of physical and mental disease, in suitable cases, and in its employment for the removal of moral taints and tendencies to crime, to properly qualified philanthropists—for the results obtained will always be in harmony with the ideals of the suggestionist. If the ethical ideals of the operator are low, attempt at the reform of the subject must prove nugatory; if high, the moral power may be raised to their plane."

The Little Missionary and Her Miracles

By
WILLIAM INGLIS

In a small room on the fourth floor of a crowded tenement near the East River two women were cooking supper by the light of a gleaming kerosene lamp. The stove was newly polished to a degree of brilliancy that cheered the eye of the beholder. On three shelves near at hand, which had just been covered with crisp white paper with scalloped edges, rows of clean white plates and dishes were standing. The floor of the small room was bare, but it seemed like the deck of a battleship fresh from the drydock.

The table in the middle of the room bore a cover of snowy sidewalk, tacked on that afternoon. An appetizing aroma of sizzling steak and fragrant tea made the air delicious and inviting.

The elder of the two women, tall, thin, and bent at the shoulders, suddenly stood erect over the pot in which the potatoes were boiling, her attention arrested by the sound of heavy footsteps ascending the stair. Her eyes were appreciative and the corners of her mouth drooped.

"That's him!" she cried, anxiously. "Oh, I wonder what'll he say when—"

"Remember, dear?" counseled the little woman at her side. "If you are kind to him and show you're not afraid he will surely be good to you."

The tall woman tried to look hopeful, but her lower lip quivered a little. A little boy and a little girl ran into the next room and hid. The heavy footsteps clumped uncertainly in the door, which presently was thrust open by a large and hairy fist. A big, long-shoreman with a purple neck showing above his blue jumper took

Miss Sara Curry
"THE LITTLE MISSIONARY"

two steps into the shining room, sniffed its delightful atmosphere, stared for a moment with dazed eyes at its sparkling cleanliness and the two women in it, then hurriedly turned away.

"Excuse me," he apologized as he retreated. "I've come up one flight too high."

"Jim!" the tall woman called after him. "Jim, come on back. Come on."

The big man returned with slow steps. He stood within the threshold and gazed around the room. Mechanically, as from old habit, he tossed his rap into one corner and his empty dinner pail into another, meaning meanwhile every instant to become more puzzled.

"Well," he asked very slowly and without any thought of being profane,—"well—what—th—hell—here—going—on—here? What does it mean?"

The wife stood dumfounded, but the little woman came forward and looked up at the big man with an expression calm and friendly.

"It means," she said, with a smile,—"it means, my friend, that your home is going to be like this all the time if you care to have it so."

"But where do you come in?" asked the man.

"Oh, I'm a neighbor, and I've been here helping your wife a while," she replied. "I'll see you to-morrow, Mrs. Manahm. Good night."

This incident actually happened a few months ago and was followed by the redemption of the woman from squalor and filth, the man from drink, and their children from a reign of cruelty, ignorance, and neglect which would have either killed them or brought them up to prey on the community. In a word, the family was rescued from hopeless squalor, crowded and transformed into a valuable unit of society. And the transformation was accomplished by the expenditure of very little money and a great deal of kindness. The system whereby the thing was done is unique in the history of benevolent work and well worth studying. It was invented and is now being carried on by one who is known throughout the most congested part of New York as The Little Missionary. Its results, in the physical, moral, and social salvation of families, have been remarkably successful.

On the day before the episode of the startled longshoreman and the renovated tenement his poor wife left her youngest baby at The Little Missionary's Day Nursery, No. 93 St. Mark's Place, so that she might be free to do a day's scrubbing and earn money. Under examination she admitted that she had to work because her husband drank most of his earnings. The Little Missionary called late that afternoon at the woman's home, a tenement of two rooms, and found her frying a steak over a stove fire. For forty-five minutes by the watch she fried and fried and fried.

"What are you going to do with that?" the missionary asked, pointing at the hardened remains.

"It's for my husband's supper," the wife replied.

"But!" cried the missionary. "I'm not surprised that your husband drinks. I'd drink, myself, if I had to live on such food. My dear, I'll come in to-morrow, and we'll see what can be done. You know, if a man doesn't get good, we'll cooked food he's bound to take to drink. We'll change him."

On the morrow the missionary brought a pail, a bar of soap, a scrubbing brush, and other cleaning materials, besides a steak, potatoes, and half a pound of tea. She did not show the dejected wife how to clean the house, but on her own knees scrubbed floor and woodwork. She put the fresh crumpled paper on the shelves, washed the dishes and polished the stove, while the wife looked on in amazement at a lady doing such things. And as the missionary worked she chatted—pleasantly enough, but always with a fixed purpose.

"Your husband, my dear, really has a great deal of good in him,"

The Nursery Building and one of the Kindergarten Classes

she said, "a great deal of good, if you only take the pains to bring it out."

"In, ha!" the wife laughed, without mirth. "Who knows the mind about him—me, that's been married to him these fifteen years, or you that never saw him?"

"There never yet was man or woman that could resist the power of kindness," the missionary persisted, as her scrubbing brush crinkled to and fro. "We'll fix up this place so that he will be glad to stay here, and we'll cook him a supper that'll do him good. You see, a steak should be broiled, not fried; broiled over a bed of hot coals that will tighten up the outside quickly and keep in the nourishing juices—to say nothing of making it taste better."

The missionary set the table and cooked the supper. Before the man's heavy foot was heard on the stair the missionary gave the wife one last word of advice:

"When he comes in, kiss him."

"Kiss-a-a-a!" asked the wife.

"Certainly," replied the adviser. "It won't hurt you, and it will help to make a better man of him. Show him you love him, and you'll be surprised at the improvement in him."

Truly a Fortis came to judgment!

There is not more here to enumerate one tenth of the good things The Little Missionary has done; one can barely refer to a few of them. She is Miss Sara Curry, and she came to New York from Ohio in 1880 to devote her life to aiding unfortunates. Caring for a little child who had been run over by a truck gave her the suggestion of maintaining a nursery wherein mothers compelled to go out to work might leave their babies all day to be carefully watched and fed. Miss Curry with her own slender means hired two rooms in Avenue C. Often she was discouraged, yet she kept on working hard and praying fervently for success. The poor people of the neighborhood soon began to call her The Little Missionary.

Miss Jean Robinson, then a small child, held a lawn fair at Allenhurst in the summer, and her father took the proceeds, \$200, to

The Cooking Class for Poor Mothers

Miss Curry. Soon the work grew, and so many friends rallied to its support that The Little Missionary's Day Nursery was incorporated and installed at No. 93 St. Mark's Place. On that house a mortgage of about \$8000 still remains, a heavy burden for which relief is urgently sought. Alexander C. Morgan has provided a summer home at Netherwood, New Jersey, where sick children and their mothers can rest a few weeks in summer.

The sanctifications of the work are many, and each one is in consonance with the chief idea—in restore dejected families to moral and physical health and teach them self support and self respect. As good nourishment is the most effective antidote to alcoholism, a fine cooking school is one of the chief features of the Nursery, and in it not only mothers but boys are taught to cook. The good results accomplished are beyond computation.

Here are a few of the things done during 1907: children received at the Nursery, more than 28,000; poor families visited, 8,000; sick persons nursed, 10,000; families provided with Thanksgiving dinners, 624 (which amount to 3,800 individuals); children and sick mothers received at the summer home, at Netherwood, New Jersey, 2,423.

There are meetings every evening of the work—her girls, for boys, for mothers, for fathers. At one of the latter Mr. Louis B. Robinson, President of the Nursery, told a story illustrating how, by refusing to spend money for drink, a man could save much for food, clothing, rent, etc. A week later Mr. Robinson received the following letter:

"DEAR FRIEND

"Excuse me but I will always look upon you as a friend for you have learned me a valuable lesson in your remarks at Miss Curry's last Friday night. I will tell you it might interest you I have been in the habit of buying 10c worth of whiskey in the evening for years I had the bottle in my pocket at the time you spoke and got my 10c worth after meeting but when I got home I got

The Kindergarten Children "Playing House"

my pencil and done a little figuring same as you done in your story as what you could do with 10c, a day instead of giving them to a bum for whiskey.

"Well I figured since I started to go in a saloon and buy a beer or a whiskey it is 17 years or 6,205 days I took an average of 25c, a day a very small one for there was a many and many a Sat. night and Sunday that I spent from 2 to 5 dollars for I am a mechanic making \$4.50 a day with nearly steady work and I did not mind it but I only now see the foolishness of it. I figured in the 6,205 days at 25c a day I spent \$1551.25 what could I do with it well it has been the height of my ambition to own a little house of my own and all I could save is about \$5.00 there is the rest of it gone for drink well I am done with it I ain't spent 5 nor 10c for a beer or whiskey since last Friday something I thought I could never accomplish and I feel just as good if not better and if the Lord lets his sun shine on me in the future as in the past I will have my house yet for no saloon keeper will get any more of my money thanks to your advice and a lesson in arithmetic.

"I will not sign my name for I ain't looking for any favors.

"P.S. I hope you don't think I am a drunkard and regretted my family for I never was drunk more than twice in my life."

Incidentally, it is pleasing to know that the writer of the letter now owns a comfortable house in Brooklyn, with a small mortgage which he is constantly reducing. So much for the working out of the principle which animates the institution—to alleviate misery immediately, regardless of the race or religion of the needy; then to build up character and raise the needy to the plane of self support and decent citizenship.

It is interesting to note that of the children received in the nursery in a recent year forty per cent. were Protestants, thirty three per cent. Catholics, and twenty seven per cent. Jews. Nothing can better illustrate the spirit of the institution than these extracts from a late report by Miss Curry:

"The boys' cooking class is developing a talent in boys never thought of before. One of the boys, on coming home, saw his mother trying to cook a steak. She had been half an hour at it. 'Mother,' says he, 'let me buy the things this week. I can save you half.' The father had never had his food cooked properly. He used to drink up all his wages.

"One of the great gifts God has sent me in this work is helpers, who never tire of furnishing me with the means to help the needy ones I meet in my visiting. Many a sad and discouraged heart has been lifted up by the substantial help we have been enabled to extend, by God touching the hearts of business men. I am asking God to send us those who will help to pay off the mortgage on our nursery property."

The Boys in this Cooking Class were brought up from Babies by the Nursery

THE OYSTER SHANTY

DRAWN BY HENRY J. PECK

THE PLEASURES AND PERILS OF NIGHT DRIVING

By JOSEPH TRACY

PROBABLY few drivers of automobiles would select the nighttime for driving as a mere matter of preference. Other things being equal, one would naturally choose daylight, since the height of automobile enjoyment is found in driving through beautiful country over good roads in weather that is dry, but not too hot. However, for those who have little opportunity for daylight driving, or who desire to cover a great deal of distance in a short time during a hot, night driving has its compensations, and even certain advantages over daytime motoring.

In the hot summer months there is a delicious refreshment in driving after dark, when the rush of the car through the air creates a cool breeze, and the roadway no longer reflects the blinding rays of the sun. Traffic is usually lighter at night than by day, and the motorist experiences a sense of relief and freedom that gives automobile driving one of its greatest charms. The evening hush is in the air, and a party of congenial friends can throw rare to the winds and have a ride filled with enjoyment that seems impossible by day.

Clouds of hot dust do not fill the eyes and nostrils; goggles and masks may be removed with comfort by all, except the man at the wheel, and the car seems fairly to fly along the road with a hilling rhythm of the thrashing engine, while the trees, fences, and houses along the highway slide silently backward, leaving but a ghostly impression of their existence. The headlights and powerful searchlights shimmer on the road, which unfolds around turns after turn like an endless ribbon from an unseen hand. Again and again the way seems to come to an abrupt end, a few rods ahead, where a wall of impenetrable gloom marks the limits of the power of the acetylene rays.

There is something almost uncanny about the unreality of night driving; to one in the car, on a very dark night, all the world seems blotted out except the crimson-berthed area illumined by the lamps ahead into which the car is ever entering, yet never passes through.

The "turnpike racket" pitches and rolls, and it is easy to imagine one's self piloting a motor-boat at sea.

But the price of safety in driving at night is constant vigilance, for the dangers that are always present in driving an automobile even at the legal rate in the country, especially on unfamiliar roads, are magnified many-fold at night. The light is very deceptive—moonlight is particularly so, casting shadows that look like obstructions or that conceal real pitfalls in the road. Such shadows, cast by clumps of trees bordering the road, deceive the driver as to the exact position of the sides of the road at turns so that he may miscalculate the curve and run into the ditch or against a bank. Or the driver may be tempted to indulge in a degree of speed that is unsafe.

An incident recalled by the writer illustrates how deceptive are nocturnal appearances. A driver was out with three friends one night on Long Island, and happened to be driving on a straight macadam road between open level fields. There was no moon, but it was in the early evening between eight and nine o'clock, and the weather was clear. The car was running about twenty-five miles an hour when several houses standing back from the road were approached. Just beyond the houses there came into view a gray blur which the driver took to be a small cloud of dust from some vehicle. As they drew rapidly closer it suddenly dawned upon the members of the party, when the car was not more than three or four rods away, that it was a high board fence directly

across the road, which came to an abrupt end there and made right-angled turns to right and left. Instantly the clutch was released, the brakes were jammed on, and as the machine shrank speed the steering-wheel was again so that two wheels of the car merely ran off the road into the ditch, and the machine avoided overturning as it made the sharp turn at the corner. For these reasons it is really preferable to drive on a moonless night.

The headlight and searchlight of a car generally give light enough for driving at moderate speed. Their illumination well defines the sides of the road, especially in the country where the travelled part of the way is closely bordered by grass and weeds. Because of their position so close to the ground, however, they exaggerate the inequalities of the road surface, small ridges casting shadows which, at a distance, appear like large holes, and may sometimes startle the driver. The possibility of colliding with vehicles in the road depends upon conditions. As a rule, good searchlights will pick up a vehicle far enough ahead to allow the driver to bring his car nearly to a stop in time to prevent trouble, provided he is not running at excessive speed and that his brakes are in good order. The braking distances vary according to conditions; one of the new type high-powered runabouts

carrying two or three persons can be slowed easily and stopped very quickly, while a big touring-car heavily loaded with passengers and luggage will, of course, need a much greater distance for stopping, especially if going fast, as the momentum is very great. The distance at which the lamps will reveal an object depends much upon the nature of that object; for instance, the light will be reflected from the mirrors of the car, but a buggy that is not covered with dust, long before the eye can determine the character of the vehicle. Light is also reflected at long distances from the polished metal of an automobile and the shined spokes of a bicycle, but one may be close upon a wagon-load of hay or lumber before being able to see it. Always the first portions of such an object to catch the eye are the steel trim of the wheels which are polished bright by wear on the road. Unlike most horse-drawn vehicles, all automobiles have rear lights, and if rare were taken to see that these were always lighted at night, more rear-end collisions would be prevented, especially when stops are made in the road to make some adjustment or replace a tire.

The powerful acetylene headlights of an approaching automobile often cause trouble. A driver cannot see how far beyond the lights the wheels and body project on either side, and so is inclined to give the machine plenty of room. In doing so he may run off the side of the road, and perhaps drop one of his wheels off the edge of a drain or culvert or strike a large stone. This recalls the story of the new driver recruited from the ranks of the coachmen, who when driving one night ran head on into a horse and buggy, killing the horse, injuring its driver and badly damaging the automobile. Explaining the accident afterward, the chauffeur said that he thought the lights on the buggy were the lamps of two bicycles ridden side by side, and tried to drive between them.

The brilliant light from acetylene lamps on an approaching automobile is so blinding that it absolutely obscures everything behind and to the sides of the lamps. The effect of the strong light persists for several seconds after passing, and there is danger that the driver will swing back into the road too quickly and collide with a second car or a team just behind the first.

A beautiful Stage Effect observed in Night Driving. The Lights of an approaching Car are just visible at the Head of the Roadway. There is scarcely Room here for two Machines to pass, and an abundance of Artificial Light is Needed

Another real danger arises from following a leading car closely when swinging out to the left to pass a slower-moving vehicle ahead. This has been known to result in a collision with a team coming in the opposite direction. The driver of the first car has a clear view of the road and pulls back onto the right side of the road as soon as he clears the first wagon, but the driver of the second car has his view cut off by the first one and by the dust raised, so that he does not pull over soon enough to avoid the approaching team. Moreover, the gap between the teams is lessening, so that the following car has less room in which to pass than the leader.

Drivers of horses are prone to place far too much reliance upon the ability of the driver of an automobile to see and avoid them. Carrying on lights on their own vehicles to give warning of their presence, they place all responsibility of preventing collision upon the motorist. As it is impossible for them to calculate the speed of a car coming directly toward them, they sometimes delay too long in pulling out to the right of the road, and the driver of the automobile must take his choice between hitting the outfit or running off the road, perhaps overturning his machine in the ditch.

It is very difficult at night to estimate the angles of turns in the road, and if one tries to take them at too great a speed he is liable to run off the side. This is especially so when driving on unfamiliar roads. Another source of danger on turns lies in the possibility of coming upon another vehicle just around the bend. With fixed lights the eyes are projected in line with the position of the car, instead of on the centre of the road at an angle to it, leaving the road in darkness but a short distance ahead. Even when the car is equipped with a swivel search-light, it is inconvenient to manipulate the lamp constantly on the turns, especially in hilly country where there are many of them. The only way to insure safety on turns is to drive cautiously.

Dust is a prolific source of danger. It is much more difficult to see in a cloud of dust at night than in the daytime, for the dust particles reflect the light from the lamps back into the eyes of the driver in such a way as to obscure everything behind the dust cloud. For this reason it is not safe to pull back into the middle of the road after passing a wagon or automobile until the dust has thinned enough to let the driver know that there is no other vehicle ahead of him following the one that has just passed.

Red lanterns put out at night to give warning of excavations

Shadows cast by clumps of Trees and Bushes conceal the Edges of the Road, which unfolds around a Turn. The Need of a good Swivel Search-light is apparent here

in the road, or of piles of building materials in the streets have been the cause of a number of accidents. Sometimes there are several lights placed on both sides of the street and extending out toward the middle. In such a case the driver does not know where to drive, and in trying to go between two of them where he assumes the way to be clear he will sometimes drop his wheels into an excavation.

It is never safe to drive fast without having the eyes protected by goggles, but there is a strong temptation to do so at night, when there are few passing vehicles to raise the dust, and when the cool air feels fresh upon the face and eyes that may be smarting after a hot day's run. The danger in yielding to the temptation lies in the fact that myriads of grains and other small insects swarm in the air near the ground and under the trees after dark, and one of these may strike the eyeball at any instant. None of them discharge a powerful liquid that smarters painfully, and may startle the driver into losing grip of the steering-wheel to raise a head uncontrollably to the eye.

Of course the possibility of accident is greatly increased in the event of rain or mist when driving at night. The globules of water settle upon the glass of the screen of the car, if it is raised, or upon the driver's goggles, obscuring or distorting the vision. And if the goggles are removed when running into rain, a rain-drop may strike the eyeball and cause momentary blindness, and that moment may suffice to ditch the car on an unexpected turn. The exaggerated impression of speed that one gets, together with a constant feeling of doubt as to what may be just ahead in the gloom, should usually counsel decreased speed.

A Turn in the Road temporarily Blocked by loaded Furniture-vans and a Buggy, which carry no lights. Rays from a Swivel Search-light may be thrown well around the Turn

The Navy's New Regime

Under Medical Control

"The *Relief* had just stove a hole in her aft deck-plate."

"What shall we do, Captain?" asked the Boson's mate.

"Give the best antiseptic bath and fill the hole with absorbent cotton," returned the doctor in command. "When the leak has been absorbed cover the absorption with a cap-cotton plaster."

Next!

"What's this I hear about the White House girl giving up her job and enlisting in the navy?" said the Congressman from Waylark, meeting the Secretary of the Navy on the Potomac Tuna Court.

"I guess it is true," replied the Secretary. "The President has promised to put him in command of one of the supply-ships on the arrival of the fleet at San Francisco."

"What does he know about navigation?" demanded the Congressman.

"Nothing. But he will have an admiral immediately order him," said the Secretary.

Answer to a Correspondent

WILHELMINA JENKINS. You have been misinformed. The President has no present intention of following up his order giving the naval commands to the doctors in the service by a general order, substituting stomach pumps for those already in use on all battle-ships and cruisers.

Admiral Paregoric

O I'm the Medico-Admiral,
And I rule the big Navy.
Wherever the ocean goes to swell,
I'll kick up a nervous sea.
I give it a dose of castor-oil
Done up in a big fat pill;
And all of the heavily nod turn-out
Is calm as a mountain rill.

When out in the briny wet I go,
And meet with an acute blast
That starts with ice and sherry snow
The main and the mizzon mast,
I give the vessel a gingerale
To keep her quite free from chills,
And seek her keel in a mixture made
Of cayenne-seeds and squills.

Wherever my good ship springs a leak
By giving her some a bump,
I pipe the crew with my siren squeak
To handle the stomach-pump;
And when the water is haled away,
To dry as a big bean drum,
I stop the hole with a trowel-pump
And plaster of capsicum.

In case of a war with old Japan
I'll wallop the foe on sight,
For I have a strictly novel plan
For winning a naval fight.
I'll load all my guns with capsules filled
With gallons of opotes,
Which fired by marksmen brave and skilled
The Japsan apophyses.

And when he's thoroughly etherized,
And trying around in vain to rise,
I'll board the vessels I've thus surprised,
And while the enemy sleeps,
With my trusty knife I'll operate
In looting both skilled and neat;
And both of his legs I'll amputate,
Thus cutting off his retreat.

So here's to the good ship Epine,
And here's to her Admiral;
The fleet battle-ship in the park
Tells York and Los Angeles!
With her druggist mate and her clinic crew,
What better old craft than she
To lead the cruise through the damp and
Of the deep and surgeon sea?
JOHN KENNEDY BAYNE.

Economy

AN amusing story recently went the rounds at Princeton concerning a last year's graduate, an industrious student of an extremely liberal tendency.

At the beginning of his concluding year, it appears, his father, about to set off for Europe, had promised the boy that if he got his degree he would be sent for by his parents, who would take him for a continental trip lasting the entire summer.

His ambition thus stimulated the lad studied faithfully all the college year, and in June came through with flying colors. Then he called his father: "Yes."

The old gentleman, however, would seem to have forgotten his impulsive offer, for after musing a bit over the message he called back: "Yes, what?"

Whereupon, the son, in turn a trifle perplexed, thought it over. Finally he called his father: "Yes, sir."

His Repertory

A CAMDEN, New Jersey, man recently reached the conclusion that his eight year old boy is a trifle too bright.

At dinner one evening the father had been entertaining a number of friends from Philadelphia with a funny story. This was at dessert. The youngster had been very quiet throughout the previous courses; but here he came to the occasion in fine style.

When the laughter induced by his father's humor had ceased, the boy, with a fine affectation of delight, said:

"Now, dad, do tell the other ones!"

What Happened to Jones

ONE day a tall, gaunt woman, with rope colored hair and an expression of great fierceness, strode into the office of a country clerk in West Virginia.

"You air the person that keeps the marriage books, ain't ye?" she demanded.

"What book do you wish to see, madam?" asked the polite clerk.

"Kin you find out if Jim Jones was married?"

Search of the records disclosed the name of James Jones, for whose marriage a license had been taken two years before.

"Married Elizabeth Mott, didn't he?" asked the woman.

"The license was issued for a marriage with Miss Elizabeth Mott."

"Well, young man, I'm Elizabeth. I thought I oughter come in an' tell ye that Jim has come!"

No Doubt

BLACK MAMMY. "Nay, parson, don't it 'pear mighty strange dat de cullard folks should hev been made black?"

PARDNER WILKINSON. "Derd it do, mammy. It most had been dat de Lord created de cullard people way back in de dark ages."

"Pitiless Fiction"

THE historian Freeman once said: "I never set a man die at the end of a chapter." The modern serial, or continued story, exemplifies a like theory of pausing at the very brink of an absorbing event. We consider a year-long serial one of considerable length; yet in France, in 1910, the first two parts of the *Jefferie*, one of the most celebrated of Gallic serials, were published four or five years before the third part, and several more in advance of the fourth and fifth parts.

About the same time Henriette Mademoiselle de Scudery, memorable as the author of the first romances of any note written by a woman. She composed and published by instalments novels of a length unknown to the readers of to-day. Every story was originally issued in batches of small sections, sometimes running to a score or so. She has been described as "the most pitiless writer of fiction that the world has ever known."

The same seventeenth century illustrated, again, the willingness of French writers to hide their time. The poet Malherbe wished to compose a funeral on the death of his wife. By the time the poem was finished the gentleman had been consoling, remarried, and was himself dead!

Easy

In the grocery division of a big department store in Cleveland had long ago a young woman was conducting an exhibit demonstrating the value of a new preparation of wheat. On the counter in front of her were many little plates. These she filled from time to time with freshly cooked samples that were passed out free to customers who desired to test them.

One such, a lean, dyspeptic looking woman, consumed her dish with evident relish, and the young woman, confident of making a sale, addressed her with a most engaging smile.

"How do you like our new breakfast food?" she asked. "It's only ten cents a package."

"It's all right," replied the lean woman, setting down the dish, "but the fact is that I never eat any breakfast."

Not a Merc Man

A WELL-KNOWN captain of one of the Hamburg-American liners, while on a recent visit to New York, was talking of a prize of birth, and he told this anecdote of a certain brother captain in the transatlantic service:

"A German passenger once fell from the deck of his ship into the sea, and a sailor, seeing him disappear with a splash, cried: 'Man overboard!'"

"What do you mean with your 'Man overboard'?" shouted the captain, who heard the call. "First Hermann von Finkenstein, Duke of Sambia and Prince of the Holy Roman Empire, is overboard."

A PERFECT MILK SUPPLY

should have a quantity of purity. The name "Borden's" means pure milk. Borden's Condensed Milk is prepared from cleanest and purest milk. Use it as a food, or for coffee, or for milk.

THE BEST ALL-ROUND FAMILY REMEDY—BROWN'S ROSEBERRY PAIN-EXPELLER—25 cents a bottle.

Use BROWN'S Camphorated, Peppermint DENTIFRICE for the teeth. Suffering. 15 cents per jar.

ADVERTISEMENTS.

REVIVED AT LAST

Emaciated Woman Restored by Proper Food.

The amount of harm done from eating food which lacks the nourishing elements or is in such form that the system can't absorb it is much greater than many persons ever suspect.

The harm can't be corrected by drugs either. There must be a complete change in the dietary—the cause of the trouble must be removed.

"I have been a constant sufferer from stomach trouble, constipation and nervousness for the past 14 years," writes a Michigan lady, "and the past year became tired of life, of everybody, and everything."

"The best doctors and several weeks at a sanitarium afforded me only temporary relief. Finally an attack of the grippe caused me to give up hope of ever being well again. I was growing weaker and more emaciated every day."

"At last a doctor advised me to try some predigested food, as building would suit my stomach. My husband sent for some Grape-Nuts, of which I ate a little with milk, and then omitted the usual results."

"My stomach did not reject this food, and from that time on, for several weeks, I lived on Grape-Nuts and milk. I felt no pain whatever in my stomach, my health gradually came back, and in five weeks I gained 25 pounds. I derived more strength from Grape-Nuts than I ever did from a meat and potato diet."

"There's a Reason."

Music and the Opera

GUSTAV MAHLER AND "TRISTAN"

By LAWRENCE GILMAN

RECENTLY half a century ago Richard Wagner, engaged in his heartbreaking task of life as pathetically expressed it—"leaving one almost sick upon another," was deep in the composition of his masterpiece, "Tristan und Isolde." It is of interest to note the anniversary, for it has been marked by the fact that we in New York have not been vouchsafed an interpretation of this work which was as impressively announced as it has been wonderfully acclaimed. This refers, of course, to the remarkable version of the score that was recently produced at the Metropolitan Opera House under the leadership of Mr. Gustav Mahler, who has come to this country from the Royal Opera House in Vienna to assume a controlling share in the musical activities of the Metropolitan.

In his native land Mr. Mahler is an exceedingly distinguished and intellectual person, and his fame has spread to the four corners of the artistic world. He has long been venerated as a conductor—as one of the most able and individual in Europe; and as czar of the Royal Opera in Vienna he has brought about performances of operatic masterworks, Wagnerian and otherwise, the excellence of which has made him famous. He is, in fact, one of the most illustrious of living conductors, and he is a composer of great skill, amazing endurance, and boundless ambition—his formidable experiments in symphonic writing have been the subject of extended comment in this place. Mr. Mahler, before he came to us, was reputed to possess an indomitable will, and to exercise it implacably; he was said to entertain inflexible convictions—convictions that were indeclinable and to some degree revolutionary—concerning operatic interpretation, and to enforce them without compromise. From such a man, obviously, an extremely interesting reading of Wagner's wonderful work was to be looked for; especially since, as it was understood, Mr. Mahler had enjoyed much latitude and had been favored with every opportunity in the preparation of the performance. The event was, beyond dispute, one of prime importance, not alone by reason of Mr. Mahler's reputation, but because "Tristan und Isolde"—a work, within the forty-nine years of its existence, become an authentic classic, and an unfamiliar interpretation of it by a man of authority, through which new traditions may be established, becomes of vital consequence to the music-loving public.

The manner in which Mr. Mahler's conception of the "Tristan" score was made known conveyed, it may be said at the start, a suggestion of portentousness that was somewhat unfortunate, despite the serious consideration to which, as has been said, the occasion was entitled. It should scarcely be necessary to remind the thoughtful reader, although the fact seems to have been forgotten, that Mr. Mahler is very far from being the first great conductor who has set before us the result of his study of Wagner's sovereign tragedy. "Tristan" has been in the repertoire of the Metropolitan Opera House since it was first performed there on a certain historic evening twenty-one years ago—that is to say, since December 1, 1886; and there were giants even in those days. That performance (in the cast of which, it may be recalled, were Lilli Lehmann, Albert Niemann, Marianne Brandt, and Emil Fischer) was conducted by the late Anton Seidl, a Wagner conductor who, in respect of certain qualities, has never been approached; and Mr. Seidl conducted thereafter innumerable performances of "Tristan" in New York, performances the memory of which, even to-day, a decade after his death, delights and exalts the spirit. We have heard, too, the superb "Tristan" reading of Felix Mottl, a reading which, while it was not so poetic, so luminous, or so tender as that of Seidl, had moments of overwhelming splendor. These facts are recalled here and now because it is not well that Mr. Mahler and his adherents should treasure the notion that the score of "Tristan und Isolde" has been in any degree a

stranded look to this point—that our students and music lovers are unable lurkers to whom is to be graciously accorded a new Wagnerian dispensation.

Mr. Mahler possesses, seemingly, the order of mind that is called analytical. He approaches a score in the manner of a botanist laying bare the intricate loveliness of a rare and complex plant. He is bent upon dissecting it with the utmost faithfulness, and with rigorous precision. His attitude is detached, rigorously objective. It was in this spirit that he disclosed the infinite subtleties of the "Tristan" score—nothing escaped his marvelously penetrating scrutiny. He exposed the gorgeous yet delicate and often recumbent strands of that wonderful web of orchestral tone with a vivid clarity that was well-nigh pitiless. Moreover, he knows how to salute the surge and thunder of the orchestral tides in such a manner that they never overwhelm the voices of the singing actors on the stage. His reading is invariably lucid, exquisitely calculated, extraordinary in its finesse, its poise, its distinction and dignity of plan.

But Mr. Mahler fails, in considerable measure, to lay bare the heart of this music. There is a greater and a deeper "Tristan und Isolde" than that which he makes known. His fastidious taste, his admirable discipline, his respect for the voice parts, his horror of obvious effects, lead him, in the end, astray. In this music is the mightiest, the most unconfined emotional declaration that the art of the world can show. This incomparable score—incomparable alike in its flaming passion and its superlative beauty—comes from the brain of Wagner at white heat; not to make evident and irresistible its fiery ecstasy, its unique ardors, is to be unfaithful not alone to its spirit, but to its letter; is, in other words, to be false to the genius of Wagner at its most precious and typical. It is not extravagant to say that so tame, so ineffectual, a performance of the last act of this music drama as that achieved by Mr. Mahler has not been heard in New York; the delicious longings of *Tristan* were scarcely recognizable as such; the exultant transports of *Isolde's* "Liebestod" were turned into a gently pathetic lament; the music was, to be frank, emasculated, shorn of almost all its glory and its strength. Nor was the second act more compellingly read. The mellow loveliness of the nocturnal opening scene, the entrancing beauty of *Isolde's* rhapsodizing, the ineffable poetry of the hymn to the night—these things were not revealed; yet time after time the singers have been apparently present in other readings. Nor must it be supposed that Mr. Seidl, for example, in making clear these characteristics of the score, did so at the cost of overcoming the singers. With him the pedestal was securely in the orchestra, the statue upon the stage. With Mr. Mahler the pedestal is not mere in the orchestra. It is often sunk beneath the floor.

In the matter of tempo, Mr. Mahler does not appear to have that sure and instinctive sense of what is appropriate and inevitable which, as Wagner conceived, is the ultimate test of fitness in a conductor. To adduce a single instance, Mr. Mahler takes the Prelude at so unemotional a pace that its smoldering fire seems at times on the point of extinguishment; so facile, indeed, was the reading, that Wagner's characterization of the climax—that "mighty onslaught, the most powerful endeavor to find the breath which shall open to the heart the path to the ocean of the endless joy of love"—might have been recalled by an inexperienced listener with something like incredulity.

It should be said, in conclusion of this brief discussion, that Mr. Mahler seems fit to cut the music of "Tristan" with a ruthless need and a lack of regard for its dramatic relationship—that any one must confess, a little shocking. If here has really been made known a definite and determined refusal on the part of the Metropolitan's audiences to hear the work in the liberally curtailed form in which it has been known in New York, the death of Mr. Seidl, it would seem to be only fair to those who value and love the opera to take it to the regular subscription repertoire and perform it, as "Parsifal" is performed, under conditions more favorable to its adequate presentation.

Mr. Theodor Chappuis
THE NEW BENJAMIN FRANK AT
THE METROPOLITAN OPERA HOUSE

Mrs. de Castro
CONTRALTO AT THE NEW
BENJAMIN FRANK OPERA HOUSE

F. S. HARRIS

When, after dining well, you stroll forth in the soft twilight to enjoy your fragrant Havana, how annoying it is to find that you have left your silver ashtray on the mahogany sideboard!

Free List Suspended

Iturkina has recently moved from New York to Boston. The other morning he went to the butcher's.

"Give me a nice porterhouse," he ordered. "Extremely sorry, sir," said the proprietor of the establishment, urbanely, "but we are not giving anything away this morning."

Annihilation

A DEAD MAN'S shoes he'd waited for, but when the owner'd passed the shoes were gone; and, furthermore, the cobbler had breathed his last.

CARLETON SMITH.

A Limited Supply

THE DEPARTING SERVANT. "Could you give me a character, madam?"

MADAM. "I'm sorry, but I haven't one to spare."

The Day's Work

ONE morning not long ago a well known woman of Chicago while shopping thoughtlessly picked up an umbrella belonging to another woman and started to walk off with

it. The owner stopped her, and the absent minded one, with many apologies, returned the umbrella.

This little incident served to remind her that a number of umbrellas were needed in her family, so she bought two for her daughters and one for herself. As it was the holiday season she took the articles with her, instead of ordering their delivery.

As she entered a car, armed with the three umbrellas, she chanced to observe that exactly opposite her sat the very woman with whom she had had the unfortunate experience but a short while before.

The second woman stared at the three umbrellas very hard for several minutes. Then, with a significant smile, she leaned across the aisle and said, in an icy tone, "I see you've had a successful hour."

Emphatically

AN acquaintance called on some ladies in an Alabama town who had at the time been much wearied by an apparently endless succession of callers.

The door was opened by Augustus Butts, the faithful old butler.

"Are the ladies in?" asked the caller.

"No, ma'am, they're all out."

"I am so sorry that I missed them," continued the visitor, handing him her card.

"I particularly wished to see Mrs. Jones."

"Yes, ma'am, thank you, ma'am," responded Augustus. "They're all out, ma'am, and Mrs. Jones is particularly out, ma'am."

His Tribute

A BOSTON man avers that in a certain New England churchyard there is a tombstone bearing an epitaph that never fails to bring a smile to the face of the reader. It runs thus:

"To the memory of Clara Ann and Sarah Jane, his two wives, this stone is erected by their grateful widower, Henry B. Perkins. They made home pleasant."

Out of His Class

THERE is a clerk in the employ of a Philadelphia business man who, while a fair worker, is yet an individual of pronounced eccentricity.

One day a wire basket fell off the top of the clerk's desk and scratched his cheek. Not having any court plaster at hand, he slapped on three-cent postage stamps and continued his work.

A few minutes later he had occasion to take some papers to his employer's private office. When he entered, the "old man" observing the postage stamps on his cheek fixed him with an astonished stare. "Look here, Jenkins!" he exclaimed. "You are carrying too much postage for second-class matter!"

False

THE story is told of an actor, popular with the native girls, who is beset by the fear of being thought older than he is.

The last time this player was interviewed it was by a young woman reporter for one of the dailies. She wished to get his views touching the conclusion of the drama, a suit just the actor was not particularly desirous of discussing.

"I'm not sure," said the young woman, laughingly. "I believe I'm really finding out what you think. You ought to be frank, for your eyes are gray and—"

"Prematurely so, I assure you, my dear young lady," the player hastened to inter-ject.

Important to see that it is Abbott's.

The Season's Plays

SOME MIDWINTER EVENTS

By "I"

RECEPTION to "Quality Street" unprecedented.

This is the rubricum which Charles Frohman sent to J. M. Harris as terse and faithful comment at the close of Miss Maude Adams' first performance of *Phoebe Throlopp* in the revived "Quality Street" at the Empire Theatre. Had the performance been a first production the enthusiasm could not have been more marked.

For nearly three seasons Miss Adams has been playing in Mr. Harris' delightful "Peter Pan," and one has had to rely upon his memory to associate Miss Adams with skirts. She has been tripping about the stage in Peter's knickerbockers for so long that there was no little curiosity to see her again in the more cumbersome trappings of femininity.

It was five years ago that Miss Adams appeared in "Quality Street," but her performance now has lost none of its freshness, none of its winsomeness. The role of *Laurette Brown*, "dancing Captain Brown," is played by Frederick Erie. It is a pity that Mr. Erie plays the part with such a superabundance of energy, which at times reaches the point of shouting. He seems to have mistaken boisterousness for youthful excess of spirit. The characters of Miss Adams, Miss Fanny, and Miss Henrietta were played extremely well by Miss Ida Hammer, Miss Mildred Morris, and Miss Ella Gilbey.

In that perennial home of comedy, Weber's Theatre, where auditors and performers seem to sit facing one another cheek by

joint across tables charged with drinkables and sandwiches, they are presenting a burlesque of "The Merry Widow" that may well keep Broadway on the grin for many nights.

Into this environment is projected the resilient Mr. Peter F. Dailey—we beg his pardon: Pete Dailey—in the character of *Emmet de Jollyday*, a journeyman lover. Mr. Pete has long been a wanderer from the Great White Way, a prodigal star in the distant night-stand land, and his return is the mighty signal for one of the most exuberant welcomes ever offered to a comedian. Incidentally it may be recorded that Mr. Pete must have found very nourishing hooks on the road, for whereas when he last appeared in New York he was merely robust, now he is vastly glistering—glistening, swelling, and tripping about inside his costume as the levitating agent surges and strains against its envelope in a billowy balloon.

But the agility of Mr. Pete increases in direct ratio with his stupidity. Never has he danced with such grace and lightness as he does now; also never has he been so spontaneously funny, so bubbling over in a perpetual effervescence of good humor and magnanimity that not only tickles the house, but makes his comrademuck and forget cues even at the risk of the manager's frowns. Great is Peter Dailey of the Broadwayland! Here is one of his most winning sallies: he connects a levy of chorus girls clad in diaphanous raiment. "Ah," he connects, with a merry twinkle of the eye, "you shouldn't be out on a cold night like this unless you're wrapped up in your profession!"

Charles J. Ross is highly effective as *Prince Desdalis*, a valuer at Maxim's. His acting and his diction are admirable, and his dancing is at once graceful and dignified. Lulu Glaser, the *Princess Fania*, is as winsome as ever, and her voice, though for a time obscured by a cold, has much of its characteristic charm. Joe Weber, as *Brick*, janitor at the embassy, and Albert Hart, as *Baron Copoff*, Faroukian Ambassador at Paris, were fitted with ineffective parts that gave them very little opportunity to be diverting. Mabel Weston, as *Faustine*, the *Beronaux Copoff*, was similarly handicapped. All of these disadvantages will doubtless be eliminated, and there is every prospect that the burlesque will win the favor of the public to which it appeals.

And while on the subject of beneficial changes, may "I" suggest that a judicious use of disinfestants will also be useful? There is one bit of vulgar dialogue, which is several times reiterated, that offends without evoking a blush even from the most hardened Tenderloinness. Surely it is not altogether unworthy of managerial notice that decency is, after all, the best policy.

"Funa-bashi," a new musical comedy, recently disclosed to public view at the Casino, offers that most novel thing, a Japanese setting. Terumack J. Carter (Joseph Mims), United States Secretary of State, is visiting that country in order to appease the national resentment which has been aroused over the breaking of a Japanese umbrella in San Francisco. His son, Jack Carter (Walter Perival), is betrothed to the *Princess Gogodolin Billard-Hoop* (Margaret Rutledge), a British heiress; but he is in love with *Polly Rivers* (Vera Michelson), an American girl, who is disguised as a Japanese to hide her identity from the stern Terumack. After the traditional misunderstandings Terumack renounces and renounces in Act Three, when he himself will marry the obliging *Miss Billard-Hoop*. For the "book" of the production Irvin S. Cobb assumes the responsibility; the music and lyrics are by Stafford Waters.

"Funa-bashi" was, on its initial presentation, rather more successful than it deserves. A New York audience no longer looks for an intelligent plot in a musical comedy, and it will forgive three quarters of the songs for the sake of a few good ones; but it does expect that the largest apples will be displayed on top of the barrel. "Funa-bashi" has several apples of magnitude, but our musical and dramatic grocers fail to display them. There is, for example, *Miss Mary Blowingstone Saks* (Maude Fulton), who has been "fired" from every department store in the city. She dances like a fairy, and is indisputably the hit of the piece. Why were we not permitted to see more of her? Mary makes hardly an appearance during the first act, and she has an irritating habit of coming on the stage and walking off without meeting the anticipations of her audience.

Terumack J. Carter, who looks like an Healed Mr. Taft with chin whiskers, performed some notable athletics with the long end of his lute voice. Jack Carter was played by Walter Perival, and Monte Beauchamp, his friend, by Percy Ames. Alire Fischer and Vera Michelson sustained the chief women parts with a certain ability. Mentions should be made, too, of *Billson*, the champion (Edna Ruth); *Queen Bebe* (William Bick); *Lightweight* ex-champion from Forty-second Street, and *Wesson*, the Japanese wrestler, who should have afforded much entertainment by an encounter with *Bebe*, but the authors of the production availed themselves of their opportunity.

Miss Viola Allen as "Irene Wycherley," the new English Play which has made a success abroad

TEN TO SEVENTEEN

A Boarding-School Diary

By **JOSEPHINE DASKAM BACON**

Author of "The Memoirs of a Baby"

From "Ten to Seventeen"

THIS is a diary of girls in boarding-school during those years when the world is made up chiefly of two kinds of excitement—sentiment and scrapes. Those who are concerned with the story are all healthy, charming girls—Roberta, who writes the "events," "Ben," whose cleverness inspires them, and Constantia, who prefixes to each event a kind of "poem" truly remarkable. The story involves grown-ups and their various affairs, seen from the genu-

ine school-girl point of view, and expressed in the exact language of the age. Any one who had forgotten what girls at school are like between ten and seventeen would need to read only a single page to remember. The book is sure to please equally those who are young and those young no longer.

Illustrated. Price, \$1.50

STORIES OF SYMPHONIC MUSIC

A Guide to Modern Orchestral Programme-Music

By **LAWRENCE GILMAN**

Music Critic of "Harper's Weekly"

This book fills a genuine need of the music-lover, for it offers in compact, accessible, and easily intelligible form information which will help him to listen understandingly to the music of an orchestral concert. It presents clearly and without technical analysis the poetic or pictorial or dramatic basis of every important example of programme-music in the symphonic repertoire, putting the reader in possession of information which will enable him to listen comprehendingly, for example, to a symphony by Berlioz, an overture by Mendelssohn, a symphonic poem by Liszt, or a tone-poem by Strauss or Debussy.

"The best thing for every concert-goer to do is to get a copy of Mr. Gilman's book and prepare himself beforehand."—*N. Y. Evening Post*.

"From Berlioz and Liszt and Raff and Wagner, down to the latest works of Strauss, Elmyr, Debussy, Sibelius, Furtwängler, Elmyr, Chabrier, and Converse, with many others that will occur to concert-goers, Mr. Gilman has left nothing that has any claim to the attention of music-lovers. . . . It is a useful and interesting book."—*The New Music Review*.

"A valuable contribution to the music-lover's library."

COMMENT

Brother Bryan May Relent

THERE was a newspaper report last week that Brother BRYAN would not insist upon running if too many members of the National Democratic Committee disapproved. If a third, or even less, of them lined up to dissuade him, he might refrain, the papers said. But later came word from him that the report wasn't so. Nevertheless, there are sound reasons why Brother BRYAN should prefer to assist at a Democratic victory rather than be undisputed leader to defeat. To be the head man at a wake is glory while it lasts, but after the interment one has only a headache to show for it.

Bryan and His Party

What is the attitude of the Democratic party towards Mr. BRYAN? On this subject there is abundant evidence; the amount of it is increasing, and in character it is becoming more convincing. In his *Commoner* Mr. BRYAN denies that he is seeking to force himself upon the party, and in a recent speech he intimates that the party is running after him, and easily assures it that it will be able to catch him. This is periphrase unworthy of a serious man. Mr. BRYAN is seeking the nomination; his friends are enlisted in the work; he is so much in earnest that he vituperates and he slanders his opponents. In another and more recent number of the *Commoner* he charges them with belaboring to "The System." Thus he adopts the tactics of Mr. ROOSEVELT. By "The System," Mr. BRYAN and Mr. ROOSEVELT mean the owners of property, the corporations, the business men and financiers of the country, who have also been designated as "malefactors of wealth." The party friends of the President have learned that wholesale—even unintended—abuse of a class has resulted in disaster, and that indulgence in it has been a political blunder. Mr. BRYAN has not learned this. He continues to think that the White House is best or most easily to be reached by a class war. His abuse of individual opponents is one way of conducting such a war; it is also a confusion not only of his longing for the Democratic nomination, but of his fear that the chance of receiving it is slipping away from him. The man who finds it easy and pertinent to his condition to assert that men like JAMES PLATTEN and JOHN C. HENFUELL are slaves of the "money power," and are also governed by personal hatred of him, is in that parous frame of mind which indicates fear of a coming disaster, and it is time that a man of Mr. BRYAN's intelligence should see that he is likely to lose his dearest wish. When may a man be said to be trying to force him-

self upon his party? When he is endeavoring to secure its nomination by meretricious methods, by noise, by wild denunciation of his competitors or of his critics, by seeking to obtain control of the convention by a mob of his own adherents, by any method rather than by submitting his merits to the calm discussion of the party and its convention.

The Party's View

There is no Democrat or Republican who is capable of forming an opinion upon political conditions who believes that Mr. BRYAN can be elected; who does not realize that his nomination would be practically the abandonment of the contest by the Democratic party; who is not assured that WOODROW WILSON would command against TAFT, LA FOLLETTE, or any "logical" successor of ROOSEVELT, a very considerable portion of the sincere Republican conservative vote; that he would command against CANNON the large and growing anti-Dingley Republican vote; that his chances would be as good as those of Governor HUGHES. It was agreed by all whose opinion on the subject is worth reckoning with that there are other Democrats—HARRIS, GRAY, JOHNSON, and two or three Southerners—who would carry more States than Mr. BRYAN could carry. This conviction, long possessing thoughtful Democratic minds, has shaken the faith of certain of Mr. BRYAN's warm followers who usually have no time to think on purely practical subjects, and it is influencing the rank and file of the party. The Philadelphia *Record* asserts that "an announcement by WILLIAM JENNINGS BRYAN of his retirement as a candidate for President would put life into the Democratic party, would enthuse several million voters who are at present apathetic." This fully explains the attitude of the party. It does not believe that Mr. BRYAN has the ghost of a chance to be elected; the larger part of the party is opposed to his policies; some particularly obstreperous Democrats—like JURY T. NELLE GRAVES and others—have heretofore shouted for ROOSEVELT and BRYAN, thus indicating recognition of the identity of the political philosophy accepted by the two, but there were never enough of them to nominate such a ticket in a Democratic convention, any more than there are now enough of them to nominate BRYAN as the heir of ROOSEVELT. But Mr. BRYAN seeks the nomination in such guise. Let him and his foolish friends succeed in convincing all Democrats that he seeks to be their candidate as a second ROOSEVELT, and his chance will disappear from his own dreams. Mr. BRYAN, in view of the prevailing conditions, cannot force himself upon the Democratic party as the perpetual destroyer of all its opportunities; and if he cannot do this he cannot be nominated; we repeat that suicide does not follow deliberation.

Morse Henry Has Stopped Thinking

As late as January 18 Morse HENRY still refused to take courage. Being asked if he thought BRYAN would be nominated, he said, as reported in the *New York Times*: "I don't think anything about it. I do not look on the nomination of BRYAN for the Presidency as a possibility or a probability. It is an accomplished fact." Perhaps it was an accomplished fact at the time when Colonel WATERBURY recognized it, but it is one thing for a fact to be accomplished and another for it to stay so. Often enough it is harder to keep a fact in the condition of establishment than to retire it and launch a new one.

Too Hard a Job

Senator BURKE has introduced the tariff commission bill, the reason for which he set forth in his magazine discussion with Mr. BRYAN. The bill is based upon the theory that the tariff shall remain protective; that the government shall continue the socialistic effort to husband business; to make profitable enterprises to which national conditions are adverse; that statutes shall still seek to remedy the incompetency of individuals and the necessary denials of nature; that, in a word, the supreme end of the tariff shall continue to be paternalistic. Senator BURKE admits that Congress is not equal in the task, and favors the appointment of a commission to be composed of a producer, a customs lawyer, an administrator of customs laws, one come familiar with foreign customs laws, and an economist or statistician. All of these may easily be high protectionists, and only two of them are at all likely to be men who will regard the prob-

less from the point of view of the consumer. These commissioners are to gather and arrange information for Congress, which is presumably to act upon it in legislation. It is in this way that Mr. BEVERIDGE proposes to eliminate politics from tariff legislation. If the bill should become a law, Mr. BEVERIDGE would be among the first to discover that his effort had been futile. As long as tariff laws are made for the purpose of aiding any kind of business, so long will those who are engaged in the business invest part of their capital in politics. Congress in this instance, for example, would change the tariff law, or make a new law, with an eye to votes and campaign contributions, the information and observations of the commission to the contrary notwithstanding. The only practicable way to reform the tariff is to pass a law, not for special interests, but for the general welfare. Such a law would necessarily be a tax law for revenue, and would consult the general welfare. Humanely speaking, it is quite as impossible for a commission as it is for Congress to make a fair tariff law which shall be mainly protective. The task is beyond human power. While the effort to shut out politics might be sublime, it would be impracticable. The tariff as it stands ought now to remain in politics until the policy of the country is changed, and is supplemented by laws which shall regard the welfare of the whole, the majority being the consumers. The friends of the DINGLEY law are not competent to revise it; only those who comprehend the evil of its underlying principle should be entrusted with the task of tariff reform.

Opposition to the Aldrich Bill

The West is protesting against the proposed emergency currency of the ALDRICH bill, as we predicted that it would. The presidents of the Chicago banks especially are against it. The reasons with which they seek to sustain this opposition are, speaking generally, applicable to the original national bank act, and one of the presidents frankly says that that law, which has so long been regarded as the provider of an exceptionally sound paper currency, ought to have been entitled, "An act to provide an artificial market for government bonds," and he adds that the ALDRICH bill might for the same reason be entitled, "An act to provide an artificial market for municipal and railroad bonds." In brief, the argument is that when the emergency arises for which the new issue of currency is provided by the bill the banks will be called upon to purchase the necessary bonds in the market. This is a fundamental objection, and, as we have said, goes to the soundness of our existing bank currency system. When the national banks were established, the State banks were told that their circulating medium was to be taxed out of existence, and that if they desired to issue notes they must procure a national charter and purchase government bonds. The notes thus issued were, and are, sound, but they have always cost a good deal. So it is to be with the emergency currency. The objection made by the Chicago banks is intelligible, but it is aside from the immediate question. Granted an existing bond-secured currency, and granted, further, the impossibility of revolutionizing our system, what is to be done in order to put an end to currency famines? Let us admit that the present system is bad, but is it so bad that we are justified in refusing to adopt a measure that will put an end to currency famines unless we can at the same time also put an end to bond-secured bank notes? Shall we continue to insist upon the continuance of an unscientific and unelastic system unless we can secure one that is perfectly scientific, or shall we at least improve the unscientific system by making it elastic? It should be added that the supporters of the ALDRICH bill are as well aware as the critics of the West of the true character of the measure, and that they would welcome a better system if it were possible to obtain one. Would the Senators and Representatives from the West support a better measure—say, for example, the FOWLER bill? Serious and intelligent discussion of this bill is growing, especially in the South and East.

A Pregnant Opinion

The Circuit Court of Appeals of the Eighth Circuit has just emitted an opinion, which was written by Circuit Judge KARNES, in the case of the Butler Brothers Shoe Company v. The United States Rubber Company. It is not necessary for our purpose to enter with much particularity into the

details of the immediate litigation. The rubber company shipped goods to the shoe company, which was acting as its factor in Denver, and the shoe company defended on constitutional grounds an action for the recovery of the sum due to the rubber company. The Constitution of Colorado forbids any foreign corporation from exercising any corporate power, or from doing any business, or from prosecuting or defending any suit in the State unless it files certain papers and pays certain fees. The rubber company, by the shipment of goods to the shoe company, so the court held, was not transacting business in the State of Colorado; but admitting that it was, it was also held by the court that the State of Colorado could not exact the fees provided by its Constitution and statutes. The court further held that no State can prevent any foreign corporation from carrying on interstate commerce within its borders, or obstruct or burden it; that the foreign corporation has the right to exercise within the State every corporate power essential to the conduct of such interstate commerce, the laws of the State to the contrary notwithstanding; that if the foreign corporation is forbidden by the State, as a condition precedent to its doing business within the State, to remove actions against it from the State to the Federal courts, such prohibition is invalid; the cases may be thus removed notwithstanding. This opinion is especially valuable for its liberal citation of the cases of the United States Supreme Court bearing on the subject. The law commented upon is, in its application, similar, if not the same, as that involved in the Alabama railroad cases. There the State has been seeking to obstruct and burden interstate commerce, while it has even undertaken to revoke the license of an interstate railroad on the ground that it had removed cases against it to the Federal courts. This is the right of the road as a citizen, and it cannot be denied to it by the State, nor can the State enforce the road's direct or indirect acceptance of the condition that it shall surrender its right in order to obtain another right—that of carrying on interstate commerce within the State of Alabama. No one can read the excerpts cited in Judge KARNES'S opinion and not recognize that the interstate roads have the right to transact such business within any State, and to remove to the Federal courts from foreign State courts any cases that may be brought against them; and that no State has the right to interfere in the slightest degree with either right.

The Republican Candidacy

The President has announced that his candidate will be nominated on the first ballot. This is the regular thing to say of the favorite, and it is occasionally a wise thing for a campaign manager to say it. The manager may not be indifferent to what he says; he is so easily carried away by feeling, that with him very often emotions are mistaken for reasoning. Secretary TAYLOR must be nominated on the first ballot if he is nominated at all; and, for a like reason, BAYAN must be nominated on the first ballot or suffer defeat. Neither is likely to gain strength on subsequent ballottings; indeed, neither can grow by deliberation. Secretary TAYLOR is respected and liked by a good many people. He has made some sensible speeches; he has done some excellent deeds; he has displayed unusual energy and enterprise; but he has sought chiefly to induce the Republican party to nominate him because he is the administrator of Mr. ROOSEVELT'S policies and their defender, and because he would carry them on if he were elected to the succession. Some of the minor policies of the country favors, and so does the WEEKLY, but the greater policies are, we think, hostile to our Federal government and to the will of the country. More firmly than any man except Mr. ROOSEVELT, Mr. TAYLOR believes in revolutionizing the character of the government, and in transforming the Federal republic into a national republic like France. He accepts, with conviction of their advisability, the stronger views of Mr. ROOSEVELT, and would do all in his power to put them in operation—to centralize power at Washington by depriving the States of powers which they possess under the law, and which they may exercise much more to the advantage of their several communities than could the Federal government. He accepts, and in his time has acted upon, the theory that the Federal power may be increased and added to by judicial "constructions." He favors the use of this power, so gained, for the enervating of the States and their citizens by pater-

nalism. He is for a patristic civil government, if we may transfer the ecclesiastical word in order to suggest the image of a political hierarchy. Mr. TART might, indeed, be a wiser father of "his people" than Mr. ROOSEVELT has been, or possibly could be; but do the American people desire any father! When was it that they lost the power to conduct their own affairs!

The Opposition to Mr. Talt

Speaking generally and broadly, all of Mr. TART's opponents in the Republican party, except Senator LA FOLLETTE, repose Mr. TART's centralizing and patristic notions, some more and some less. Governor HUGHES, for example, is utterly antagonistic, by nature and education, to any scheme that, by indirection and usurpation, would permit the Federal government to do what New York is rightfully doing; and, it may be added, the State is doing its task so much better than the United States possibly could that Governor HUGHES would not seek to accomplish by amendment what Mr. TART would attempt by construction. Senator FORAKER, too, is opposed to any State control of private business, any control beyond the proper regulation which would have for its end the compulsion of fair and honorable dealing. Speaker CANNON is a communist, or socialist, only on the tariff question. Like a good many other Republicans, he has been brought up with the idea that the Republican party cannot carry elections except with the aid of the campaign contribution of the protected interests, but he does not believe in government ownership or control of railroads; nor in Federal licenses to State corporations in order that they may carry on interstate commerce. He is not wholly opposed to the law as recently laid down by the Supreme Court which relates with lucid vigor the rights of the States. Leaving Senator FORAKER out of view, on a familiar political theory, which, of course, applies to Secretary TART, it is clear that if the Republican convention is dominated by the radicals whose power has been increased by the works, the deeds, and the influence of Mr. ROOSEVELT, Senator LA FOLLETTE will best satisfy the party's ideal; if the stand-patters control, Speaker CANNON will be the strongest man, for he is the incarnation of the party's economic folly; if the middle of the way men prevail, Governor HUGHES will be nominated. Secretary TART labors under the great difficulty that, appealing personally and especially to no element of the party, he is a candidate ordered by the administration.

The Colleges and Their Sports

The faculty of Harvard voted, on January 7, to send to the president and fellows of Harvard College, the committee on athletic sports, and to each college represented in the Association of Colleges in New England, the following expression of opinion: "That in the opinion of this faculty the number of intercollegiate contests should be largely reduced." Football has been reformed with considerable success, and though it may easily fall again into evil ways, it is at present a better and less objectionable game than it was three years ago, so that there is no immediate agitation of the expediency of abolishing it. But the whole matter of American intercollegiate sport is, in a quiet way, very much under discussion and a subject of current rumination by many observers who think that it is overdone and needs restraint. The great intercollegiate games of the year, especially the football games, are taken too hard. It makes too much difference who wins or loses them. Public interest in them is somewhat too intense, and makes the newspapers talk too much about them. They began forty or fifty years ago as a means to an end, as a natural outgrowth of a rising interest in athletic exercises in the colleges, and as a means of stimulating and broadening that interest. How much the colleges of the fifties and early sixties needed stimulation of that sort is hard to appreciate in these times, when the penumbra has swung so far the other way, but we have eyewitness testimony about it from FERGUSON, GEORGE WILLIAM CURTIS, and others (see *Romans's History of the United States*, Vol. II.), who depicted the physical state of the college students and other young gentlemen of that day. So when the interest in sports began in the colleges it met a clamorous want, and the early games and races between the students of the older colleges were both pleasant in themselves and useful in helping along a very valuable movement.

A Means that Became an End

But now what was a means seems to have become an end. Instead of intercollegiate contests for the encouragement of college athletics, we have something more nearly like college athletics for the sake of winning intercollegiate contests. And we are even told that the two interests, instead of working together for good, have come to conflict, because the present existing standards of intercollegiate competition make for a partial separation from the mass of students of groups of specialists who devote the main part of their energies to preparation for the events in which they represent their college, while the mass of students, deprived of the stimulating company of these athletic leaders in their sports, tend to leave the whole business of outdoor sports to their fellows who excel in them. The extent to which this happens can easily be exaggerated, but it does happen considerably. The interest of the undergraduate world is far too much concentrated on the intercollegiate contests, to the prejudice of general interest and participation in the local games of each college, of which the modest aim is merely exercise and wholesome pleasure.

Contests Won by Graduates

Behind the vote of the Harvard faculty there is the recognition that the intercollegiate contests are not serving quite the purpose they ought to serve. But there are curious difficulties about putting them to rights. The endowed Eastern colleges are governed largely in large matters of policy by the opinions of their graduates, who in most cases elect representatives to their boards of trustees or overseers. The graduates are enormously interested in the intercollegiate competitions, and no group of graduates is easily persuaded that there is anything amiss with them so long as their own college keeps its end up or more in the competitions. The truth is, undoubtedly, that it is the graduates who really do the winning, because in the great intercollegiate contests the training and teaching of winning teams and crews call for a systematic method, continued steadily year after year, the maintenance of which requires maturity of judgment, experience, foresight, and authority such as are quite incompatible with the youth, distracted attention, and impermanence of undergraduate students. By the time an undergraduate learns his business as an athlete he is out of college. The undergraduates can supply the players and the oarsmen, but if victories are to be won, the brains and the method must be furnished chiefly by the graduates, or such teachers as they furnish. It may be said that it is unimportant who wins the intercollegiate games, and so it is. But no college likes to see its men beaten overmuch. It is important to the great Eastern universities to keep their lamps shining in the West, and draw students from there and from the South, and so correct their tendency to become local institutions. To this end the advertising value of success in sports, though not as great as is supposed, does still amount to something, and it does not help the reputation of a great college that engages in intercollegiate sports at all to be habitually beaten in them. It has to choose, finally, whether to pay the price of victory, or to restrict its participation in intercollegiate contests.

Fewer Contests Proposed

It is the latter alternative that the Harvard faculty seems to prefer, and it is the one that all the colleges in the end are likely to be forced to adopt. Where the group of contestants is strictly limited, the conditions of sport—length and method of preparation, gate money, paid coaches, and the like—can be more easily controlled by agreement than when the group is large. And the smaller the group, the less public concern there is as to who wins in any match, the less strain on individual contestants, and the less sacrifice of prestige by any college that is convinced that intercollegiate contests are overdone and resolves to crowd them back where they belong. Whether the Harvard graduates are ready yet to lock up their faculty, and how far the other New England colleges share the feeling that the Harvard vote implies, are yet to be seen. We believe, however, that in the end the Harvard suggestion of fewer contests, which implies smaller groups of contestants, will win in all the colleges, because in all of them the excess that it aims to correct is recognized by all the more thoughtful observers.

Edmund Clarence Stedman

By Henry Mills Alden

THE sudden death of Mr. STEDMAN, January 18, removed from us the last of that triad of American poets—STEDMAN, ALDRICH, and STEDMAN—naturally grouped together, because in their old New York days, in the fifties, they were personally acquainted and had the same associates, worked under the same conditions, all of them just beginning their careers at a time when the writers who made our earliest literature—LIVING and CROVER and POE—were passing away, and those of the New England group—WHITTIER, HOLMES, EMERSON, LOWELL, and LONGFELLOW—had reached their maturity. There were others who were also at that time winning their first laurels in these New York days—GIBBER, WILLIAM CUTLER, HAYWARD TAYLOR, DONALD G. MITCHELL, WALT WHITMAN, and WILLIAM WINTER. But the three poets we mentioned at the start are always thought of together by all American readers. They in a distinctive sense maintained the traditions of English poetry with which WHITMAN had broken from the first. How little while ago we were looking upon them as our young poets, and comparing their work with that of their elders! Now they too have passed.

Of these three STEDMAN was, if not the most ardently, still the most steadfastly, pledged to poetry by the bond as well as the gift of song—that bond

"Severe as fate, fixed and unchangeable."

He spoke of the poet as one "to whom rhythmic phrases come as the natural utterance of his extremest hope, regret, devotion. . . . At the rarest crises he finds that without an even beyond his will, life and death and all things dear and sacred are made auxiliary to the compulsive purpose of his art." This was his own case, "the poet's but." When he did not write poetry itself it was about poetry and poets that he seemed bound to write. His illuminative comment and creative criticism, in his treatises on the Victorian and American poets, and his genial and clear analysis of the elements of poetry are valuable contributions to literature.

In this respect STEDMAN was the natural successor to LOWELL, if without his lambent light and humor, also without his frequent whimsicality; he is firmer and more direct in his interpretation, with a more classic mould. His own insight made him the best of anthologists. While wisely academic, as the scholar must be, if the sanity of culture is to be preserved, his poetic sensibility was the ground of plastic thought and judgment, of which modernity was the characteristic trait.

It was an optimistic mindfulness. While others were bewailing materialism and other influences which in our time seem to move to vex the poet's soul, but to suppress poetry itself, he neither distrusted the present nor despaired of the future. His close study of the Victorian poets inspired him with enthusiasm and a dauntless hope. In an age in which the touchstone of science was at its worst he thought of it as at its best, requiring a tenacious rather than an injurious readjustment to its dispensation on the part of the poet and artist, who "keep pace with it, even forestall it, so that each new wonder leads to greater things, and the so-called dream of art is a victorious tradition."

"If my bark sails 'tis to another sea."

As to materialism, "the practical capriciousness of the age has no nearly satisfied its motive nor to begot the intellectual and aesthetic needs to which beauty is the purveyor."

In this same chapter from which I have quoted, on "The Future of American Poetry," STEDMAN says: "Our keynote accordingly should be that of freshness and joy; the sadness of declining races only, has the beauty of natural pathos. There is no cause for morbidly introspective views—no need, I hope, for dilatoriness—in this brave country of ours for centuries to come." This is distinctively STEDMAN'S keynote in his own poetry, which has the Hellenic directness and is as pellucid as Helicon. We do not see that any limitation is thus imposed upon it; but if there is any such limitation, it has its compensatory excellence in the poet's life and buoyant spirit. STEDMAN inherits rather from SHELLEY than from TENNYSON or from LAMARTINE, whom he so much admired. That SHELLEY was his earliest inspiration is intimated in his "Ariel," written for the centenary of that poet's birth, and, I think, the finest tribute ever paid to his genius.

"What joy it was to haunt some antique chisle
Lose as thine echo, and to wreak thy youth
Upon the song,—to feel the throbs which made
Thy bliss, thy truth,—
And thrill I knew not why, and dare not feel
Myself an heir unknown
To lands the poet treads alone
Ere to his soul the gods their presence quite reveal."

Like SHELLEY, STEDMAN inclined rather to the direct lyric than

to the more involved sonnet. But one sonnet written by him, "Moss Benliff," beginning

"Give me to die unwriting of the day,"

is now pathetically recalled.

He was, above all, the poet of heroic action and adventure. At least, these themes most stirred him to strong verse. Perhaps his experience as a war correspondent with the Army of the Potomac may have first kindled the martial enthusiasm which rang so clear in many of his early lyrics; but poems like that on MORGAN, the lieutenant, show how native to him was the spirit of adventure. After all, it is the free disport of his fancy in his poems of lighter vein, like his "Fun in Wall Street," that most delights us. He made his first impression with "The Diamond Wedding," published in the New York Tribune when he was barely twenty. The keen and brilliant delineation, with a surprise at every turn, which marked that poem, has been the striking characteristic of all his verse.

Mr. STEDMAN, with all his scholarly tastes and his supreme devotion to the poetic art, was natively a man of action. This led him into the adventure of finance early in the sixties. He often expressed his preference for this kind of relief to the literary life rather than for sedentary occupation in any professionally literary capacity.

STEDMAN'S career rovers essentially, within the compass of a single lifetime, the whole period of American literature. The opportunities thus given him for association with those of his own guild he from the first eagerly embraced, and he was always in the front of every undertaking in the interests of American literature and authorship. More than others, of his own generation, he has gone out of his way to give help and encouragement to young authors in whom his quick and sympathetic insight discovered the promise of genius. He has done this in an unperfunctory way or without discrimination, and the sequel has always confirmed his prevision. His letters to even the least intimate of his acquaintances, whether written in response or of his own motion, and in whatever stress of care or business, were never casual or hurried, never sparing in expression, but in full and positive terms as laudations at his nature. A man so worthy in all ways of love and admiration is for such generosity more especially beloved.

The Proposed London Pageant

AMERICANS who visit the British metropolis next summer will have an opportunity of seeing the most impressive historical pageant that has ever been witnessed. It will be recalled that last year a number of ancient English towns undertook to interpret their history to the eye in a number of scenes which reproduced the customs, manners, and costumes of various epochs. The series of historic revivals culminated in the Oxford pageant, wherein the university towns of PLANTAGENET, OF TUDOR, OF STUART, and of HAUSORIAN times were vividly depicted. All such exhibitions, however, will be outdone immeasurably next July by the exhibitions of London's past, for which preparations have been already begun upon a vast scale. To say nothing of legends which connect the city with the fall of Troy, and subsequently tell us of a British King LUG, whose name survives in Luggate, the verifiable history of London goes back some eighteen hundred years. We shall behold, for example, a pictorial representation of the colony of Londinium, when the town was Roman and pagan, and when a temple of Diana stood on the site of St. Paul's Cathedral. The industries, the commerce, the amusements, and the dress of the Roman colonists will be exemplified. The spectacle would not be complete without a gladiatorial show, or without a force of legions, equipped with shields, spears, and javelins, setting forth on one of the inextinguishable Roman roads to repel a barbarian invasion on the far northern border. A prominent attraction by his followers will be seen once more in London streets; and the litter in which Roman matrons were borne upon the shoulders of slaves to the galley which waited to convey them from the banks of the Thames to Gaul. After the Roman comes the Saxon epoch, the five dark centuries that intervened between the departure of the legions and the recapture of London from the Danes by ALFRED. Then, again, will be revived for us the Norman and Angevin period, when London streets were traversed by Crusaders on their way to Palestine; or those later days which saw the Wars of the Roses, and that memorable year when the sturdy citizens put out their longbows to follow HARRY OF LANCASTER to the field of Agincourt. Reproduced, also, will be the court of HENRY VIII, when Cardinal WOLSEY was still the all-powerful minister, and when ANNE BOLEYN, fresh from FRANCE, was the beauty of her beauty. The spacious times of Queen ELIZABETH will play, of course, a great part in the pageant. We shall witness one of the feasts which when the Queen's suitors came to pay their court; we shall see her attended by her favorites and courtiers—LEITCHFIELD, BUCKLEIGH, ESSEX, RALEIGH, each in his habit as he lived; neither

shall we miss a counterpart of a performance at the Globe Theatre, as it stood on the Southwest side of the Thames, when WILLIAM SHAKESPEARE was its actor-manager. Special attention will, no doubt, be given by the organizers of the pageant to the reigns of the STUARTS, the tragedy of CHARLES I., the grim interlude of the Commonwealth, and the wild pageantry of the Restoration. In the eighteenth century, also, London had thrilling moments that deserve to be recalled, as when she learned of MEXICO's victories, of the young Pretender's landing in Scotland, of VOLTAIRE's capture of Quebec, of the loss of the American colonies, of compensatory triumphs in India, and of the threatened invasions by the French of the British Isles. A place, also, in the panorama must be reserved, no doubt, for the first third of the nineteenth century, when travellers had to depend on the stagecoach and the sailing ship, and when ideas and manners differed so profoundly from ours.

Dr. WARREN, vice-chancellor of Oxford University, said the other day, at a meeting held in London for the purpose of approving the proposed commemoration of the city's past, that the pageant of last year at Oxford had educated the whole community, and had made Oxford realize itself. He impressed upon the committee the necessity of acting upon historical lines, and of including in the pageant representatives of every class of life, from the humblest citizens to those of high degree. Dr. WARREN said that the spectacle which he witnessed last summer in Oxford had recalled to him the remark of a Roman poet that those things stimulate us less which are heard with the ear than those which are presented to the faithful eye. But if the history of the relatively small university town was sufficient for a remarkable pageant, how much more voluminous, more glorious, more national, and more imperial would be the history of London! Mr. FRANK LANCELOT, who superintended the Oxford pageant, and has been appointed to organize the far more imposing exhibition in the British metropolis, predicts that London next July will be revolutionized. Business men will arrive at their offices in coats of mail; restaurants will be crowded with Crusaders and Cavaliers; on the tops of omnibuses will be seen historic men and medieval garments; human grandeur will drive by in motor-cars; and Queen ELIZABETH and her ladies will look forth from broughams. He is not dreaming dreams, he says, but foretelling precisely what London will be in the days of next July. The result, he predicts, will not only be picturesque, but the spectacle will arouse a wonderful feeling of sympathy between all classes.

Age and Achievement

We can, most of us, recall the childhood years when we looked upon the age of thirty as being the end of all real living; romance, adventure, achievement, must surely lie behind that tremendous accretion of years. We can, many of us, recall the absurdly youthful and unfinished sensations with which we passed the mark and found romance as alive as ever, adventures offering at every turn; achievement—any that should count at all—still hidden in the gray folds of the dim future, and life growing distinctly more interesting and more enjoyable day by day. The childish imagination can hardly be stretched to allow for the awakening of the impersonal, intellectual curiosity which is the mainstay of age, and which does more than any one thing in human life, unless it be an inborn capacity for love and trust, to make life an enjoyable affair. To be able to look out beyond our own part and portion in life and watch the rhythmic motion of life itself waving among its human puppets; to love form and color and sound, for their own sakes; to find the sincere record of other lives as instinct with interest as our own; to see, to hear, to smell, to perceive life widely—to be gain a broader youth than in childhood we could ever dream of.

"What is not done at thirty," said a famous jester, overlooking a gathering of his youth kith and kin, "is not done at all." There is truth and truth in the assertion. Genius, indeed, has usually given a sign—and most often an uncomfortable one—by thirty. But life is a long holder, and there are many runs before we reach the height of genius. Genius, it is true, is born. Who has vastly and greatly to outrun his fellows must start with an advantage, but talent is often of slow growth and late flowering. Music and poetry blossom early. There is hardly on record a musician who did not show signs of special hearing ability from the cradle. Poetry is born in the turbulent period between youth and manhood, and rarely blossoms long. SHAKESPEARE's genius, it is true, continued to produce to the half-century mark; but in the last six years of his life his power had lapsed. SHAKESPEARE, in his later years wrote metaphysics and not poetry. BUNSWICK, BYRON, and KEATS all died young—before exhaustion of creative energy had set in. WORDSWORTH was saved long to the world of utterance because he was a philosopher, and COLERIDGE'S inspiration was too paraesthetic to take into account here. But there remain many achievements that belong to the latter half of life. It has been frequently asserted that great prose cannot be written

before forty. Statesmanship is of late development. Scarcely all the vocations that call for the handling of men, for coolheadedness, concentration, self-discipline, wide experience, come to their own late in life. Women, too, develop mentally much later than men, owing, probably, to their more sheltered lives; the purity of their experiences, the narrowness of their culture, and the meagre demands made upon them. GEORGE ELIOT began at thirty-eight to write stories, and published her first novel when forty. Mrs. WASHINGTON was forty when she published *The Valley of Decision*, and thirty-seven when she published her first prolonged short story, "The Touchstone." But the record is broken by Pierre de Coulverville, an American woman who writes French well enough to have her book crowned by the Academy, who began her literary career after reaching the half century point. All women's important work was done after forty.

If we look over the names of the tale-tellers in the magazines, we find they are mainly young folk; but the average tale is a conventional product depending more upon tact and imitative ability than original inspiration, reflection, or wisdom. Two novelists have of late come into the field and won laurels well after the half-century mark was passed.

Another point that makes it difficult to say what is the right-fair age of achievement is that achievement is difficult to measure during a lifetime. It takes a generation or two to get a sense of comparative values. He would be a hardy adventurer in the realm of criticism who would to-day dare to deny that SHELLEY stood in the front rank with the greatest of all English poets; and yet SHELLEY died utterly uncertain of his own fame, and now would have been held enough while he was alive to set him beside even so second-rate a talent as BRYAN. JAMES THURGOOD, who died hardly known as himself, after being discouraged in 1881, has a fantastically widening and growing, so that one of our most distinguished and reliable poetic critics now says of his fame: "It may now be regarded as securely founded, for it is hardly possible, even for those who most dislike the spirit and tendency of his work, to deny that it is made and fitted for endurance."

Except in those forms of production which depend upon the emotional impulse, music and lyric poetry, then, the age of achievement might readily be said to lie between the years of forty and sixty-five. Product that should depend upon experience, perception, intellectual curiosity, and reflection could hardly be born earlier.

Life, the infinite and the illimitable, lies before us awaiting its garments of art; to be clothed upon with form and color and words; but who will weave the garment must first be able to look beyond himself. To see life simply and sincerely, to realize how much of it lies beyond us and insensitive to us, to accept—may, to have accepted—one's little place in the universe and ceased to wall and struggle for a larger point of vantage—these are the established conditions of doing cool work. And any sincere and simple record, conscientiously made by unerring, accident observation and reflection, is an achievement, adds to the documentary evidence of what this human life is and may be. Perhaps the less such document tends to the adding of comment, the drawing of conclusions, the more valuable it is.

"I set down what I see, what I feel, what I have lived, writing it as well as I am able," was J. K. HUTCHMAN'S account of his wonderful human documents. KEPLER, too, tells how in early youth, when he first set out to write, his method was to set down in black and white, without preference or prejudice, such matters as passed before him.

And to do this the same quality is necessary that we need for all or any living faith—faith, without which there can be no religious life, no human sympathies, no achievements. We live in a world where we are obliged to take the risks and trust to chance. The producer, therefore, must have faith that his perceptions are worth something; that they have their meaning, their reliability, their value in the scheme of things; and who keeps his mind and his perceptions plastic, who refuses to crystallize or settle into a mold, shall find that achievement does not belong to any particular decade of human life, but that the building up of the record may at any time attain the size, the beauty, the height, the value that we dub achievement.

Personal and Pertinent

THE death of WILLIAM L. ALDEN in Buffalo, on January 14, recalls a touch very familiar to readers of newspapers whose memories reach back twenty-five years. Mr. ALDEN'S reputation as the writer of amusing editorials in the sixth column of the New York Times was very wide and lively in its day. It was in its fullest vigor in the early eighties and faded until, in Mr. CLEVELAND'S first administration, he was appointed Consul-General at Rome, a place he filled with ability at a time of especial turmoil during Italy's struggle for independence. Afterwards he acted for several years as editorial writer for the Paris Herald. He was a

journalist of ability, the author of a number of well known books for young readers (*The World of Pinocchio*, and others), and a very genial man who is affectionately remembered.

EDWARD H. STRUBLE, who died on January 13, at Bangkok, was one of the most skillful, efficient, and accomplished diplomats our country has produced; a very unusual man with rare qualifications for public service. He was no more than fifty-three years old, and should have had many more years of useful work in him; but the bite of an insect poisoned him in Egypt two years ago, and though he got somewhat better of it, so that he returned last year to Siam, he did not recover. He came from Charleston to Harvard College in 1873, the first Southerner to find his way to Cambridge after the Civil War. He graduated in 1877, studied law in the Harvard school, came to New York, and contributed to the Presidential campaign of 1884 a pamphlet on "Mr. Blaine and his Foreign Policy," which led promptly to his being sought out by President CLEVELAND and appointed Secretary of Legation at Madrid. In Mr. CLEVELAND's second term he was made minister to Ecuador, and later was sent to Chile to succeed PATRICK EGAN and pour oil on the waters that had been seriously ruffled under Mr. EGAN's supervision. He made himself exceedingly useful and acceptable in Chile, serving as arbitrator in important cases; but MCKINLEY became President and STRUBLE returned to private life, and became, in 1898, Professor of International Law in the Harvard Law School. When the King of Siam lost his adviser and decided to call an American Mr. HAY recommended Mr. STRUBLE, who, in 1903, got leave of absence from Harvard and accepted the call. He accomplished some exceedingly important negotiations for Siam, but the tale of his remarkable diplomatic achievements cannot be told in a paragraph. The great secret of them was that whenever he went he was found trustworthy—able, qualified, tactful, and just—so that tangles smoothed out at his touch and difficult disputes were adjusted as they should be. If he had lived he would surely have been recalled to the diplomatic service of his own country, and to a Democratic administration his experience and qualities would have made him exceedingly valuable and insured him greatly increased distinction.

Correspondence

THE LIQUOR MEN'S LICENSE LAW

BROOKHAVEN, N.Y., December 25, 1907

To the Editor of Harper's Weekly:

Sir.—There appeared in a recent issue of HARPER'S WEEKLY an article entitled "The Rising Tide of Temperance," which commiserates at some long counties, municipalities, etc., which have voted "dry." It also quotes other statistics furnished by the National Temperance Society, some of which, to say the least, are questionable, but nowhere in the article would an unprejudiced reader find any evidence of the growth of genuine temperance sentiment.

The title of the article, as well as of the statistics referred to, is in fact a misnomer. It is true that in every State in the Union where local option elections have been held the "dry" element has been victorious in a majority of the elections, but with what result? There is no evidence to show that as the result of those elections a single drop less of liquor is consumed in those communities, nor that a single voter has changed his habits in regard to the use of liquor.

The author of the article in HARPER'S, in summing up "What Prohibition has accomplished," remarks that the liquor traffic is prohibited in one-half of the territory of the United States by law, that the National Temperance Society has distributed one billion two hundred million pages of printed matter advocating prohibition. He neglects to state, however, that, despite this tremendous campaign which has been going on for years, the consumption of liquors in this country has steadily increased year by year, and that this growth of consumption has been greater in so-called "dry" sections than elsewhere. What prohibition has really accomplished is the frustration of "blind tigers" where the drinker gets the vilest kind of liquor in some dirty bowl instead of drinking like a gentleman in a clean, inviting place; the jag tide by exposure, so that the recipient does not stop until he has drained the jug instead of taking a drink or two at a time, as he would at a licensed bar; the resorting to any means, foul or otherwise, to get liquor; the making of sneaks, hypocrites, liars, and perjurers of ordinarily good citizens.

Experience in the States which have been operating under prohibition laws bears out these statements. In prohibition States drunkenness is prevalent throughout the length and breadth of the State, and the fines collected annually for liquor law violations exceed those of any other State. In fact, the system of collecting fines there practically amounts in licensing the "blind tigers." The decent people of Maine are ready to vote back licenses as soon as the matter is properly agitated.

In prohibition Kansas, the drug stores are doing a thriving liquor business, so much so that many of them are only nominally drug stores, but really started to avoid the liquor law. If one reads the monthly reports filed by the druggists of Kansas, he becomes imbued with the idea that there is a great epidemic of colds and stomach disorders in that State, and that it is a very unhealthy place to live. The explanation of all this, however, is that

healthy citizens swear to having ailments in order to get liquor for medicinal purposes.

I have indicated above that some of the statements used in the article on "Temperance" are not facts. Take the reference to the decision of Judge Armeson, of Lebanon, Indiana, that the saloon is a nuisance *per se*, and the statement that the liquor monster dared not appear from this decision. The truth of the matter is that the decision was very promptly appealed from and equally as promptly reversed by the Supreme Court of Indiana, which upholds the right of the State to grant licenses, and denies that the saloon is *per se* a nuisance.

Another statement is that the prohibition movement has been made in a businesslike, unostentatious way. That it has been businesslike there is no denying. In every district, even in the smallest hamlet, money has been collected to conduct the campaign, so that the campaign funds of either of the national political parties fade into insignificance by comparison. How this vast sum is spent there is no accounting, but certain it is that hired agitators, organizers, and professional "converts" get a large share.

That there have been no spectacular crusades, however, is not the case, but, to the contrary, the anti-saloon war has been waged with line and cry and the raising of actual hysteria. Witness the proceedings of frenzied women and innocent school children preceding every election. Witness Carrie Nation and others who emulate her example.

And yet, prohibition being such a failure, the fact that the prohibitionists, who constitute but a small minority of the people, should be able to wield such influence over the vast majority of the conservative element of society and secure their votes against licensing saloons, is very significant. How is this possible?

The answer is found in those politically incubated and protected dives and disreputable saloons existing in almost every town with line and cry. Therefore, to protect their much greater places of this character, controlled by bees who have fastened themselves on the liquor traffic, is a very small percentage of the total number of saloons, yet they have brought such odium on the business, and as a reward for their dirty political work have been allowed to defy the law so flagrant, that in order to extenuate them the people vote out the saloons, making the innocent suffer for the guilty, and substituting for the evils of these dives the evils that result from prohibition.

But is there no alternative? The decent, self-respecting liquor men have waited patiently for society to solve this problem, but have waited in vain. Therefore, to protect their much greater and at the same time aid society morally, they have leaped into the breach, and offer a solution which for lack of a better name is called The Model License Law. The liquor men are very much in earnest in this matter, and confidently predict that if laws embracing their suggestions are enacted, the saloon as an object of odium and a cause of agitation will be a thing of the past, and there will be no regrets on the part of any one, except the prohibition bachelors and those few sincere but mistaken believers in prohibition.

MODEL LICENSE LAW.

First.—All licenses now outstanding to continue in force unless cancelled by a majority of voters.

These licenses should be transferable from one to another, as any other property is transferable, or left as a part of an estate, as the good will of any other business may be left. This form of license is similar to that enjoyed by all other lines of trade, and if granted to the retail liquor dealers it will, in our opinion, remove them at once from active participation in politics. Under the present system the saloonkeeper is at the mercy of the political boss and of the authorities elected or appointed for the purpose of issuing licenses each year, and as long as this continues he must of necessity remain an active factor in all political fights.

Second.—No license should be issued in the future until the proportion becomes not more than one for each 500 of population, and thereafter they should be issued in such proportion as society or common sense demands.

Third.—A license should yield a good annual return to government, but it should not be excessive, for several reasons; principally because it encourages, and in some cases almost compels, the handling of impure liquors, the sale of alcoholic beverages to intoxicated men and to minors, and the violation of laws in regard to closing at certain hours, etc.

If society imposes upon the saloonkeeper, the saloonkeeper will impose upon society.

Fourth.—All licenses to retail liquors should be clear, unambiguous contracts, between the State and the individual, and they should provide that conviction (first offense) of the violation of law should carry with it a thirty days' suspension of the business of the licensee, and the second conviction should work immediate cancellation and, furthermore, that the holder could never be licensed again to retail liquors in that State.

Fifth.—A penalty should be provided, in all laws governing the retail liquor trade, against any minor over eighteen who represents himself to be of age in order to procure intoxicants.

The idea that is paramount in these suggestions is to give as great value and security to a license as possible, so as to encourage the utmost obedience to the will of society, as expressed in the laws on the statute books, to remove the liquor dealer from politics by making him liable to continue business dependent on his own will and acts; and to provide the immediate and inevitable cancellation of license upon conviction of the violation of law.

I AM, SIR,

STANLEY BUCKNER,
Secretary of the Publicity Committee of the Model License League.

Chief Croker on Duty

Fighting Fire With Politics

THE PLIGHT OF NEW YORK

By WILLIAM INGLIS

THE baleful influence of corrupt politics in undermining the Fire Department of New York, until this influence shall have been removed, the city stands constantly in danger of a conflagration beside which the Boston, Chicago, Baltimore, and San Francisco fires would appear insignificant. The danger is imminent and it is very great. Much of the hose used by the Fire Department is rotten, and—what is much more serious—discipline in the department has already grown lax, as shall appear by examples from the official record, given at length in this article.

The burning of the Parker Building, at Nineteenth Street and Fourth Avenue, on the night of January 10th, caused the death of \$1,000,000 worth of property.

past six and seven o'clock, but could not detect the place from which it came. In making several trips through the building, but still was unable to discover the fire, which, of course, was gaining headway every moment. He had no keys for the fifth or sixth floors, so that in his anxious journey up and down the stairs he was still unable to explore the offices and stores in his search for the trouble. It was not until eight o'clock that the crackling of flames and the thick outpouring of smoke showed that fire was raging in the warerooms of the Deemer Woollen Company, on the sixth floor. The watchman ran down six long flights of stairs to the street, but in spite of all his haste at least five minutes passed before he gave the alarm.

The fire companies responded promptly and stretched in their hose. They soon found that the rear portions of the fifth and sixth floors were ablaze and the flames were rushing to the front.

Fire Commissioner Lantry

three fire-fighters, the loss of millions of dollars' worth of property and the crippling of two great lines of transportation for two days. Yet these losses are not in themselves so appalling as the demonstration afforded by the disaster that the rich city of New York is not equipped to fight fire. The taint of politics has weakened the Fire Department.

The most striking feature of the conflagration was the failure of the hose that was being used against the flames. Forty-five lengths of hose burst on the first night of the fire, which exceeds all records for this sort of breakdown. Yet the rottenness of the hose is only one incident of many that go to show that the efficiency of the New York Fire Department, which was for years the best in the world, has been sadly impaired of late by the paralyzing influence of politics upon the discipline of the organization. Battalion chiefs, captains of companies, even the men in the ranks, will admit in confidential talks with their friends that discipline has waned, and that the morale of the force has suffered grave deterioration. Either the department must be purged of politics or it will fall into decay. Indiscreetly the men are as good as ever—brave, cool, resourceful, ever ready to give up their lives at the call of duty—but that wonderful human machine of which New York long has been so proud is already running heavily and with constantly decreasing efficiency.

The Parker Building fire, with its loss of life and property, will have served a useful purpose if Mayor McEllan, as a result of the investigation now being made, shall succeed in exterminating politics from the department.

A glance at the history of the Parker Building fire will afford a graphic example of the working of the department handicapped by politics. There are only fifteen hundred fireproof buildings in New York, as the word "fireproof" is understood by fire engineers. The Parker Building was one of a type built ten or twelve years ago. There are one hundred like it still in use in New York city—houses, that fall far short of fireproof qualities.

The Parker Building was twelve stories high. Its roof 165 feet from the ground, its ground area about 150 by 150 feet, or 17,000 square feet upon declining space taken out by an L-shaped part of the structure. The house was designed as an office building, but for years the floors have been occupied by manufacturers, merchants, and printers. At six o'clock in the evening the tenants depart. On the evening of January 10th the night watchman smelled smoke between half-

The Parker Building Conflagration which, through the Death of Three Firemen and the burning of rotten Hose, shook New York's Faith in its Fire Department

Incidentally it may be remarked that though the building was excellent in construction, which was abundantly proven by its skeleton holding together against the ravages of the flames from roof to cellar, yet it is held to be of faulty plan and design. The most serious defect was the lack of fire stops, or division walls. Each floor presented 17,000 square feet of undivided area over which the fire roamed unchecked by any substantial obstacle. There were flimsy partitions of glass and wood here and there, but these only whetted the flames and carried them along like fuses. The two sets of stairways and two elevator shafts were not enclosed by fireproof walls or doors, and the fire quickly spread into them and up and down as far as they reached.

For the first few minutes after the flames arrived they fought the flames on the sixth floor, but in spite of all their efforts the fire crept steadily toward the front of the building. The insurance patrolmen chopped through the doors into the fifth floor, intending to stretch their waterproof covers over the stocks of merchandise, but they were met by a gush of flame that quickly

gases and superheated air an explosion invariably occurs. This is the "back draught" so dreaded by the workmen, for it is as destructive as a blast of gunpowder, and not only hurls men about like dry leaves, but, if the gases are sufficiently confined and compressed, rends the stoutest buildings. There were several minor explosions of this sort in the Parker Building, but none of deadly effect until 9.30 o'clock, when the firemen had been in the building for one hour and a half.

Then it was that a mighty rear shock the tall structure, and a heavy cylinder press came crashing down from the eleventh floor. The 1 beams of steel had been weakened by intense heat, for they were enclosed in fireproof material on only three sides. There were five cylinder presses on this floor, weighing some fifteen tons, causing a pressure more than twice as heavy as the one hundred pounds to the square foot allowed by law. Some one had blundered in allowing that floor to be so frightfully overloaded—some official whose identity may be established some day after long official investigation. When the "back draught" explosion rent

The Menace of the Fire-wrecked Parker Building which halted Two Main Transportation Lines

TRAFFIC IN THE SUBWAY UNDER FOURTH AVENUE WAS STOPPED FOR FEAR THE BUILDING WOULD FALL. THE STREET TIMBER CRIBBING, LAID TO PROTECT THE UNDERGROUND LINE, INTERRUPTED THE OPERATION OF THE SURFACE ROAD

drove them away. The firemen delivered streams of water on the fifth floor, too, but the blast had taken too firm a hold to be easily checked, and continued to march toward the front. A great deal of valuable time was lost in trying to bring the water tower into play. The top section was jammed, and even when a second tower arrived in response to the second alarm its stream was of little help. For the weight and the angle at which the water was delivered weakened the stream and made it difficult to direct its course.

The flames spread from floor to floor. Flying up the chimney-like elevator shafts or licking through the outer windows as they leaped up from one story to another. After one hour of fighting the blast had spread throughout the building above the fourth floor, and there was no hope of extinguishing it. For all the real good they could accomplish, the firemen might as well have walked out. But it is not the habit of these men to retreat, and they remained in the building doing all that men could under the circumstances.

It is a curious thing that in the matter of explosions the so-called fireproof buildings are much more dangerous than any other. They are so compactly put together of iron, steel, and terra cotta that the gases and superheated air generated by the combination of flooring and other woodwork rapidly accumulate, especially on the upper floors. When, through the smashing of a window or a breach in a wall, a fresh draught of cold air blows in upon the

the steel beams, long densely overloaded and now weakened by intense heat, the heavy cylinder press must crashing down with the force of a gigantic projectile, rending and crushing everything in its way to the cellar.

Two firemen and one insurance patrolman were swept down to torture and death under the mass of glowing steel. A dozen others fought and writhed their way out of the twisted wreckage, some with half their clothing torn off in the struggle, and all bearing severe bruises on their bodies. Fifty men came tumbling out upon Fourth Avenue, and no further effort was made to fight the fire from within the building.

Streams were thrown from the street level, but they were not effective above the fifth floor; several streams were played from an adjoining hotel, and an attempt was made to pump water to the top of the American Lithograph Company's building, eleven stories high, on the other side of Fourth Avenue, and to force the streams one hundred feet vertically across the thoroughfare. This was of little effect. The fire burned until nothing was left of the Parker Building but its capricious skeleton of steel. The best efforts of the Fire Department had only delayed its destruction and prevented the spread of the flames to the adjoining property. The Subway and the Fourth Avenue surface line were closed to traffic for several days for fear that the wrecked building might collapse, but after a committee of engineers had examined the charred skeleton and pronounced it secure, the restriction on traffic

was removed. From the beginning of the fire to its end the most conspicuous and alarming incident was the frequent bursting of the hose. Length after length collapsed under the strain. There were forty or more of these breaks in one night. For many months similar occurrences had marked every fire in New York, but this time was an extensive and important that it attracted many observers, and they talked a great deal about the poor hose. Of course, it would be somewhat unreasonable to expect all the hose to be flawless. Moreover, the ordinary vicissitudes of the service, the rolling of wheels over it or the jab of the end of a horse-whip, etc., are apt to make weak spots in the very best hose. But such a series of breakdowns in the vital parts of the fire-fighting apparatus had never before been observed. Instantly the thing became a scandal. The firemen smiled grimly at all the clamor. They knew that the Bureau of Supplies for the Fire Department had long been in charge of a man named Ryan, who was once removed after an investigation, in the course of which much bad and cheap hose was found in use. After a long fight the courts ordered the reinstatement of Ryan, but he was not replaced at the head of the Bureau of Supplies until Commissioner Lantry came into control of the department.

The reporters surrounded Hugh Bonner, now Deputy Fire Commissioner, formerly Chief of the Department, and one of the most efficient firemen that ever lived.

"There is no use denying that the hose is bad," he said. "We do not trust the hose at the 100-pound pressure required by contract, because we are afraid it will not stand the strain."

When one remembers that hose in use at a fire often has to sustain a pressure of from 185 to 210 pounds to the square inch, this state of affairs is hardly appalling.

Chief Edward F. Croker, of the Fire Department, was interviewed next day. Ordinarily he is one who answers "Nothing to say" when the reporters question him. But this was a different matter.

"There is a lot of — poor hose in the possession of the Fire Department," he said. "The poor hose is not confined to one section of the city, but scattered all about. We should have 150,000 feet of hose, and the money equivalent to that would be \$150,000. If such a fire as that in the Parker Building should take place again with a high wind blowing while the department is handicapped with bad hose, there would be danger of a very disastrous fire. To fight such fires we need the proper appliances. We asked for an appropriation of \$150,000 for hose alone last year. We asked for \$25,000. We shall have to do with such hose as we have until we get the necessary appropriation."

The Merchants' Association of New York wrote to Mayor McClellan asking him to investigate the charges made by the Board of Fire Underwriters, that by means of cunning changes in the specifications for hose in recent contracts made by the Fire Commissioner, various and enormous lengths of hose were excluded from the competition. In the association's letter to the Mayor was this startling paragraph:

"The extraordinary inefficiency of the hose—as once more demonstrated at the recent fire on Fourth Avenue—is such that, had a strong wind been blowing on that occasion (as was rather to be expected at this season of the year), that scorching conflagration which the merchants of this city so much fear might very well have occurred."

The Board of Fire Underwriters, through its Committee of Fire Prevention, made a searching expert examination of all the fire hose in New York, and made public the findings nearly a month before the Parker Building fire. The Underwriters' committee declared that a test of the hose on hand was not permitted, because the Fire Department officials feared that much of it would burst. The committee reported that of 1838 lengths of hose on hand on January 1, 1907, purchased in 1901, 1902, and 1906, 351 lengths, or 17½ per cent, burst during the first ten months of 1907, while of 1597 lengths on hand the same date, purchased between 1903 and 1902, only 281 lengths, or 19 per cent, burst. The much older hose was obviously of better quality.

Between January 1 and December 1, 1907, hose burst at the rate of thirty-seven lengths a month. In forty-three alarm or greater fires during that period 409 lengths of hose burst, or over eleven at every fire.

The Fire-ravaged Parker Building, a Monument to Three Lives and a Property Loss of Millions

In 1905, the committee reported the specifications were changed so as to favor certain manufacturers. In one case cited, out of 247 lengths of hose furnished by the Windsor Fire Appliances Company, 116 lengths burst during the first ten months of 1907. The company, although under bond, did not make good the loss, and action against it has been dropped. The president of this company was Michael P. Laughman, now a deputy commissioner under Commissioner John H. O'Brien, of the Department of Water, Gas, and Electricity.

The Underwriters' committee concludes its report:

"It is evident that the hose in the New York Fire Department is deficient in quantity at two-thirds of all the houses, more especially in important districts; that much of it, especially recent purchases, is defective in quality; that these deficiencies and defects are tending to increase, and that no suitable provision has been made to remove or correct them. With such weak appliances to aid the firemen, no department can be expected to satisfactorily perform the work naturally expected of it. We wish to acknowledge the hearty cooperation of Chief of Fire Department Edward F. Croker, in affording us every facility for collecting information for the purpose of this investigation."

Mayor McClellan has ordered the Commissioners of Accounts to investigate the scandal of the rotten hose. Firemen declare that the origin of it can be summed up in one word—politics.

Politics, too, is at the root of the woful crippling of discipline that has taken place of late in the Fire Department. Every chief, every company commander, will admit that political pull has weakened their control over their men. These officials will not publicly complain. It is doubtful even whether they would admit, upon examination under oath, the facts which they freely acknowledge to friends in conversation.

"Rotten hose!" exclaimed a veteran fire officer to this writer. "That isn't the worst of it. The whole department is rotten with politics. There's where the trouble lies. The hose is bad. But it's a great deal worse to see officers lose control over their men because the men rely on political pull to help them out when they get into trouble through breaking the rules."

As a matter of fact every man in "the business," as the fire-fighters cheerfully call their arduous and deadly vocation, is well aware that nothing serious ever happens to a fireman who breaks the department rules if he has the backing of certain politicians or is a member of a certain political association. It is notorious that in one well known political club in an up-town assembly district more than two hundred firemen are members. Why? Well, because it will do a fellow no harm to belong to the same pack with a certain great man whose word is powerful in the department. Firemen are not shirks. Probably not two men out of the two hundred joined the association with the fixed idea of avoiding the consequences of misbehavior. But it is notorious that various members of the pack have been allowed to break the rules of the department and have got off with very light punishments even when their violations of the rules were gross.

There is no possible doubt that political "pull" has wrought havoc all through the department. At an up-town fire since the Parker Building was burned there was serious delay in sending firemen into the blazing house. One of the newspapers next day reported that two firemen refused to go up the ladders. The battalion chief who commanded them met a friend next day who asked him if the newspaper story was true.

"Well," replied the chief, "they didn't exactly refuse to go up into the house. They only hung back a lot."

"And you had to order them to go up several times before they went?"

"Well, yes; they were pretty slow in getting started."

"I'd have had them down at headquarters under charges the very next day," was the friend's comment.

"Yes, I suppose you would," said the chief, "but that would only show that you don't know how the business is run nowadays. Any battalion chief who takes any of his men down on charges knows that he's putting himself on trial, not the men. They get off altogether, or the worst that happens is the stopping of a few hours' time off. Then they go back to their quarters and give the chief the laugh. The only way to manage nowadays is to do the best you can."

"You know it's all not to make excuses for a fireman who won't go into a burning building, or hangs back waiting to be ordered twice. You know there isn't an officer in the business who orders his men into a place that he won't enter himself. It's the interference of these politicians that makes men hang back—the talk of these rank outsiders that we ask the men to take risks that are too great. Why, the Fire Department is full of risks, like the army or the navy, and the man who won't take chances ought to keep out of the business. You know perfectly well that we don't take unnecessary risks, or ask the men to do so, but all this outside interference is paralyzing the department. It kills the authority of the officers and upsets the men."

Although no Fire Department official would say a word for publication as to the interference of political guild with discipline, this writer obtained from the department record the history of several cases which show very clearly that some influence has caused the imposition of trivial punishments for very grave offences. In considering these cases—which are selected from many of like nature to serve as illustrations—one should remember that because of the small number of men in each fire company it is of the highest importance that every man should be on hand whenever required, and in perfect mental and physical condition. Any fireman who is drunk or absent from duty strikes a fatal blow at the efficiency of his company. Here are some typical offences and the punishments administered by Fire Commissioner Lastry:

Fireman John J. McGraw, Engine 40, November 24, 1907, conduct prejudicial in good order and discipline, conduct unbecoming a fireman. Twelve hours' leave of absence deducted.

Fireman Joseph P. McCoy, Engine 74, December 4, 1907, absence without leave. Twenty-four hours' leave of absence deducted.

Fireman John J. Hannon, Hook and Ladder 17, December 8, 1907, absence without leave. Twelve hours' leave deducted.

Fireman Patrick A. Clarkin, Engine 52: December 3, 1907, absence without leave.

December 4, 1907, absence without leave and under the influence of liquor.

December 5, 1907, absence without leave and neglect of duty.

Twenty-four hours' leave of absence deducted, and Clarkin transferred downtown.

Fireman Alfred J. V. Hyde, Engine 81, December 6, 1907, violation of rules and regulations in leaving quarters without permission, and on December 7, 1907, absence without leave and neglect of duty. Twenty-four hours' leave of absence deducted.

Fireman Martin W. Renck, Engine 52, December 6, 1907, absence without leave. Twelve hours' leave of absence deducted.

Fireman Martin W. Renck, Engine 52, December 15, 1907, absence without leave. Judgment not yet recorded.

There are hundreds of cases like these in the recent history of the Fire Department. In the case of Clarkin, of Engine 52, it is easy to trace the effect of his trivial punishment upon Renck, of the same company. Clarkin was found guilty of leaving his company without permission and staying off on a drunk for three days. For this capital offence he lost twenty-four hours' leave of absence and was sent downtown where there is much more work for firemen. Imagine how useful such a man will be in a company that is called out to fight fires anywhere from six to sixteen times a day!

And like a corollary to the Clarkin case comes the case of Renck. On December 8, the day after Clarkin returned to Engine 52, from his spree, Renck wandered away from Engine 52 without leave, and all it cost him was the forfeiture of twelve hours' leave. Naturally Renck drifted away again nine days later. Imagine the feelings of the other men of Engine 52 at work in a burning building with the knowledge that the safety of their lives may at any moment depend upon the efficiency of such men as Clarkin and Renck! How can a company do its best work with such elements of weakness in it?

Scores of cases could be cited to prove still further the malign influence of politics upon the New York Fire Department. The lives and property of millions of citizens are in the keeping of this body of men. The career of politics is eating out the life of the department.

STRENGTHENING THE DEFENCES OF THE PHILIPPINES

Swinging Aboard the Quaternaster's Lighter at Manila one of the Fifty-ton Coast-defence Rifles shipped from Brooklyn last September

THE largest shipment of ammunition and war supplies ever made by the government of this country is now being rushed to its Insular Possessions.

The Pacific steamship *Manchuria*, which sailed from San Francisco, on January 7, carried as part of its cargo 6,000,000 rounds of ammunition, consigned to the army in the Philippines. Thousands of the new Springfield rifle have also just been shipped to the Far East. The transports *Sherman*, *Frazer*, and *Bir*, now in commission on the Pacific, will, within the next ninety days, carry an amount equal to that taken on the *Manchuria*. Aside from this great quantity of ammunition of war the transports will also carry more than 100 rounds for each of the fifteen 10-inch coast defence guns at Manila, and the fifteen 10-inch coast defence guns at Subig Bay. There will be an equal quota for the six new 14-

inch guns and the fourteen 12-inch rifles, and a bountiful supply of shells for the six and eight inch guns and mortars.

In addition to the shells, guns, and rounds for small army rifles, the government is making hurry shipments of contact-exploding torpedoes and detaching harbor mines for a thorough mining and debarring of the harbors of Subig Bay and Manila. About \$1,000,000 worth of mines, torpedoes, and submarine bombs are included.

The normal supply of ammunition for the Philippines is about 3,000,000 rounds yearly for small arms. The quota shipped to the islands each year has not been depleted, but on the other hand has considerably accumulated because there has been no warfare. With this fact in view, the government's action in rushing an auxiliary supply—equivalent to the needs for six years—is attracting much interest.

Another Chance for Cuba

By G. M. P. MURPHY

Late Lieutenant 17th U. S. Infantry

I direct that the installation of the President and Congress of Cuba to be elected next December, and the turning over of the island to them, take place not later than February 1, 1909

— PRESIDENT ROOSEVELT TO SECRETARY TAFT

RICH English planter thrust a box of matches under my nose one night in Havana. "That," he said, "is the reason why Cuba can never be independent."

"You mean a leg?"

"I mean," he said, coolly, "that if your troops withdraw I can pay ten pesos to a couple of riggers to fire a few shots, and back you come. There is too much money in this island for you to experiment any longer. The Cubans have had their shot. They threw it away. You mark my word, they will never get another."

The fact be stated is one that grows on you more and more as the days go by in Cuba. The ultimate doom of independence is chafed in the streets and joked of in the cafes of Havana. It is a foregone conclusion to the hard riding, heavy handed ranch owners of the country. It is a probability that forces itself on every one who is in close touch with the spirit of the people. No one doubts the honesty of the promises of our government. But every one doubts whether Cuba will allow those promises to be fulfilled. If satisfaction is saved it must be saved in spite of itself. But the government has decided to grant it another chance.

The open facts of the case support this theory. Our troops sailed from Havana, leaving behind them a stable government, clean cities, rising buildings, newly paved streets, and business growing by leaps and bounds. Since the war \$100,000,000 of American capital alone has been invested in Cuba. Yellow fever had been stamped out. The infant republic was on its feet, and above it were the strong arms of its great neighbor. When our troops again sailed south the government was overthrown. The capital was almost in the hands of bandits. Crops and houses were burning. The whole island was in a ferment. Business was dead. Millions of the people's money had been squandered in graft. Yellow fever was returning. The island towns had sunk back into their ancient state of filth. All parties rushed with joy to greet Mr. Taft—a crowning, pitiful confession of their inability to govern themselves.

Why was all this change? It was not that the party in power had disastrous principles. You carefully examine the political situation for plottings, and you find hardly a splinter of difference among them all. Palma's policy of government was the same as that of his Liberal opponents who were marching to drive him from the capital. It was not that the President was corrupt. Palma may have been weak. He may have been unwise in choosing his advisers. But he stands out at least as a clean, honest man who did the best he knew how to do. The fault is in the old Spanish idea that a public office is a private graft. The cry of the Liberals to-day is not for reforms in administration or for punishment for abuses. It is for office. An election in Cuba is not a contest of ideas. It is a contest of leaders for political plums. A revolution is not the uprising of a wretched people. It is a disorderly mob stirred to murder and pillage by a disappointed candidate. A prominent foreign business man in the interior told me that the weaker party in his province is deliberately seeking to go into insurrection if an election is held in June and the party is defeated, in order to at least cause the Americans to resume the reins of power and to take from the successful candidates the enjoyment of their victory. The leaders will sell their independence to gratify the spite of the dog in the manger. The story of the shame of Cuba is the story of her selfish and unscrupulous politicians.

The pity of the whole situation is that the great majority of the plain people—the peasant class—in Cuba are peaceful men and women who ask nothing but unsolicited permission to cultivate their little fields and smoke their cigarettes, and sip their rum of an evening. After being present at revolutions in South and Central America, and after studying closely the Spanish American character in several countries, I have no doubt that in these alluring states the disease comes from a handful of ill-hatched conspirators and their bands of blackguard adventurers who frighten the simple farmers, one by one, into their ranks. Even in Venezuela, with her shocking record of rebellion, the armies are recruited with the lash and the rifle butt. The particular ill fortune of Cuba is that she has such a large population of negroes, who, naturally lazy and lawless, and having nothing to lose, but everything to gain, are the immediate tools of every leader who aspires to go into office through

the brush. A Cuban veteran with several wounds and a noble record of real valor—he once shot with his pistol two of his own men to force the rest to charge a Spanish column—said to me, almost with tears in his eyes: "Ah, the people—the poor people—they are so good. There is nothing bad in them. It is their wicked leaders. If they could be put together and shot we could save Cuba."

Unfortunately such a select execution is out of the question, and the problem that must be solved is how, in the circumstances as they are today, can our government keep its pledged word to give Cuba another chance. In doing this we have a larger obligation to meet than the mere abandonment of the island to the Cuban people. Our duty is to establish the governing power that it can not only protect itself against its native political enemies, but that it can as well crush the plots of the foreign business interests. It is a question whether any value should be attached to the persistent reports of conspiracy among these interests in connection with the recent upheaval. But the situation now is distinctly changed, and the moneyed classes in general appear not manifestly determined to force, if possible, the continued presence of United States troops. They form a potent factor to be considered in the solution of the difficulty.

To properly discharge this duty will consume a much longer time than political conditions in the United States may permit. Our premature abandonment of Cuba in 1902, forced by ill-conceived and on the part of those at home and by a desire to cater to the opinion of Europe, was largely responsible for the present trouble in the island. The Cubans are a people untrained in self-government and ignorant of any feature of representative government except the opportunities for unbridled disorder. They have learned in a day the lessons that our own colored race has been fighting for and absorbing since the old folk moot days in the forests of northern tierceury. It is a question whether they can ever grasp wholly the principles of a republic, but at best we can hope to train them only for infinite patience and by the expenditure not only of money, but of life and time. But we can boast before the world that we have kept our pledge. On the other hand, if we settle down with the honest purpose of doing our task well, and take ten or twenty years if need be to repair the shattered machinery of the island government, to strengthen it, and clean it, and rivet it afresh and to train skilled mechanics to handle it, we shall perhaps turn out something that may at last become a State. We shall hear the criticism of Europe and the burning ignorance of distant nations at home, but we shall have fulfilled our duty as humane men.

I do not mean that through all this period the actual presence of our troops throughout the island will be necessary. The first half of the provisional government should be to reorganize, equip, and train a rural guard so strong that it will be a real weapon in the hands of the administration of the State. The second half, during its building picked officers and uncommissioned officers of our army to teach it the lessons the British taught the Egyptian regiments that have themselves so well at Omdurman. It should be as rigorous that its central station in the various districts should always have a sufficiently large body of men for the purpose of drill and discipline. Detachments sent out from these rendezvous should not be left—on they are now—for long periods out of from military instruction, but should be regularly relieved by new men and withdrawn into the central station as they are needed up and kneaded into shape again. The rural guard should be made as soon as possible a power—for without power the rural element of Cuba cannot be beaten into decent order. As soon as this force is strong enough the American troops could be concentrated into a brigade camp near Havana, where they would be in evident readiness to strike if necessary, though the guard would be learning the real game through playing it for themselves.

Even this would be but a beginning, and the kindred tasks of instructing in medical wisdom and political administration and the simple laws of self-government are no matters of days or months, but of years. Whatever you the latest theorists at home and equally honest enemies of Cuba may find, when our transports set sail loaded with troops, the real friends of the republic, who believe in the plain people and its path to a better way, are the enemies of the authors with sorrow. When next they fall in Cuban waters they will never again be altogether lifted.

Fishing for the Great American Play

A DIALOGUE WITH MR. DANIEL FROHMAN, TOUCHING INCIDENTALLY UPON OYSTERS AND APPLES

WHEN will it arrive, this long anticipated drama of America, which is to crowd out the novel, and, as the medieval mystery play, interpret the mind of its own generation?

Up above the Lyceum Theatre, far above the mainline crowd which came streaming in to see "The Third," one of the season's most conspicuous successes, a third man was seated in a large apartment before a desk piled high with manuscripts, searching for the Great American Play and eating apples.

Mr. Daniel Frohman probably knows as much about the drama, every phase of it, as there is to know. He has made actors and actresses. He knows the times from the gold, the bubble reputation; and yet he sat there like some pearl fisher among his oysters, eating apples and searching among stacks of manuscripts for the Great American Play. This hopefulness was the most amazing feature of the spectacle—the *sure-foot* which survives continuous disappointment; the unconquered optimism of the pearl-fisher who knows that somewhere, hidden among the oysters, lies the pearl.

"Managers get many plays from authors which are well constructed and tell a fairly interesting story with dramatic logic," he said, "but they do not dig deep enough to meet the demand of a modern audience."

Mr. Frohman himself dug deeply into his pile of oysters. "Now here is a three act play of great promise," he said, "but it has only one event, spread over three acts, culminating in a single climax, whereas it should present a series of surprises. So it will have to be returned."

"Are all plays read that are submitted?"

The question was unnecessary. One could see the thought in Mr. Frohman's mind before the *monosyllable* "yes" escaped him. Does the fisherman jerk his rod upward when he feels a nibble at the bait? Mr. Frohman resembles everything less than a fisherman, seated in his apartment, high over the mainline crowds, reading his manuscripts with inexorable patience, and rating apples.

"A play should have continuous action, all the way through," he said.

"I thought the tendency of the modern drama was toward subjective action?"

"When I allude to action," said Mr. Frohman, "I don't necessarily mean physical movement and pided play. A successful play must contain continuous struggle and battle; the struggle of love with duty, to name the most frequent example. The characters may be sitting in their chairs, talking pleasantly together, and still fulfil this purpose. And the action must go forward by leaps and bounds, from one climax to another. The ideal play will have the fewest characters, but it will hold the attention so that you won't know whether there are six or sixty; and two persons upon the stage will hold the audience entranced, as in the Greek drama. Like the Greek characters, too, they will appear as puppets upon a dark background of necessity, victims of the circumstances which they have helplessly brought into existence."

"How does the American drama stand at present, as contrasted with that of foreign countries?" he was asked. "If it has merit of its own, why do you import plays?"

"This year we make a error. The best of our authors have failed by the wholesale," said Mr. Frohman. And then the fisherman's optimism broke forth in him. "But I have great hopes of

the American drama," he added. "I have produced a great many American plays in the past. As a stock manager, I provide plays from any source. A play is not a matter of geography. The question is of obtaining one of sound, wholesome, universal theme."

"The Frenchman is the best dramatist, but the subjects he chooses are not palatable to English or American audiences. The English are better dramatists than Americans for producing plays of broad and general human interest; but the American play is a greater money maker, because the subjects drawn from native sources win greater success than any foreign play."

"An English critic recently characterized the average American play as childish."

"Yes, that has some truth. But, remember, the average American play is not intended for New York, but for the country, where the audiences are mostly composed of young people who are less sophisticated. The English provincial drama is very similar."

"Have you detected any noticeable improvement during the past decade; any approach toward the Great American Play?"

"The last decade has witnessed a great improvement both in the character of plays and their interpretation. The plays have a more sophisticated quality and bigger emotional interest, while the obvious *dramatisme* has largely disappeared. The acting has improved because of the revolution in stage methods, especially the introduction of electric lighting. When the actors played before rows of candle lights, they had to exaggerate; hence the absurd soliloquies and asides which have given place to expression and quiet action."

"But this has weakened the imaginative quality of the drama such as we had when stage resources were weaker. The modern American play needs adjuncts which are superfluous in the case of Shakespeare."

"Do you think our actors compare favorably with the English?"

"They are quite as good. At present, however, there are no essentially great actors on the English speaking stage. Irving was the greatest actor of his time, after Booth, but he was not a great actor."

"Actors here," he continued, "have a greater opportunity than actors in the world. England continues to demand as her supply employed in the profession. London is the great English goal for dramatic talent, while the provinces offer only a meagre existence. America is so big and has so many cities of magnitude that the English actor finds his best chance is ever here. Thirty per cent. of our actors are out of the country."

"What line of work offers the best chance of success?"

"The line in which there is the least supply, and the greatest demand, both here and in London, is what is called 'leading business.' We want young men and young women who can play responsible heroes and heroines. They have to encounter so many different conditions for success, not only the success which comes from art, but that which is produced by personality. The greatest successes are those which come from personality."

"What do you think of the critic's influence upon the theatre?"

"On an average the critic fixes pretty well the standards by which the entire community judge the play. Favorable criticism will help a good play, but not a bad one. Adverse criticism has no effect on the success of a play which has qualities of popularity and interest."

"The critic should not concern himself with the monetary prospects of a play, but with criticism of the dramatic work. The critic has no concern with the business side. He should devote himself to plays which are successful though they defy the conventions of dramatic art and treading on the dignity of the drama."

"But are there any reasons of dramatic art? Have they not been relegated to the lumber room of the dramatic utilities?"

"There is the artistic construction of the story, the taste in the choice of a subject, the acting. Then, while the utilities of pure and time don't matter, there must be nifty of action. These are reasons on which criticism should be based. Instead of this, it is often based upon the individual writer's own personal predilections. The best critic is he who has the most catholic taste and experience. The greatest drawback of the stage the critic can stand by is that which inhibits the public from subjects questionable in their moral or religious significance."

Among the many subjects spoken of, this idea seemed constantly to find its way to the surface of Mr. Frohman's thoughts: the need for a clean, wholesome drama, of universal and elemental appeal.

"A play should appeal to the universal heart of the public. Plays that are dramatic brids on behalf of exclusive subjects neither elemental nor wholesome draw only a limited audience, and for that reason there has no popular following in America. All plays that succeed appeal to every class of humanity. The Great Play will be clean, wholesome, elemental. But there are always fluctuating periods in the course of a century; and this is one of the valleys."

There was something of pathos in the words, and the picture of a man used and slow in his approach, high above the mainline crowds, waiting for the Great Play with the imperishable optimism of the fisherman, and eating apples.

Honor Among Thieves

By ASHBY DEERING

ILLUSTRATED BY HAMILTON WILLIAMS

I receive a sudden summons on a lonely afternoon, especially when it is the afternoon of December 24, a season of emotions which no ordinary man can afford to ignore. It was so with me when a bellboy bustled in upon the privacy of my usual note-book, Christmas gloom with a note addressed to me in an unfamiliar hand, and that one impatient word of superscription—"Answer."

"My dear Mr. Linton," the note began, "I have heard of your remarkable powers of observation through an acquaintance who regards you highly, not as a detective, but as a scientific investigator of crimes that are perpetrated from motives unrequited in law books; likely enough the crimes of curiosity. I shall esteem it a personal favor if you will call on me immediately to consider a theory of mine along this line, and whether you prove or disprove my notion, I assure you that the reward for your services will be made adequate to any valuation you may set upon your holiday time."

The note was signed by a former magistrate who was reputed to be immensely rich, not only in dollars and cents, but in human wisdom, and endowed with a heart "still warm beneath the snows of experience."

He had retired from the bench under something of a cloud. His fellow jurists had grieved his heart with imputations that he was a snit, but he had dismissed their case against him with a noble gesture, true to his last grain of common sense. And then he had sent for me. At once I understood that the old man wished me to vindicate his judicial seclusion, and he witness to these families of justice which may ever shine forth on the cold milestones of the court record. And as I turned up the collar of my storm-coat on the walk to his home I reflected that his memory was still good enough to hark back to the mental record of the one pennyweight of evidence that he had long ago dropped into the balance to save a prisoner's reputation for uprighteous.

"Ah, I was expecting you, Mr. Linton; I knew you would come," said the veteran as he shook my hand in the library. He was almost tottering. His clasp was feeble, yet the mould of his bony fingers suggested a certain strength of hoary purpose. I felt that his mind had outlived his physical decay.

His very next sentence completely opened my friendly hope. "Mr. Linton, you are the one man," said he, "the only living criminologist who can find out what I wish to know. I have sent for you to engage your talents to discovering the germ of shoplifting."

There I began to believe the stories I had read about the madness of Justice Waddington, but I let him ramble on.

"I am positive," he continued, "that shoplifting is caused by a specific germ especially prevalent at this season of the year. And I am equally confident that you can find that germ and segregate it from all other germs of criminal curiosity, and thereby aid me in the last humane task I shall ever set my mind, heart, and hand to. I am preparing a book on the 'Crimes of Curiosity' which will

He asked if I would go in quest of the germ of shoplifting

be, long after I am dead and gone, an authority in the law libraries of the whole civilized world, and I am morally certain that shoplifting is chief among these psychic phenomena. This disease is not akin to kleptomania, and is but slightly related to the sin of

A note addressed to me in an unfamiliar hand, and that one impatient word of superscription—"Answer"

acquisitiveness; rather it is an inordinate desire to contemplate in private the things displayed in public, beyond the reach of the average purse or the willingness of the private spendthrift.

"I have met in my experience on the bench many young girls of gentle breeding who do this thing in the spirit of adventure—girls and older women whose consciences are a law-work of slender threads, with frequent open spaces that exemplify the world, the flesh, and the devil.

"Their parents are rich and indulgent, often influential enough to safeguard them against the common penalty, and they learn to regard misdeeds as a luxury afforded by riches. I mean riches in the abstract, devoid of liveliness."

He paused to know whether I followed his cynical reasoning, and then he asked me if I would be willing to go in quest of the specific germ of shoplifting. In his distorted enthusiasm he imagined that this malignant microbe could be fixed in a microscopic slide and photographed. He suggested that I go out among the Christmas shoppers, watch them, and follow them, in order to accumulate a battery of germs, later to be classified as criminal curiosity cultures.

To please the aged lawyer I said I would undertake the commission, although I hadn't the slightest idea of doing so. As I left the house, however, I fell to wondering what sort of reason had won out and thus deranged his once brilliant mind. The more I thought of the riddle he had propounded the more it fascinated me. And at last I found myself in the cheerful hurry-burry of a great department store, scrutinizing the Christmas shoppers with a suspicious eye, for a shoplifting germ, if my old friend was right, lurked on every one present, marked in plain figures.

The place was crowded with the cosmopolitan classes of the great city. They were buying and dickerings and pecking their change. Presently I observed a young man wrapped in a big overcoat secret something he had not paid for. I could not determine what the article was, but as I watched this polite specimen of the genus shoplifter I was again amazed at the deftness of his action and the rare discrimination he exercised in the selection of his stealings. He took only small and costly articles, and I was not far wrong in estimating his plunder at several hundred dollars. All his takings were dropped into immense pockets of his great coat. I followed him almost to the door, through which he hoped to make a quick exit. There we both met the unexpected. I saw the thief, loaded like a pack horse and puffing under his blanket coat, suddenly stand stock still in front of a beautiful woman, handsomely dressed.

From her muff protruded the edge of a large roll of gorgeous ribbon. It was on the point of falling. If it fell, instant detection was inevitable, for a foot-walker stood only a few feet away. Just beside our bulky friend of the long pockets stood an eagle-eyed filled with porcelain vases. A deft and almost imperceptible movement of his elbow brought one of these to the ground with a crash. The floor-manger made a frantic rush to the spot, while the people about scattered. At the same moment the shoplifter in the storm-coat made a step toward the beautiful lady and shoved the offending roll of stolen ribbon back into her muff.

I heard him say a word to her in a laughing whisper: "My dear, you should not be so coarse in your work." Then, calmly surveying the turmoil, he walked unconcerned out of the place. To my dying day I shall never forget the look of gratitude with which that lovely creature followed his orderly retreat. Quickly she moved as if to join him, and I saw her watch his progress through the confusing crowd, hesitating until she had lost him.

The snow was coming down in a Violette frolic. Large, damp, sticky flakes fell on those pale patrician cheeks and melted in her tears. For a moment I hesitated which to follow. Which would you have followed? Almost involuntarily I went after the man in the storm-coat with the shoplifting pockets. I tapped him on the shoulder, and when he turned a startled face to me I said,

"You made a friend to be proud of a moment ago. Did you see the grateful look she gave you? Did you notice she followed you out and wished to thank you? Wasn't she a beauty? Wouldn't you like to know her?"

These and more questions I propounded to him. I tried to make him understand that he had won my approval too, and that such

"My dear, you should not be so coarse in your work."

a fine action as his was never wanted even on a witness before the fact, but on the other hand had done much to excuse the vagaries of kleptomania.

"Yes, I would like to know her," he said, regretfully. "I have never before had an opportunity to meet such a charming woman under such peculiar circumstances. But, sir, you do me a grave injustice to suppose that I would presume upon so slight a favor to make the acquaintance of a lady in distress. I am not a snob."

I told the story to the ex-magistrate just as I have told it here. He listened without betraying the slightest emotion, turned over papers on his library table until he had found some unshuffled sheets of his great masterpiece on the "Crimes of Curiosity," and painfully he scrawled this line:

"Section III.—Honor Among Thieves."

GERALDINE

By T. L. M.

A MAIDEN tall was Geraldine—
The kind who's known as "aperty,"
Her bosom measured "sixteen,"
Her chest (inflated) "forty."

She played a lovely game of golf;
And crowds— and crowds—attended
To see the way that she drove off,
Twas really very splendid!

Her form at tennis was "the thing,"
And it was even kinder
She'd come put gloves on in a ring—
They also say she "sprigged."

One day, by some romantic hap,
(Cap'd, maybe, had thundered)
She met a very little chap,
Who weighed less than a hundred.

Imagination never could
Of him make an Apollo,
His legs were thin as saplings of wood,
His chest was very hollow.

An easy chair he had a mind

Most often to be led in
He shivered in an autumn wind
As aspen leaves are said to.

Now old Dame Nature, so it seems,
The species often varies,
And then uniting two extremes
Thus reconciles contraries.

This love match, therefore, may have been
In one sense quite prophetic,
Although he was so very thin,
—And she was so athletic.

Yet there's a circumstance quite slight
It might be well to mention—
A matter which it seems but right
To call to your attention.

It shows that oftentimes we endure
From sinister facts too funny:
The truth is, Geraldine was poor,
And he was black with money.

AMERICA'S LARGEST STADIUM

By FRÉMONT RIDER

THE interest of the great arena the building of which has been stimulated by the modern renaissance in athletics, is the new stadium recently completed for Syracuse University. It is the largest and finest structure of its kind in America, approximating the ancient Greek models, and it accommodates forty thousand spectators.

The site selected is striking, an elevation overlooking the city of Syracuse and, in the distance, Onondaga Lake. The stadium itself is an oval, 670 feet by 475 feet, the area covered being 6-1/2 acres, or about five times as large as the famous stadium at Athens, recently restored for the Olympic games. The entire structure is of reinforced concrete of the most massive character. The tiers of seats rest on huge piers extending in places twenty feet below the ground level. Five hundred tons of reinforcing steel and twenty thousand cubic yards of concrete were used.

The cabled field in the centre is surrounded by a quarter-mile cinder track, and on the south side is a 220-yard straight-way

course which passes out through tunnels at either end of the stadium.

Above the upper tier of seats, on the ground level (for the entire stadium is an excavation), is a twenty-foot concourse, nearly one-half mile around, where automobiles can be parked to watch the games.

The work has been going on for more than three years, most of this time being consumed in the excavation required, amounting to nearly 400,000 cubic yards. In the concrete work, the contractors showed great ingenuity and success in the solution of the many new problems which arose.

The idea of the stadium originated with Chancellor James R. Day. The funds were supplied by Mr. Julian D. Ayres, and the cost has already exceeded half a million dollars. A new gymnasium, connected with the stadium by tunnel, is now under way. This, it is understood, will cost another half million. It will be the largest and best-equipped gymnasium in the world.

THE DEPENDABILITY OF THE AUTOMOBILE

By HARRY W. PERRY

THE idea that the automobile is unreliable still persists in the public mind and seems likely to continue for a long time. It is kept alive by the joke-makers and artists who, as a rule, are years behind the times, and who find it so hard to originate jokes that they fall back for "revenue" upon subjects that are worn threadbare, and are long out of date. There can be no denial that in the early days of the development of the motor-car there was plenty of justification for all the jokes that were printed, but nowadays nobody sees an automobilist or his chauffeur stretched flat on his back under a car tinkering with its mechanism, and for every machine that is seen stopped by the roadside for adjustments of the machinery or repairs to a tire one sees dozens of cars running perfectly. It is very rare, indeed, that an automobile has such a serious breakdown as to require towing to a repair-shop, or to necessitate its abandonment by the passengers. Such stoppages as have to be made on the road are usually only for simple adjustments, the cleaning or changing of a spark plug, connecting up of a fresh ignition battery-cell or the substitution of a new inner tube for a punctured tube in a tire. The changing of tires does not take more than a few minutes nowadays, as most cars are fitted with quick detachable rims that are easily and quickly manipulated.

A popular misconception is very hard to eradicate, yet it needs only a little thought to convince any one that automobiles are to-day more reliable than electric street-cars, horse-drawn conveyances, or even railroad locomotives and cars. Hardly a day passes in any of our large cities when one does not see street-cars disabled by the blowing out of fuses, short-circuiting of controllers, burning out of motors, or failure of brakes to work properly. In many cases long lines of cars are stopped, and traffic on the whole street is blocked. Such incidents attract only casual notice, however, and some annoyance if one happens to be inconvenienced, but they are so common that they have come to be considered an almost inevitable accompaniment of electric traction, and the jokesmiths never think of making them the subject of humorous paragraphs and sketches.

That horse-traction is almost equally undependable will probably be admitted when the reader is asked to recall the many horses he has seen overcome by heat in summer, or suffering from injuries received by falling on icy streets in winter. Having always been

accustomed to the general use of horses, such sights are not novel to us, and we think less of the predicament in which the passengers find themselves when such things occur than of the sufferings of the animals. Suppose for a moment that events had been reversed; that for centuries we had travelled about in motor-cars, and generation after generation had seen goods transferred in motor-trucks, and packages delivered only in automobile delivery-wagons. Imagine the popular interest that would be taken in the first attempt to introduce and use horses as draft animals, and the jokes that would be made over their propensity to take foolish turns at a fluttering newspaper and run away, on the one hand, and, on the other hand, the columns upon columns of letters of complaint that would be written to the editors regarding the use of such dangerous animals in the public streets, and the filthy condition of the streets arising from their use. What crowds a healthy horse would attract, and what an example of unreliability would be a horse that could not walk on a street covered street.

It will be seen, then, that the reason why the temporary disablement of an automobile on the road formerly attracted so much attention from a quickly gathering crowd of curious spectators was because automobiles themselves were new and were therefore objects of great interest. As the only time when the man or boy in the street got a good close look at them, and particularly of the engine and machinery which were always concealed when the cars were running, the breakdowns became strongly impressed upon the minds of the people. But as the machines were improved and their number increased, the public became accustomed to seeing them roll through the streets and along the roads, and their passage left little impression—so little that the earlier impressions were not dispelled, and people who have given no serious thought to the matter still associate the automobile with breakdowns and roadside repairs and adjustments, rather than with a merry party of pleasure-seekers out for a day's run or a family off for a tour of hundreds of miles through mountain districts.

Next to the steamship, the automobile is the most reliable means of mechanical transportation that we have. Railroad locomotives would be breaking down repeatedly on the road if they were given no more care in the shops than the motor-car gets. The traveler is likely to overlook the fact that when he makes a trip by rail, say from New York to Chicago, he does not ride behind the same

The Kind of "Going" that tests the Endurance of any Car—yet Roads in this Condition are successfully negotiated every Day

Conquering Time and Space under elemental Conditions on an Indiana Road between South Bend and Chicago—A Tourist's Nightmare come true

engine during all of the journey, as he would do in an automobile. The car is in its hauled over each successive division of the road by a fresh engine just from the roundhouse or shop, where it has been carefully inspected, wiped, oiled, and put in good condition. In railroad practice the divisions are from one hundred to two hundred miles long. During the run the engineer notes, on a pad of blanks provided for the purpose, all of the things that he wants done to the engine before he takes it out again, and these are attended to carefully at the end of the division. When an engine has run about three hundred miles it is given a general overhauling, the fire being drawn, the boiler-tubes cleaned out, the joints re-packed, and adjustments made. Yet, despite all this careful attention, there is often trouble on the road due to leakage of steam through badly packed joints, leaky boiler tubes, brakes that do not work smoothly, or more serious faults that develop in the machinery.

Compare such conditions with those that obtain with an automobile when on a long tour, in which the same engine and machinery are run sometimes over one thousand miles or more of public wagon-roads—not, it should be remembered, on rails laid on a carefully graded and leveled roadbed. The car is run one hundred or one hundred and fifty miles a day, often through heavy dust, mud and sand, at the end of which the owner or his chauffeur is weary from driving, and is much inclined to give the engine only the most necessary attention, merely wiping off the worst of the accumulated dirt, filling the oiler, gasoline tank, and radiator, and testing the batteries and coils. Instead of anticipating trouble with the transmission, brakes, steering gear, and bearings, the driver usually waits until something goes wrong with them on the road, and only so much care is given the machine as will keep it running until the end of the tour, when it is sent to the garage for a thorough overhauling and tuning up. Such methods could not be followed with a locomotive, whose every part must be inspected at the end of every run of one hundred to two hundred miles, whether trouble has developed or not, to guard against delays and possible accidents on the road.

It is really remarkable how persistently people stick to the idea that the automobile is not to be depended upon,

when it is remembered that every summer during the last seven years, one or more national competitions in reliability and endurance, open to all who desired to enter and abide by the rules, have been held over courses of several hundred miles by representative organizations, such as the Automobile Club of America, the National Association of Automobile Manufacturers, and the American Automobile Association. Besides these, there have been many similar events conducted by local clubs, as the Long Island Automobile Club, the Chicago Automobile Club, and the New York Motor Club. Wide publicity has been given to these in the daily press and in all of the many automobile papers, with carefully compiled tables showing the excellent performances of most of the competing machines, many of which finished with perfect scores showing that they had had no involuntary stops on the road occasioned by machinery troubles, and had arrived at every official checking point on time. It is necessary to recall only the more recent of these contests to present evidence of the high state of perfection to which the automobile has been

brought in the dozen years of its development in America. By all odds the most significant of these was the Sealed Bonnet Contest, conducted last June by the Automobile Club of America. The announced object of this event was "to afford the opportunity of demonstrating, under severe touring conditions, without adjustments, repairs, or replacements of any kind, excepting tires, the continuous running qualities of the modern stock touring-car now offered to the public." To this end, strict rules confined the entries to regularly catalogued machines, and required that on the day before the start each car be inspected by the contest committee, and official seals be affixed to the bonnets and all operating parts thereunder, to transmission gears, axles, wheels, springs, coil-boxes, and battery-boxes. After being sealed, the cars remained in the custody of the committee at all times, except during the hours when they were being driven on the road under the watchful eye of official observers, until the close of the competition. The most exacting of all the rules absolutely prohibited the making of any adjustments, repairs, or replacements of any kind, except tires, during the whole period of the contest, which extended over the four days from June 19 to 22 inclusive. Even the tightening

Minimizing the seriousness of Break-downs en route by the Use of detachable Rims that may be easily and quickly detached

Some of the Forty-one Cars which, of Forty-seven Entries, covered 600 Miles in a recent Endurance Contest without undergoing a single mechanical mishap

of a nut, or the fixing of a broken battery-wire was sufficient to cause the disqualification of any contestant from further participation. As a further guard against the making of repairs or adjustments on the road, one rule prohibited any tools, except tire tools, being carried on the cars or by any passenger, except the tools in the regular toolbox, which was officially sealed like the bonnets.

All of the cars were required to cover a designated course of one hundred and fifty miles a day, and the high-powered runabouts had to go an additional twenty-five miles each day. To secure diversity of road conditions and topography, the runs on the successive days were from New York City to Poughkeepsie and return, Pawling and back, West Haven and back, and Bridgeport, Danbury, and home again. During each intermediate night the cars were placed in the care of the committee in the Club garage, and the contestants were not allowed to go near them. According to the rules they were to, the cars had to average not less than thirteen to seventeen miles an hour, and, on the other hand, were subject to disqualification if they exceeded the legal speed limits in town and country.

It is difficult to imagine more onerous conditions than these, and, as a matter of fact, it was the belief of not a few well-informed persons in the trade that the nature of the contest was too severe, and that the final showing would do more harm than good to the reputation of the manufacturers' products.

The results were a complete surprise, and were thoroughly gratifying. That of forty-seven cars that started in the contest, forty-one covered the six hundred miles in the four days without having any mechanical trouble whatever. Of the six that were disqualified only one met with a serious mishap, having broken a cam shaft. The man forgot to fill his crankcase with lubricating oil before starting, and another forgot to put a nut on the steering gear, which worked loose. One machine was put out of the contest because of a broken battery-wire, another owing to a short circuit in the ignition system, and a third because of a broken

valve spring. All of these were minor troubles that were remedied in a few minutes.

By way of comparison, it is well to consider for a moment the possibility of making a six-hundred-mile journey behind a team of horses without so much as having to stop to fix a broken strap, buckle, horse axle nut, or replace a cast shoe; or in a trolley-car or railroad train without a moment's delay due to trouble with the machinery, or having the engine inspected, cleaned, and adjusted.

But the remarkable showing made by the automobiles in the Sealed Bonnet Contest only served to spur the manufacturers on to seek further laurels. Several of the cars that made perfect scores in that event were entered in the Glidden Tour, with their operating parts similarly sealed, and were driven from Cleveland to Chicago, and thence through Indianapolis, Columbus, Pittsburg, Baltimore, and Philadelphia, to New York during a two-week run in July. One of these reached Pittsburg, and another got to Bedford Springs, east of the Smoky City, with seals unbroken and without making repairs or replacements.

One particularly notable example of reliability was that of a car that covered nearly 3000 miles with bonnet, transmission, coil, and battery-box sealed. After going through the Sealed Bonnet Contest successfully, it was driven from New York to Chicago, where it took part in the Chicago Automobile Club's one-hundred-and-seventy-five-mile endurance run in July, and was then driven back to New York, all with the original seals intact.

In the light of these facts, which can be easily verified if any one cares to take the trouble, it seems as if it were high time that every well-informed person recognized and acknowledged the reliability of the automobile—both foreign and American, since most of the cars that competed in the Sealed Bonnet Contest—themselves original American ideas—were of domestic manufacture, while those that made the more remarkable performances mentioned were American cars.

HOW TO ADD TO THE LIFE OF AN AUTOMOBILE

"MAYBE could be added to the life of an automobile and to the satisfaction that it gives to its owners," says an experienced manufacturer of motor cars, "if people would bestow upon the automobile but a part of the attention they give to other property. Take, for instance, the item of winter storage. Few people who store their cars for the winter think of taking the trouble to put the car on blocks and to remove the tires from the wheels. The insides of the rims, too, should be cleaned and a coat of enamel applied to the inner surfaces where

the tire rests. This will prevent corrosion and will leave the rim smooth. A good idea, also, is to give all polished brass surfaces a coating of heavy oil, such oil, for instance. A tide of ordinary grease, however, will preserve the lamps, the radiator, steering post, and other parts that would be injured through corrosion. The tops should be oiled and cleaned with oiled waste, to keep it smooth and flexible. These rules find but little application in this section of the country, since we have a rather open winter which permits the use of the automobile practically all the year.

THE FIRST REPUBLIC
IN AMERICA

The question, "What was the first republic in America?" the average reply would probably be, "Why, the United States, of course!" And yet this Union of States, founded upon the Declaration of 1776, was not the first republic to be established in America; there was an earlier one, that died soon after its birth, of which little or nothing is said in our American histories.

In 1761 France, being then engaged in war with England and realizing that she could no longer hold the province of Louisiana, had, through the French ambassador at Madrid, offered a memorial to Spain setting forth her inability longer to support Louisiana, and praying for the continuance of Spain to supply its necessary wants and to prevent it from falling into the hands of the English, against whom it stood as a bulwark for the Spanish colonies of the West. The negotiations finally resulted in Spain's taking over the province; but she evinced small interest in her new possessions, whose vague boundaries to the north and west were not even defined in the act of cession. The people of Louisiana were in the peculiar position of a colony abandoned by the mother country and unclaimed by the new sovereign. Indeed, even the fact of the cession was not made known to them—that is, not until the year 1764.

Deeply grieved by the action of their mother country in thus disposing of them without their consent, the local government submitted the matter to a council under the leadership of Nicholas Chauvin de Lanfrière, the attorney-general.

Lanfrière called a convention of the people at New Orleans while the new Spanish governor was on his way to the colony. The convention adopted resolutions and drew up a petition to the king, Louis XV., wherein they protested their loyalty to the French crown and prayed that they might not be cast off among strangers. One Jean Milhet was appointed delegate to lay these resolutions and the petition before the king.

Milhet was not, however, successful in his mission, for he did not gain the ear of Louis. The best he could do was to lay the matter before the powerful minister, the Duc de Choiseul, who, though Milhet was not aware of it, was in fact the secret means of the negotiation for the transfer of the colony. Choiseul, while promising to lay the matter before the king, never, as a matter of fact, did so, and the disappointed delegate returned home without having accomplished the object of his journey.

Then the people of Louisiana resolved upon a radical course. On the night of October 28, 1768, the rebels took possession of the French forts and the gates of the town in the name of the Republic of Louisiana. No resistance was offered them. The newly appointed Spanish governor took refuge on a ship, which subsequently sailed for Havana.

The Late Edmund Clarence Stedman

AN APPRECIATION OF THE POET BY HENRY M. ALDEN APPEARS ON PAGE 7 OF THIS ISSUE

On October 29, 1768, the council at New Orleans adopted a formal declaration of independence, officially styled the colony the Republic of Louisiana, elected Lanfrière "Protector," and drew up a written constitution. This interesting government lasted from October, 1768, until July, 1769, when a Spanish squadron of twenty-four vessels, with a force of 2000 men, arrived at New Orleans. The new republican state was overthrown and five republican leaders, including Lanfrière, were put to death. The Republic's official going ahead is believed to have his Breton counterpart in the council of the country he intends to visit. This will save a lot of trouble and annoyance.

The travelers say that automobiles are still a great deal of a novelty in Denmark, and that there are only a few hundred in the entire country. In Denmark motorists are restricted entirely to the state roads, and no car can be driven over any but the roads designated by the government.

The motorists say, also, that they had more trouble on their return at the United States Customs House, because of their red tape methods, than any place in Europe. It is suggested to motorists that they have an invoice made out for their car on the other side, to show that it is clear, or they will have to give a bond to that effect on their arrival on this side.

VALUABLE NOTES ON MOTORING IN GERMANY

KAISER WILHELM, of Germany, has his own ideas about motoring, and therefore has made his empire the most liberal in the world toward motorists, yet he also has seen to it that this liberty is costly.

Two persons who have just returned from a four months' European motoring tour, mainly in Germany and Denmark, praise the roads throughout the German Empire, declaring them to be even better than the best that their own State of New Jersey affords.

The one drawback they encountered was the matter of expense. Gasoline costs upwards of sixty cents per gallon, and before one is allowed to run his car he has to put up a sizable tax. For a 12 horsepower car the motorist pays \$10 for one month, \$20 for four months, and \$40 for one year. High priced cars are correspondingly more. When the tax is paid a number is given to the motorist by the police, but before this it is necessary for him to show an American driver's license, countersigned in the United States by the German consul. Failing to have this, the owner must make a trial run before a selected specialist, and he pays the specialist \$10 for looking at him. After that, \$1.50 is added

Music and the Opera

TETRAZZINI, AND OTHER MATTERS

By LAWRENCE GILMAN

THE most gratifying aspect of the recent debut at the Manhattan Opera House of Madame Luisa Tetrazzini, who has of late been making so mighty a stir in the world of music, was the overwhelming assurance of popular success which attended it. The statement is made deliberately. It has frequently been pointed out on this page that Mr. Hammerstein in the exhibition of fresh conceptions and novel personalities. But to achieve such ends, which are not apt to be either certainly or continuously remunerative, is an expensive—at best a precarious—undertaking. It is well, therefore, that Mr. Hammerstein can count, for the furtherance of his other aims, upon the substantial good-will of exhibiting Madame Tetrazzini to a responsive and unfailing public. Yet it is, perhaps, worth noting—and of this Mr. Hammerstein himself is perfectly aware—that in producing, for example, Charpentier's "Louise" for the first time in America, he has accomplished a feat far worthier of discussion and of public interest than is his selection and display of the singer who is now filling the Manhattan with glad and exultant crowds. But Madame Tetrazzini's emphatic success with the opera-going public is merited. She possesses a voice which, in its upper octave, is truly extraordinary in its limpidity and its plangency, and she is remarkably skilful in her singing of ornate and forced music: she is gifted, and she is vocally agile. For the vast and inalienable public which, as between hearing Violetta sing "E-ta" in all while she stoops to gather up her skirts and hearing Mr. Gilbert as *The Father* in the last act of "The Louise," would in fact prefer the former, Madame Tetrazzini is a singer who is amply qualified to afford both satisfaction and delight.

Mr. Bassi, of the Manhattan Opera House, as "Canto" in "I Pagliacci"

Mr. Vincent d'Indy is one of the half-dozen living composers whose outcries are entitled to serious consideration; therefore the performance the other day, for the first time in America, of his new symphonic poem, "Jour d'été à la montagne," was an event to be noted, even were the music less remarkable than it proved to be. Mr. Darnstoch played the work at the fifth evening concert of his New York Symphony series in Carnegie Hall, in the face of a popular and critical hostility toward Mr. d'Indy's productions which might reasonably have cautioned a less independent conductor than Mr. Darnstoch to leave the score untouched.

The work, a tone poem in three parts, was completed in 1903, published in the following year, and produced by Mr. Colonne in Paris, on February 18,

1906. The music was suggested by a prose poem of Roger de Pampelonne's, and this is printed as a preface to the score. A translation into English of certain passages may be given here as an indication of the intent of the music. Mr. de Pampelonne's meditations are comprised under the three separate heads, "Dawn," "Day" (Afternoon), and "Evening," and the music, in its three divisions, corresponds to these subjects of the text. A few excerpts from each will serve as an index to its music:

[Dawn:] "Awake, dark phantom! smile to heaven, majestically, for a ray in the infinite rises and strikes your brow."

"Awake, valley! who convulsed the happy groves and sleeping cottages; awake, singing. And if, in thy chaste, sighs also reach me, may the light wind of the morning hours gather them and bear them to thee. . . . The shadows melt away little by little, before the invading light. . . . Laugh or weep, creatures who people this world. Awake, harmonies! God hears! . . ."

[Day:] "How sweet it is to cling to the moon-like sides, broad hairdress of heaven! How sweet it is to dream, far from the turmoil of man, in the smiling majesty of the mountain! Here, all earthly sounds mount in harmony towards my restful heart; here, all becomes hymn and prayer. . . ."

[Evening:] "Night steals across the all-covering sky, and the waning light sends forth a fresh breath softly over the weary world. Soon all things sleep beneath the shadows, all appears ghostly in the valley; yet all still lives. . . . O Night! Eternal harmony dwells beneath thy veil; joy and grief are but sleeping. O Night! consuming life stirs through the all-encompassing day; life creates itself anew beneath the pearl-strewn mantle of thy outstretched arms. . . ."

It will be seen at once, by those who are familiar with Mr. d'Indy's outlook as an artist, that this is a subject after his own heart. He is at once a man of singularly devout and simple nature, and an entire mystic. For him the spectacle of the living earth, in lovely or forbidding guise, evokes reverend and exalted moods. His approach to the spectacle of its wonders and beauties is Wordsworthian in its deep and awe-struck reverence and its fundamental simplicity. He does not, like his younger artistic kinsman, Debussy, see in it all manner of fantastic and mist-enveloped visions; it is not for him a pageant of delicate and shining dreams—Mallarmé's haze and indolgent Faun in amorous woodland reverie would not have suggested to him, as to Debussy, music whose consciousness is as explicitly revealed as it is marvellously transfigured. The egotism of d'Indy is preeminently religious; it has no tinge of self-consciousness, it is large and benign, rather than intimate and intense.

He is absolutely himself, absolutely characteristic, in "Jour d'été à la montagne." This music is a hymn the grave earnest and the utter sincerity of which are as ill-temperable as they are impressive. In its art it is remarkable—not so monumental in plan, so astoundingly complex in detail as his superb *Hammerstein* symphony, yet a work that is full of his peculiar traits. Its constructive plan is broad and simple, yet severely dignified; harmonic ally it is as novel as fascinatingly ingenious, as anything he has hitherto achieved; melodically it is of rare and curious distinction; as a whole, it is of almost continuous beauty, it is profoundly poetic, it is rich and luminous in texture, and it is rigorous in the ardor of sentimental and spectacular effect. It does not always sustain its highest level—the level of inspiration reached in all of the first movement, in the opening of the second movement, in the exquisite conclusion. Mr. d'Indy's hatred of copy and meretricious formulas of style results at times in an undeniable lack of thought and mood, a kind of emotional sterility which it is hard to see and to deplore; but at his best he is—as in this work—admirable and absorbing.

It remains to be said that Mr. Darnstoch read the score with sympathy and entire devotion, and that the orchestra (one that has steadily and delightfully improved) played it brilliantly. Mr. Darnstoch offered his personality as a virtuoso to the extent of playing the subsidiary piano part; for the piano is used in this score only as an orchestral adjunct.

King Alfonso as a Poet

A MEXICAN review entitled *Unión Ibero-Americana* gives a poem which it declares to have been written by no less distinguished a person than King Alfonso. It appears to have been composed some years ago, previous to the time when Princess Ena consented to become Mrs. Alfonso. A cat may look at a king and may also read his poetry. Almost any cat would be able to tell from reading this effusion that the young king of Spain is just as bad a poet as most other swains when they have the love fever. Here is the Spanish version:

"Me hiere tu desdén! Más en mí duelo,
existe aquella fe de los titanes
que pretendieron vencer el cielo.
No importa de tu boca la sonrisa,
ni de tus negros ojos relucientes
la mágica mirada que esclaviza.
He de triunfar! Qué importa que el
destino
con su mano fatídica me aliente
de caridos y de bombas el camino!
Por ti, Ena, el corazón palpita,
y al d'ad me to rindes por ser Faustó,
-ó 16 mi cándida Margarita."

Which being translated in fairly free fashion comes to about this:

"Stricken by thy disdain am I,
Yet in my sorrow feel the faith
Which tells me I can mount the sky.
Berk I little of the spite that lies
'Tpon thy lips, nor th' enlaving glance
(Within thy black resplendent eyes)
Triumph shall come! Who cares if fate
Has carped the way with bombs
And grown her thistles at my gate?
Ena, for thee alone doth beat
My heart; and if I may not be
Thy Faust, be thou my Margarite."

An Easy Case

"Yes, doctor, one of Harry's eyes seems ever so much stronger than the other. How do you account for that?"
"Knot-hole in the baseball fence last summer, most likely, madam."

A Long Background

FIRST NURSE (at hospital). "That ballet-dancer in the ward with delirious tremors must be fairly old."
SECOND NURSE. "Why?"
FIRST NURSE. "She says nothing but pre-historic animals."

Effectual

The down East tavern keepers have had much experience with autumnal sportsmen, of whom many are called but few get up.
The instance is cited of a Bostonian, a mighty hunter before the Lord, who came "put up" at a quaint little Maine hotel, where he left a call for half past four in the morning.
Exactly at that time a sharp rap awakened the sleeper. "All right! I'll be down in a minute," he drawled in a muffled voice from under the blankets.
"No, you don't!" shouted the proprietor. "You'll get up right now or sign this receipt!"
"Receipt! What receipt?" demanded the now very much awake sportsman.
"We all," granted the proprietor, "I don't intend to have ye bamp! When to the stove at eight o'clock, making out ye bill, then be called!"

Baseball in Venezuela

In reporting an opening for athletic goods in Venezuela, Consul James W. Johnson writes from Puerto Cabello:
"The game of baseball is gaining a steady foothold in Venezuela, and bids fair to become a popular form of outdoor amusement. A game played recently in Caracas was quite a social event, being attended

by the wife of the President and many people of prominence. The outlook warrants American manufacturers of athletic goods in putting forth some efforts to encourage the sport. Descriptions and rules of the game printed in Spanish and distributed in the cities of Caracas, La Guaira, Valencia, Puerto Cabello, and Barquisimeto, together with window displays of baseball paraphernalia, would undoubtedly result in spreading the game over this entire section of country and opening up a market for the sale of general athletic and sporting goods. A market for baseball equipment alone is worth being opened, as in this climate the game can be played the whole year.

Making It Clear

WHEN she carelessly fell in the conservatory, said her husband (not heeding her explanations),
"The ingredients I'd use for soups and stews
Are none but extremely strained relations."

J. ADAM STRAWSON.

His Possessions

"Tux, lingering however frequently succeeds only in affording the witness an opportunity to display his own wit at the counsel's expense," says a well known member of the Baltimore bar.
"A certain actor was before the poor delators' court in a Western city, when he testified that his only assets were his salary as a member of the local stock company."
"But you must have something else," said the prosecuting counsel. "Tell the court what else you have."
"That's all."
"What's no personal property?"
"Oh yes, a dog—and a watch."
"Now think hard," persisted counsel, bellowing he was on the right track; "what else?"
"Well," suggested the actor, "I have a case of rheumatism."

A Guilty Conscience

"SAWYER!" bawled the conductor, as his train approached the town of that name.
"Don't care if you did," said the young woman who had just kissed his girl; "we are going to be married next month!"

Kept His Word

"Tux late Mr. Smithers was certainly a man of his word," said Mrs. Binker, looking up from the morning paper.
"Late Mr. Smithers?" queried her worse seven-eighths. "I hadn't heard of his death."
"That's why I say he was a man of his word," said the widow behind the cotton window.
"Twenty-two years ago he told me if I didn't marry him he would die. And he has."

For Consistency's Sweet Sake

"Known to me," said Boothelwaite, "that if the President is right in appointing a Surgeon to the command of a Hospital Ship."
"Well?" said Winkletop.
"Well," said Boothelwaite, "he ought to appoint a veterinarian to command the Cavalry, and put a Chiropodist over all the foot soldiers."

Sort of a Paradox

"I would like to engage an optimistic cook," began Mrs. Maltrou.
"I don't quite understand," said the employment agent.
"I'll be more explicit," replied Mrs. Maltrou. "I want a cook who makes the best of things."

Cooperation

PARKE. "You keep a joint bank account with your wife, don't you?"
LANE. "I deposit the money, and she draws it out."

A Restful Intellectual Atmosphere

NOON. "The doctor says we must be careful of our boy's brain."
TOM. "Why not keep him entirely away from all mental excitement?"
NOM. "That's our idea. We're going to send him to—University."

Peculiar Qualifications

"Is choosing his men," said the Sunday-school superintendent, "Gideon did not select those who led while their arms and threw themselves down to drink; he took those who watched with one eye and drank with the other."

Awful to Contemplate

LITTLE PEARCE had been severely punished for spilling a glass of water on the table. While the tears were still wetting his eyes he turned pathetically to his father.
"Pa," he asked, "what would you have done to me if that glass had been full of ink?"

Badly Needed

THE Professor had been quitting his psychology class, and was evidently somewhat disappointed with the result.
"Gentlemen," said he, as the bell rang for dismissal, "it has been said that God is good brain food. If that statement is true, I advise some of the men in this class to try a whale."

A FIFTY YEAR TEST.

The above statement during the past fifty years to improve upon the standard of all infant foods—Borden's *Infant Food*—Graham's *Infant Food*—have been in use. *Infant Food* is prepared under rigid sanitary conditions. As no infant food is equal to Borden's.

THE BEST WHOLE LOZENGES FOR CHILDREN ARE BORDEN'S VERMIFUGE LOZENGES. It costs a box.

ADVERTISEMENTS.

Pears'
Don't simply
"get a cake of soap."
Get *good* soap. Ask
for Pears' and you
have pure soap.
Then bathing will
mean more than
mere cleanliness; it
will be luxury at
trifling cost.

Sales increasing since 1759.

The Season's Plays

MISS MAUDE ADAMS IN A NEW VERSE DRAMA

By "I"

IN this day and generation, while we are rearing office buildings fifty stories skyward, pursuing birds in dirigible air-ships and fishes in submarines, to say nothing of chatting across leagues of land and water with a magnificent repudiation of wires, it requires something of courage to offer the public a dramatic entertainment in verse, let the verse even be the old immortality of Avon. It may be that as we have learned to work so hard we have elected to take our enjoyments simply: and perhaps we have been enticed from the hot-house symbolism of verse into a less-nurturing but somewhat more actively agitated atmosphere of realism. We spend so much time over lodgers and laborerates that when nightfall comes, and we seek the theatre to evade thought up-to-morrow, we are much less likely to be diverted by:

"Ay, mark those well,
The blood adrip upon thy lusty blade.
Now thou, 'tis running red, not white with fear,
As that which cries the coward on thy cheek."
(*He dies.*)

than by:

"My God! I'm shot!"

This may not be entirely admirable, but it is strictly in keeping with the skyscrapers, the air-ships, the submarines, and the wireless contrivances of the age. However, these few lines have nothing whatever to do with such aspects of the verse drama as its didactic influence, its uplift, the regret over its decay, or the joyousness over its rarity; they are in more or less relevant remembrance upon Miss Maude Adams's new play, "The Jesters," at the Empire Theatre. This play, a translation from the French, is in rhyme, and, save for what Miss Adams gives to it, it is tiresome. The indirectness of the verse, which has few charming passages, makes it so, and Miss Adams alone robs her lines of their poetic circumlocution and makes them humanly direct. Most of the other players are evidently unable to forget what may be designated as the typography of their lines, and they deliver them typographically. Miss Adams now and then, and with skill, throws a foot (not a metrical foot) beyond the four-square confines of the frame without setting the rest of the canvas agog.

These are the only moments in which the play makes a reasonable appeal, since its theme is as old as the eternal hills, that of the youth who, to win his lady, goes to her court disguised as a jester. It has been said that to offer a verse drama requires courage. This should be amended; it would require courage, indeed, to offer "The Jesters" without Miss Adams. Twice in this play she demonstrates the high character of her skill: once in accounting for the disfiguring lump upon her back, and once in her narrative of the love-affair of a summer breeze. These show not only her command of verse as a medium, but a rare insight into the spirit of the lines. Those two passages differ widely in motive: the one charmingly pathetic, the other sympathetically epic, and each fairly sparkles in a gloom of words.

There are few moments of mirth in the play. Most of them are contributed by Gustav von Seyffertitz in the role of Valentin, the captain of the castle guard, the action of the piece taking place in France in 1557. One exceedingly amusing bit is done by Frederic Eric as Holarius, a probationary jester clad in black from crown to heels, who most lugubriously recites his poem to the breves, and so saddens the castle banquet that he is soon hidden beyond. It is the only thing Mr. Eric has to do, and he does it delightfully.

Miss Adams is, of course, the successful jester among several aspirants for the post, and, winning this, she is not long in winning her lady-love. I should not say "her," perhaps, because Miss Adams is in the doublet and hose of a prince, which, by the way, she wears most becomingly, thanks to the lessons Peter Pan has given her.

A merciful man is merciful to his piano: wherever our pleasure with Mr. Leslie Harris's recent "musical monologue" at the Hudson Theatre was, to some extent, tempered with a vicious sympathy for the poor, protesting victim of his fur, frenzied outspontaneity. Nevertheless, it was not easy to withhold appreciation of Mr. Harris's complaint, immense personality. Mr. Harris hails from England, and he made his debut here in the part of what used to be called, in the days of Curvey Grain, a "drawing room entertainer," to improve a New York audience with a line smoked sugar-cured rambloush brand of English humor. In his credit it must be said that he accomplished this pleasant task with considerable ability. Mr. Harris is exquisitely English, "England's truest entertainer," according to a self-entertained opinion. From feasting recollections of other brands of this article we should be disposed to agree with him.

For "The Literary Sense," a thirty-minute satire of the most delicate order, our story is just indebted to Europe and to Arthur Schnitzler, who last season gave us "The Reckoning." At the Madison Square Theatre, Miss Katherine Grey has revived "The Reckoning," one of the thought-provoking dramas, and she provides it with the new piece by the same author.

Charles Harvey Linning has made the translation of "The Literary Sense" from Schnitzler's "Literature," and he has preserved a showlike attitude toward the theme, which has had several recent and laughable examples in the field of letters on this side of the water. A young woman writer has indulged her wit, for the purpose of securing "copy," in more or less pious affairs with two men. Until the publication of their respective books, the girl and the literary one of her two friends has supposed the other to be entirely serious. The party of the first part has in such case, it transpires, used the letters of the party of the second part, and "copy" has been made of various "sacred mementos" in their friendship. But, alas! like murder, the books will not. Behold, they contain the same letters! To the rage and disgust of lover number two—the sincere one—and the embarrassment of the two authors.

The satire of this situation is distilled into crisp lines and pungent epigrams that again suggest Shaw.

Miss Katherine Grey in the crucial scene of "The Reckoning" at the Madison Square Theatre

Tactful

An Iowa Representative tells a story of the campaign which resulted in the election of Mr. Leslie Shaw to the governorship of that State. By one of those complications that make all politics a confusion to the ordinary citizen, Mr. Shaw lost his own county, although he was elected by a large majority.

In Mr. Shaw's town there was an Irish shoemaker named Mulligan, who had always made and repaired the statesman's shoes. The morning after election Mr. Shaw had occasion to visit Mulligan's shop.

"I congratulate ye, Governor," said Mulligan, as Mr. Shaw entered.

"Well," said Shaw, "I'm glad to be elected, but, Mulligan, I'm sorry to have lost my home county."

Mulligan vouchsafed no reply, but hammered vigorously at the work in hand. The Governor, noting this strange silence, asked: "You see, Mulligan, it's a hard thing to have your own home go against you."

Still was Mulligan silent, a circumstance that enlisted Mr. Shaw's intense interest.

"What would you say, Mulligan, when a man loses the county in which he lives?"

A democratic gleam came into the eye of Mulligan. "That wud ol ye, Governor? All ol could say is that it's a bad thing you didn't live in every county in the shate."

Nip and Tuck

"When Brown came to this city ten years ago he didn't have a cent."

"Well, well. How did he make out?"

"Oh, he's still holding his own."

Illuminated Version

The King was in the counting house.

Counting up his money (oblivious of the fact that mere material welfare was not save a nation).

The Queen was in the kitchen.

Eating bread and honey (evidently shirking her duty to the state, as no children are mentioned).

The maid was in the garden.

Hanging out the clothes (she should pray to be delivered from love of luxury and ease).

When alone came a blackbird.

And pecked off her nose (clearly a natural feature of the same class as the well-curled hair story).

McLANNONIAN WILSON.

Not the Kind Wanted

"LITTLE WILLIE ran away to hunt red skins."

"Yes?"

"But he didn't find any until his father had finished with him."

Nor the Cat He Meant

For a number of years a bitter feud had existed between the Browns and Perkins, next door neighbors. The trouble had originated through the depredations of Brown's cat, and had grown so fixed an affair that neither party ever dreamt of "making up." One day, however, Brown sent his servant next door with a pane-making note for Mr. Perkins, which read: "Mr. Brown sends his compliments to Mr. Perkins, and begs to say that his old cat died this morning."

Perkins's written reply was bitter:

"Mr. Perkins is sorry to hear of Mr. Brown's trouble, but he had not heard that Mrs. Brown was ill."

At the Masked Ball

"Do you know, by Jove! I actually kissed my own wife just now."

"Sh! Don't say a word. I did the same thing."

Old Jocosity

In aid of would-be humorists (we'd rather aid than be 'em)

Some modern Croesus should maintain a funny men's museum.

Where there should be a moral and instructive exhibition.

Of jokes and gags all duly tagged with notes and definition.

And classified and catalogued in every known variety.

So long as tirelessly worked off on suffering society.

In short, a great museum called that of Unnatural History.

Where humorists could find old jokes and chuck them of their mystery.

For instance: take the venerable ever-youthful witicism

About the mother-in-law of man, which breathes every criticism.

This might be labelled: "Origin, in time of poor King Solomon:

Revised for Henry VIII. and Mornems; quality, a hollow one;

Varieties, some fifty-seven, too numerous to mention;

Purpose, that of safety-valve for conjugal discomfiture."

Or take that gag, "The good old times," which antedates Jerusalem,

And recedes a wide acceptance in the days of old Methusalem.

The joke on drunkards "seeing snakes" goes back, 'tis thought, to Noah.

(He saw, of course, just water snakes, not the terrestrial sea.)

"The theatre hat"—the youngest joke in all the vast museum—

Can now be found no farther back than the Roman Coliseum.

On either hand, the antedates, according to Ormsby.

Is traceable to Mother Eve; subject, "the child precocious."

And so forth, the third of Adam born (see Bishop Cosher's table).

Originated puns like these: "I'd raise Cain were I Abel."

The "ignorance of doctors" gibe has been a favorite steadily

From ancient times—revived long since in the youth of Mrs. Eddy.

The "lawyer, worried by his witness," holds a high position.

As to the "sneaking doctor" joke of origin Phœnician.

On old Egyptian freshets carved are jokes on young wives' cooking.

And jokes on bathers date from when Delilah was good-looking.

One label would on all the rest throw light of odd obliquity.

By showing what a favorite joke is favorite jokes' antiquity.

Is our museum all these facts, and more as edifying.

Relating to the witty things our magazines are laying.

Would be set forth and labelled with the greatest scrupulousity.

For information of professional men of humorosity.

This would not check their output—we cannot be so sanguine.

But 't would make sure that all their jokes they'd have the good old tung go in:

For 'tis well known the humorist's pitfall is "originality";

And he, by following beaten ways, avoids his humor, banality.

GEORGE JAY.

With an Eye to the Future

QUEEN ALEXANDRA of Gracious Presence herself attended last spring's annual Dominion House Fête in London, and because of that conspicuous fact there is a tale to tell—and worth the while. One of the diminutive flower maidens was both pretty and plump, and when Her Majesty stopped for an instant to smile down upon her, what did she do but put up her were (and tramping) mouth for a kiss, which she received.

"Molly!" gasped her astounded mother, after the distinguished visitor had passed on, "how could you?"

And Molly gave good reason. "I fought," said she, "it 'd be interestin' to tell my granddaddlers."

THE POSSIBILITIES OF WIRELESS

DRAWN BY A. B. WALKER

A Tragedy

A MORAL proprietor in Kansas City once told of an amusing incident connected with the stay at his house of a rural politician of Missouri.

The politician had come to the hotel for but one day, and he had taken his dinner elsewhere with a friend. When, on coming to pay his bill, he found himself charged with a day's board, dinner and all, he protested vigorously. It was explained to him that the American plan was based strictly on time, and that if he chose to eat elsewhere it was his own lookout. The man, however, refused to be satisfied, and paid the bill under protest. Then, to every one's surprise, he asked if dinner were "still on." Upon being informed that it lasted until nine in the evening, he exclaimed:

"I've extra one dinner, but I'm going to get my money's worth out of this house. If I suffer all the torments of dyspepsia."

He then rushed into one of the dining rooms, seized a bill of fare, and ordered everything he could think of. When he finally reached his limit, the waiter handed him a check for \$8.35.

"What's that for?" he demanded.

"Your dinner, sir."

"But I have already paid for my dinner in my bill," protested the unfortunate man.

"I am staying here on the American plan," "Then you should have gone into the other dining room," said the waiter. "This is the European-plan café."

What They Did To Him

"Why did Napoleon hate the English?" now asked an instructor in history in a public school of Cincinnati—to which question an immediate reply was offered by any pupil.

"I'm sure somebody knows," said the teacher, hopefully, scanning the faces before her.

"I think I kin tell, mum," finally ventured a dirty faced lad in the rear of the room. "He hated the English because they made him live an' die all by himself on the rock of St. Helena."

Fixed

One of the local officials of Chicago tells of a plumber's apprentice who, on his way to work one morning, called at the office of the health authorities and made known his wish to register his father's death. When the clerk asked the date of the demise, the son replied:

"He ain't dead yet; but he will be before night. I thought it would save me another journey if you put it down now."

"That won't do at all," said the clerk. "Perhaps your father will live for a long while yet."

"Well, I don't know," responded the apprentice, doubtfully. "The doctor says he won't, and he knows what he has given him."

Overheard

An amusing story is told at one of the Philadelphia clubs. It seems that an older member thereof, a clever chap, was being frightfully bored by his rival's talk at the table one night, the latter individual being as dull as the former was bright.

The talk was fast becoming unendurable, when the first-named member chanced to observe a man at the other end of the dining room yawning in a manner that threatened to dislocate his jaw.

"Look!" exclaimed the first member, in desperation, "we are overheard!"

His Point

LITTLE BOY (in toy shop). "Is this bark safe?"

SALESMAN. "Absolutely, my little man. I'll warrant you won't break into it." "But I want one that papa and mamma can't break into."

The Collected Poems of
Dora Sigerson Shorter

These poems comprise ballad and folk lyrics of the old native Irish, more moving than stories and vibrant with melody, and many delicately wrought lyrics, independent of the Celtic, besides. They are by a gifted Irishwoman, writing, says George Meredith, from her heart of the legends of her country and the superstitions of the peasantry. Mr. Meredith, in the introduction, supplies a rare criticism of Celtic poetic art.

TEN TO SEVENTEEN

A Boarding-School Diary

By **JOSEPHINE DASKAM BACON**

Author of "The Memoirs of a Baby"

From "Ten to Seventeen"

THIS is a diary of girls in boarding-school during those years when the world is made up chiefly of two kinds of excitement—sentiment and scrapes. Those who are concerned with the story are all healthy, charming girls—Roberta, who writes the "events," "Ben," whose cleverness inspires them, and Constantia, who prefixes to each event a kind of "poem" truly remarkable. The story involves grown-ups and their various affairs, seen from the gen-

uine school-girl point of view, and expressed in the exact language of the age. Any one who had forgotten what girls at school are like between ten and seventeen would need to read only a single page to remember. The book is sure to please equally those who are young and those young no longer.

Illustrated. Price, \$1.50

HARPER & BROTHERS, PUBLISHERS

Commissioner Smith vs. The Standard Oil Co.

From the Railway World, January 3, 1908.

Mr. Herbert Knox Smith, whose zeal in the cause of economic reform has been in no wise abated by the panic which he and his kind did so much to bring on, is out with an answer to President Moffett, of the Standard Oil Company of Indiana. The publication of this answer, it is officially given out, was delayed several weeks, "for business reasons," because it was not deemed advisable to further excite the public mind, which was profoundly disturbed by the crisis. Now that the storm clouds have rolled by, however, the Commissioner rushes again into the fray.

Our readers remember that the chief points in the defense of the Standard Oil Company, as presented by President Moffett, were, (1) that the rate of six cents on oil from Whiting to East St. Louis has been issued to the Standard Oil Company as the lawful rate by employees of the Alton, (2) that the 18-cent rate on file with the Interstate Commerce Commission was a class and not a commodity rate, never being intended to apply to oil, (3) that oil was shipped in large quantities between Whiting and East St. Louis over the Chicago and Eastern Illinois at six and one-fourth cents per hundred pounds, which has been filed with the Interstate Commerce Commission as the lawful rate, and (4) that the 18-cent rate on oil was entirely out of proportion to lawful rates on other commodities between these points of a similar character and of greater value, such, for example, as linseed oil, the lawful rate on which was eight cents. President Moffett also stated that thousands of tons of freight had been sent by other shippers between these points under substantially the same conditions as governed the shipments of the Standard Oil Company.

This defense of the Standard Oil Company was widely quoted and has undoubtedly exerted a powerful influence upon the public mind. Naturally the Administration, which has staked the success of its campaign against the "trusts" upon the result of its attack upon this company, endeavors to offset this influence, and hence the new deliverance of Commissioner Smith:

We need hardly to point out that his rebuttal argument is extremely weak, although as strong, no doubt, as the circumstances would warrant. He answers the points made by President Moffett substantially as follows: (1) The Standard Oil Company had a traffic department, and should have known that the six-cent rate had not been filed, (2) no answer, (3) the Chicago and Eastern Illinois rate was a secret rate because it read, not from Whiting, but from Dolton, which is described as "a village of about 1,500 population just outside of Chicago." Its only claim to note is that it has been for many years the point of origin for this and similar secret rates. The Commissioner admits in describing this rate that there was a note attached stating that the rate could also be used from Whiting.

The press has quite generally hailed this statement of the Commissioner of Corporations as a conclusive refutation of what is evidently recognized as the strongest rebuttal argument advanced by the Standard.

In fact, it is as weak and inconclusive as the remainder of his argument. The lines of the Chicago and Eastern Illinois

do not run into Chicago. They terminate at Dolton, from which point entrance is made over the Belt Line. Whiting, where the oil freight originates, is not on the lines of the Chicago and Eastern Illinois, which receives its Whiting freight from the Belt Line at Dolton. The former practice, now discontinued, in filing tariffs was to make them read from a point on the line of the filing road, and it was also general to state on the same sheet that the tariff would apply to other points, e. g., Whiting. The Chicago and Eastern Illinois followed this practice in filing its rate from Dolton, and making a note on the sheet that it applied to Whiting. This was in 1895, when this method of filing tariffs was in common use.

Now let us see in what way the intending shipper of oil could be misled and deceived by the fact that the Chicago and Eastern Illinois had not filed a rate reading from Whiting. Commissioner Smith contends that "concealment is the only motive for such a circuitous arrangement," i. e., that this method of filing the rate was intended to mislead intending competitors of the Standard Oil Company. Suppose such a prospective oil refiner had applied to the Interstate Commerce Commission for the rate from Chicago to East St. Louis over the Chicago and Eastern Illinois, he would have been informed that the only rate filed with the commission by this company was 6½ cents from Dolton, and he would have been further informed, if indeed he did not know this already, that this rate applied throughout Chicago territory. So that whether he wished to locate his plant at Whiting, or anywhere else about Chicago, under an arrangement of long standing, and which applies to all the industrial towns in the neighborhood of Chicago, he could have his freight delivered over the Belt Line to the Chicago and Eastern Illinois at Dolton and transported to East St. Louis at a rate of 6½ cents.

When, then, is the concealment which the Commissioner of Corporations makes so much of? Any rate—from Dolton on the Eastern Illinois or Chippewa on the Alton, or Harvey on the Illinois Central, or Blue Island on the Rock Island, applies throughout Chicago territory to shippers from Whiting, as to shippers from any other point in the district. So far from the Eastern Illinois filing its rate from Dolton in order to deceive the shipper, it is the Commissioner of Corporations who either betrays his gross ignorance of transportation customs in Chicago territory or relies on the public ignorance of these customs to deceive the public, too apt to accept unquestioningly every statement made by a Government official as necessarily true, although, as in the present instance, a careful examination shows these statements to be false.

The final point made by President Moffett that other commodities of a character similar to oil were carried at much lower rates than 18 cents, the Commissioner of Corporations discusses only with the remark that "the reasonableness of this rate is not in question. The question is whether this rate constituted a discrimination as against other shippers of oil," and he also makes much of the failure of President Moffett to produce before the grand jury evidence of the alleged illegal acts of which the Standard Oil official said that other

large shippers in the territory had been guilty. Considering the fact that these shippers included the packers and elevator men of Chicago, the action of the grand jury in calling upon President Moffett to furnish evidence of these wrong-doings may be interpreted as a demand for an elaboration of the obvious; but the fact that a rate-book containing these freight rates for other shippers was offered in evidence during the trial and ruled out by Judge Landis was kept out of sight. President Moffett would not, of course, accept the invitation of the grand jury, although he might have been pardoned if he had referred them to various official investigations by the Interstate Commerce Commission and other departments of the Government.

We come back, therefore, to the conclusion of the whole matter, which is that the Standard Oil Company of Indiana was fined an amount equal to seven or eight times the value of its entire property, because its traffic department did not verify the statement of the Alton rate clerk, that the six-cent commodity rate on oil had been properly filed with the Interstate Commerce Commission. There is no evidence, and none was introduced at the trial, that any shipper of oil from Chicago territory had been interfered with by the eighteen-cent rate, nor that the failure of the Alton to file its six-cent rate had resulted in any discrimination against any independent shipper,—we must take this on the word of the Commissioner of Corporations and of Judge Landis. Neither is it denied, even by Mr. Smith, that the "independent" shipper of oil whom he pictures as being driven out of business by this discrimination of the Alton could have shipped all the oil he desired to ship from Whiting via Dolton over the lines of the Chicago and Eastern Illinois to East St. Louis. In short, President Moffett's defense is still good, and we predict will be so declared by the higher court.

The Standard Oil Company has been charged with all manner of crimes and misdemeanors. Beginning with the famous Rice of Marietta, passing down to that apostle of popular liberties, Henry Demarest Lloyd, with his Wealth Against the Commonweal, descending by easy stages to Miss Tarbell's offensive personalities, we finally reach the nether depths of unfair and baseless misrepresentation in the report of the Commissioner of Corporations. The Standard has been charged with every form of commercial piracy and with most of the crimes on the corporation calendar. After long years of strenuous attack, under the leadership of the President of the United States, the corporation is at last dragged to the bar of justice to answer for its misdoings. The whole strength of the Government is directed against it, and at last, we are told, the Standard Oil Company is to pay the penalty of its crimes, and it is finally convicted of having failed to verify the statement of a rate clerk and is forthwith fined a prodigious sum, measured by the ear. Under the old criminal law, the theft of property worth more than a shilling was punishable by death. Under the interpretation of the Interstate Commerce law by Theodore Roosevelt and Judge Kenesaw Landis, a technical error of a traffic official is made the excuse for the confiscation of a vast amount of property.

The Chemistry of Commerce

By **ROBERT KENNEDY DUNCAN**

Author of "The New Knowledge"

The *Chemistry of Commerce* is a graphic narrative of the wonderful work of applied chemistry in the industrial world to-day. It affords an engrossing story of the invention and manufacture of commodities that are close to the business or home interests of each one of us. It is packed with information upon such topics as

RESULTS OF PLANT FERTILIZATION
FROM "THE CHEMISTRY OF COMMERCE"

the making of artificial rubies and diamonds, of non-breakable *Wellsbach* mantles, of the distillation of perfumes in quantities sufficient to float a frigate, of the coloring of glass, of the engineering feats accomplished by high temperatures, the preparation of drugs like camphor and opium, the extraordinary future of industrial alcohol. Professor Duncan—himself a student of science and a practical chemist—spent a long time of study abroad and secured his material personally from famous chemists at work in their laboratories.

Decisive Battles of the Law

By
FREDERICK TREVOR HILL

This is a book portraying those great legal contests of national importance which have proved to be of the deepest significance in the history of our country. Mr. Hill writes throughout with fairness, brilliancy, and good judgment, with the eminent impartiality which becomes him as a lawyer and a writer upon law, and at the same time with the vivid narrative skill that is his as a novelist.

A Critical Examination of Socialism

By **W. H. MALLOCK**

An admirable discussion of the entire subject of Socialism, pointing out with thorough fairness both the weak and strong points of the doctrine as it is understood in this twentieth century. It is a book that will serve the uninstructed reader as a first introduction to the subject, and will at once put him abreast of the most recent developments and the uppermost controversies of Socialism. The subject of modern wealth is treated with keen and illuminating analysis.

A NOTABLE BIOGRAPHY

THE LIFE OF CHARLES A. DANA

By

GENERAL JAMES HARRISON WILSON

"The most readable biography that I have had in my hand for many a day. Dana was one of those unseen forces that are so potent in this world, and the author has made very clear how important his relation has been to the history of our time."

—Judge GEORGE GRAY.

"I read it from beginning to end, and with lively and increasing interest. Many of these pages impressed me as a veritable contribution to the history of the War of Secession."

—CHARLES FRANCIS ADAMS.

"Of extraordinary interest and wonderfully well done. I can imagine no one beginning it and laying it down."

—Hon. ROBERT T. LINCOLN.

"The most brilliant and most talked-of journalist of his day."

—N. Y. Times.

"A more interesting work of its class has rarely appeared—a picture of a great man as he really was."

—Baltimore News.

"It is many years since the biography of an American citizen has been awaited with more interest."

COMMENT

Secretary Taft and Governor Hughes

WHAT progress has recently been made in campaigning for the Presidential nomination has been obvious among the Republicans and not entirely obscure among the Democrats. Leaving out the breezy claim of LA FOREAITE's manager of something more than two hundred votes in the convention for his principal as entirely unsupported even by asserted evidence, the interest centres about Secretary TAFT and Governor HUGHES. It is satisfactory to be able to say, without regard to party politics, that here we have real Presidential timber, and timber of a better quality than the party has had always on hand. THE WEEKLY has expressed its disagreement with Secretary TAFT's controlling and patristic principles, but it recognizes his intellectual and moral worth, as it recognizes the admirable qualities of Governor HUGHES. Since his return from Manila, Mr. TAFT has sensibly grown in public estimation, and Governor HUGHES's position has also recently improved. The statement that Mr. TAFT has all along refused to be aided by an abuse of Federal patronage is to be taken as characteristic of him, and as probably true. There is nothing small or petty about Mr. TAFT. We may differ from him concerning constitutional and political principles, but it is pleasant to be able to say that he is a dignified candidate, and so is Governor HUGHES. The letter which Secretary TAFT wrote to Mr. PARSONS advising him, in view of Governor HUGHES's announcement that he would accept the nomination—in other words, that he was a candidate—has been variously taken. By some it is said that it was a cunning and clever move on the part of the Secretary. It is better, for the sake of the dignity of the country and its politics, to take a higher-minded view of the letter. It is an admirable document for the preservation of party harmony, but, better still, it is the letter of a gentleman who is blessed with higher thoughts than those of plans for his own aggrandizement, and nobler purposes than those of personal gain and advancement. As to Governor HUGHES, he is also lifted up by these circumstances; he may now be a candidate on his own high merits, while a faction of discontented and disreputable politicians cannot, it might be disastrously, give a false color to the movement for him—a movement which cannot amount to anything without the support of conscientious and sober citizens who believe more in Mr. HUGHES's principles than in Mr. ROOSEVELT's and Mr. TAFT's.

The President, the Senate, and Patronage

The complaint that the President is employing Federal patronage for the purpose of aiding Secretary TAFT to procure the Republican nomination continues to be made, and

the anger of the Senators is apparently increasing. The accusation is denied on behalf of the President, and it is asserted that he simply intends no longer to be dictated to by the Senate. The announcement of such a determination on the part of the President recalls the valiant days of GROVER CLEVELAND, and, Presidential politics aside, an improvement is thereby marked. It is not very long ago when it was understood that it was Mr. ROOSEVELT's settled policy to consult the Republican Senators, or the leading one of them, of a Republican State, and the head of the organization in a Democratic State, on the subject of Federal appointments. The President now, it is reported, is to assert his own independence. This would mean a contest between himself and the Senate, whether or not it is his purpose to use the Federal patronage to aid Mr. TAFT. It is not necessary to take sides in such a controversy. It is perfectly true that the Federal offices, not included in the classified service, have, with few exceptions, been used by Presidents and Senators alike to "strengthen" the party, which means to improve its general political fortunes by increasing the political power of the administration or of the Republican Senators in their respective States. The welfare of the country has always been of secondary importance. The denial that has gone on between Presidents and Senators in these public offices for party or for personal profit has often been scandalous. If the Senate can convince the country that Mr. ROOSEVELT is nominating postmasters and other officers to help his friend secure the Republican nomination, it will damage Mr. ROOSEVELT's prestige as a reformer; if, on the other hand, the country is convinced that Mr. ROOSEVELT is weary of the Senate's dictation, the country will side with him; for it is in the habit of sympathizing with a President whenever he has a real conflict with the Senate.

Mr. Bryan's Campaign

The proposed conference of conservative Democrats which was to have been held in New York was wisely called off. The natural movement to secure for the Democrats a candidate who will give the party a fair chance to win the election should be left to the separate States first, and to consultation in the convention afterwards. An elaborate consultation in advance was likely to have done more harm than good, and it could not have been effective. Only after the Democrats of the different States have acted, and after their representatives have come together officially, can a practicable decision be made and effective action taken. The candidates that are opposed to BRYAN are distinctly growing in strength, not only WOODROW WILSON, Governor JOHNSON, and JESSE HARRISON, but Senator DAVIS, and Senator CLEVELAND. As to Mr. BRYAN, his activity in his own behalf contrasts him unpleasantly with every leading candidate of both parties. He continues to test for support. His latest effort to win it was made in Kentucky by addressing the Democrats of the State in favor of electing BRECKINRIDGE Senator. That was not only meddling, but people outside of Kentucky are inclined to take HENRY WATKINSON's word that BRECKINRIDGE ought not to be Senator from Kentucky, and that his success in the primaries was due to the kind of vulgarity that has recently become too familiar in the State's politics. The rest of the country takes WATKINSON's judgment of BRECKINRIDGE about that of BRYAN, and are inclined to believe that the latter has been playing his own personal game; that he is far from being moved by high moral considerations. BRYAN did not gain a vote by this questionable performance, and lost some more of the respect of his fellow countrymen. The recent ecstatic upsurges in Congress over the mention of BRYAN did not help his cause, but they indicate the character of his support. The only important Democrat who hailed for him does not believe that he can be elected. Even the other Congressmen who were helping to make the noise know in the bottom of their minds that BRYAN could not again carry the four small Northern States that he carried in 1900; he might, indeed, carry three of them against KNOX or FARMUS, but at this writing there is no chance for either of these as against TAFT, HUGHES, or LA FOREAITE. BRYAN's majorities would come from the little "white spot" which is so frequently and tellingly pictured by the New York World.

Pass the Aldrich Bill

The WEEKLY has pointed out that the Aldrich bill is a measure that would prevent the recurrence of currency

famines, such as that from which we have just suffered. Better bills might doubtless be drawn, but could not possibly be passed at the present session of Congress. The *Atlanta bill*, as improved by changes made late in January, is a good measure and worthy of support. The best practical minds in Congress have been put on it. It should be passed.

The Railroad Problem in the South

Present public opinion concerning the railroads must be astonishing the politicians who were so hostile to them last fall. Governor AYLES of South Carolina, for example, has a name now to say for them in his message, notably concerning the need of more trucking and more equipment. The *Atlanta Constitution*, not so conservative as it might be, also urges the needs of the roads, saying:

Main lines carrying heavy traffic should be double-tracked, ought to have been double-tracked before now; terminals should be extended to and beyond the full capacity to meet the present demand; equipment should be improved and increased until there remained no difficulty in meeting every call made for it.

It continues that in the South "there has been, and there still is, an embargo upon railroad improvement and railroad development"; that "that embargo must be removed specifically—affirmatively—and when this is done the South will come into its own once more." The decision of the Supreme Court of Pennsylvania declaring the two cent rate law of that State to be unconstitutional has called forth similar comment. For example, the *Philadelphia Public Ledger* has this to say of the decision:

The decision in no way calls in question the just regulation of these or any other public service corporations, but it does bring to an end the incalculable attempt of demagogues to meddle and obstruct in an incoherent war on capital and enterprise. Even those who were carried away for a time in this foolish hysteria will share the satisfaction that when Legislatures and Executive wander from the safe path, our institutions provide, in a judicial review of their acts, the means of bringing us back to the conservative path of law and justice. This return of sanity is well-nigh universal, and even demagogues will soon take notice.

Army Troubles

The army authorities are taking a good deal of pains to present Congress—with facts and figures as a basis for reform legislation. It is to be hoped that Congress will take the state of the army seriously in mind, and that the executive department will do likewise. One who desires to see the regular military establishment made efficient is not necessarily an advocate of militarism, or of transforming the nation into a great military power; whatever army we have ought not to be comically inefficient, however, as ours is. There are several things the matter with the army which are patent. In the first place, there are a number of general officers, some of whom have been brought in from civil life, who have been promoted over older and often better men, and this has created soreness, and has resulted in many instances in inefficient and exasperating post commanders; in the second place, company officers are not kept long enough at a single post. This means that they are not long enough at a time with any single command, and this again leads to the discontent of the men, due partly to lack of proper care for their food and comfort, for such care cannot be expected except from company officers who have served with the men long enough to be interested in them and to understand the peculiarities of the post and of the personnel of the command. These evils may be remedied by executive or administrative action. In the third place, everything is done, or seems to be done, that can make the soldier's life a burden. Congress does not provide for the policing of the posts, and the soldiers are forced to clean up the walks and to do a hundred and one small offices which they look upon as beneath their dignity and as work which they did not enlist to perform. The pay of any soldier is inadequate, and especially of the coast artillery—soldiers who enlist to defend the coast are required to go to school in order that they may learn the necessary mathematics of their trade, and they are required, too, to drill with small arms as well as with the great guns, and to keep both clean; the result is that one term of enlistment is all of such service that a man wants. Finally, the sale of wine and beer at a canteen is forbidden; the company table is thus deprived of the addition to the

soldier's food that was once purchased from the profits of such sales, while the outside saloon and drunkenness are encouraged. General BIAZ, as chief of staff, has just submitted a report on the canteen, in which he asserts that the morale and discipline of the army have suffered in consequence of its abolition. These are evils that may be remedied by legislation. What it all comes to is this: that by reason of certain executive and administrative conduct, and by reason of legislative omissions and commissions, the country has not been able to get as many soldiers as it needed, nor to keep those it got. There were 6000 desertions last year out of an army of 65,000. Just now recruits are numerous, because of the industrial depression, but when that passes, the conditions lately experienced are sure to return unless Congress takes action proper to prevent it.

A Successful Profit-sharing Plan

As our readers are aware, the United States Steel Corporation a few years ago devised a plan for profit sharing which attracted a good deal of attention. The chief criticism was directed against the policy of the device to ally more closely to the corporation those who were to benefit by the sharing. As a matter of fact, this was, perhaps, the wisest feature of the scheme, for it made it of mutual benefit, for the advantage of the employer as well as of the employed. A few weeks ago Mr. GILMER W. PINKANS explained at the dinner of the National Civic Federation the results of the plan as it had been in operation up to the end of 1907, or for five years. The plan, in brief, contemplates the retention into the ownership of the corporation of its thrifty employees, and the retention of them as shareholders by making it for their interest to remain in the service of the company, and, conversely, against their interest to abandon it. When the earnings of the year have reached a certain sum above fixed charges, dividends, and maintenance requirements, a percentage of the remainder is to be set aside for profit sharing. One half of the reserved fund is to be distributed in cash, and the rest to be invested in the company's preferred stock, and of this stock one half is to be delivered at once, and the other half is to be held. This reserved stock is to be delivered to those who remain in the company's service for five years longer, or to the employee, or to his estate, if he be disabled or die in the service. If he voluntarily leaves the service within five years, the stock is to be forfeited—not to go to the company, but to be distributed among the other employees. Thus the company wisely sought to tie men to them. The employees were divided into classes according to the amount of their regular earnings. It was confidently predicted by some that the plan would be found impracticable; but Mr. PINKANS's statement shows that it has been abundantly successful. In 1907, more than \$1,250,000 was distributed; in 1904, the same amount; in 1905, \$1,800,000; in 1906, \$3,500,000. The second part of the plan involves the sale of preferred stock to employees, who are permitted to subscribe for as many of the shares as a fixed percentage of their various salaries will purchase at something less than the prevailing market rates. Payment of the stock is to be made by deductions from monthly earnings, not to exceed twenty-five per cent. of them, the purchaser having three years in which to complete his payments. The dividend of seven per cent. is to be his, five per cent. interest being charged on deferred payments. The method devised for retaining the purchaser as a shareholder is simple. At the end of every five years of ownership, and on proper evidence of faithful continuous service, he is to be credited with five dollars on each share of his stock, so that, if he remains in the service long enough, he will have purchased his stock for very little, or, perhaps, for nothing. Under this part of the plan in 1904 more than 10,000 employees subscribed for 32,000 shares at \$25 per share; in 1905, about \$300 subscribed for 18,000 shares at \$27 50; in 1906, more than 12,000 subscribed for 24,000 shares at \$100; in 1907, more than 14,000 employees subscribed for 27,000 shares at \$100. In five years more than \$10,000,000 has been actually distributed under the two plans.

The Notable Career of Mr. Jenap

New York lost a very valuable and notable citizen—and so did the country and the world—in MONSIEUR K. JENAP, who died on January 23. He came here from Connecticut about sixty years ago, got a job in the Paterson Locomotive Works,

started a brokerage firm at twenty-two, and four years later a bank. He prospered rapidly, got rich, and retired from active business, after twenty-eight years of it, in 1884. So far it is not so unusual a story. The interesting part of it lies in Mr. JESSE's use of money and of leisure. He was great in his public services and very interesting in the great variety of such services that he put his mind and money into. For seven years, until a few months ago, he was president of the Chamber of Commerce, and when it met to take action on his death, Mr. CHASE, among others, spoke at some length of the remarkable scope of his public labors and benefactions, and of his constant growth in knowledge, sympathy, and interest in the work of the world. He was a religious man, and a very wise and liberal giver to religious objects. He was a great philanthropist, benefactor of colleges, officer and supporter of a long list of charities, and promoter of education in the North, in the South, and as far away from home as Asiatic Turkey. He was also president of the Natural History Society (to which he gave a million dollars in his lifetime, and another million in his will), and a great promoter of exploration and scientific investigation, being president of the Peary Arctic Club, the Audubon Society, and the International Society of Americanists. Coincident with his ceaseless activity in charities, and educational, religious, and scientific projects, he kept such a hold on every-day affairs as is betokened by his long presidency of the New York Chamber of Commerce. It was while a member of that organization that he started in 1884 the movement for forest preservation which resulted in the New York State Forest Reservation in the Adirondacks. Reaching the age of seventy-seven, he lived his fruitful and beneficent life well out, active and useful to the very end of it in adding to human knowledge and making human life a richer possession.

A Great Success in Living

It is a timely privilege to dwell upon Mr. JESSE's noble career, because of the wide diffusion of the propensity to believe that great fortunes are a sort of blight on civilization; that they represent the wresting from the common fund of an undue share of the means of support, and that every rich man represents in a greater or less degree the impoverishment of his fellows, and some sacrifice of the best interests of the human family. Delusive fancies such as these are the natural fruit of the socialist notions that are now so prevalent. No doubt excessively rich people, who are extravagant, wasteful, and worthless, add somewhat to the burdens of society, but great fortunes which are not viciously or very wastefully used are useful as accumulations of capital, while fortunes used as Mr. JESSE used his are like great public funds, of which the expenditure is directed by much better intelligence than could be hired, and probably at a comparatively low cost of administration. Moreover, Mr. JESSE was a living contradiction of the charge that all that rich Americans know, or care to know, is how to get money. He was a very valuable example of true success in life; success in the first place in winning power and leisure, and then in using them profitably for himself and to the immense advantage of society. He not only succeeded in life, but he succeeded greatly in living—two things that are not identical, and of the latter of which shining examples are rarer than of the former.

American Men Receive a Tribute

It is a long time since so fine a compliment has been paid to the intelligence of American men as has been accorded them by Mrs. CHURCH-SANDERSON, the English suffragette, who lately visited this country in the interest of woman suffrage. She was well received here, had a good hearing, and made a very agreeable impression. But she went back to London, and the papers report her as saying there that the progress of the suffrage movement had been checked in America by the lack of manly opposition to it. "The namby-pamby men," said Mrs. SANDERSON (as the cable quotes her), "think it impolite to dispute a woman's statement, and say they will not keep women from getting the vote—they can have it if they want it. But the horrid rich American women say they already have all they want, and have so retarded the movement in the East." That is a very amusing impression to have been made on our British visitor's mind, and we would hesitate to say that there is not a good deal of basis to it. It

is unusual nowadays to find an American man who is ready to disclose any active opposition to woman suffrage. The fruit is ripe and ready to drop, and wherever enough women agree to shake the tree it does drop. But here in the East they cannot agree to shake the tree. Perhaps one trouble is that the value of the suffrage has depreciated. The things that people exert themselves to attain are things that are scarce. What anybody can have does not seem worth appropriating.

A Profit in Some Losses

A fiscal correspondent of the *Evening Post* says that Pittsburg investors have lost in the last five years fully a hundred million dollars actual cash. One-fourth of this sum was swallowed up, it seems, in mining speculations, a tenth in "the crazy bank speculation of 1903," and the rest sunk out of present sight in various industries. A hundred millions in a heavy sum to take out of a city, especially a city not of the first rank. But Pittsburg seemed to need to lose some money—a good deal: not quite a hundred millions, perhaps, but a substantial sum. The golden tide had flowed in on her so that the toes of too many of her citizens had been lifted off the bottom, leaving them to founder in a medium in which they had never learned to swim. Some of them will be happier and better for the recession that gives them something solid beneath their feet again. The same is true of others besides Pittsburgers. Philosophically and ethically speaking, there was a great deal of money even a year and a half ago in hands that needed to lose it. As a rule, they did lose it—some of it: much to their mental and physical discomfort, but in many cases to the profit of their department and morals.

The Convalescent Philippines

The President and Secretary TAYLOR agree that matters are progressing reasonably well in the Philippines, that the islands and the people are going ahead, and that in the course of a generation or so they may be fit for complete self-government and, possibly, independence. We have the impression that that is so, and that if the Filipinos don't rebel and upset the processes, they will be able in time to take at least as good care of themselves as we are able to take of them. One thing that helps is that they have been moved from the profit page to the loss page of Uncle Sam's books, and all of us as we contemplate them taste a little of the blessings apocryphally promised to those who expect little. The illusion about the bag of gold at the end of that rainbow has faded beautifully out—oh, Mr. BENJAMIN?—and some day, in the Lord's good time, maybe, the long, iridescent bow will fade out too. But it is to take at least a generation! Hold the seventh son who would venture to predict what thirty years will bring forth in the Far East.

Outside

ODYSSEY has passed out a world which became sorrowful to her in her old age. Her novels brought her in, first and last, a great deal of money, but nothing in them ever suggested prudence or thrift as part of their author's outfit. Doubtless both were qualities that were incompatible with the existence of the stories, and there is no use of mourning that she did not have them, and that, lacking them, she came to short commons and material distresses as her lamp burned low. But neither her spirit nor her temper seems to have given out, nor did love fail her, nor the charity of the poor with whom she had freely shared her plenty while she had it. The dimensions of her celebrity were remarkable. She must have had nearly as many readers in her time as the late Mrs. HUGHES of Brooklyn, and they were much more discriminating readers and lived all over the world. Her stories may be absurd, her heroes fantastic, but their absurdities were set forth with very penetrating qualities of enthusiasm and very positive ideals of deportment that appealed to something that will always be found in readers so long as readers continue to be human beings. And the stories were stories too; very liberally furnished with happenings, crises, and emotions, the best of them, critically speaking, being some of her books for children. A woman of spirit and of talent; generous, rash, impossible. There are more old friends and steady customers of hers beyond than are left now on earth, and it is a kindly translation that takes her to them.

The Prolongation of Human Life

A book which is likely to be read with lively interest all over the English-speaking world is an English translation of the work lately published in Paris on the means of prolonging human life, by Professor ELIE METchnikoff, the distinguished Russian biologist, who is now sub-director of the Pasteur Institute, and who a number of years ago demonstrated that there exist in man's body certain cells, known generally as phagocytes, the chief function of which is to devour intruding microbes. The purpose of his new volume is to answer three questions—namely: Can human life be prolonged beyond its present normal term? Would such prolongation result to the advantage of society as a whole or of the race? Lastly, How can it be prolonged? Posing many aesthetic and interesting examples, he answers the first two questions in the affirmative. He does not think that seventy or seventy-five years should, or need, be the ordinary limit of active and useful human life. As to prolonging it he has ideas which are worth considering. He finds no absolute relation between longevity and size, since parrots live longer than many large mammals. Neither can he admit that there is any definite relation between germination and longevity. Although the period of sterility life is longer in the horse, that animal does not live as long as a hamster being; and some birds, the incubation of which only lasts a few weeks, can live more than a century. Neither will he acknowledge that low fertility can be regarded as a cause of longevity. There are parents which lay two or three times a year, producing six to nine eggs in each clutch. Finally, there is no exact relation between longevity and diet. Though it is true that elephants are vegetarian and reach very great ages, on the other hand there exist long living carnivorous animals, and many observations have proved that great ages may be exhibited by oaks and eagles, which live on animal food. It is also certain that the longevity of fresh-water crocodiles is great.

The Russian biologist's specific contribution to the discussion of longevity and the means of securing it is his avowal, for which a great deal of evidence is adduced, that a principal cause of senility and early death is the presence in man of the large intestine, and the toxic effect of the products of putrefaction which are there generated. He believes that the inherited structure of the human large intestine and the customary diet of civilized man are essentially favorable to the multiplication of a large number of the microbes that cause putrefaction. No doubt the avoidance of alcohol and the rigorous exclusion from man's diet of foods that favor putrefaction, such as rich meats and of raw or badly cooked substances containing microbes, may do much to remedy the evil. Such preventive measures may not suffice, however. They may need to be supplemented with the introduction of the microbes which cause lactic fermentation, for these have the effect of inhibiting putrefaction. He has undertaken to demonstrate in this work that by lactic acid taken under certain conditions human life may be greatly prolonged and the chief evils of senility may be avoided. Numerous experiments have shown that the anti-putrescent action of lactic fermentation depends on the production of lactic acid by microbes. It is a fact that from time immemorial human beings have absorbed quantities of lactic microbes by consuming in an uncooked condition substances such as soured milk, sourkraut, etc., which have undergone lactic fermentation. By these means they have unknowingly lessened the evil consequences of intestinal putrefaction. In the Bible soured milk is frequently spoken of. When Amos was entrained like the three angels, he set before them soured milk, as well as sweet milk, and the calf which he had dressed. In Deuteronomy, Moses commends among the food which Jehovah had given his people to eat "soured milk of kine." Soured milk has been used for food in Egypt from the remotest antiquity, and a similar preparation is familiar to the inhabitants of the Balkan Peninsula and of Algeria. Soured milk is consumed in great quantities in Russia, and it forms the staple diet of many natives of tropical Africa. The fact that so many races use soured milk especially is an excellent testimony to its usefulness. Dr. LANA has testified that amongst the natives of the region south of Angola, who drink soured milk habitually, many individuals of extraordinary longevity are to be found. Moreover, these old people are very active and can make long journeys. One JAMES RILEY, who was shipwrecked on the west coast of Africa, and who seems to have been a conscientious observer, records that the wandering Arabs of the Sahara live almost wholly on the milk of camels, fresh or sour. On this diet they display great vigor and reach advanced ages. RILEY estimated that some of the old Arabs must have lived two hundred years. Significant is the number of centenarians to be found in Bulgaria, where yabourts, a soured milk, is the staple food. We observe, finally, that, from the general viewpoint of this book, the course recommended for the minimization of the products of putrefaction in the large intestine, and the consequent arrestment of senility, consists of the absorption either of soured milk, prepared by a group of lactic bacteria, or of pure cultures of the specified Bulgarian bacillus found in yabourts, the

soured milk of Bulgaria, though in each case a certain quantity of milk sugar, or saccharose, should be taken. We add that Professor METchnikoff practices what he preaches. For more than eight years he has taken soured milk, prepared from boiled milk and inoculated with a lactic leaven, and he is convinced that lactic bacteria can render a great service in the fight against intestinal putrefaction, which is the principal cause of senility. We repeat that the belief is confirmed by the large collection of facts regarding races which live chiefly on soured milk, and amongst which great ages are common.

Of course the great majority of the people in the world will prefer, however sound Professor METchnikoff's theories may prove to be, to live on such food as they like, and die when they are called, rather than live much longer on a diet too much modified by soured milk. None the less are his theories valuable, and likely, if they are substantiated, to be of practical service to mankind.

Temperament and Training

There is a charming little tale of BERN McENNEY STUART about an old dandy who was "marked for red," and who met the whole of life sealed in a comfortable rocking-chair, while his wife, awed by this deliberate expression of the will of Destiny, cheerfully supported him and his six children. This cult of being "marked for" the line of least resistance has had a period of excessive power and éclat since the laws of heredity have been popularized and given to the masses, and the gift has proved a delightful one for those desiring above all accomplishments and all achievement to take rest in this life. To say a quality is inherited has been almost as conclusive to the half-educated as to say a man, bound hand and foot, cannot move. But qualities are no more inherited than are accomplishments. Tendencies are inherited, and even these are no more necessarily bound to become habits than environment is bound to be conformed to. A son does not always follow the ancestral vocation, nor practice the ancestral virtues, and if these are not binding, surely the ancestral vices are no more so. JAMES'S Ghosts has frequently been taken as a thesis proving that heredity is not to be circumvented, whereas Ghosts is a tract on telling the truth and not on heredity at all. JAMES was bent on having people face facts and act according to their true nature, and he spent his energies showing that wherever we idealize facts away we meet disaster. The tragedy of Ghosts lay not in the fact that Oswald's heredity was fatal, but that his mother's lies had prevented his reviewing facts and applying remedies. Here we come to the greatest fact in life taken into account in the whole matter of heredity: that if life is full of poisons, so also it is full of antibiotics. The world will be indeed without us, but it is also within. The universe pushes against us, and, in the end, will surely overthrow our bodies and we shall lay them down to make some spot of earth greener and more fertile, but so long as the life breath is in us, the world will be within as well as without. So long as we breathe we can react against the push of the universe. To be sure, our react is different degrees, but the genius pushes back against the universe harder than the jellyfish, but the point is, that so long as man is man he can react. He is never necessarily a slave to any inheritance or any environment. If we pin our faith to fate, we have as much right to believe in fatal courage as in fatal cowardice, in the fatal power of mind to conquer stuffs less living and less alert, in the fatal victory of wisdom over destiny.

But to attain to these fatalities, the personality must be unified, must consciously face and come to know the facts outside itself, must willfully react upon them. The first manifestation of weakness is the scattered, disintegrated personality, the mind not quite sure of itself or of what it wants to do. Anger, grief, jealousy, appetite, rapacity, rage, all these disintegrate, and leave their victim powerless. In BLAKE'S "Mad Song" a supreme touch of genius lies in the lines:

"Like a bird in a cloud
After night I do crowd,"

And not the exigencies of rhyme brought in that word "crowd," but the sudden vision of a personality broken, scattered, a prey to lawless, multitudinous instincts.

So when we ask how shall a man escape his ancestry, the answer comes, by building up a well unified character, by establishing a personality, controlled and well braced in by one dominating faculty, and by training the mind to face facts squarely and honestly, and to call them by their right names. If we were to delude ourselves into believing that the world will were not outside us as well as within we might swiftly fall, but if it is outside as well as within, the remedy is to stand up, grip our heels, and push back.

The first power we have to deal with is that of thoughts. Our thoughts have to be directed against obstacles, and thoughts are not hereditary, though a tendency toward a certain form of thinking

any be. Our thoughts, in the main, are such as we make shift to gather together, in evolver out of our experiences, our failures and successes; our thoughts adapt themselves to whirling circumstance, and, except in the slumber of races, the sea does not think what the father thought. If obeying our thoughts we try their power, we measure their force against the encroaching forces of the world. "The event," said a philosopher, "is the actualization of thought." Think any one thought often enough and then see how it comes true. It was Goethe who said with a certain weariness, "What we wish for is youth again itself over so in age," and Emerson, "All prayers come true; therefore be very careful what you pray for." Willing comes true, wishes beget facts, and thoughts create visible objects in the world.

To train the child, therefore, to think and to will is to train him to take his inheritance into his hands and bend it into such shape as he wants. The beginning of all illumination is analysis. To teach a person to look at facts and call them by the right names is the best of education and prepares him to cope with destiny. It must have been Emerson, believing as he did in the wind of destiny which blew ever toward the necessary and the right, who suggested that if we could not throw in our desires to run the same course with the stars in their orbits, we could harness these heavenly bodies to our purposes. But so in a cross current and one runs the risk of being crushed every minute. The way of the stars, according to that, would be the way of right and necessity, but the danger would come in any man's denying that the wishes and opinions of the masses were the forces of the universe. The masses are the units waiting a leader to rally them, and the opinion of the majority is, by the very nature of it, wrong. That opinion is wrong which is prevoence of a possible higher accepts the lower view, and whatever view is popularized till it meets the understanding of the great majority is never early on a lost level. It was something quite different that Emerson meant when he suggested that we harness the stars to "pull our purposes. Doubtless he meant just what Thoreau meant when he wrote in his meditations: "You will never enjoy the world aright till the sea itself smooth in your views, till you are clothed with the heavens and crowned with the stars."

Such enjoyment as this it was that gave Whitman his strength, that left Blake, after a life of hardship, labor, mischance, abuse, and ill success, singing upon his death bed, so full was he of serenity and peace and sense of good work done, so that he literally sang himself from the bed of earthly failure into the arms of death. "And I know he was elevated at the throne," as the poet did not say, but should have said. This is to conquer destiny by willingly identifying one's self with all the victorious, healing processes of life, and who does this is the victor of his destiny.

And those who are doomed to suffer bodily ills and incapacities have but a wider field to traverse, a more numerous enemy to overcome, a larger victory to record. They at least can always suffer to good purpose, can always build up a sublime thought, or a fine disposition, or an unalloyed sympathy out of what, at first glance, might seem a disadvantage.

Wherefore, as the nearest problem now, in Plato's *Lysis*, "Every man and every woman should walk seriously and pass life in the nobest of positions and be of another mind from what they are at present."

Personal and Pertinent

It was in the papers several weeks ago that President Fawcett of Brown University had called upon the men of Brown to rally around their colleague HARRIS and try to make him President. When a Brown man runs for President, Brown men, Dr. FAIRCOTE thinks, should be for him. At New Haven they seem to take a different view. TART is a popular son of Yale—the most popular, doubtless—but Yale is not officially for TART for President. So it appeared when the Young Men's Republican Club of New Haven tried to borrow the Yale dining hall for a TART banquet on LINCOLN'S birthday, and were told by Secretary STOKES that it couldn't be done because the Yale authorities were anxious that the university should not be in any way accused of taking sides in a political contest.

Any one who thinks he can write a poem suitable for musical setting as a madrigal, and would like to win \$50 by so doing, should bestir himself, and send the MS. to the Chicago Madrigal Club, which has instituted a prize competition, and will pay to the winner this sum. The poem must be lyric in character, simple in rhythm, and of popularly appealing character; it must consist of not less than twenty-four nor more than thirty-two lines, and must have "unity and climax." It must bear a fictitious name, and be accompanied by a sealed envelope bearing upon the outside the fictitious name and upon the inside the author's true name and address. The MS. must be addressed to Mr. D. A. CAMPFINGER, 410 Kimball Hall, Chicago, before April 1, 1908. The award will be made on the first of the following month.

FRANCIS THOMPSON, recently dead, wrote many of his poems under the spell of the charming MEYNELL family. WILLIAM MEYNELL, it was who saved THOMPSON from despair and possibly from death, at a time when he had sunk to so low an ebb as to be glad to earn a few pence holding horses in the street or running errands. "The Sister Songs," his second volume, were written about Mr. MEYNELL's two little daughters MERVIA and MARLENE. "The Making of Viola" was written to Mr. MEYNELL's third little daughter. "To My Godchild" was written to Mr. MEYNELL's son, FRANK MEYNELL WILFRED MEYNELL, who is now, it is said, preparing a biography of the poet. Despite his habit of taking laudanum, a habit to which he became addicted in the unbearable poverty and hardship of his early life, THOMPSON lives in the memories of those who knew him best as a gentle and innocent man, of great genius, and only such faults as his unhappy habit brought with it. The poems were all written in the intervals when he was not using laudanum. After the *New Poem* he relapsed into the drug habit, and it completely destroyed his poetic power.

Senator ARNONE, who has just kept his promise to furnish Congress with a currency bill which they may discuss, and pass, if they perceive the need of it, is a conciliatory but very practical man. He is in the Senate to legislate, and very quietly, he has become one of the most efficient legislators of the country. He is a strict partisan, but he permits no annoying partisan prejudices to interfere with a purely business piece of lawmaking, like this currency bill, or like a railroad rate bill, or like a tariff bill. He is the friend of all men who have influence, and he usually makes it a point to be especially polite to the Democratic leader. He was very intimate with GOSSMAN, for example. He isn't silly or insidious, nor is he covered with duplicity. He is too intellectual for that. Whomever he gains in the way of an ally in carrying out his designs, he pays him the compliment of appealing to his mind. He does not pretend to be anything different from what he is—a Republican and a protectionist—but he is perfectly willing to take what he can get and be compromises with great deference. It isn't often that the other party has the better of the bargain. Such an adept is he in the art of lawmaking that his Republican colleagues never dream of adopting an important measure until he has passed upon it. One of his most distinguished fellow partisans has said of him that he sees farther into a proposed measure, understands its scope and possibilities more clearly, foresees its effects with a keener and more accurate vision, than any Senator of them all.

Correspondence

ALL NORWEGIAN

To the Editor of Harper's Weekly: Cape Cod, N. Y., January 18, 1908
SIR,—In HARPER'S WEEKLY of January 11, 1908, under "Personal and Pertinent," I observe an article referring to Captain Hoidal Amundsen's expedition through the Northwest Passage in the *Gjøa* as being an undertaking of a Dane with a Danish vessel. Captain Amundsen is a Norwegian; the *Gjøa* is a Norwegian vessel built in Norway, and the entire crew were Norwegians, with the sole exception of Lieutenant Godfred Hansen, who is a Dane. The expedition was fitted out and the expense of it defrayed entirely in Norway, so Norway should be given exclusive credit for the great results in science, geography, and exploration that were realized.
I am, sir,

F. HERNANDEZ GARE,

Consul for Norway.

SIT DOWN, DR. BRYAN, SIT DOWN!

To the Editor of Harper's Weekly: JACKSONVILLE, Fla., January 20, 1908.
SIR,—The editorial from the New York World entitled "Fire President" is, in some respects, a fine piece of work. It details those fundamentals which we would like to think were comprehended in the *great* Declaration, but which, in fact, seem to have a more practical application in the case of Mr. TART. This Bryan propaganda seems to me a new hope and a welcome engagement, and that the time so spent could be much better occupied as bringing forth a "live" one, so to speak.

The average man seems to look upon Bryan as the next Democratic nominee and also seems to recognize that almost any Republican nominee can beat him. There is absolutely no popular sympathy for Bryan as a candidate, and the prospect, instead of exciting party enthusiasm, is the cause of a widespread and surely fatal apathy. Why then should the Democratic party put a man in to beat at a critical point the game when he has already "lamed" not twice and is almost universally regarded as "lame" again? What the party wants right now is some candidate whose work, even if not crowned with success, will cheer up the hosts and by a thorough return and staunch adherence to the true old doctrines will furnish inspiration for the battle to be fought in the future. I personally know scores of Democrats in this community who will vote for TART or Hughes as against Bryan, and many of these are first voters who after their first departure will probably be lost to the party forever.

Hyman is the Democratic candidate simply because he has put the party in such disorganized condition that no other man has the nerve to make the run in the face of such utter demoralization; he is the candidate because most Democrats don't care; he is the candidate because there is not his enough in the old back to crawl into harbor anyway, and a good pilot won't take her as she stands. But the old ship is of strong parts, and of properly manned with a crew that know enough to figure out its latitude and longitude the voyage of next summer and fall might not have such a fatal aspect.

For my part, unless the tidd Connesser is put on the retired list and a man of courage and political sense put in his place, I am going to desert and line up with Roosevelt—not as a Republican, because I don't like the name, but as a Roosevelt or Taft Democrat, as the case may demand.

Whether the candidate may be, he can't cry down the principle of reform inaugurated by Roosevelt, because public events of the last few years have justified its purpose. He can simply pledge himself to carry it on sanely and without unnecessary friction, and to accompany it with the great benefits derived from a re-direction of the tariff. He ought also to get out of this international cramp, into which we have been lured by taking up a lot of little backwater republics and dynasties.

Yours with hope.

Not unaccompanied, however, by some foreboding.
W. H. DOUGHERTY.

FOR JOHNSON AND TARIFF REVISION

Richmond, Va., January 27, 1907

To the Editor of Harper's Weekly:

Non.—By his declaration for immediate tariff reform and his stand as a revisionist of the most pronounced type, Governor John A. Johnson, of Minnesota, should receive the earnest consideration of all true Democrats as the proper man for the Democratic Presidential nomination. His singleness of view should commend him to all those who have party views at heart, his discrediting as incidental all these minor issues upon which the party has so often used her last energy, and advocating that principle upon which she has won her only victory in recent years, the Democracy would, no doubt, go forth to a successful campaign.

What the party so badly needs in the coming election is a candidate, or candidates, that will draw votes. Experience has proven that, after the Southern States have been carried, the party must have eighty-three more electoral votes. If the party is to be victorious in the coming election it is clearly its task to nominate a candidate who can draw these extra eighty-three votes. The one man who, at present, seems capable of doing this is the Governor of Minnesota.

Mr. Johnson has shown his ability as a vote-getter; his plurality of over 6000 in Minnesota as against Roosevelt's plurality of 161,000 attests him to leadership along that line. Viewing the situation from an entirely unbiased standpoint, Governor Johnson could draw more electoral votes throughout the North and West than any other man in the Democratic party.

As for the Vice-President, ex-Governor Douglas, of Massachusetts, stands out prominent and conspicuous. His ability as a vote getter is equalled by low and excelled only by that of the Minnesota Governor. In a campaign for tariff revision Governor Douglas would be the logical candidate for Vice-President. The section of the country from which he comes would, no doubt, show greater Democratic gains than any other section, the North-west alone excepted; for New England is pledged to the policy of tariff revision.

The improbability of any other Democratic candidates carrying a sufficiently large number of doubtful States has been forcibly pointed out, from time to time. With a ticket headed by Johnson and Douglas, and a platform naming tariff revision as the paramount issue, a conservative estimate places the probable result as follows:

Johnson and Douglas	Republican	Democrat			
Alabama	14	California	10	New Jersey	9
Arkansas	5	Colorado	3	(out of 121)	2
Florida	5	Idaho	3	Delaware	3
Georgia	13	Iowa	13	Indiana	13
Kentucky	13	Illinois	27	Montana	3
Louisiana	9	Kansas	10	Nevada	3
Maryland	8	Maine	6	New York	39
Mississippi	10	Nebraska	8	Ohio	23
Minnesota	18	Oregon	4	Rhode Island	4
North Carolina	12	Pennsylvania	34	Connecticut	7
Oklahoma	7	Utah	3		
South Carolina	8	Vermont	4		99
Tennessee	9	Washington	5		
Texas	18	West Virginia	7		
Virginia	12	Wyoming	3		
Minnesota	11				
Massachusetts	16		142		
New Hampshire	4				
Michigan	14				
Wisconsin	13				
North Dakota	4				
South Dakota	4				
New Jersey	9				
(out of 121)	30				
242					

A careful perusal of the above estimate will verify my claim for its conservatism. The Southern States can be relied upon to cast their electoral votes for the Democratic nominees; with Johnson and Douglas at the head of the ticket it would be possible to carry the States given to them above. If any of these should fail, there are the doubtful States with thirty-nine votes upon which the party could draw.

I am, sir,

R. K.

OUR LETTERS

MILWAUKEE, WIS., January 24, 1907.

To the Editor of Harper's Weekly:

DEAR SIR,—For some time I have observed that all of your correspondents whose letters are published in the WEEKLY conclude with "I am, sir."

This may appear to you to be a very simple question for me to ask, but I should like to know how it happens that all of your correspondents adopt this style. I have argued that you certainly would correct errors in a letter sent to you for publication, but that you would not attempt to tell your correspondents that it is impossible to conclude their letters with "yours truly," "very truly," "respectfully yours," or in any other respectful or earnest manner. Why should there be uniformity? In discussing this matter with a neighbor the suspicion was suggested by him that perhaps you wrote all of the published letters yourself. I do not believe it. If I did, I should not always turn in that department as soon as I open the paper. I think there is altogether too much grandiloquence, bombast, or stiffness or something about "I am, sir," and wish to suggest that if you are changing the letters of your correspondents in this respect you are not using good judgment. Why should all of your correspondents be tied down to such pedanticism?

I am, sir,

W. F. H.

No, we do not write the published letters. They are printed as they come, except that sometimes inadvertent or clerical errors are set right, and that usually the severely simple forms of address and conclusion which you speak of are used. The reason for simplifying the forms of address and conclusion as we do, and as most other papers do, is that these forms, as a rule, are purely conventional and mean nothing, and to standardize them saves space and leaves the real meat of the letter in bolder relief.—EDITOR.

DENOUNCED

SEVEN DAYS, IND., January 4, 1907

To the Editor of Harper's Weekly:

Sir,—I first began to pick up HARPER'S WEEKLY of December 7, 1907, in my club room and noticed your infamous libelous article entitled "The Roosevelt Panic and its Predecessor," in which you say "that popular instinct has linked it indissolubly with the name of the Chief Magistrate," etc., and more of such sort. I denounce the editor of the article, whosoever he may be, as a malicious perverter of it. You say as well understand now that such miserable lies do not and will not forfeit the love and high esteem in which our great President is held by the mass of the people.

Your paper is but the mouthpiece—the hired agent of the slaveholders, grafters, and thieves who have lived and fattened off of the great public for many years. You and your like are understood. Further understood, Indiana is not for Fairbanks, but largely for Taft.

I am, sir,

J. P. CREEK.

A VOICE FROM OHIO

CINCINNATI, O., January 21, 1907

To the Editor of Harper's Weekly:

HARPER'S WEEKLY might read Mr. Taft's Boston speech—the utterance of a statesman.

The WEEKLY could then see what an ass the WEEKLY is. No, not that—the WEEKLY is a hired liar.

When the WEEKLY gets awake in the night and finds itself alone in the dark and must listen to its own accusation—"I am a hired liar!"

But conscience is probably dead by this time or asleep. One thing is left to it surely—the WEEKLY can snarl brimstone bearing.

Hired liar!

Hired ass-wain!

The next President—Roosevelt or Taft. HARPER'S WEEKLY—Harry Orchard.

I am, sir,

We read the speech. It was an interesting speech, and not unedifying. Neither is Judge Taft unedifying. We respect and revere him considerably. Conscience! (Of whom?) Taft! No, too big a job; like eloping with a girl's school or drowning an orphan asylum. We don't want to associate anybody, even a retail person, least of all the excellent Taft. We love the truth. As for Harry Orchard, we learned rather a good opinion of his veracity. You don't sign your name, and leave us uncertain whether it is Charles or Henry.—EDITOR.

The Truth About The Navy

HAVE WE AN EFFECTIVE BATTLE FLEET OR NOT?

A REPLY TO SOME RECENT CHARGES

By CHARLES B. BREWER

Formerly Chief Draftsman of the Bureau of Construction and Repair, United States Navy Department; Member of the Society of Naval Architects and Marine Engineers

THE very grave allegations of the existence of defects in the construction of practically all of the vessels of the navy, which appeared in the January number of *McClure's*, from the pen of Henry Rosterdahl—one who should be able to speak with more or less authority—and the comments on the article by the press of the country, call for an answer, and an answer they will probably have from an official source; indeed, such an answer is already in preparation, the press reports say.

An answer, however, from an outside source, from one who has personal direct knowledge of many of the subjects, but from one who is now in no way connected with the Navy Department nor with a firm having contracts with the Navy Department, may be considered less partial. It is also probable that an independent report of the whole matter will come from a congressional committee, if reports from Washington are correct. But as large bodies move with proverbial slowness, this independent answer may possibly be of value.

In Mr. Rosterdahl's article the charges relating to the constructive features of the vessels are briefly as follows: That the heavy belt armor of the battleships is under water; that the turrets are over an open shaft down which fire may find ready access to the magazines; that the boxes of the vessels and the turret-guns are far too low, and that the broadside guns have an even worse emplacement; that the vessels are unprovided with torpedoes and torpedo tubes, and that the nature of the bureau system compels it to resist improvements in those matters. The charge is also made practically throughout Mr. Rosterdahl's paper, that though the defects have been known for years nothing has been done to correct them.

This article is intended as a comment rather than a complete answer to the aforesaid charges—a comment on some of those which are true, and an answer to those which are not considered justified—and particularly to the impression created throughout the article that those whose duty it has been to look after these matters have slept while the navy was building. The charges will be dealt with in the order of their consideration.

LOW ARMOR-BELTS

*Of all our battleships, not one shows its main armor-belt six inches above the water when fully equipped and ready for sea."—(From Mr. Rosterdahl's article.)

Now the term "fully equipped and ready for sea" may mean almost anything. It has, and must have, a definite meaning to the designer, and as it appears each year in the table of vessels given in the Chief Naval Constructor's Report under the column headed "Full Load Displacement," or, in other words, full weight, it means: the ship complete; all bunkers full of coal, the full complement of officers and men, with their effects; stores and provisions for a three months' cruise, and a full supply of ammunition, that is, as much ammunition as her magazines will hold in the racks and bins, arranged to take care of every piece by count, and enough additional space provided for passages in which to handle it expeditiously, and also enough space above the heavier shell for the trolley and rail to pass it over what is left in the bins to the ammunition hoists.

The ship in her "normal displacement" or normal weight is the ship the public knows. Thus, the 10,000-ton vessel is 10,000 tons in normal displacement, and the main difference between the ship fully loaded for sea and the ship in her condition of normal displacement is the difference between the ship described above and the ship with her-torpedo ammunition, stores and provisions aboard, and a much smaller amount of coal than her full supply, the normal amount of coal for the normal supply being 900 tons for a 10,000-ton ship.

The full load weight of a 10,000-ton ship such as the *Louisiana*, *Connecticut*, *Massachusetts*, *Iowa*, *Kansas*, or *New Hampshire*, is about 17,000 tons to 17,800 tons. The similar weight of a 12,000-ton ship, such as the *Virginia*, *Georgia*, *Rhode Island*, *New Jersey*, and *Arkansas*, is about 16,100 tons, and for a 12,500-ton vessel, such as the *Haines*, *Minnesota*, or the *Albatross*, it is about 15,500 tons.

No ship can choose her fighting weight any more than she can choose her time to fight, because, from the time she leaves port her coal and provisions are being consumed, but that the vessels named above, when called upon to fight, will be in a condition somewhere between the weights mentioned is most probable. When in a condition anywhere between the indicated limits, the heavy armor-belt will extend above the water-line, between 24 and 51 inches for the *Connecticut*, *Veracruz*, *Louisiana*, *Kansas*, *Minnesota*, and *New Hampshire*; between 37 and 34 inches for the *Virginia*, *Georgia*, *Rhode Island*, *New Jersey*, and *Arkansas*; and between 17 and 47 inches for the *Missouri*, *Wisconsin*, and *Albatross*.

Just reflect one moment on the difference between these

THE ARMOR-BELT AND WATER-LINES OF THE BATTLESHIP "CONNECTICUT"

The armor-belt extending around the stern is the top of the heavy armor-belt. The armor shows where this belt rises to protect the magazine and engine-room. The upper dotted line on the hull indicates the full load water-line, the lower one the line of normal draft.

figures and the six inches credited by the author of the charges. The vessels in the foregoing list are fourteen of our force of twenty-eight battle-ships. They are those last built. The condition of the other fourteen has not been examined, but they would doubtless answer for themselves as the first half have done. There is a photograph of the Connecticut published in Mr. Rosterdahl's article, and the reader is referred to a "dark line just above the water" as indicating "the actual height of the Connecticut's armor." The words "All our ships suffer from this

range, as was evidenced by a test explosion of a 12-inch shell inside an experimental target, which was built as a reproduction of this part of one of our vessels now afloat. This test the writer witnessed at the Indian Head Proving Grounds in 1903.

THE OPEN TURRET

"... The open turret of the United States battle-ship is the only violation of this principle [i. e., that powder must not be passed directly up to the gun-deck through a vertical shaft] in the practice of the world."

"The open turret is a conical shaft ... at its bottom is the handling room ... and opening directly into it are the magazines."—(From Mr. Rosterdahl's article.)

One not familiar with the construction of the vessels would imagine that the handling room was stacked with powder waiting for the flaming grains from an accidental flare-back in the turret to drop forty feet and ignite it. Such is not, or should not be, the case, if the means at hand are utilized. The shell, iron which there is practically no danger, is stored in rooms the doors of which must be kept ajar in action to allow the trolley with its heavy shell to pass, but not so with the powder. Each door in the powder-magazines opening into the handling room is provided with what is termed a passing scuttle, which means a tray on which to slide the powder out and a metal flap to close this opening. This flap is in place at all times, except at the very instant the powder passes out, falling into its place by gravity the instant afterward, and only one charge of powder at a time should, under any circumstances, be kept in the handling-room.

There would have been an call for the heroic deed related of the sailor in the accident aboard the Missouri in 1904, when he stepped up this hole in this passing scuttle with a powder-can wrapped in his coat, had this metal flap been in place. That the ship had been equipped with such a metal flap was clearly proven by the photograph taken at the time of the accident, which showed it on the floor in one corner of the handling-room.

Immediately after this accident the hinge fastenings of these metal flaps were provided with more secure fastenings by a general order issued by the Bureau of Construction and Repair to all navy-yards and ship-building yards.

Mr. Rosterdahl states in his article that the birth of the automatic shutter, a device to close off the turret-opening from the handling-room, occurred two years after the Missouri accident, and only after the ignition of a charge of powder on the Kearsarge, in April, 1906, had compelled it by "the pressure of public opinion" and the "excited imagination of the country."

In August of 1903 the writer, when on duty at Newport News, designed an automatic shutter which was sent at that time to the Bureau of Construction. The design is now on file in that bureau, and has been followed in the case of most of the shutters since installed on the vessels. Early the next year, in 1904, on duty in Washington as Chief Draftsman at the Bureau of Construction, I with the other officers of the bureau started the installation of automatic shutters on all the vessels then under con-

struction. The dark line readily discernible in the photograph is what sailors call the "hoisting" of the ship, and in that portion of the ship shown in the photograph is approximately in line with the top of the armor-belt. The photograph shows, however, the stern only, where, as in the bow, the armor is, for a short distance, many inches lower than over the magazine and engine and fire-room spaces. If this "dark line just above the water" is a basis of so great a charge, the critic should have followed more closely the course of construction of our vessels, for this line extends so short a distance that not only has it stepped up to the dimensions enumerated before the long machinery spaces are reached, but even before the magazine spaces are reached. Furthermore, the side-armor is at this point backed up by the heaviest part of the ship's protective deck armor, and the principal reason for this thickening is that the side-belt armor is low at this point.

It must be clearly understood, however, that if enough weight be piled on, it is possible to sink a vessel not only below her belt-armor line, but below her air ports, and if she does not then become unstable and turn over, it is also possible to sink her all the way to her decks by adding more weight. A photograph of the battleship *Nere Jewey*, taken just before her departure for the cruise to the Pacific, actually showed her with weight so piled on that her main armor-belt was under water. The photograph shows her at a draft of 28 feet 6 inches, a 28-foot draft mark being just above the water. This means that a 15,000-ton vessel actually had a displacement of more than 19,500 tons. No commander would, of course, dream of going into action with any such surplus and entirely unnecessary weight, nor would a fair-minded critic base a charge on such a condition.

To place this heavy belt armor higher would mean to increase the extent of it, and each additional inch to the height of it enormously increases the weight of the ship, for it must extend far enough below the lower probable water-line to afford protection to the vitals of the ship when she is rolling in a heavy sea-way. To what extent it can be increased is worked out by the constructors separately for every design, generally many times, and for use of the later designs, which the writer had charge of while on duty at the bureau, it was worked out in about thirty different schemes, with plans and complete weight calculations for each, before a design was finally settled on. Weight was considered in every department of the vessel, where it was feasible to do so, in order to secure additional armor.

Even were the charge true, the ships would not be in the lethal condition which the article leads the reader to think, for there is armor of considerable thickness immediately above the belt-armor, which extends from right to left above, and it is also backed by coal-bunkers and a heavy protective deck which affords a large degree of resistance to even the heaviest shell at close

THE RELATION OF THE BATTLE-SHIP "MINNE-SOTA'S" ARMOR-BELT TO HER WATER-LINES

The bottom of the *S.*, indicated by the arrow *A*, marks the 25-foot water-line. The normal draft of the "*Minne-SOTA*" and the "*Connecticut*" is 23 feet 6 inches, and the draft for full-load displacement 25 feet 9 inches. Each of these water-lines has been traced on the photograph from the draft figures which may be seen upon close inspection immediately below the figure *B*. The top of the armor sits above at about 27 feet, 6-inch water-line. Where it steps up to protect the magazines is indicated by the arrow *B*. It will be seen that this rise is about an inch with the 25-foot water-line. The armor-line of the "*Connecticut*" is exactly the same distance above the level as it is in the "*Minne-SOTA*." The weights are identical.

THE ARMOR-BELT OF THE BATTLE-SHIP "OHIO"

The foot of the sailor is ration on the top of the heavy armor-belt at the forward part of the ship. The upper dotted line on the armor indicates the battle-ship's full-load displacement water-line, and the lower one the normal water-line.

struction. These included the battle-ships *Virginia*, *Rhode Island*, *Georgia*, *New Jersey*, *Nebraska*, *Louisiana*, *Connecticut*, *Mississippi*, *Yerres*, and *Kansas*, and the armored cruisers *Princess*, *Albatross*, *Albatross*, and *Albatross*. The orders for shutters for practically all of the vessels under construction, and some of those in commission, the plans for many of them, and the successful installation of some, were satisfactorily completed before the acc-

these later vessels was evidently forgotten by Mr. Reuterdahl when he wrote that "the yawning gun ports still remain as originally designed." True port protection is nothing more nor less than armor fitted around the gun on the inside of the turret and, naturally, behind the turret armor. It is made of sufficient size to close the opening around the gun, and moves up and down with the gun as it is elevated or depressed.

LOW BOWS, AND GUNS THAT CAN NOT FIRE

"It would be impossible in rough weather to aim and fire the forward turret guns."—From Mr. Reuterdahl's article.

The reason ascribed for this alleged defect is that the guns are too low. Certainly, if the weather is rough enough this would be the case no matter at what height the guns might be, but we do not expect to fight in a hurricane.

The figures given by Mr. Reuterdahl for the heights of the decks above water (the bows of the three ships of the *Indiana* class 11 feet above the water, the two ships of the *Kearsarge* class 13, those of the *Connecticut* about 18, and of our latest armored cruisers 20 feet) are approximately correct, dependent, however, upon the water line referred to. But it should cause no such alarm as the article prompts if it were impossible to sight these guns while the vessel is shipping solid seas over guns six feet above the decks which are, in turn, 18 or 20 feet above the water-line. (These latter figures, "18 or 20 feet above the water-line," are Mr. Reuterdahl's.)

The designer must ever keep in mind the stability of the vessel, which is rapidly affected by placing the enormous turret weights at a greater height. He must not forget that with an increased height of turret must come an increased height of the armored casing tower behind the turret, if the navigator's battle-station is to afford him an unobstructed view. As the height of this tower is raised, a longer and consequently heavier armored tube is required to protect the communication wires and pipes between the tower and the forces that work throughout the ship. The post-house screen and bridges for harbor navigation must also have an unobstructed outlook. The water line, the tower, must be raised if the tower and turrets are raised. When the designer has carefully remembered all these things, which he must not forget, he must then remember that the advantage of turrets and guns of the height advocated by Mr. Reuterdahl is open to most serious question in a consideration of the increased size of the target offered to the enemy's fire.

In the same part of his article Mr. Reuterdahl refers, by way of object lesson, to the fact that the forward turret of the British

THE ARMOR LINE OF THE BATTLE-SHIP "KANSAS"

The armor line of the "Kansas" is at the same distance above the keel as in the case of the "Connecticut" and "Mississippi," and the weights for the three are in every way alike. The "boat-topping" is the nautical term for the fore of point marking the ship's water-body, which is clearly shown in the photograph, is also at the same height as in the other two ships. At the bow, where the waves do not hide it, the boat-topping may be seen well out of water. The photographs of the "Connecticut" and "Mississippi" in dry dock show how high above the boat-topping the armor runs awashships for two-thirds the length of the vessels.

dent in the *Kearsarge* in 1906. The writer remembers the fact very distinctly, because he met the turret officer of the *Kearsarge* on the street in Washington, about a week after this accident, and received the first news of it from him. The subject was taken up by the Bureau of Construction and Repair the same day, and within a day or so the recommendation had been made to the department for the installation of such shutters on all other vessels in commission with turrets.

A strong recommendation for the installation of such shutters on all vessels in commission was received from Admiral Evans about a week after this. (The spring of 1906.) As early as 1902 they had been required in the specifications for vessels under construction.

Not only were automatic shutters provided for years before Mr. Reuterdahl claims they were forced upon the bureau by an inflated country, but designs for an improved form of turret were being vigorously prosecuted during the development of the automatic shutter, which he also claims came in 1907 from an outside source "after fifteen years" of sleep by those responsible for such matters. It was realized that while automatic shutters were the best thing to offer for turrets of the type already constructed and under construction, new ships called for something different. The subject of improved turrets had taken definite shape as early as 1905, when a double-stage turret, the design of the Bethlehem Steel Company, was contested for by the New Hampshire, a vessel which has now had her trial trip. The writer understands that since he left the bureau in December, 1906, the question of allotted weights being greatly exceeded has caused some change in the type of turret for that vessel, and is now informed of the type actually installed, but the above will clearly show that the *Big Van Winkle* act, if engaged in as charged, must not have been without its disturbance.

SIZE OF TURRET GUN PORTS

Our ships at Santiago during the Spanish war had been subjected to a storm of shot and shell from the forts on the hills, tops and had been powerless to return the fire, for the reason that the size of the turret ports would not permit the guns to be aimed high enough. This taught its lesson, as, for new vessels, the angle of elevation of the turret guns was raised from fifteen to twenty degrees, and the size of the ports in the armor was correspondingly increased. The turret of a battle-ship weighs several hundred tons, and although it may be revolved horizontally, it is not designed to be raised or lowered, and as the guns must move up and down for firing at different ranges and at elevated objects, the only alternative is to make the turret ports large enough to provide clearance for the guns. These ports, however, are not open on our later vessels, as the reader of Mr. Reuterdahl's article is led to believe. The existence of gun-port protection on

TO KEEP WATER OUT OF THE TURRETS

The arrow indicates one type of turret in use in the navy to close the turret ports when heavy weather hurls waves aboard the ship.

battle-ship *Dreadnaught* is "set far back—about one hundred and two feet from the bow." The answer to this is, that in many of our vessels about this distance is 120 feet.

If, as Mr. Reuterdahl states, the battle-ship *Virginia* shipped 120 tons of water into her forward turret during a trip from Cuba in Hampton Roads a few months ago, with her steel bolters, which are intended to close the turret ports in heavy weather, in place, as

It is claimed they were there must have been some grave defect in the making of the hull, for it is of the same design as that on many vessels from which no complaint was received, while the writer was in the bureau.

THE BROADSIDE BATTERIES

"... The broadside guns on our ships are in an even worse position than those in the forward turrets."—(From Mr. Reuter's article.)

The forward Turret of Rear-Admiral Evans's Flag-ship, the Battle-ship "Connecticut"

would indeed be a serious state of affairs, for the submerged torpedo-rooms are placed at only about one single place on a ship, owing to the vast amount of room it takes up and other peculiar requirements. It is the one thing on the ship to which the integrity of the double bottom must yield—the one compartment, except at the extreme ends of the vessel, whose limits extend from the outside air skin-plating, on one side to the skin-plating on the other. If this space is not pro-

Rear-Admiral Thomas standing by the after Turret of his Flag-ship, the "Minnesota"

THE SMALL, WELL-GUARDED TURRET PORTS OF THREE BATTLE-SHIPS

There would seem to be scarcely space enough between the guns and the sides of the ports for half a dozen 12-inch shells to enter them at the same time

Quite naturally is this the case. These guns are so placed as to have the benefit of the lower side-armor protection. Indeed, so important are they that it is the principal reason for the existence of the secondary armor-belt. This armor, on most of our vessels of recent type, now extends to the main deck. The stability of a ship of the size of those now about cannot be maintained if the armor and the guns are carried to the bridges. A more conservative observer, however, would have stated the distance of these guns above the water-line—dependent upon which water-line he referred to—as from 13½ to 18 feet rather than 11 feet, as Mr. Reuter's assumes.

UNARMED SPACES FORE AND AFT

The ends or parts of the ends of some of the earlier vessels of the United States fleet are certainly provided with less protection than could be wished, although, as Mr. Reuter adds, this is "not of recent discovery." It could have been added that neither has this been permitted to go uncorrected on later vessels. Years ago it was corrected. Since it is realized by the proper persons, and there is no danger of a repetition, the loss said about the older vessels the better, for a wreck spot is one's armor is certainly not a thing to advertise.

LACK OF TORPEDOES AND TORPEDO TUBES

"... Our battle-ships, up to the present time, have been practically unprovided with torpedoes and torpedo tubes."—(From Mr. Reuter's article.)

The casual reader would infer from this extract that the ships generally have no provision for torpedoes, a fact which, if true,

vided for is the early stages of construction it is wellnigh impossible to obtain it afterward.

Fourteen of our battle-ships and seven of our armored cruisers now about have submerged-torpedo-rooms with foundations and arrangements for the tube itself, the installation of which is trifling compared with the provision for space. Many of these vessels have two such rooms, one at the bow, the other at the stern. These rooms have been provided on many of these twenty-one vessels at an abnormal expense, and on half of them after they were well under construction. Indeed, to meet the demands of sea-going officers, on eleven vessels, the specifications for which had originally required torpedo tubes, they were omitted, owing to the temporary disclaimer into which the submerged torpedo had fallen. When the development of the torpedo made it an imperative adjunct to a battle-ship, these torpedo tubes were put in, necessitating a great increase of cost. The writer has a very vivid recollection of the struggle he had to utilize certain parts of the ships as built, and to accommodate the torpedo-rooms into four from-space instead of the customary five, in order to preserve the space for additional ammunition, and also to save about \$10,000 per vessel on several of the ships concerned.

INSUFFICIENT AMMUNITION HOISTS

"The mechanism for hoisting ammunition to the crews of the medium guns can give them only from one-fifth to one-third the amount that they can fire."—(From Mr. Reuter's article.)

The fact that our gunners have become so predicament—as indeed they have become—must be most prejudicial to all who are
(Continued on page 32.)

A Ku-Klux Klan of To-day

THE RED RECORD OF KENTUCKY'S "NIGHT RIDERS"

By CHARLES V. TEVIS

THERE is war in Kentucky. In a score of towns what is virtually a state of martial law exists. In the farming districts cellars have been fortified and loaded arms stacked within easy reach. The "Night Riders" are abroad.

Rivalling the notorious Ku-Klux Klan in daring and in romantic interest, this intensive foe of the commonwealth of the Blue Grass State has burned a path to a disquieting dominance. By day the planters of tobacco, riding in companies, are doggedly proselytizing in protest against what they characterize as the oppressive methods of the American Tobacco Company. Their greeting is characteristic of whole-hearted Kentucky; generally their word of farewell is a warning, perhaps veiled, but menacing. By night bands of masked men are roving the State with flaming torches and ready revolvers, leaving behind them a trail of devastation and bloodshed.

At Lexington, Brigadier-General Roger Williams, of the State Militia, is holding several companies of soldiers ready for any emergency. Company G, of the Seventh Ohio Regiment, is prepared for the attack which has been threatened on Manchester, Ohio. At Lawrenceburg and Aurora, Indiana, the "Night Riders" have already made several raids, and defensive measures have been taken for another expected invasion. Without exception, the citizens of every municipality in Kentucky where tobacco is marketed are sleeping on their arms.

That the breck and butter of seventy-five per cent. of the farmers of the State is endangered, scarcely takes as an excuse for its sway. The so-called "tobacco trust," the American Tobacco Company, has been defied by the planters. They are withholding their 1906, 1907, and, in some cases, their 1908 crops from the company's markets. This means that their product is not being marketed; that their pocket-books for the year just past are minus approximately \$35,000,000; that the banks are refusing them credit; that the insurance companies are declining to write "property risks" and even canceling policies; that the chance for a 1908 crop is remote; that a staggering blow is likely to be dealt at the life of Kentucky's greatest industry.

The rebellion had its origin two years ago. Certain of the planters awoke to a realization of what they alleged to be the "grip of the trust." Fortwith they began to preach the doctrine of "a trust against a trust." They vowed that they had no hand in the making of prices for their tobacco; that in order to live, pay their debts, and continue the raising of tobacco they had to accept what was offered them, and that the interest on their investment of labor and money was not worth while. Hundreds of farmers flocked to this standard; five associations, unions in effect, were formed and affiliated under one name, the "American Society of Equity"; and the cry for higher prices was loudly raised.

In the course of months, 75,000 members were enrolled in

the two big societies, the Burley Tobacco Association and the Dark Tobacco Association. This membership represented a tobacco pool of 350,000,000 pounds, or more than seventy per cent. of the State's output. How formidable this farmer trust became can readily be seen. But the leaders of the movement appreciated the fact that for it to be successful there must be no non-unionists, and a greater crusade was instituted. As has been said, persuasions failed to bring all of the independent growers into the fold. Then came the Night Riders.

This was the beginning of a crusade of destruction which has up to this time claimed the loss of \$500,000.000 worth of property and the sacrifice of several lives. As yet nothing has served to check it.

Not one, but a half-dozen companies, of from 200 to 500 men each (a strange commentary on Kentucky's percentage of ruffian citizenship, if the contentions of some are to be believed), are parading nightly, blackened ruins marking their progress.

On the night of the second of March, 1908, they appeared suddenly in the streets of Princeton. They were on horseback, masked, armed, determined. With a preliminary scattering of shots, they applied the torch in several freight cars containing tobacco, some of which had been bought by the American Tobacco Company, and the rest owned by independents. Not until these fires had completely destroyed the tobacco did they leave the city and disappear into the darkness as mysteriously as they had come.

"A band of ruffians!" They will not dare to repeat the outrage!" was the verdict, when the news of the raid was flashed over the State.

Closely upon the heels of this event came a report that a band of mounted men, masked and armed, had burned the barns of a farmer near Hopkinsville. Simultaneously, other planters, all independents—communicated the intelligence that their crops had been "sailed," or ruined by "dragging," or that their barns had been burned. These arrived from different parts of the State, and each stated that a band of mounted men, masked and armed, had committed the depredation.

The trouble is confined to the few western counties that raise the greatest Burley crops. The hirelings who are doing the work will soon be apprehended and "panicked," said the witnesses.

Then appeared the ominous skull and cross-bones on the front doors, fences, and barns of independents, who were refusing to join in the fight against the tobacco trust. Letters threatening destruction of property and a whipping were sent out broadcast. A campaign of intimidation was waged, and the American Society of Equity's ranks were augmented. But the American Tobacco Company and its allied concerns pursued the even tenor of their way, strong in the support of those who laughed at threats and remained independent.

This was not well advised. On the night of December 7 began a reign of terror that

THE TRAIL OF THE "NIGHT RIDERS"

has no like in the history of Kentucky. Hopkintonville was the point of first attack. The citizens of this city, on that memorable evening, little suspected what the next few hours held for them. A raid by the mysterious band of "Night Riders" was far from their thoughts. Not until their slumbers were broken by the clatter of flying hoofs and the rattle of shots, and their sleep-battered eyes blinded by the glare of burning buildings, did they realize the full meaning of a descent by the dreaded band.

In the face of a determined fire from the several detachments of the invaders, the men of the city armed with all kinds of weapons, ventured from the protection of their homes to meet in alleys and in the shadows of buildings. Preachers, physicians, lawyers, merchants—men of all classes and characters made up these squads, which, by daring dashes and sly maneuvers, at length joined for a concerted attack upon the marauders, who were holding the public square. There a pitched battle ensued.

The spectacle of fellow Kentuckians, perhaps neighbors, perhaps relatives, shooting at each other with deadly intent, was painted red by the flames of the blazing warehouses. Shrieks of terror-stricken women were heard above the rattle of shots; and the cries of the wounded answered the shouts of new recruits to the ranks of the defenders. Slowly, fighting each step of retreat, the "Night Riders" were forced from street to street and alley to alley, and finally to the outskirts of the city. Three two of the raiders were seen to fall from their horses as the bullets flew among them. The crowd of citizens had by this time assumed formidable size, but in the face of its terrific fire the invaders made a last stand, while their fallen comrades were being placed upon their horses. Then, with a threat to repeat the outrage, the band galloped away.

Until broad daylight heavily-armed sentries guarded each approach to the city. Several citizens had been badly wounded, and at the earliest possible moment a petition for State troops was flashed over the wire to Governor Augustine A. Wilson. He immediately ordered the Lexington Company on the scene, and by evening the city was in a state of martial law.

Meanwhile, from the farmers who had fled to town upon hearing of the raid, it was learned that Edward McCook, a young planter of Trigg County, was lying fatally wounded at his home. He refused to give any account of how he had come to such a state. The news was also brought that William Gray, another young farmer of Christian County, had been brought home dead to his parents early that morning, several marked men bearing the body. They had made no statement. These two incidents were accepted as disclosing the identity of two of the mysterious band, and added much weight to information already credited, that the "Night Riders" were not hirelings and ruffians, but centers of land and influential growers of tobacco. With the realization of this the aspect of affairs became doubly grave.

All sorts of strange stories sprang into life. It was said that the "Night Riders" had an organization modeled after that of the historic Ku Klux Klan; that there was one man at the head—some of the biggest growers in the State—and, under him, a high council of war, acting through captains, lieutenants, and different bands of privates; that this organization was State-wide, its companies ready for their sinister work in every tobacco-producing section within the boundary lines of the State. Some declared that the bands made their headquarters in caves, that there lots were caved, and the fate of different independents decided. A few of the more imaginative even pictured wives and mothers making masks and hoods for their husbands and sons.

The contagion of fear quickly spread north and east from Hopkintonville, and with warnings from authentic sources and ill-timed appearances of strange groups of masked horsemen caused more than one body of citizens to prepare for defense. A cordon of guards was thrown about all the warehouses in Lexington. This example was followed in Mayfield, Owingsville, Russellville, and a number of other towns. By day every stranger was an object of suspicion, by night sentries patrolled the streets.

Yellowing wholesale destruction of property in Trigg County, on the night of December 9, and an attempt to re-attack Hopkintonville two nights later, Governor Wilson received word from Washington that the United States Government and the French government were protesting that the destruction of property in Kentucky was affecting some of their trade interests, and that the President would hold the Governor responsible for the immediate suppression of this uprising and the punishment of the terrorists. The State police machinery was at once set to work, aided by the officials of the several counties, in stirring denunciations of the acts of the "Riders" was made by the Governor, who also appealed to the citizenship of the State to aid him in ridding the offenders to earth. A conference between the officers of the American Society of Equity and representatives of the American Tobacco Company was arranged to bring about a mutually satisfactory agreement and end the troubles.

This meeting was held, but no settlement was agreed upon. The tobacco company's trust representatives did not have a great deal to say. The Society of Equity conferees were voluble in their regret for the acts of the "Night Riders" and their denunciations of such work, declaring, in the strongest possible terms, the indignation that the society, for one moment, countenanced the depredations of the band or any sort of violence. C. M. Barnett, the society's president, pledged his efforts and the active aid of the organization in behalf of law and order, and the prompt and punishment of all guilty persons. Little else was done at the conference, although toward the desired agreement was accomplished.

Then a band of "Peaceful Riders By Day" made its appearance. General George W. Jett, one of the most influential planters in the State, was in command. It commenced its march in Breckin-

County, from East Augusta, where the five hundred "soldiers" congregated. From one farm to another went the company, soliciting signatures to a contract not to raise any tobacco in 1908, unless the tobacco trust "lays down" and advising to "hold" or "sell" term, those who refused to sign not to attempt to market any of their product.

On the whole, the army met with a satisfactory reception—far be it from the writer to attribute this to any apprehension inspired by the imposing cavalcade—but in many instances open refusal greeted the soft arguments, and grim arose the inevitable advice. One man, Mike Reesor, who lives near Augusta, awaited the reception committee on the veranda of his home, a couple of shotgun leading against his chair. The leader of the committee, pausing directly at the front gate, demanded to know whether or not he intended to join the Society of Equity. Reesor's reply was brief and to the point.

"No, I am not going to join," he said, "and the first man who enters this yard will be shot from his horse."

The "Peaceful Riders By Day" retired in some disorder, several of the members being restrained with difficulty from accepting Reesor's challenge.

For two weeks this army paraded in Mason, Bracken, Boone, Kenton, and Campbell counties, preaching peace and prosperity through organization, and generously distributing "advice." During the period the "Night Riders" were not asleep. As if by reversion irregularly, they appeared at the most unexpected places, and their hand was heavy. Then came the second conference of the Society of Equity men and the representatives of the trust. The following statement was given out at the conclusion of the meeting by the district board of the planters:

In accordance with the understanding reached at Frankfort, a meeting was held in this city (Winchester), to-day (January 31), with Messrs. Smith and Walker, of the American Tobacco Company. They offered to buy 10,000 hogsheads of tobacco pooled at twelve cents a pound, taking an equal per centage of all grades of tobacco. After discussion it was determined that this amount was less than they were paying for 1906 tobacco, and even less than they are paying for the 1907 crop in winter order. A counter proposition was submitted to them, to wit: that our Burley Association should offer 10,000 hogsheads at scheduled prices, which would average fifteen cents a pound.

"We consider it a great concession on our part to be willing to sell so small an amount of tobacco. But our proposition was rejected, and we were notified by the American Tobacco's representatives that they would not change one iota from the original proposition, and when asked if they would consider any further proposition in the nature of a compromise, they answered in the negative."

"It seems to us that the present situation ought to prove to every citizen that the grower of tobacco has but one buyer for his product, and that is the American Tobacco Company. Our buyers are few and close, and it was its duty to break aside small differences and, if possible, effect a sale—in vain. The question now is what steps shall be taken to protect our interests and, if possible, again render the cultivation of tobacco a profitable industry in Kentucky. . . . We insist that each member of the association stand true to his colors and be patient and sacrificing in the future, as he had been in the past, because we firmly believe that a victory for our side will soon be won."

"Above all, we ask every member of our association to 'cut out' his 1908 crop of tobacco, and to use every lawful influence to induce others to do the same. We cannot emphasize too strongly the importance of not raising a crop in 1908."

"We have come to the conclusion that the American Tobacco Company is using every endeavor to break down our organization, and, if it can, disrupt it forever. Without appealing to the prejudice or passion of our people, we can state with truth that our disruption means bankruptcy and ruin for many of our farmers, and want and misery among a large part of Kentucky's citizenship. To obviate such a state of affairs we will call upon the law-making and law-enforcing power of our State to join us in a movement that will forever put an end to such a trust. . . ."

At the meeting of the Burley Association, which was one of the third big raid of the "Night Riders," this time at Russellville, where several citizens were seriously wounded, and \$100,000 worth of property was destroyed.

The band entered the city shortly after midnight without a moment's warning. A detachment overpowered the police officials, binding them hand and foot. Another detachment went to the Louisville and Nashville railroad yards, where they took possession of every locomotive, fraying that whistles would be sounded and the alarm given to the countryside. The electric-light plant was also seized, and its whistles opened. Others of the band tied telegraph operators to desks and at the point of revolvers, held up the telephone operators, many of them women, at the same time wrecking the apparatus.

The Memphis fast train carrying mail and passengers, due in Russellville about one o'clock, was stopped a short distance from the city. The "Night Riders" mounted the engine and forced the engineer to run slowly through the city, and with no more noise than was absolutely necessary.

The main body of the raiders proceeded directly to the work of incendiarism. Within a brief time flames from the factory of the American Sulfur Company and the warehouses of Luckett and Wade were reddening the heavens. The warehouses of the Standard Oil Company, a plating plant, a wagon factory, a grocery, a livery stable, and a private residence within the fire zone were soon ablaze. After having their usual bloody trade mark, by

Marvels of Medicine Hat

By BARTON WOOD CURRIE

ILLUSTRATED BY M. L. DUMEXHAL

THERE was a trim young woman on the Imperial Limited out of Vancouver whom I took to be intensely modern and highly civilized. The forcefulness, dignity, and grace in her bearing compelled my admiration. She impressed me by her conversation as having travelled much and read deeply, if not rather too profoundly. Therefore, I was indeed surprised when she informed me that her home was in Moose Jaw, and that she was president of the Moose Jaw Ethical Culture Society. I carried this information to the man from the Yukon—a sour-dog from Dawson, he called himself—and was disappointed in his lack of interest. I expected he would be thrilled to hear it, just as he would sit up if I announced that she was a Queen of Siam or an Empress of Korea. It seemed, however, he knew it all the while.

"Yes," he said, in an easy, conversational tone, "and her sister is the secretary of the Medicine Hat Woman's Auxiliary. Likewise she has a brother teaching higher mathematics in Whoozup. Medicine Hat may be the coldest place on the weather-report map, but you need not expect to find any untamed savages there."

I protested that I entertained no such false opinion of either Medicine Hat, Moose Jaw, or Whoozup. It could not be denied that they were quaintly named. Furthermore, they were some distance from the centres of population and sources of culture, which had led me to hope that I would find them interesting in my brief sojourn in the Northwest.

While we ran through the lower undulations of the indescribably desolate Alberta prairies I sought to draw out the young lady from Moose Jaw on the Northwest, mentioning the fact that I proposed to stop over for a few days in Medicine Hat.

"I cannot see why you wish to stop there," she said, perceivingly. "For Medicine Hat does not approach Moose Jaw in culture. Why, we have three Browning societies to their one. You will find them awfully stuck up about their natural gas, just as if there was anything remarkable in gas. And they will tell you that it is colder in winter in Moose Jaw, but don't believe a word of it. Medicine Hat has a much higher rainfall record, and the annual loss in cars is far greater than at home. Then the experts all agree that the worst winter blizzards start somewhere in the plains above Medicine Hat. It is really America's rave of the winds," she added, almost maliciously. Then she fell silent and refused to discuss the subject further.

Arriving at Medicine Hat, I descended to what seemed an endless expanse of station platform. There was a mile or less of ball posts at the platform's edge, and every post wore a hooded lamp. A brilliant sun beat down from an unobscured sky. Yet I noticed all the lamps along the platform were blazing. They were gas lamps with asbestos mantles and burned a generous flame; a fine, broad, reckless flare. From end to end of the long timbered walk every lamp was lighted. I glanced across the

There was a trim young woman on the Imperial Limited

station lawn to one of the main thoroughfares and saw more radiant globes pecking the pavement. Undoubtedly there was some originality in this out-of-the-world community.

While I marvelled on the strange daylight illumination a tall, gaunt man, freckled and weather-tanned, moved away from a gas lamp he was looking under and tacked towards me furtively. He bent down and read my initials on the grip, rubbed his right forefinger curiously across the address, attempted to give it a little shove, and, failing, snapped up to his full abnormal stature.

"Betting?" he said, suddenly.

"Visiting," I replied.

"Dummer feller, hey? What like?" A spark of interest flamed in his big sorrowful eyes.

"No line," I explained. "Just visiting."

He regarded me in the reproachful way a man of gentle disposition does when he is convinced that you have wilfully perverted the truth. However, I persuaded him to point the way to the Queen's Hotel.

A tidy young man in tweeds reclined behind the hotel-office desk in a roomy Windsor armchair. He was absorbed in *A Tale of the Tropics*, a stout book with a badge of flame for a cover design. Even so, he had his coat collar turned up, and his teeth chattered. He shot me a melancholy glance from the fall of his eye, reluctantly got up, and commenced blowing vigorously on his fingers. I was inspired to ask:

"Are you cold?"

"No," he said, sadly, "but while reading I happened to think of last winter. . . . Do you intend to remain long?"

"No, only a few days."

The strange look in his big, deep-set eyes chilled me.

"You would like a room,"

he said, abruptly.

"Yes."

"With or without gas?—I beg your pardon—with or without bath? There is so much gas in Medicine Hat,"

He bent down

"Are you cold?"

he added, apologetically, "that it quite frequently gets on my mind."

"Then it is true that you never turn off the gas?" I asked.

"Never," he replied, briskly. "Wouldn't you say, You see, the wind occasionally blows in Medicine Hat, and it is best to keep up a good pressure in the lamps to meet it; then it is almost as cheap as the air. But listen! The evening breeze is coming down the Saskatchewan Valley now. Hear that far-off roar? But don't be alarmed, my friend. The hotel is a solid one, and solid buildings rarely blow away at this time of the year. We lose a bump now and then, but so far have lost no hotels."

He walked to the door and closed it just in time to escape a cloud of dust that whirled up from the roadway, curled into a sandspout and shot away on the thundering pinions of the evening breeze. There was something taffingly quaint in the humor of this young man.

"Our winds," he ran on, when he had returned behind the desk, "are nothing to the blows they have down in Moose Jaw. Why, down there they have to anchor their houses and cattle. It is a good deal better to be a Medicine-Hatter than a Moose-Jawer." I straightened up and regarded him incisively. But there was not a crease in his countenance as he yawned and returned to the snug recess of his Windsor chair.

Leaving that singular young man to the ferried jungles of his tropical book, I switched my attention to the green world that stretched before the wide hotel windows. The grass was freshly green; all the toylike little houses were painted a peculiar lime green; the South Saskatchewan River wound flat and glossy green between bare perpendicular banks, grey-green with prairie grass, but naked of tree or bush. There were trees, however, set out in the little emerald yards—strangely, unevenly green trees; snakily, iridescently green trees.

Such trees you will never see in nature anywhere off the stage. Perhaps, I thought, they are gas-trees, indigenous only to Medicine Hat. Still and erect, modestly draped as to trunk and limb with property bark, clothed with property leaves of a property sneaky green, you will find trees like them nowhere else in the world unless behind the footlights. And in Medicine Hat, as was fitting, they were set out behind the perpetually burning gas-lamps, which, by a strain of metaphor, might be called the footlights of the prairie.

But what Medicine Hat Barbiak had bred these stage trees and grafted them in a slightly alkali soil of the desolate North-

"Go anywhere and dig a gas-well with a gimlet"

west? Fired with a new feel of curiosity, I again turned to that baffling young man behind the desk. Although deeply absorbed in his book, he looked up with his office smile, which he seemed to wear only from the chin down.

"Are you acquainted with the flora of this district?" I asked, in the heavy, challenging tone of the learned.

"No," he replied, quickly and serenely, "but her department is a fine book."

This young man in tweeds, I thought, bitterly, was more than quaint or whimsical. He was diabolical, and I wondered how he came to exist so long on this Alberta frontier. Yet it would not do to slow him how keenly I suffered from his shabby attempt at wit. So I yawned behind my hand and said:

"I am afraid I have shot over your head. What I desire to know is the genus, kind, and classification of these small trees bordering the walks of another effort to get down within range of your intelligence."

He wrinkled his brow and bent a forefinger on his temple. Then he walked slowly to the doorway and looked out. He opened the door, stuck his head out, and peered up and down the street. Then he swung round on me abruptly and exclaimed:

"Why, old chap, these are green trees!"

I was dumb for a few moments, filled with one thought, one desire—to murder him where he stood smiling vacuously upon me. Where I grew calmer I asked him if Medicine Hat gas, the great volume of it let loose in the atmosphere, destroyed the mind.

He perked up immediately, rubbed his hands together, and became almost violent with enthusiasm.

"Our gas," he cried, "is the most wonderful aeriform substance in the world. It combines all the highest qualities of rock-gas, illuminating gas, fuel-gas, coal-gas, air-gas, and water-gas. It is a splendid balneum gas, and from it we make a laughing-gas that would tickle you to death. It is Medicine Hat's greatest asset. It is a high-pressure gas and may not be tampered with. It is very close to the surface. Boring for it is almost a pleasure. It is so simple. Why, I would not be surprised if you could go anywhere around the square and dig a gas-well with a gimlet. Of course we do use something larger and do go deeper than a few inches in order to be thorough."

"We do all our lighting, heating, and cooking with gas. We run our mills with gas. We have enough gas among us to light, heat, and cook the entire Dominion of Canada. If we could only

(Continued on page 31.)

Is it true that they come tripping gayly into town?

The Merry, Merry Cuckoo

By JEANNETTE MARKS

ILLUSTRATED BY ANNA WHELAN BETTS

WT, had done, no more, or y'll be havin' an attack an'—"

Annee's words sounded incohesive, although she fortified them by an animated gesture with her plump, wrinkled hand. Her eyes glared timidly from the window to David's face.

"But, Annee, y've no said a word of the cuckoo," said David, plaintively.

"Ay, the cuckoo," replied Annee, her heart sinking as she sent her voice up—"the cuckoo!"

"Has it come? Did ye hear it?"

The old man clasped and unclasped his hands helplessly, childish disappointment overspreading his face.

"David dear, if y'd lost listen to what I was a-goin' to say—" Annee gulped—"I was a-goin' to say that I've no heard the cuckoo yet, but that everythin's overrery, an' I'm expectin' to hear one any time now. It's so warm there might be one singin' at dusk to-day—there might be!"

"Might there be?" asked David, his eyes brightening—"might there be, Annee?"

"Ay, there might be, lad," and she lifted his head on her arm gently while she turned the pillow.

"It's overrery," he objected, "an', Annee—"

"Na, David dear, be still," she commanded, drawing his head close to her bosom before she laid him down on the pillow again. "Pastor Morris says everythin's overrery, even the foxglove is well up in the garden: an' the heather by Blane t'wa will be blossomin' a month early, an' the hills will be pink, lad—soon. Now, dear, I'll be back by-and-by with the broth; ye must be still awhile."

Annee went out of the room, stepping as softly as she could. For a moment she stood on the door-sill, looking into the old garden, green at last after the dreary winter, and beautiful in the promise of coming summer blossom. Foxglove and columbine, honeysuckle, lilies, and roses would bloom, but David would see them no more! For fifty springs they had gone into the garden together, he to trim the hedge and bind up the honeysuckle, she to dig about the rose-bushes and flowers. And every spring there had been one evening when the cuckoo's song was heard for the first time, and when there came into David's eyes a look of boyish joy. Ah, lad, lad—how she loved him! And he should hear the cuckoo again!

Resolutely Annee started up-hill, climbing close by the high pasture wall, and, panting, made her way as best she could over boggy places. After she had gone about a quarter of a mile she looked around her furtively. There lay Glyndyff Bach in the distance, Ty Geryg and Cwm Clich far away, and the meeting-house still farther. Only the mountains were near by, and a few lazy sheep trailing over their wild, gray ledges. She did not see even a sheep-dog. When she sat down by the stone wall there was a look of approval on her face, followed, as she opened her mouth, by a look of appealing misery.

"Ay, it was somethin' like this: Co-o-o, Co-o, let me see, every year I've heard it, an' David he does it, Co-o-o! Pw! that sounds like a hen," Annee peered about her. "Co, ra, ra. Then she shook with silent laughter. "I know! It goes over and over again, sing-sing, sing-sing, like this: Co-o, co-o. Ay, that's better." Practising the song, Annee rocked herself backward and forward. "It's growin' better!" she exclaimed; "but, lad, lad, I'm plannin' to deavie ye," and the tears rolled out of her old eyes. She hunched the tears away impatiently and began the song again: "Co-o-o, co-o-o, co-o-o, co-o, co: ay, that's fair; ay, it's fine! He'll not know me from a real cuckoo. I'll have to be tryin' it now, for y've no long deavie."

Annee went down into the valley, humming the bird-notes over to herself lest she forget what she had learned. She

lifted her short skirts and waded through the marshy places; in her eagerness she was unmindful of the pasture logs, her seventy years, her weary body; and her sparse gray hair lay damp on her forehead. In her mother-heart was but one thought—bringing his wish to David. Gasping, she reached the southern corner of the cottage garden, and there leaned on a trellis for support till she could get her breath. Completely engrossed in what she was to do, she did not think to look about her, she did not listen for possible approaching footsteps, and even David had slipped in her path a wee bit behind the cuckoo song. Finally she drew a long breath and began; she paused a moment, then repeated the song, softly, slowly. Pleased with her success, she sang the song again, very softly, very slowly, till it sounded such as if it came from a distance somewhere by the stream near the mill-wheel. She was just beginning once more when steps creaked behind her and a voice said, lamtantly:

"Egi, 'tis a pretty cuckoo ye make, Annee, an' a pretty song!"

"Lowry Prichard!"

"It's overrery for the cuckoo—is it not?"

"Ay."

"An' what are ye singin' in your garden for an' David dyin'?"

Annee's mild eyes gathered fire, but she said nothing.

"Are ye deavin' David an' be on the edge of the grave, Annee?"

It's a golly song to sing an' a tale for meatin', eh, Annee?"

"Ye may—ye—out—of—this—garden, an' that this minute," said Annee adumbrating.

Lowry looked towards the widow.

"Ye look like crazy, Annee—crazy with wrath—ay, and your hair is all rampled an' your smock is wet. Bein' a cuckoo be—"

But Lowry never finished her taunt, for Annee pushed her through the wicket gate.

The old wife went towards the cottage door slowly. David must have heard Lowry's words, and she could never make him happy again.

"Annee! Annee!" Her face brightened, then fell.

"Ay, David, I'm comin'."

"Annee, did ye hear a cuckoo singin'?"

David's eyes glowed rapturously in the twilight.

"Ay, I thought an' deavie."

"It sang three times; first it sounded like somethin' else, it was so breathless; then it sang quiet and sweet, like a cuckoo; and the third time it seemed comin' from the old mill-wheel. I was listenin' for it again, when I heard Lowry Prichard's shrill voice, an' I could hear no more."

"But, lad dear, y've heard it, an' I'm that gull!" Annee beamed upon him. "Three times; ay, that's fine, an' a real cuckoo; now y'e happy, deavie, an' y'e'll sleep well upon it."

"Will it be singin' again?" asked David, with a sigh.

"Ay, in the early mornin' an' at dusk. Now ye must drink your broth an' go to sleep."

David drank it obediently.

"It's been a fine day, lad dear—is it not so?"

"Ay, a fine day. I did not think I'd ever hear it sing again," and David's head slipped contentedly onto the pillow.

"Ay," he murmured, "a happy day!"

At dawn Annee stole out to sing her cuckoo song. It was done quickly, and she was back among her pots and kettles before David could know that she had been away. She rattled the saucepans around, then she stopped to listen. Yes, there he was calling.

"Ay, David, I'm comin'; I did not hear for the noise, deavie."

"Annee, it's been singin' again!" There was an expression of eager happiness on David's face. "I was awakin' to hear it sing over an' over again, over an' over again. But, Annee, ye make such a clutter there's no hearin' more than a song or two, an' yesterday 'twas Lowry."

"Ay, deavie, it's a pity I was makin' such a noise gettin' breakfast for ye."

"I was awake, Annee, when the start were hugin' in the trees, an' I saw them go out one by one while I was waitin' for ye to sing. I heard little creepin' "

Annee sang the song over and over again

things makin' way through the trees as the grass, as I saw the poplar by the window turn from silver to brown an' back to gray; as I heard the other birds makin' their early mornin' stirrin', flittin' an' chirpin'; as a little breeze came an' bustled through the trees with them, but so cuckoo, an' then just as it was singin' ye began stirrin' with pots an' kettles."

"Na, Davie lad, I'm that sorry; but ye have heard it twice, dearie, an' it'll be singin' this evenin' at dusk, perhaps over an' over again. Ye are feelin' fine this mornin', Davie?"

"Ay, better nor yesterday mornin'; I'll be gettin' well, Anne—Is it not so?"

"Indeed, lad dear, ye'll be about among the heather 'fore long."

Anne turned suddenly and went back into the kitchen; there in a corner she dried her eyes with her apron, drew a long breath, and went on with her household duties. She was disposing of the work rapidly, when she heard the click of the wicket gate. Coming up the path were John Roberts, Peter Williams, and Lowry Prichard. Anne put down the pot she was securing, wiped her hands on her apron, and went to the kitchen door, which, stepping outside, she closed carefully behind her. She looked sharply at the approaching group, and her kindly, wrinkled face hardened. Peter Williams spoke first:

"A fine mornin' to ye, Anne Dalben."

"Thank ye, Peter Williams, for the wish."

"How is your man?" asked John Roberts.

"He is the same," replied Anne, in a level tone of voice.

Lowry Prichard moved nearer.

"We've come about the cuckoo-singin', Anne. At the meetin' last night the congregation prayed for ye, an' a committee was appointed to wrestle with ye."

Anne breathed quickly.

"Ay, sister," continued Peter Williams, "ye've always been a godly woman; her of the flock; ye would not have David go to heaven with your lie on his soul!"

"Amen!" sang Lowry Prichard.

"An' sister, there was light in that meetin'; the spirit's among us these days; yours are the only lyin' lips."

"Repent!" shouted John Roberts.

"Have ye done?" asked Anne.

"But, sister—"

"I've a word to say. I've no mind to your salvation, no, nor to heaven if the Lord makes this singin' a lie. I'm a-thinkin' of David as I've thought of him these fifty years, an' if a lie will make him happy when he's dyin', then I'm willin' to lie an' do it every minute of the day."

"Sinner!" muttered John Roberts.

"Ay, sinner, a willin' sinner," said Anne, her soft eyes blazing.

"Now begone, and ye need not return."

Anne bolted the door and sat down wearily on a chair. She felt quiet; it mattered no little what the neighbors thought of her if only David might be happy, and David still believed he had heard the cuckoo. She was tired—so tired that she did not care what the church said of her; and her heart was numb. She knew that David was going, but it did not come home to her in the least except to make her hungry to bring him happiness. He should have that if he could give it. At a faint call she hastened to his room.

"Anne, there's some one outside, an'—"

"Ay, Davie Dalben, there is, an' Anne is a cuck—"

But the sentence was never finished, for Anne forced Lowry Prichard's head back and slammed the casement to, latching it securely.

"What does she want?" asked David, freely.

"I cannot say, lad, but she's no right talkin' to ye through a window. She's an idle, prying young woman, I'll see nor that she's out of the garden. Go to sleep, dearie; it's bad for ye havin' so much noise over nothin'; ay, that's a good lad," and Anne smoothed his brow with one hand the while she brushed aside her tears with the other.

If David should live a week longer, could she ever keep the truth from him? For a day—yes, perhaps. But for an entire week, with all Nant y Mor trying to force a way to the sick man? No. And how could she sleep morning and night with the neighbors—singing into the garden and around the house? She felt irresistibly for strength only the courage of a mother left alone in the world with a sick child to protect. She had no idea of relinquishing

She looked sharply at the approaching group

her plan, although she was in despair, and if any one had come to her with a friendly hand she would have wept. As it was, she was ready to meet attack after attack.

Anne was not surprised, later in the day, to see young Pastor Morrie coming up the pathway. He came slowly. When he greeted Anne his eyes sought the ground, his complexion was redder and more boyish than ever, and his lips, usually firm in speech, seemed uncertain. But the large hand with which he held Anne's was warm and kind. In the elated kitchen he began to talk with Anne about David—how was David? what did the physician say? wasn't Anne growing tired? what could he do? Suddenly the young pastor changed as if brought face to face with a disagreeable duty.

"Anne they say you are imitating a cuckoo; is it so?"

"Ay, sir, for David's sake."

"But, Anne, that is acting a lie, is it not?"

"It may be," replied Anne, wearily.

"Wouldn't it be better if I were to tell David, Anne?"

"Oh, no, no, no!" sobbed Anne. "Not that!"

"Na, Anne, Anne, you mustn't cry so; there!" and the young man stretched out his hand helplessly.

"Oh, air, it's all the happiness David's got, an' he's goin'. Oh, ay, lad, my lad!"

"There, there, Anne!"

"We've been married fifty years this spring, an' every spring we've listened for the cuckoo, an' not one missed. An' this year he's dyin', an' he's a wantin' to hear it so, an' it's overawry. Oh, Davie, Davie," sobbed Anne.

"There, Anne, there, dear!" soothed the young man; "tell me about it. We'll see, Anne."

"There's no more," said Anne, "only he kept askin' about things—violet an' cowslips an' birch-trees an' poplars—an' I knew all the time he was thinkin' of the cuckoo an' not askin'

The messenger had come

because he was going an' mightn't hear it. An' one day he did. An' I said I thought he'd hear use that very evenin', that everythin' was overrere. Then he seemed happier than I'd seen him, an' I went off up the hill an' practiced it till I could do it fair. Oh, Davie, lad!"

"Now, Anne, dear," comforted the young man, patting her helplessly on the back—"Anne, dear, don't cry; just tell me more."

"Then, sir, I sang the song in the corner of the garden, an' when I went into the house there was such a look of joy on David's face that's not been there for many a month, an' it was so matter Lowry Fribhand found the youngin'. It's the last happiness I've seen him, sir."

"I see," said the young man; "ay, Anne, I see. And you will be wishing to do it again?"

"Ay, sir, David's expectin' to hear the cuckoo to-night. Each time might be his last, an' I needn't disappoint him, poor lad."

"Well, Anne," said the minister, looking shyly out of the window, "I'll be around the garden at dusk watching, and there'll

be no use to annoy you while you are singing, so sing your best for David."

"Oh, sir, thank you," replied Anne, drying her tears and sighing with relief; "it's a comfort. But ye're no harmin' your conscience for me, sir, are ye?"

"I'm not saying, Anne; I'm over-young to have a conscience in some things. I'll be going in to speak a few words to David, shall I?"

"Ay, sir, ye're an' kind."

And so it happened that at dusk, when David's eyes were growing wider with expectation and his heart was beating for very joy of the coming song, that Anne, after she had settled him in motherly fashion, smoothed his overalls, rolled him "lad

dear," and "dearie," and "Davie," and all the sweet old names she knew so well how to call him—so it happened that she stole out into the garden with a lighter heart to sing than she had had in many a day. She knew the young minister was somewhere around to protect her from interruption. Standing by the honey-suckle trellis, awaying her old body to and fro, she sang. The song came again and again, low, sweet, far away, till all the hill seemed chiming with the quiet notes and echoes. And the young man, listening outside to the old woman singing inside, the garden, knew something more of the power of love than he had known before; and he bowed his head, thinking of the merry notes and of David in the twilight room, dying. Anne sang the song over and over again, then over and over again, till beyond the valley she saw the evening star hanging in the sky. Once more she sang, and all the spring was in her song. Then she turned to go into the house, her heart beating with fear. As she came through the doorway she heard her name called.

"Anne, sweetheart, did ye hear the cuckoo singin'?"

David was sitting up in bed, his hands stretched towards her.

"Ay, lad, dear," replied Anne, softly, taking David into her arms.

"An' there were so many, an' they sang over an' over again."

"Ay, David."

"But ye were no here, an' I'd like hearin' them better with ye here."

"Ay, dearie, I was busy."

"Oh, it was beautiful singin'—"

"Ay, lad, I know."

"An' over an' over again, like this—"

But David's notes trailed away as he started to sing.

"Ay, dearie, I was busy."

"Oh, it was beautiful singin'—"

"Ay, lad, I know."

"An' over an' over again, like this—"

But David's notes trailed away as he started to sing.

"Ay, dearie, I was busy."

"Oh, it was beautiful singin'—"

"Ay, lad, I know."

"An' over an' over again, like this—"

But David's notes trailed away as he started to sing.

FIRE AND "FIREPROOF"

By PETER JOSEPH McKEON

HE fire-fighting problem of a building is a complex one. In the architect's own field plan, design, and construction. It involves the fire resistance of structural materials. This is a matter about which architects are usually well enough informed, but are they equally well informed about the selection and use of these materials in order to get the best results from a fire-protection standpoint? A study of fires points the other way, and indicates that, in the matter of plan and specifications, architects could secure improved fire resistance, with equal or even less cost than the methods they now follow.

In respect to private fire protection, the Fire Department, and fire insurance, features that may perhaps be considered outside of the architect's proper sphere, the architect is miserably at a disadvantage. The scheme of private fire protection includes so many appliances, devices, and systems, that the architect simply cannot spare the time to keep informed about them, but must either take them on trust or secure this information from outside sources.

This is even more true in the architect's relation to the Fire Department, and yet he cannot ignore the fireman, if he hopes to plan a good building. The firemen are supreme in case of fire: they are called on to make up for all the errors and weaknesses that have previously gone into a building, and their work is difficult and dangerous under the best conditions. Neglecting the Fire Department, not only results in excessive fire that could be confined, but it results in a damage to the building and its contents which, to the uninformed, appears nothing short of wanton vandalism, but which, in most cases, is necessary and unavoidable. If the Fire Department is expected to put out a fire, it is sensible to give it every possible assistance in its work, and in this direction much can be done by the architect when planning the building.

Fire insurance is a tax on the building and the tenants that lasts as long as the building stands. For this reason, the architect's duty to his client demands that it receive some consideration. Insurance rates and rules are a special business entirely outside of the architect's province, and the architect cannot bother with them. In ninety-nine cases out of a hundred the finished

building has an insurance rate that could have been less. This is not the fault of the architect, but at the same time the insurance should be considered when the building is being planned, and for this reason the matter has to be considered by the architect.

All these questions as to the selection and the use of materials, private fire protection, the Fire Department, and fire insurance, enter into the design, plan, and construction of every building. They call for special knowledge which the architect cannot be expected to possess, and under the circumstances the only safe course for the architect, both in justice to himself and also to properly further the interests of his client, is to do what he has done with other special problems of a building, elicit in consultation some one who is competent to pass on the special features presented by the fire hazard.

One of the historical instances of a "fireproof" building being gutted by fire from the outside was principally due to a defective standpipe connection. The fire was communicated on the sixth floor, and when the firemen tried to use the standpipe they found an inverted connection to which they could not attach their hose. Therefore they were compelled to carry hose lines up nine flights of stairs, but before they could do this the fire had possession of the floor, was extending to the upper floor, and was beyond control.

One of New York's most notable skyscrapers, a building which has received the widest press publicity as embodying every idea and device for safety, has only one stairway and one set of elevators. All of these are in one shaft, which is unenclosed and open to all the floors of the building. As a result, a fire on any floor would make it impossible for the occupants on the floors above to descend, because the heat and smoke would make the stairs and elevators impassable. In this building the location of the stairs and elevator could have been better planned, with all due regard for economy of space; moreover, the stairs and elevators could have been separately enclosed, making them dependable as fire escapes without impairing their use for many-day purposes.

The same building has five underground floors used for storage.

Music and the Opera

—EDWARD MAC DOWELL

By LAWRENCE GILMAN

THE arts of sculpture, letters, and music have suffered grave losses in America during the past twelve months. Saint-Gaudens, Steedman, Mac Dowell—the roll is a lamentable one, and the name that is most tragically present upon it is the last. Saint-Gaudens could look back upon almost sixty years of full and significant activity; Steedman could count his threescore and ten, and over. But the youngest of these three friends—they were devoted colleagues—had just turned forty-six, and for three years he had been mentally dead; he had achieved much, yet his work was far from completed; he gave promise of momentous accomplishment, of even nobler and riper work than that which now stands securely opposite the record of his years.

American art can ill spare a creator of the stamp of Edward Mac Dowell. Comparatively speaking, we possess, or have possessed, painters, sculptors, poets, of masterful individuality; men who have not merely kindled parochial pride, but who have contributed to the art of the world. But we have been, save for Mac Dowell, poor in music. It is mere justice to him, now that he has passed beyond the reach of our praise, to say that he gave to the art of creative music in this country (I am thinking now only of music-makers of native birth) its single impressive and vital figure. His is the one name in our music which one would venture to pair with that of Whitman in poetry, or Saint-Gaudens in sculpture. It is not a predictably harsh asseveration to say that, until Mac Dowell began to put forth his more individual works, our music had been palpably, almost frankly, derivative; an undisciplined and native transplantation, made rather pallid and anemic in the process of European growth. The result was admirable, in its way, praiseworthy, in its way—and wholly negligible. To have named any of its manifestations in the same breath with the art of Whitman at its best, with the verse of Poe, with the painting of Inness, would have been, for any sensitive and instructed critic, unthinkable.

The music of Mac Dowell was, almost from the first, in a wholly different case. In its early phases it, too, was imitative, reflective. Mac Dowell returned to America, after an eleven years' apprenticeship under European masters, in 1883, bringing with him his symphonic poem, "Lancelot and Elaine," two tone-poems for orchestra, "Hamlet" and "Ophelia," two orchestral paraphrases of scenes from the Song of Roland (fragments of a projected "Roland" symphony), and a numerous songs and piano pieces—all of his writing. In fact, comprised between the youthful piano suite, opus 10, and the delectable "Mariettes" of opus 38. Not greatly important music, this, measured beside that which he afterward put forth; but possessing an individual profile, a rarer, a tang, which gave it an immediately recognized distinction. A new voice spoke out of it, a fresh and tender, as eloquent and forceful voice. It denoted Germanic influences; of that there was no question; yet it was strikingly rich in personal accent. Since then his art has found, through various forms, a constantly finer and weightier expression. For orchestra he wrote the "Indian" Suite—music of superb vigor, fantastically and truly imaginative, wholly personal in quality; for the piano he wrote four sonatas of heroic and passionate content—indisputable masterworks—

and various shorter pieces, free in form and poetic in inspiration; and he wrote many songs, some of them quite flawless in their loveliness and their emotional veracity.

He suggested, at his best, no one save his earlier self. He was one of the most individual writers who ever made music—as individual as Chopin, or Debussy, or Brahms, or Grieg. His manner of speech was utterly untransmuted, and wholly his own. Vitality—an abounding freshness, a perpetual youthfulness—was one of his prime traits; nobility—nobility of style and impulse—was another. The morning freshness, the willing spontaneity of his music, even in moments of exalted or passionate utterance, was continually surprising: it was music not unworthy of the golden age of the world. Yet Mac Dowell was a Celt, and his music is deeply Celtic—mournful, by turns dolorous and sportive, darkly tragical and exquisitely blithe, and overflowing with the unpredictable and inexplicable magic of the Celtic imagination. He is undeniably noble—it is, in the end, the truth which most surely signifies him. "To every man," wrote Macdowell, "there come noble thoughts, thoughts that pass across his heart like great white birds." Such thoughts came often to Mac Dowell—they came always to be hovering not far from the particular territory to which his inspiration has led him, even when he is most gayly inconsequent; and in his finest and largest utterances, in the sonatas, their majestic trend appears somehow to have suggested the sweeping and splendid expansiveness of the avian ideal. Never subtle in impulse or reverend in mood—music, as it seems, untouched by sophistication—his art has nothing of the impalpability, the drifting, iridescent vapors of Debussy; nothing of the imperious backgrounds of Brahms. He would have smiled at the dictum of Emerson: "a beauty not explicable is deeper than a beauty of which we can see the end." He knew how to evoke a kind of beauty that was both aerial and enclaved; but it was a clarified and lucid beauty, even then; it was never dim or wavering. He did not care, I think he did not comprehend, the art of such as Debussy—he viewed the universe from a wholly different angle. Of the moderns, Wagner he worshipped, Tchaikovsky deeply moved him, Grieg and Dvorak he loved. Yet some of those so adorned his imagination that they overcame his independence—he was always, throughout his maturity, himself; not arrogantly or insistently, but of necessity; he could not be otherwise.

So far as the actual materials of his art are concerned, this is not the place for a detailed discussion. Melodically he was fertile, distinguished, moving, indubitably original. His harmony is extremely rich, and, here again, extremely personal—more varied, poignant, and suspenseful than that of Grieg (with which it has been inaccurately compared); not so successful or venturesome as that of the men of contemporary France. The essential Mac Dowell, the Mac Dowell who will live, is not the too exclusively known Mac Dowell of the smaller and more fragile piano pieces, or of the songs; it is rather the author of the heroic, the incomparable sonatas—the "Tragics," the "Frodo," the "Norse," and the "Keltic"; the author of such deeply poetic and deeply imaginative tone-poems in little as certain of the "Sea Pieces" for piano and certain of the "Woodland Sketches." Here he is alone, he is unexcelled; there is nothing of like quality, achieved with a like excellence, in the literature of music.

Edward Mac Dowell

FROM A PHOTOGRAPH TAKEN MONTHLY BEFORE HIS ILLNESS

Is England at a Turning Point?

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

LONDON.

PARLIAMENT meets on January 29 for what will be a crowded and momentous session. The Prime Minister, as I write, is on his way back from Biarritz much improved in health. The country as the British people have looked round to a far kinder and juster estimate of Sir Henry Campbell-Bannerman's character and capacities. It has developed quite an affection for him. Even in the days of his greatest unpopularity, the days of the Boer war, he retained a greater hold on the feeling of the provinces than Londoners were aware of. He had slaved so laboriously for his party; he had stood by it through thick and thin with such imperturbable manfulness; he had shown under circumstances that might well have broken the heart even of a Disraeli, so steady a grout for error knowing when he was beaten; and he was in himself so genial, soothing, and humorous—that the national appreciation of pluck and plodding went out to him in a far greater measure than the West End could ever quite understand. Since he became Premier he has led us immensely in his position. In the House of Commons no one is so popular. He wields the authority not of a commanding personality, but of a very winning and amiable one. In his own party, a party made up of many discordant sections, his genius for reconciling opposites for discharging an atmosphere of harmony has brought to him, as it brought to President McKinley, an influence that is out of all proportion to his gifts of intellect or statesmanship. Things go smoothly when he is there to superintend them. His illness and his absence have meant the virtual stoppage of the party machine, and it is more than probable that the government will face the House with its new bills on a very backward state. It is with a lively satisfaction that the country has heard of "Cicero's" return to health, and the welcome that the party will give him will be not less sincere. As long as he feels able to moderate the duties of leadership, Liberalism and Labor men alike are not only glad to serve under his banner, but feel that they are not likely again to have a leader whom it is so pleasant and easy to follow. His predestined successor is Mr. Asquith, on whose shoulders more and more of the work of directing Liberal policy is falling. Mr. Asquith's abilities are of a high order, but "Cicero's" no one looks forward to his accession to the Premiership without a certain foreboding. He does not radiate good humor; the country generally has never warmed to him; and it is a matter of doubt whether he possesses the necessary gifts of personality for the task of inspiring men. On all grounds, therefore, "Cicero's" recovery is a matter of party congratulation.

The general political situation remains very much as it has been since the government came into office. The ministry have done well, and the country is satisfied with it. There is one danger sign that the tide is on the turn; there is still less sign that it is turning in the direction of the Unionist party. Free trade remains the settled policy of both the government and the country, and in a year of bumper trade it has been an overture to defend it against the assaults of the protectionists. Whether its defense will continue to be so easy is another matter. The boom is rapidly collapsing; unemployment increases with an ominous rapidity; but times in the United States and Germany mean that the practice of dumping goods in Great Britain at a loss will shortly be resumed; the operations of the American Beef Trust in England have already aroused a great deal of disquietude; and the extreme difficulty of financing the social reforms that are pressed upon the government from every side without broadening the base of taxation, and the further attempt of broadening the base of taxation without having recourse either to tariff reform on the one hand, or to socialist expedients on the other, become daily more pressing. It was Mr. Chamberlain's misfortune to start his agitation just at the moment when trade was on the verge of a vast expansion. The average man found the ever-swelling figures of the import and export returns a sufficient answer to the arguments of the protectionists. But if those figures begin to fall him, if a period of prolonged and severe commercial depression sets in, then it is quite possible that there be some weakening to his free trade ranks. That is one of the difficulties ahead of the government. Another is the increasing pressure of the Labor men. It seems very probable that within the next few weeks all the members of Parliament who are specially identified with labor interests will have enrolled themselves in a single organization, and will act for the most part as a separate party. Hitherto some of them have been more Liberal than Labor, and others, representing the interests of particular trades, such as miners and railwaymen, have held aloof from Mr. Keir Hardie's independent party. But it looks now as though all the Labor M. P.'s, whether they call themselves trade-unionists or independent or socialist, will join forces. This is a development which official Liberalism can hardly be expected to welcome. If it takes place, the result will be that the Labor group, while leavened with a certain element of conservatism, will be largely increased in numbers, and therefore in a better position than ever to bring pressure upon the govern-

ment. Already the Labor men have taken to running candidates of their own against Liberals in the constituencies. Already their influence has equalled the government in being feared by many, such as an old-age pensions scheme on a non-contributory basis, that strike at the root of that individualism and self-reliance which were once supposed to be the special characteristics of the British people. Already the country, or rather the middle class, have been alarmed by the growth of the Socialist propaganda, and is watching with a good deal of anxiety to see how far the government is prepared to resist it.

Against all this, however, the ministry has some very considerable successes on the credit side of its account. It has passed many social and admirable measures; its conduct of foreign policy has been eminently sound; and even if it had achieved nothing else, the grant of self-government to the Transvaal would alone entitle it to a high place in the record of imperial statesmanship. Moreover, it is at present the only possible government. If it were to go out of office to-morrow it would have to return a week later. Its opponents are still so divided among themselves as to be wholly incapable of forming an administration of any kind. They are no longer a party, but a mass of floating wreckage. In spite of his proclamations of unity, any one with half an eye can see that unity is non-existent. The powerful organization that Lord Salisbury commanded is now split up into four distinct sections. First of all there are the Halfordians, who, so far as the country can understand, are neither free-traders nor protectionists. "The great truth is," says a truth is, "that Mr. Halford is a Liberal's disciple," that Mr. Halford, in pursuance of purposes which seem to him good, has used all the subtle but immense resources of his official position in order to battle every attempt at a sweeping tariff reform agitation. . . . He is an economic socialist, looking at himself with every possible disadvantage, but as a society's consciousness. We shall be pretty sure in thinking that Mr. Halford's real desire is to extinguish the separate tariff reform agitation; to keep Mr. Chamberlain's adherents under control by repeating that fiscal change of some sort is inevitable; to recover the support of the Unionist free-traders, who are numerically few but socially and financially very strong; to fight the next election upon some shrewdly chosen general issue, like "anti-socialism"; to come back to power with a blank check; and to deal with the problem of fiscal change according to circumstances. Secondly, there are the Unionist free-traders, who belong to the old guard of the Conservative party, who hate socialism and all its works, and who believe that the proper policy for the party is to rouse the middle class by prying upon its fears of socialization. Thirdly, there is the far more numerous body of Unionist tariff reformers who sympathize with the social programme of social reform, who are as ready as the Labor men themselves to provide old-age pensions and work for the unemployed and free schools for school children, and who at the same time insist that tariff reform is the only way to supply the financing these and similar reforms. An alliance between the Irish Nationalists, the Labor men, and the tariff reformers who think in this way is by no means an impossibility of the near future. Fourthly, there are the Unionist free-traders, a small but influential group, who are equally opposed to tariff reform and to any proposals that smack of socialism, and who show signs of lapsing by the force of reflex action into a Toryism that is out of date twenty or thirty years ago.

All these difficulties will have to be accommodated before the Unionists are again a united party, and the process will be long, tedious, and infinitely difficult. From opponents so distracted and impotent the Liberals, one would think, have little to fear. But there are certain questions on which even the Unionists are at one, and these, as it happens, are precisely the questions which the government is determined to raise in the course of its social attack on the Church and on the Church's hold over education; any attack on the rights and privileges of the House of Lords; any attack upon the vested interests of the Irish landlords; and any attack upon the licensing trade find practically the whole of the Unionist party rallied for defense. The government's campaign for the session includes an education bill which the friends of the established Church will resist to the uttermost; a licensing bill which the trade will fight tooth and nail; another Irish and bill which also may be sure of a fierce resistance; and a further step the development of the campaign against the House of Lords. All of these are measures in the highest degree controversial. The licensing bill, in particular, is bound to arouse the last extremity of opposition. Over £1,500,000,000 invested in "the licensed trade"; the national capital of the drink trade is over £400,000,000 a year; and more than £200,000,000 of public revenue is raised from it. The prospect of repressive legislation has already very seriously depreciated the value of all brewery shares, and the vast and perfectly organized industry that are at stake will resist just as bitterly and strenuously a fight. Altogether the prospects of the government might easily be brighter. So, too, might the prospects of the Opposition. No definite prophecies can be ventured on, and no definite conclusions drawn. English politics are in a state of flux, and neither the government nor the form of the ultimate precipitation can as yet be more than guessed at.

How Congress Works Passing a Bill

By Edwin Tarrisse

It is probably no exaggeration to say that not more than one person in ten knows anything of the process by which the Congress changes a "bill," that is, a measure in the form of an act into an "act," or a law. Before describing this process, it will be well to remark that all bills do not go through every step of the process. There are about cuts by which the enactment of bills to which there is no objection can be facilitated.

A bill, unless it is one which increases or diminishes the revenue, may originate in either House of Congress. In order to exhibit the process in full, we will follow the imaginary fortunes of a tariff bill, which can originate in the House of Representatives only.

We will imagine that some member introduces a bill to put mouse-skins on the free list.

The bill is referred, as a matter of course, to the Committee on Ways and Means, and it will never be heard from again unless that committee reports it back. A motion is sometimes made to discharge a committee from the consideration of a certain subject, and to bring the matter directly before the House. But such a motion is rarely or never carried.

It has been decided that the reference of any part of the tariff to a committee involves the reference of the whole subject. Accordingly the Committee on Ways and Means may report a full tariff bill as a substitute for the bill to make mouse-skins free of duty.

When the committee reports the bill it is "read twice,"—that is, the title of the bill is read, referred to the Committee of the Whole, and ordered to be printed. All revenue and appropriation bills go to the Committee of the Whole, under the rules of the House.

On a day set for the consideration of the bill the House goes into Committee of the Whole. A chairman appointed by the Speaker presides. The bill is read by section and clauses, after general debate has closed, and any member may offer amendments. All voting in committee is by rising; the yeas and nays are not taken.

When the bill has been gone through and all amendments have been voted upon, the committee rises and the chairman reports the bill back to the House with the amendments. The House then votes upon them, either singly or in gross, and by yeas and nays if they are ordered to be taken.

The bill is then ordered to be engrossed, that is, written out in a fair hand and just as it is after being amended, and to be read a third time. As it is usually already engrossed it is at once read the third time—by title, as before—and passed.

The clerk takes the bill to the Senate, by which body it is referred to the Finance Committee. In case time the committee, if it sees fit, and not otherwise, reports the bill back to the Senate, with propositions to amend. In the Senate the bill is considered "as in Committee of the Whole"; the amendments of the Finance Committee and other volunteer amendments are accepted or rejected; they are again voted upon when the bill is reported to the Senate from the Committee of the Whole, and the bill is passed.

As the two Houses are not agreed upon the bill, a committee of conference, usually consisting of three members of each branch of Congress, is appointed. The committee, when it has come to an agreement, reports to each House; and the acceptance of the report is the final stage of the bill in its passage.

The measure is now "enrolled," that is, it is printed in large, open type upon parchment, and is taken first to the House, where it is signed by the Speaker; then to the Senate, where the Vice-President signs it and finally to the President, and makes the bill a law.

Congress is notified that the bill has been

Morris K. Jessup

FINANCIAL AND PHILANTHROPIST, WHO DIED RECENTLY AT HIS HOME IN NEW YORK

approved, and the original copy of the act is deposited in the Department of State.

Voting

Three responses are heard to a roll-call in Congress: they are "yea," "nay," and "present." The meaning of the last, unlike that of the other two, is often misunderstood, as is shown by the phrase frequently encountered in the newspapers—"voting present."

There is no such thing as "voting present," since that very response signifies the avoidance of voting. It counts neither for the affirmative nor for the negative, nor does it compel either side to get out more votes to make a majority, as is usually the case in private organizations where a "blank" vote is rare.

When, to take a concrete example, seventeen members of the House Ways and Means Committee vote eight yeas, seven nays, and two present, the yeas prevail. A majority of "those present and voting" is the usual parliamentary phrase. Saying "present" fulfills only half of this condition.

Why do Congressmen make this response, then, when its effect is like that of no vote? The reasons are diverse. Sometimes men desire to go on record as neutrals, particularly when their real position is one of antagonism to that of their party. A member may also have a private or personal interest in a contest before Congress, and so, like a judge, refuse to take any part in its debates. Under such circumstances he may

respond "present," making an explanation thereafter of his reason. These cases are exceedingly rare.

In actual practice in the House of Representatives the system of pairing accounts for most of the "present" responses. A member is paired with somebody who is supposedly absent. If he responds "present," and subsequently finds that his "pair" is for any reason released, he is at liberty to change his record to yea or nay, as he prefers, while if he had remained silent in his seat during two roll calls, that opportunity would have been forfeited.

Thus "present" usually means that a man is paired with somebody who is away, but that he wishes to reserve to the last his voting rights in case that pair should chance to be "declared off" by mutual consent.

He Were

A prominent Western attorney tells of a boy who once applied at his office for work.

"This boy was bright-looking, and I rather took to him."

"Now, my son," I said, "if you come to work for me you will occasionally have to write telegrams and take down telephone messages. Have a pretty high degree of schooling is essential. Are you fairly well educated?"

"The boy smiled confidently."

"I be," he said."

The Season's Plays

TRAGEDY AND FARCE IN NEW SHAPES

By "I"

HE absorbed interest and expectancy with which one, especially in one's younger and impressionable years, has watched the events of a melodramatic unroll, keeping firm grip unswervingly upon the action of the seat, is a combination of sensations so pleasurable that to experience it again is distinctly surprising. Miss Viola Allen's new play, "Irene Wycherley" (pronounced I-re-nee, by the way), with which she opened her season at the Astor Theatre, is not melodramatic by any manner of means, but there is not the slightest doubt that it is the most absorbing and unusual play which New York has had offered to it in many a day. From the beginning of the first act until the close of the third it holds one's interest with a very sure grip. In addition to having an extremely good play, Miss Allen is surrounded by a most capable company, which includes such well known players as Mr. Edwin Arden, Mr. Grant Stewart, Mr. John Glendinning, Walter Hampden, Miss Selma Johnson, and Mrs. Sam Southern.

The story of "Irene Wycherley," in which Miss Allen plays the title role, is not a pleasant one. It recounts the struggle of a woman against her abhorrence for her husband, whose ill treatment of her is odorous. She has separated from him on account of his inhumanities and immoralities, and only consents to return when she learns that he has been horribly disfigured and deprived of his sight by an accident in the hunting field. When she does return, his treatment of her is even more brutal than before, and to it he adds his loathsome caresses, which she finds it impossible to tolerate.

In retaliation upon her for this the husband writes to their home, through a letter his wife had previously written and which he had, in a moment of reformation, decided not to send, the woman who had caused the breach between them. This woman has married a second time, the first husband having killed himself, and the second husband, who accompanies her on the visit, is quite in ignorance of her past.

Soon after the arrival of the woman her identity is disclosed, and Mrs. Wycherley orders her from the house. At first she is defiant, but is threatened with exposure of her career to her husband. When he learns of the request to leave he demands to know its meaning, and then erupts come fast and furious, leading to a climax which is truly startling.

This play is marked throughout by good acting, and Miss Allen plays her part with fine force and effect. In the scene in which she recalls the appeal of the man who is so much in love with her, Arthur Charleston, and shows him how he has spoiled all their happy friendship, and in the later one, in which she repels Wycherley, with his brutalized face and no less brutal caresses, Miss Allen is admirably convincing. Her efforts to be of some service and comfort to her married husband have a fine element of pathos.

Wycherley is played by Edwin Arden, and he makes the man superbly repulsive to the last. The loveliness of Charleston, Walter Hampden's part might have been somewhat warmer and more convincing, but it was sufficiently awkward to be sincere. Only a few lines are allotted to John Glendinning, as Rosamere, the second husband of the Red Woman of the play, but these he makes much of, demonstrating at the end quite unmistakably the blindness with which the South African colonist deals with matters touching his honor. Incidentally it is disclosed that the shooting of Wycherley in the field is not so much of an accident as was supposed.

Miss Selma Johnson plays Mrs. Rosamere, formerly Mrs. Carr (not a bad name for a woman who was the pitfall for Wycherley), with sufficient efficiency of manner, and Mr. Grant Stewart as Wycherley's father is real in every way save that of appearance. Such a son as Wycherley must have brought more wrinkles to a father's face than Mr. Stewart shows.

The ending of the play is not so strong as it might be made, because one has not a full realization of the tragedy which has taken place from the rather slight announcement in disjointed sentences of the elder Wycherley.

The first act introduces three characters who, when they leave the stage then, never return to it. The only purpose they serve is that of acquainting the audience with the necessary facts in the life of Irene Wycherley, and of disclosing the characteristics of Mrs. Carr.

Save in the ending of the last act the play, which is by Mr. Anthony Merton, and is

said to be his first, is one which holds an audience irresistibly.

Comment upon the play is incomplete without reference to the make-up of Mr. Arden as the disfigured husband. Instead of appearing with the conventional paraphernalia of injury, bandages, etc., Mr. Arden elects to present the much more realistic tokens, the scars and disfigurements. Of course the character of Wycherley is required to be detestable, and Mr. Arden, with his eyes rolled up until only the whites are visible, and the red scar streak across his face, adds truth to his repulsiveness.

Several years ago an English comedian named Dallas Welford emigrated New York by his impersonation of a fat little Cockney man-of-war, a Mr. Hapkins, in a farce of that name. Who that witnessed his inimitable performance can forget "Oppy" and his delicious vulgarities? Mr. Welford has come back to us, and his return is a welcome one. He is now to be seen in a new farce at the Savoy, adapted by Paul M. Potter from the French of Beaumarchais and Vaudeville. It is called "Twenty Days in the Shade," a phrase which in French carries the same kind of sinister significance conveyed by our "up the river" or "on the island": it means, in other words, a term in the penitentiary. The story, in brief, is as follows: An ill-fated adventurer, one Henri, *Cosme de Meriville*, has struck an officer during an altercation in a theatre, where the audience was witnessing a variety performance in the company of a charming lady other than his wife. He is charged with assault, and a few days later learns through his attorney that he has been sentenced to twenty days "in the shade"—the penitentiary. The *Cosme*, realizing the desperate nature of the situation which confronts him, bribes an influential friend to impersonate him and to serve his sentence for him; and for a time he enjoys a precarious security. But when, some months later, he is visited by an ex-covert (*Shirley*: Mr. Welford) who mistakenly takes him for a prison acquaintance, and who his double, released from jail, appears upon the scene with a demand for his money, the predicament of the unfortunate *Henri* becomes well-nigh unbearable. It would not be fair to disclose the nature or the outcome of the ensuing complications. Let it suffice to say that they furnish material for considerable fun of a not very hilarious sort. To tell the truth, if it were not for Mr. Welford's exquisitely humorous portrayal of the unsuspicious *Shirley*, the farce would move haltingly. It is true that Mr. Charles Dickson's *Pantricks*, Mr. Ernest Lawford's *Thousandaire*, and Miss Jeffrey Lewis's *Madame Lafont* are variations and repeats; but it takes more than four good comedians to make a first-class farce. It is probable that if the action of the piece were shortened and quickened the effect of it would be more infectious. At present it moves rather slowly, and a little laboriously. It must also be said that Mr. Richard Bennett, who plays the part of the harassed *Henri*, has not precisely the manner of comedy. An excellent actor of serious roles, he seems ill at ease in the habiliments of farce.

A Scene from the Third Act of "Irene Wycherley," at the Astor Theatre. THE ACTORS, FROM LEFT TO RIGHT, ARE VIOLA ALLEN, WALTER HAMPDEN, JOHN GLENDINNING, EDWIN ARDEN, AND GRANT STEWART.

Wit Waisted to Taft by Watt

New Item—The stronger President Taft, on which Secretary Taft was a passenger, was in wireless communication on the passage from Hamburg with the redoubtable Canadian Ambassador, "The Great" in command by Captain Watt, the *Laudance* by Captain Watt.

The President Taft, heading westward, came into the wireless zone of the *Laudance*, doing her best to honor the second house.

On the President Taft was William Taft, enjoying the air, the Watt in command. The six-mile walk, he was taking with him, arm in arm with Captain Watt.

"What ship in the offing have I described?"
"It is the *Laudance*," Watt replied.
"And her master's name is Watt?"

"Watt? What? Watt?" scouted Taft to Watt.
"Do I know her master's name?"
Not I, but just you wait a bit.
"I'll try this wireless gear."

And then from Watt a message came,
"Asking Taft and Watt to dine;
And join him in a quiet game,
Returning home by nine."

Then Watt to Watt this wireless sent:
"To my dear friend, Captain Watt, —
I rarely thank a President;
But for you, dear Watt, why not?"

Said Watt to Taft: "I like not wit
That topples over all."
"God wait," said Watt, "such wit is fit
For Watt if not for Taft."

WILLIAM L. CURTIS.

The Founding of the Red Cross

THE battle of Solferino, fought in 1859 between the allied French and Sardinians and the Austrians, was one of the most sanguinary conflicts of modern times. Forty thousand Austrians and fifteen thousand of the allies were killed and wounded.

To Henry Dunant, a Geneva philanthropist who witnessed the battle, it seemed that the wounded, not the soldiers, who not instant death, were the real unfortunate. The military hospitals, overcrowded, proved inadequate; most of the wounded were left in agony. Thousands who might have been saved by timely help died upon the battlefield.

The Swiss philanthropists and other volunteers did all they could to relieve the suffering, but that was comparatively little. The Geneva asked himself what could be done to mitigate the horrors of war? He devoted much thought to the problem, until, finally, he was able to suggest a plan of action; this plan he set forth in a pamphlet called *A Society of Red Cross*.

Dunant advocated an international society composed of volunteer nurses, who should hold themselves in readiness to follow armies and aid the wounded of any nation, to be protected by all nations as neutrals and non-combatants engaged in works of mercy.

This pamphlet proved to be the foundation upon which the Red Cross Society was organized. Dunant's project was warmly approved by his own government. When Dunant went to Paris he found that there, too, the pamphlet had made a deep impression.

The day after its publication in the French capital, Madame de Staël, sister to the Duc de Broglie, caused the Red Cross badge to be displayed in her drawing room.

To visitors, who asked their names, she made such convincing answer that both Parisian society and the French government were soon committed to the Red Cross principle.

The international conference that organized the society was held in Geneva in October, 1863. By the end of the following year thirteen governments had officially ap-

proved the society's purpose. To-day every civilized nation sustains it. The good it has accomplished since then may be judged by the single fact that during the Franco-Prussian War the German society alone expended thirteen million dollars; and it is stated that, so far as is yet known, the figure for the expenses of the Red Cross during the recent war between Russia and Japan will many times exceed that figure.

Dunant, in winning his light for the organization of the Red Cross, lost his own—that is, his own financial ventures were disastrous. Happily, however, the Czar, Empress of Russia and the Federal Council of Switzerland granted him relief in the shape of pensions. These were supplemented by donations of money from Germany.

The Ways of the Chinese Laundry Ticket

It is not generally known that the Chinese system of ticketing a bundle of soiled clothes is based on the many gods and goddesses of the laundry. Though it is complicated, the laundryman seldom delivers a bundle of washed clothes to the wrong person. Furthermore, if the ticket is lost the chances are that one will not get his linen, unless he is a particular friend of the proprietor. Instances are of record where an American has gone to court to force the Chinese to yield up the washing, but the judge was not convinced that the case of the Occidental was a good one.

The Chinese laundryman, at the beginning of each week, makes out a batch of checks, in duplicate, to be used as wash tickets. He assigns the name of some god or goddess, or of some objects, as the sun, the moon, or the stars. To this name he prefixes a number, as "moon No. 1," "moon No. 2," and so on.

In the space between the two legends—for the signs are repeated twice—he has his own name, as, for instance, Wong Lee.

When a customer takes a bundle of washing to the laundry the Chinese, by tearing a ticket in two in a ragged fashion, puts one-half on the packet for reference; the other half he gives as a receipt to the person who has brought the package of laundry.

It must be pointed out that the laundry is demanded and no fears need be entertained that the bundle of clean clothes will not be forthcoming, for they are scrupulously exact in these matters.

His Specialty

ARRIVING after a ten-mile ride, at a farmhouse and West, Dr. H. — exceedingly grave and dignified in his demeanor, but rather slow in action, found a very sick child, and, as usual, on such occasions many kind women from adjoining farms helping the mother.

The doctor watched the patient for some time without any move to give relief.

Finally one of the older women present took courage and suggested:
"My dear doctor, cannot you do something for the poor child?"

"Dear madam," answered the doctor, "I am a little uncertain yet about this case; but please be patient, as I am sure the child is going to have it, yet,—brightening up." "I am well on this."

Ways of Telling Time

FROM our Philippine possessions has come an account of a primitive device for recording time which deserves a place among the long list of contrivances for that purpose. It is used by the natives during certain spells. They bore a hole in the bottom of a coconut shell and let it fill with water. At a certain point it suddenly drops to the bottom of the basin. This calls "time."

Many were the devices for recording the

flight of the hours before the coming of the clock. The most famous, of course, was the hour-glass, which was made of various sizes and capable of recording with tolerable accuracy almost any given interval of time, although errors are greater than an hour.

The burning of candles was another favorite device. Lines were drawn at different elevations for the fractional divisions of the period which the candle recorded. There was also an ingenious water-clock, which is even now occasionally seen in museums. The sun dial, for marking true astronomical time, was much in use in early days. In our latitude it would not be strictly accurate, except in a few days in the year, and its accuracy at other times would be of a varying quantity.

All Beach

WATMAN was sitting upon his father's knee watching his mother arranging her hair.

"Papa hasn't any Marvel waves like that," said the father, laughingly.

Willford, looking up at his father's bald pate, replied, "Nup; no waves; it's all beach."

Inconsistency

"Pa, what is the meaning of inconsistency?" asked Freddy.

"Inconsistency, my son," explained Pa, "means a man who grows all day, and then goes home and kicks the dog for barking at night."

Weather or Not

A GERMAN woman discovered one morning recently that her maid Nora had broken the thermometer that hung in the reception hall.

"Well, Nora," sighed the mistress of the house, in a resigned way, "you've managed to break the thermometer, haven't you?"

"Yes, m'lord," replied the maid, in a tone equally resigned. "And now, m'lord, we'll just have to take the weather as it comes!"

WHIPPED CREAM.

Two large packages of cream in Borden's Purest Cream (Eagle Brand) with condensed milk, are available for sale. The first of these is the "Whipped Cream" and the second is the "Whipped Cream" and the second is the "Whipped Cream."

THE BEST ALL-ROUND FAMILY LINIMENT—BROWN'S KIDNEY-AND-PANCREAS—15 cents per bottle, 25¢.

USE BROWN'S Compound, SINGAPORE DENTIFRICE for the teeth. Delicacy, 15 cents per Jar, 25¢.

ADVERTISEMENTS.

PANTRY CLEANED

A Way Some People Have.

A doctor said:—

"Before marriage my wife observed in summer and country homes, coming in touch with families of varied means, culture, tastes, and dissimilar tendencies, that the families using Postum seemed to average better than those using coffee."

"When we were married, two years ago, Postum was among our first order of groceries. We also put in some coffee and tea for guests, but after both had stood around the pantry about a year untended, they were thrown away, and Postum used only."

"I p to the age of 28 I had been accustomed to drink coffee as a routine habit, and suffered constantly from indigestion and all its related disorders. Since using Postum all the old complaints have completely left me, and I sometimes wonder if I ever had them."

Name given by Postum Co., Battle Creek, Mich. Borden, "The Road to Well-being," in pages. There's a Reason."

Make the best use of it. A defective intestine will not absorb the best food. Postum is a perfect food. It is a perfect food. It is a perfect food.

FIRE AND "FIREPROOF"

(Continued from page 24.)

facturing purposes, which involves considerable fire hazard. The only way to reach these subterranean premises is by a single circular iron stairway. In case of fire, how the work people are going to get out, or how the firemen are going to descend to reach the fire, is a mystery. In all probability neither exit nor entrance would be possible, on account of the ascending heat and smoke.

In one of the most sensational hotels in New York city, the standpipe system was a work of art. The risers were polished brass, while the hose and the valves were enclosed in handsome cabinets. When the Fire Department inspected the standpipe, however, it found a number of useless and unnecessary gate valves, involving the possibility of the system being shut off in case of fire. The hose connections to the valves were so close to the bottom of the cabinets that the hose could not be swelled to its full diameter, making it impossible to get water through without bursting the hose. For all practical purposes the standpipe was useless for Fire Department work, so the Fire Department companies in the vicinity were notified, in case of fire in this particular hotel, not to depend on the standpipe, but to stretch hose lines into the building.

"Fireproof" fires allow many proofs of vital fruits in buildings. A fire in a nine-story loft building traveled from the seventh floor to the eighth and ninth floors by way of a stairway enclosure designed with wire glass in wood settings. Stair travels for the stairs were also used in this building, although it was well known at the time that this feature had cost the life of a Fire Department officer. The failure to provide skylight space (absolutely necessary for Fire Department operations and required by law), the exceedingly dangerous practice of leaving steel and cast-iron structural members unprotected, the putting of wood roofs on otherwise incombustible buildings, the total neglect of window protection against dangerous neighboring buildings, the overlooking of fire escape facilities (afterward covered at greater expense and inconvenience by order of the Fire Department or the State Factory Inspection Service), are other instances of defects in supposedly fireproof buildings, all the more acute because of the sense of false security engendered by the "fireproof" idea.

These are instances of fire weaknesses that exist in many buildings and only await fire to reveal them. They are errors that can be avoided when the building is being planned and erected.

LIFE-SAVING AT SEA REVOLUTIONIZED

By C. F. CARTER

REVOLUTIONARY methods in saving life at sea will be introduced by Revenue Cutter No. 10 now being built for the United States government at Wilmington, Delaware. The cutter is the largest vessel ever designed for life-saving, and it will be equipped with special apparatus never before used for the purpose. These innovations are expected to make possible rescues from wrecks not accessible by any means hitherto available.

Along the Atlantic coast, where the life-saving stations are close together, and the service is well drilled and equipped, it often happens that a vessel is driven ashore where the surf is so violent that a life-boat cannot be handled in it at all. There may be a gale blowing on shore, and the ship may be so far out that it is impossible to shoot a life-line to it. In such cases the life-saving crew can do nothing. Sometimes tugs can approach a wreck near enough to communicate with those on board without being able to do anything to help them.

On the Pacific coast, particularly the northwestern part, the conditions are even worse than along the Atlantic. The strait of Juan de Fuca, the entrance to Puget Sound, the most important entrance on the whole coast, through which six million tons of shipping pass annually, is particularly dangerous. Not only do fogs and haws prevail for half the year, but the currents are so erratic that even the pilots who navigate the waters constantly do not understand them. No dependence can be placed on the lead, because deep soundings may often be obtained close ashore.

In the last fifty years something like seven hundred lives have been lost in wrecks in the vicinity. The climax to a long series of disasters came in the wreck of the coasting steamer *Falencia* from San Francisco for Seattle, with a loss of 136 lives on January 22, 1900. The *Falencia* went on the rocks at the foot of a high cliff on an unsettled part of Vancouver Island during a fog. As she did not go to pieces for thirty-six hours after she struck there was ample time to save many of those on board if only the means had been available. This disaster made so profound an impression in the Northwest that President Roosevelt appointed a commission to inquire into the cause of the wreck, and to devise ways and means, if possible, to prevent similar fatalities in the future.

After recommending additional lightships, telegraph and telephone lines, fog signals, and wireless telegraph, the commission also advised that a first-class ocean-going steamer, officered and manned by the most skillful life-saving crew that could be procured, and equipped with the best possible life-saving appliances and wireless telegraph, should be stationed at Noah Bay, five miles from the entrance to the strait. Congress signified its approval of the commission's recommendation by appropriating \$200,000 for building the cutter. Plans were drawn by a board of officers from the Revenue Cutter service, and construction was promptly begun.

The cutter, which in general external appearance resembles a first-class tug, is 152 feet long, 20 feet beam, and 17 feet deep. She is to have engines of 1200-horse power, and a cruising speed of twelve knots. As it is expected that the cutter will not infrequently be called upon to go in search of missing vessels, she will carry enough coal to make a cruise of 3000 knots.

Number 10 will be equipped with a motor lifeboat, two other lifeboats of the self-righting, self-bailing type, a life raft, line-throwing gun, a complete equipment of lifeboats and life preservers, wireless telegraph, the Ardis system of night-signaling, two powerful searchlights, one at each end of the deck-house, as that the quest of missing ships may be pursued by night as well as by day, wrecking pumps, fire-extinguishing apparatus, and a steam windlass and strain gypsy for towing. No matter what the situation of a distressed vessel may be, the life-saving cutter will be prepared to render instant and effective aid.

The distinguishing feature which is expected to enable the cutter to effect rescues under conditions that have heretofore precluded the possibility of help is a wonderful cableway over which a breeches-buoy can be operated between the masthead of the cutter and the wreck, far above the reach of the waves. No matter how wildly the cutter may be plunging and tossing, no matter how violently the mast may be thrashing the air, the cableway will always keep taut so that the occupant of the breeches-buoy will be able to make the passage in safety.

The cable is kept at a fixed tension by an automatic reel safely housed below deck, where its operation cannot be interfered with by any waves that may come aboard. The instant the pitching of the mast allows the cable to slack, the engines of the reel automatically take it up at lightning speed, only to pay it out again when the cutter pitches the other way, but always keeping the cable at an even tension sufficient to hold it and its burden far above the waves. The breeches-buoy can then be operated as readily, rapidly, and safely as if it were mounted on shore. On reaching the cutter an ingenious contrivance will automatically lower the buoy and its burden swiftly but gently to the deck.

The cableway being a thousand feet long the cutter will have plenty of room to maneuver. It will be able to approach a wreck from the windward side enough to shoot a life line aboard and anchor. The people on the wreck will have only to haul in the life line and make fast the cableway. The crew of the cutter will do the rest. Often it may be possible to save treasure, baggage, and even the more valuable portions of the cargo in small packages.

The life-saving cableway is the invention of Spencer Miller, of New York, who has fifty-seven patents to his credit in his own name, and an interest in a dozen others secured in cooperation with various inventors. Mr. Miller is the inventor of the marine cableway, by means of which ships are hoisted at sea at the rate of eighty-five to a hundred tons an hour while steaming eight to ten knots an hour.

The new Life-saving Cableway in Operation

Gems from Examination Papers

In a competitive examination of several applicants for positions in the municipal offices of Boston, one candidate shocked the examiners by his display of frivolity in evading questions he could not answer. He did not, of course, get an appointment. The following are some of the replies made by the applicant in question:

Q. Describe a feasible course for the circumnavigation of the globe, mentioning all bodies of water which would be passed through.

A. In a balloon. No waters would be passed through.

Q. What, in a few words, are transcendentalism, epicureanism, and utilitarianism?

A. The first means thinking on the roof while living in the basement; the second means living high on an ass; the third is the study of how to do so.

Q. How may the races of mankind be chiefly divided?

A. Losers and winners.

The following are specimens of some absurd and amusing answers made by schoolboys and schoolgirls in examination papers:

Q. King Alfred the Great was a very good man, and when he died Lord Howbery preached his funeral sermon.

"Iron is grown in large quantities for manufacturing purposes in southern France."

"The sun never sets on British possessions because the sun sets in the west, and our colonies are in the north, south, and east."

Q. Define the first person.

A. Adam.

Q. Why does true English history begin with the reign of Henry VII.?

A. Because up to this time it was all lies.

In the following, mathematical and scientific graces are also revealed in a strong light:

"A parallel straight line is one that who produces it never will end nor meet."

"Blood consists of two sorts of corkscrews—red cork-screws and white cork-screws."

Questions on miscellaneous objects of general knowledge also elicit some gems, as witness the following:

Asked to explain what a buttress is, one boy replied: "A woman who makes butter."

Teacher's dictation: "His collar rose to such a height that fashion well-nigh choked him."

One pupil defined primates as "the wife of Prime Minister."

Perhaps the funniest reply ever made to a question in natural science was:

"Gravity was discovered by Isaac Walton. It is chiefly noticeable in the autumn, when the apples are falling from the trees."

To the question "What is a limited monarchy?" this answer was returned:

"A limited monarchy is government by a king who, in case of bankruptcy, would not be responsible for the entire national debt. You have the same thing in private life in limited liability companies."

Another answer was: "The Diet of Worms is the grub that blackbirds and thrushes feed on."

A Comprehensive Repentance

I DON'T mean to do it.

I surely meant it well.

Nor knew you wouldn't like it.

But how was I to tell?

I didn't need to do it.

But didn't know it then.

And now I know I did it.

I'll never do so again.

BY KILGILMEY.

His Joke

DE STEPLER. "What makes you think Gertie has almost finished the cigars his wife gave him for Christmas?"

GERTIE. "Why, I met him to-day, and he said he was almost at the end of his rope."

LIQUEUR
Peres Chartreux
—GREEN AND YELLOW—

This famous cordial, now made at Tarragona, Spain, was for centuries distilled by the Carthusian Monks (Pères Chartreux) at the Monastery of La Grande Chartreuse, France, and known throughout the world as Chartreuse. The above can represent the bottle and label employed in the putting-up of the article since the Monks' expulsion from France, and it is now known as LIQUEUR PERES CHARTREUX (the Monks, however, still retain the right to use the old bottle, and label as well), distilled by the same order of Monks, who have securely guarded the secret of its manufacture for hundreds of years, taking it with them at the time they left the Monastery of La Grande Chartreuse, and who, therefore, alone possess a knowledge of the elements of this delicious nectar. No liqueur associated with the name of the Carthusian Monks (Pères Chartreux) and made since their expulsion from France is genuine except that made by them at Tarragona, Spain.

THE TRUTH ABOUT THE NAVY

(Continued from page 15.)

interested in the navy, but particularly to the very few whose untiring efforts have brought it about. This remarkable increase in rapidity of fire and in number of hits placed has been a comparatively recent development, and when the vessels of the *Pensacola*, *Virginia*, and *Louisiana* classes—vessels only recently afloat—were laid down they were provided with an ammunition hoist for each broadside gun which could serve three-fourths of the ammunition required by the men when every gun on each side of the vessel was firing at one time. In actual numbers the means from twelve to sixteen ammunition hoists on a vessel. It is probable that in most cases the vessels will be called upon to fight with only one broadside at a time, and, under such conditions, the rate of supply per gun would be largely increased.

In November, 1910, the writer of this article visited the fleet of British naval vessels at Annapolis. Six or eight of these vessels were very similar in size, battery, etc., to our *St. Louis* class, whose rate of supply of ammunition is about as described above. With the exception of one hoist at each end of the vessel, the only provision for hoisting ammunition on these British ships was an ordinary tackle for passing it up over the deck through open apertures to the guns above. The shutters for these apertures at the various decks did not pretend to be water-tight. These vessels were not a year old at this time.

IN CONCLUSION

There are many things about our vessels and in the hazy "system" of handling them which doubtless need correction. There are many broadside guns in compartments too thinly armored. The turret emergency gear for hoisting their ammunition. The ships have less armor than those of some of the other nations. The captains and admirals reach their commands at too late an age, and retain them, therefore, too short a time before retirement. We need more battle drills, more torpedo drill, and more destroyer work, which is drill. The crews of the navy-yards should be reduced. The originators of designs should not pass finally upon criticisms of those designs.

These and many other matters connected upon by Mr. Reuter-dahl are entirely true. In judging whether the ships of the navy are generally in the miserable condition pictured in his article, the reader should remember that while our ships have been compared unfavorably with those of the British navy, ours are in a great many respects superior. The reason for an unfavorable comparison is often to be found in the demands of American ideas, ideas which call for less upon tons of weight in equipments and conveniences aboard our ships of which the British seafarman has never so much as dreamed. The vessels of our navy have steam heat in every station, in every part of the ship which the crew of nine hundred men frequent, and water-heating arrangements in all quarters. The British ships sailors have the equivalent of three small-sized kitchen stoves, and scarcely know what hot water feels like.

A KU-KLUX KLAN OF TO-DAY

(Continued from page 16.)

shedding about three citizens who incautiously ventured upon the streets, the "Night Riders" left the scene.

The following night the masked mob rode in Campbell County, across the Ohio River from Cincinnati. On Monday, January 6, the Riders appeared almost simultaneously at the towns of Bellet, Sherburne, and Jacksonville. The first, a village, was practically wiped off the map; all the American Tobacco Company's property at Sherburne was burned to the ground; and only a timely warning saved a quick removal of the independent's tobacco at Jacksonville saved that community.

"The war must be stopped," came the cry from all over the State.

In response, the first matter for consideration to be put before the newly assembled Legislature was the "Night Rider" case. An excerpt from Governor Wilson's message follows:

"Our tobacco market is nearly destroyed. Large customers are being taught that it is safer and better to buy elsewhere; large crops remain unsold; managers who have been promised large prices for pecked crops above the market price have seen the buyers driven from the field, and no one else will have the seed and sell, but every one else has. The result, up to this time, is that our markets, not only for tobacco, but for other products, are paralyzed, and in many cases ruined; but in large districts the law has been wholly overthrown, and the poor people, who have no one to take care of them, are deprived of the protection of the people's laws and have lost their liberty and are helpless; that the price of nearly every acre of good land in Kentucky has gone down; that thousands of people wish to move out of Kentucky to States where they hope it is safer to live, and the very factor of our working population wishes to leave the State, as thousands have done before; that it has been necessary, in order to ally the forces of frightened people even in a large city like Hopkinsville, to keep companies of militia on duty, at great expense, and with great loss of sleep on the young men who are taken from their ordinary business and work; that lawless and unprincipled men have been constantly ready to break out in a large city like Hopkinsville, by law or public sentiment, and that the people of Kentucky are brought suddenly and squarely to face the question whether the

There exists about that difference between the comforts on their vessels and on ours that there is between the comforts and conveniences in the home of the average American mechanic and that of the English mechanic, in the average American hotel and its English counterpart. They do not appear to be inordinately on their ships, although the American visitor feels as if he were freezing.

Now, who shall dare to say that these comforts must be removed? Who is there brave enough to face the American people and press after taking away either the heat to keep the interior warm, or the refrigerating means to keep his meats cold, or to deprive him of his laundry and substitute the old-time hand-labour which the British sailor has not yet outgrown, or even to remove his laundry, and all for a few more tons of armor? These comforts cost not only weight and space, but horse-power to take them from port to port, and again still more weight for the additional horse-power.

With the present difficulty of obtaining men for the naval service the wholesale abolition of these comforts may well be questioned. It may be wise to consider, before eliminating them, how many, many years these ships provide homes for our seamen, and to consider during what a small fraction of a vessel's life it is engaged in actual warfare.

Furthermore, consideration should be given to the extra risk taken, if our competitors are entirely fair, in weighing the small amount of added protection against the discomfort, and to the difference in the intelligence of the men who would be attracted by the two kinds of ships. For, after all, it is upon the intelligence of our men that we place the greatest reliance—that intelligence which has never yet failed us.

Mr. Brewster makes many true criticisms which will doubtless be of benefit. That he has had assistance in the preparation of so comprehensive an article is probable, and this assistance might, under a different order of things, have brought these matters to the attention of the navy. But, as it is, it is not so. Instead of the pages of a monthly magazine, in addition to his suggestion that complaints do not receive the attention they deserve, because the bureau receiving such complaint is the department, judge, and jury, in the fact that many complaints do not receive their full and fair hearing until after the vessel in question has departed on a foreign cruise. The writer remembers a paper reaching him that had travelled through thirty-six other lands, and how an endorsement (a small-sized letter) from each.

In his article no true thing is said by Mr. Brewster that the navy is at fault, and as he suggests for the improvement of defects in construction, the Secretary of the Navy had the technical assistance of men versed in such matters who could visit the vessels, put their fingers on existing defects, and, having the equipment directly before them, could take the necessary steps in a friendly spirit with the bureau, but with authority to push them to a conclusion at the navy-yards, thus improvement would make more rapid strides.

less of more than two millions, or the violence of a few hundreds shall prevail."

The Governor further recommended the immediate appointment of a commission with full power to investigate the economic causes leading up to the tobacco troubles—that is, to ascertain whether there has actually been an overproduction, or whether the prices have been forced down by the American Tobacco Company or a combination of buyers. He also advised certain technical changes in the statutes governing change of venue, so that the granting of such becomes imperative on the judge of any county where lawless men or intimidation places any obstacle in the way of prompt and fair trials.

That this advice strikes the keynote of the condition confronting the officers of the law, in so far as the apprehension and punishment of members of the terrorist band is concerned, is readily appreciated. It will be next to the impossible to obtain the conviction of any man in the county of his residence. The attempt to conduct a grand jury investigation at Hopkinsville proved this. Here is a sample letter received by one of the jurors:

"JAMES FOSTER.—The foreman of your grand jury has joined the Society. Legally, as you all failed to find bills against the plant and workers. You feel you don't know that we had the sheriff, commonwealth's attorney, judge, and the Governor at our backs! We expect to have a representative on every grand jury. We intended to wait on you and put you out of business in a very rough manner, but we will give you one more chance to join the society. Your ignorance and laziness will not save you your property."

—NIGHT RIDERS.

The tone of this letter is characteristic of the general attitude of the law-breakers, not only toward local courts, but the Governor, the State Legislature, or any other standing in the way of their exercise of vengeance against the trust.

The destruction, up to the present time amounting to \$30,000 worth of property in the State, and to threaten the killing and destruction of a score of people, has apparently not whetted the determination of the maskers to accomplish such by dreadful might what peaceful conferences failed in doing.

IMPORTANT NEW PUBLICATIONS

Hypnotic Therapeutics In Theory and Practice

By JOHN D. QUACKENBOS, A.M., M.D.
Author of "Hypnotism in Mental and Moral Culture"

An exposition of hypnotism as the great
regenerative force of the age, based on sci-
entific facts, and written for the general
reader. It is the result of over seven thou-
sand personal experiences of the author with
hypnotic treatment of the physically and
morally diseased, many of which have stirred
public attention. As a narrative and as a
record of humanity, this book will impress
and amaze all sorts of readers.

Memirs of a Russian Governor Prince Serge Dmitriyevich Urussov

Translated by NERMAN ROSENTHAL

Never before has the truth about the land
of the Czar been told by one of the inside
circle—the truth about the methods of the
governors, the schemes of the police depart-
ment, the intrigues and the corruptions that
are known to be sapping the Slavic govern-
ment. Especially have these evils never
been admitted and proved by a prince of an
ancient family, an administrator, a member
of the first Duma, and a courageous patriot.

Letters and Literary Memorials of Samuel J. Tilden

Edited by JOHN BIGELOW, LL.D.

A valuable contribution to American
political history, throwing new light upon
a notable career and upon the public move-
ments of Tilden's time. The letters are
full of interest, setting forth the personal
characteristics of a remarkable man, and
are rich in fact, tending to a better under-
standing of the history of half a century.

Immortal Memories

By CLEMENT SHORTER

Collected in this volume are a number
of informal addresses touching the life and
associations of men of letters, and dedicated
"to the immortal memory" of Samuel John-
son, William Caxton, George Horrow, and
others. By reason of fine material and
distinctive style these addresses make most
excellent reading.

Crown Bvo. Price, \$1.50

The Collected Poems of Dora Sigerson Shorter

These poems comprise ballad and folk
lyrics of the old native Irish, more moving
than stories and vibrant with melody, and
many delicately wrought lyrics, independent
of the Celtic, besides. They are by a gifted
Irishwoman, writing, says George Meredith,
from her heart of the legends of her country
and the superstitions of the peasantry.
Mr. Meredith, in the introduction, supplies
a rare criticism of Celtic poetic art.

TEN TO SEVENTEEN

A Boarding-School Diary

By **JOSEPHINE DASKAM BACON**

Author of "The Memoirs of a Baby"

From "Ten to Seventeen"

THIS is a diary of girls in boarding-school during those years when the world is made up chiefly of two kinds of excitement—sentiment and scrapes. Those who are concerned with the story are all healthy, charming girls—Roberta, who writes the "events," "Ben," whose cleverness inspires them, and Constantia, who prefixes to each event a kind of "poem" truly remarkable. The story involves grown-ups and their various affairs, seen from the gen-

uine school-girl point of view, and expressed in the exact language of the age. Any one who had forgotten what girls at school are like between ten and seventeen would need to read only a single page to remember. The book is sure to please equally those who are young and those young no longer.

The Chemistry of Commerce

By ROBERT KENNEDY DUNCAN

Author of "The New Knowledge"

The *Chemistry of Commerce* is a graphic narrative of the wonderful world of applied chemistry in the industrial world to-day. It affords an engrossing story of the invention and manufacture of commodities that are close to the business or home interests of each one of us. It is packed with information upon such topics as

RESULTS OF PLANT FERTILIZATION
FROM "THE CHEMISTRY OF COMMERCE"

the making of artificial rubbers and diamonds of unbreakable Weibach mantles, of the distillation of perfume in quantities sufficient to float a frigate, of the coloring of glass, of the engineering feats accomplished by high temperatures, the purification of drugs like camphor and quinine, the extraordinary history of industrial alcohol. Professor Duncan—himself a student of science and a practical chemist—spent a long time of study abroad and secured his material personally from famous chemists at work in their laboratories.

A Critical Examination of Socialism

By W. H. MALLOCK

An admirable discussion of the entire subject of Socialism, pointing out with thorough fairness both the weak and strong points of the doctrine as it is understood in this twentieth century. It is a book that will serve the uninitiated reader as a first introduction to the subject, and will at once put him abreast of the most recent developments and the uppermost controversies of Socialism. The subject of modern wealth is treated with keen and illuminating analysis.

COMMENT

The Aldrich Bill Should Be Accepted

AS THE WEEKLY has already said, the ALDRICH bill, which has been reported to the Senate since our last comment upon it, is a perfectly logical method of remedying evils of the present system, from which the country has more than once gravely suffered. Every valid criticism of the pending bill is in effect a criticism of the system which we have possessed since the establishment of the present national banks. The immediate question, however, is as to the remedy of conditions from which disaster and ruin have come or have been accentuated. At a certain time every year the contracted basis of our bank currency causes much commercial discomfort, which sometimes is threatening; at other and rarer times, as in 1893 and last October, we have actual and wide extended disaster. This can be remedied by broadening the basis. The fright which comes from apprehension that our bank currency will disappear into secret places, that needed loans will be refused in consequence, will not be bred or stimulated when it is understood that when the old cause of the fear begins to operate new currency will be put into circulation, and that the provision for such an increase is more than ample to meet the most extravagant demands. It may be thought that there are better methods, but their application would involve a complete reform of our present currency system. This is impossible. We can obtain a remedy by passing the ALDRICH bill; we cannot afford to go without the remedy. Are we willing to be so absurdly impractical as to do without what we need because we cannot secure the gratification of our ideal?

The Provisions of the Bill

The provisions of the ALDRICH bill are simple, and it is further true that the objections to them on their own account are mere conjectures. The cause of our financial is the restriction of our bank circulation by basing it on United States bonds. Now it is as certain as human facts can be that we must continue for some time to come to have a bond secured currency. The bill provides for as elastic a currency of this kind as can be devised, as follows: First, the banks are to suggest the necessity of emergency currency to the Comptroller of the Currency. Second, this suggestion is to be transmitted to the Secretary of the Treasury, who is to approve it if in his judgment business conditions require the increase, and is to fix the amount of the issue and the time when it is to be made; the notes are to be distributed proportionately among the States applying. Third, the total amount to be issued is fixed at \$200,000,000. Fourth, the securities for the new notes are to be first mortgage bonds of railways, not including street railways, which have paid at least four per cent. div-

denks, regularly and continuously, for five years prior to the deposit of the bonds as a basis for circulation; the notes that may be issued on such security will be equal in amount to seventy-five per cent. of the market-value of the bonds; the banks may secure circulation to the amount of ninety per cent. of the interest bearing obligations of any State, or any city, town, county, or other municipality or district, which has existed ten years, which has not defaulted in that time, and whose funded debt does not exceed ten per cent. of the taxable value of its property. The Treasurer is to accept securities with the approval of the Secretary. There is proper provision for ascertaining the value of proffered securities, and for their return after the occasion for their issue has passed. This is to be accomplished by a tax of six per cent. on bonds employed as a basis of currency other than United States bonds, while United States two per cent. bonds pay a tax of one half of one per cent., and United States bonds bearing a higher rate than two per cent. pay a one per cent. tax. The provisions for supplying needed currency in emergencies are ample, and they are well guarded. It would be arrant folly to defect the ALDRICH bill, directly or indirectly, for the reason that it does not revolutionize our existing system. It will accomplish its object, and nothing else can be passed.

Another "Fundamental Principle"

The capacity of WILLIAM JENNINGS BRYAN has been again illustrated—this time by his interference in the composition of the ALDRICH bill in committee. As usual, this interference was mandatory, and was followed, as is also usual, by the unseemly obedience of Senators who are by nature and training much better fitted than Mr. BRYAN for the tasks of government. BRYAN'S idea was, of course, a "fundamental principle"; so he said and so he bade his followers say—and perhaps believe. It was this: that the emergency currency provided for by the bill should be government paper and not bank paper. In a word, following his natural inclination or the bent of his mind, BRYAN wants to increase the currency by greenbacks instead of by national bank notes. Those who understand the subject of finance and banking are aware of the defects of the national bank notes as a system of currency, but they are at the same time conscious of the still greater defects of the greenback. BRYAN'S idea is a greenbacker idea. It is true that the emergency notes would not be issued as a permanent increase of the circulating medium, but the eagle's nose once being within the tent, the eagle's whole body is pretty sure to follow. Experience has taught the nation that it is next to impossible to prevail upon Congress to retire greenbacks that are out, and we are justified in believing that it will not require much persuasion to lead Congress to keep in circulation any greenbacks that may be issued for the purpose of meeting an emergency. When Congress refuses to accept this other "fundamental principle" of Mr. BRYAN'S, it will give one more blow to his unusual money convictions. It will be another victory over greenbackism and all that that implies. BRYAN always wants "more money"; even now he wants "more money" after it has been demonstrated that the largest per capita circulation known to civilization has had no power to stop a panic. He wants "more money"—whether it be of debased metal or of paper or of rags. This is the secret of his desire that the new emergency currency shall be greenbacks. He is a paternalist: the government must do every man's job. To elect such a man as President is impossible; to nominate him would be to manifest a neutrality oblivious to modern conditions, unfamiliar with the common knowledge of the times, and impervious to enlightenment.

Bryan as Roosevelt's Legatee

At the meals which Senator NEWLANDS served with the idea that they be eaten in common by Mr. BRYAN and the Democratic Senators, the Nebraska announced that he was the heir of ROOSEVELT, and that he desired the Democratic party to nominate and support him on that theory. Thus he demonstrated the soundness of the position taken by THE WEEKLY, that Mr. BRYAN and Mr. ROOSEVELT are political philosophers of the same school—a school that is hostile to free government, to federal government, and to the rights and liberties of the individual. For the same reasons that Mr. BRYAN gives in behalf of his own nomination a good many

Democrats—all who think and act upon their thoughts, at least—believe that he ought not to be President, and especially that he ought not to be their candidate for President. He is not their kind of a Democrat, for he confesses that he is a Roosevelt Republican. The confession was not necessary, but it is well to have it. Mr. BAYAN says by it that he accepts the theory that the States shall be still further subordinated to the national power, not necessarily legally—that is, by amendment—but illegally by construction; that all business shall come under the supervision and control of the Federal government, directly by Federal charter, or indirectly by Federal license for State corporations and, for individuals; that the government shall be paternal, interfering with all human activities, precisely as Mr. BAYAN now interferes in all party activities; that the President shall dominate the other departments of the government, as Mr. ROOSEVELT does and as Mr. BAYAN seeks to do, by insisting that a State Legislature shall elect the man of his preference to the United States Senate. To most Democratic minds, and to all minds that appreciate free government, these are reasons, as we have said, why BAYAN should not be President.

Deposit Guarantees

It ought to be understood that the guarantee of depositors, in favor of which Mr. BAYAN talks, urging every subscriber of the *Commoner*, for instance, to write to his Congressmen in behalf of the proposition, is not the same kind of a guarantee that has been tried in Oklahoma and elsewhere, and that might possibly be universally tried under a new national law. Comptroller BUNNEY has decided that under the existing law a national bank may not enter into the Oklahoma scheme. The BAYAN plan is that the fatherly government shall save the depositors harmless, and thus encourage reckless banks to squander the money entrusted to them. The other plan is that the banks should create a guarantee fund themselves.

Mr. Roosevelt's Trade

It is greatly to be regretted, for the sake of the country, that Mr. ROOSEVELT confines to issue dispirited views of business conditions and violent assaults upon business men. These attacks excite wonder abroad and more or less disturb people at home. Fortunately the time has gone by when the President can disastrously affect the country. It is noteworthy, and is the subject for mutual sorrow, that these denunciations of his cause come men of judgment to say that he is ill balanced, and more regretful is the joy which the President gives to every enemy of society, of the law and the courts, of order, of prosperity, and of the freedom under which prosperity is alone possible. Men like Jeff Davis and Bryan shrink with joy over the angry utterances of the President, and yet it is only twelve years ago when a very large majority of American citizens fully believed that to save the country from Bryan and Bryanism would be to save the country from a terrible disaster. What was true then is true to-day. Mr. BAYAN is right in saying that Mr. ROOSEVELT and he are one in political policy; that he, not TAFT, is the proper heir of the President; and Mr. ROOSEVELT expresses that policy and betrays its appropriate temper, to the sorrow of all good men. People say that the extraordinary document was a campaign manifesto for TAFT, but it is to be hoped that Mr. TAFT does not care with them. It is a proclamation of the rage of the hosts of disorder.

The Latest Message

Senator JEFF DAVIS, as we have said, was exceedingly pleased with the President's latest message. Senator BURNETT, the leading apostle of the third term, was reported to be delighted with it. But a great many better and more valuable friends of the President than either of these Senators took the message badly. One of them is our neighbor, the *Wall Street Journal*, which in spite of its name is a great admirer of Mr. ROOSEVELT and looks him up all its own. But it does not back him up on this message. Groaning in spirit, it says to him:

Oh, Mr. President, why is it that you have permitted your eagerness to cut Bryan BAYAN, defunct Governor BURNETT, and elect your great War Secretary, to inhibit upon the panic-stricken business of the country such a needless blow as this message? It will not make competition fairer, but only make monopoly more selfish and desperate. It will not remove a single abuse of corporation or stock market, but only serve to help those who sit at the direction of the whole business system.

The most comfort that we can offer our neighbor in its grief is the suggestion that the President's views and attitude on all important subjects have long been well known, and reiteration of them either in or out of season ought not to have very serious effects. Fortunately he has not taught us to expect of him, and the absence of it from his composition is a factor of the general business and political situation which everybody who is attempting to do business must long ago have taken into account.

No Third Term About It

The suggestion that the recent message is a bid for a third term is ridiculous. Senator BURNETT, who grails at it for one, has his reasons, which are obvious enough, for twisting any event or any utterance that comes along into a third term portent. Senator BURNETT came from Oregon last winter, a new Senator and unknown except in his own State. By fastening at once on the third term idea, and identifying himself with it, and talking about and promoting it all the time, he has gained himself a great deal of notoriety, so that his name is familiar to the readers of the newspapers. Every chance to shout for a third term for ROOSEVELT is a chance to familiarize the American people with the name and sentiments of JONATHAN BURNETT. No such chance has been neglected so far, and it is not likely that any chance will be neglected. Mr. BURNETT has only four short months more in which to use Mr. ROOSEVELT's popularity as a torch to make conspicuous the outlines of his own figure. The sole idea he stands for is the third term for ROOSEVELT. He will stand for that for all he is worth as long as there is anything to stand on. But there is no warrant in the message for the suggestion that the President feels differently about a third term than he did two months ago, when he reiterated his declaration that his present term should be his last. That he wants his policies to survive his administration has never been a secret; that he should use all the influence he can command to impose them on the country is entirely natural and characteristic, so it also is that he should consider that that purpose is furthered by expounding them anew from time to time. The message does not need any third term yearning to account for it. It is fully accounted for by the explanation that the President loves the children of his brain, and believes that the voters will love them more and more the better they know them. Also, it irritates him to have any of them disparaged or assailed, and he likes to defy their assailants. One other thing counts—that the writer's passion is very strong in him, and he likes to see himself in print.

Stock Gambling

The paragraph in the message that relates to stock gambling is a particularly interesting example of Mr. ROOSEVELT's style and matter as his messages disclose them. Declaring that he would like, if he knew how, to ask for laws "to prevent at least the grosser forms of gambling in securities and commodities, such as making large sales of what men do not possess, and 'cornering' the market," he goes on to say:

Legitimate purchases of commodities and of stocks and securities for investment have no connection whatever with purchases of stocks or other securities or commodities on a margin for speculation and gambling purposes. There is no essential difference between gambling in cards or in lotteries or on the race track and gambling in the stock market. One method is just as pernicious to the body politic as the other in kind, and in degree the evil worked is far greater. But it is a far more difficult subject with which to deal. The great bulk of the business transacted on the exchanges is not only legitimate, but is necessary to the working of our modern industrial system, and extreme care would have to be taken not to interfere with this business in doing away with the "bucket shop" type of operation. We should study both the successes and the failures of foreign legislatures who, notably in Germany, have worked along this line, so as not to do anything harmful. Moreover, there is a special difficulty in dealing with this matter by the Federal government in a Federal republic like ours. But if it is possible to devise a way to deal with it the effort should be made, even if only in a cautious and tentative way. It would seem that the Federal government could at least act by forbidding the use of the mail, telegraph and telephone wires, for mere gambling in stocks and futures, just as it does in lottery transactions.

The more we meditate on this paragraph the more wonderful it seems to us. He makes a distinction between legitimate and speculative purchases of stocks, implying that speculative purchases are not legitimate. Then he says that the great bulk of the business transacted on the exchanges is not only

legitimate but necessary. What will his warm admirer THOMAS LAWSON say to that—LAWSON, who estimated the other day that ninety-nine and a half per cent. of the stock transactions were gambles? We would rather trust LAWSON's opinion on this subject. He is much nearer the game. An enormous majority of the transactions of the exchanges are speculative, but are not on that account the less legitimate. The distinction is between speculative and legitimate transactions. It is much less simple than that. It is a distinction of prudence, between buying stocks with money you have got and can spare, and buying them with money you have no right to risk; it is a distinction, too, between big margins and small ones; and between moderate and controlled speculation based on study and opinions, and a blind effort to put money on a winning color and get something for nothing. The cure of this latter sort of speculation is automatic and sure. It hardly needs a law to suppress it when a man covers it so well. A fool and his money are still soon parted, but the paring makes for wisdom. "Bucket shops" are outside of the law in this State already, and under the severe reprobation of the Stock Exchange besides. There is internal evidence in the passage quoted that the President does not know exactly what a bucket shop is, or how its methods differ from those of a legitimate broker's office. The tentative suggestion that the Federal government should forbid the use of mails, telegraphs, and telephones "for mere gambling in stocks" is most interesting. All that the President seems to know about stock trading is that, first or last, it does a lot of mischief. With unswerving morality he does not himself recommend a Federal law to abolish this mischief, but is content merely to point out the need of one. He might talk to advantage about it with his friend President HAYES, who knows the subject. Or he can learn something next year by taking a few thousand dollars to a broker and trying to double it. That is the laboratory practice of finance, and is very instructive, though the lessons come high.

The Appalachian Forest Reserve

The news from Washington about the bill for the Appalachian and White Mountain forest reservations, so important to the South and New England, is most encouraging. The readers of the WEEKLY have been more than once informed of the project, which is Federal in its character, because in each instance the reservation will store water and will thus reclaim some of the lands and preserve many others, amounting to many thousands of acres, of several States. Last year the bill could not be considered because Speaker CANNON was opposed to it; this year, it is understood, he will withdraw his opposition, in which event the measure is likely to pass. The Speaker is a candidate, and ingeniously says that he cannot stand up against a united South and New England. The recent hearing before the House Committee on Agriculture on this subject was very satisfactory to the friends of the bill, and it would seem as though the Speaker's candor had already been of some value to the country.

A Decision Favorable to Free Labor

The United States Supreme Court has again rendered a decision which is a defence of individual freedom against socialist encroachments of government, and of the States against Federal usurpation. The law in question was that which forbids any employer engaged in interstate commerce to discharge an employee on the ground that he is a member of a labor organization. It may be foolish, as the court says, on the part of the employer to discharge a man simply because he is a member of a labor union; but it does not follow that such a reason would always be foolish, nor does it follow that government ought to undertake to prevent such folly, or that it ought to prevent the discharge of a member of a union because, for example, it exacted an oath from such a member binding him to take part in any war upon the employer that was waged by any labor union whatsoever. The court holds that Congress has no right to deprive a man of his liberty to contract, or to sever the relations of employer and employee, if he so desires, because the latter belongs to a union. As we have said, the employer may be foolish so to discharge a man; he may, however, be wise, for he may thus promote the general welfare, and therefore the welfare of all labor, by discharging any member of a labor union the fundamental purpose of which is to obtain its object, if it deem it

necessary, by war upon any part of society. At the same time it is a gross injustice upon the employer and upon all dependent upon him, including all who deal with him as sellers and purchasers and creditors, to discriminate against him by denying to him the right of perfect freedom in his association with labor, while leaving the union and its members free to quit his work, to tie up his business, and, perhaps, to ruin him, merely because he sees fit to hire other than union labor. Mr. HAYES says that he does not understand the process of reasoning by which the court reaches its conclusion. This is not strange. Many men find it difficult to understand any process of legal reasoning; some men cannot understand a legal principle; other men cannot tolerate a judge or a court that differs from them on a question of law. The Supreme Court, notwithstanding its critics, has rendered a service to free labor and incidentally to free government by laying down the law that, under the Constitution, men are still free and cannot be made by Congress to hire or to work for those to whom or to whose principles they object.

Reaching Beyond the Grave

A London despatch, dated January 31, said that Sir OLIVER LODGE had been telling the Psychical Research Society that recent recent and exhaustive tests through spiritualistic mediums had left him pretty much convinced that he had had communications with the dead. The mediums through whom the tests were made were Mrs. VIBRALL and Mrs. PIERCE. Among the departed spirits with whom Sir OLIVER believes himself to have been in communication were those of EDMUND GUNNET, RICHARD HOBSON, and F. W. H. MYERS, men who in life were closely associated with the work of the Psychical Research Society, and who passed out of this life with declared intentions of sending word back to their friends that they still possessed conscious existence. Sir OLIVER believes that such word has been received in convincing forms. He goes as yet into few particulars, but his belief is of much interest. The interest, as a rule, however, is contemplative and unexcited. Mankind is very used to be fooled by spiritualistic manifestations, and also to see persons of undoubted sincerity and scientific training misled by them. The remarkable thing is that spiritualistic investigation goes on as it does in the face of its records. The quest into this region of the unknown is full of dangers and pitfalls, and hazardous to sanity and sense, yet when one generation has been baffled by it the next takes it up, and there is no sign of its being abandoned. Whether it is worth while or not, whether anything true and important can come out of it, seems doubtful to most of us, but at least we do not doubt the honesty of such investigators as Sir OLIVER LODGE, or their comparative competence for the labors that engage them. The great majority of mankind seem to believe instinctively in a future life without scientific proof of it, and it seems easier, on the whole, to believe the fact than it is likely ever to be to believe the proof.

A King Murdered

The shocking assassination of the King and Crown Prince of Portugal seems to have excited such a degree of horror in that country as to defer for the time being the political ends for which the murder was planned. King CARLOS was personally an engaging and gallant man, but not a wise ruler. Extravagance, frivolity, and corruption have characterized the government for which he stood. Last spring there was a collapse of constitutional government in Portugal. No ministry could keep office. In May, the Cortes, refusing to vote the necessary appropriations, was dismissed, and the King suspended the Constitution and named Premier FRANCISCO dictator. Since then there has been a fight for the restoration of the Constitution, incidents of which have been such fighting in Lisbon, the imprisonment of Republican leaders, and repeated plots against the King and the dictator. The effort to maintain a government resting solely on force has resulted in the desperate retaliation of February 1.

Thaw

Of the two TITUS trials, the first was practically a trial of the man murdered, the second a trial of the murderer. In both cases the ends attained have been those best adapted to the protection of society.

Britain's Generosity in South Africa

THE boon of representative self-government centered not long ago upon the former South African Republic by Britain's Liberal government has been followed by a similar concession to the former Orange Free State, and the first general election under the new organic law has just taken place. The result is an overwhelming victory for the Boer element of the population, and there is no doubt, therefore, that the forthcoming Ministry will be formed of men who were conspicuous in the recent war against Great Britain. There is nothing surprising in this outcome of the appeal to the electorate, for as yet the Boers greatly outnumber the English-speaking inhabitants. There is nothing in the Orange River Colony, which is distinctively an agricultural country, the mineral output being confined mainly to diamonds—in the exports for 1904 diamonds figured for nearly \$5,000,000—to attract a vast influx of immigrants from Great Britain, such as was drawn to Johannesburg by the gold mines of the Rand. There are indications, however, of a marked change in this respect. During the last few years more than a million acres have been distributed among British settlers desirous of engaging in agricultural pursuits. Moreover, although the Boer component of the population has increased in fourteen years about forty per cent., the English-speaking factor has increased by one thousand per cent. Should anything like that ratio of augmentation be continued, the day is not far distant when the English-speaking element is destined to preponderate in the Orange River population. Meanwhile, whether the next census shall show a continuation of progress in wealth and population may depend upon whether the Boer administration follows or reverses the policy of the provisional government, which was directed largely to the encouragement of agriculture. A reversal of the policy is most improbable, inasmuch as the Orange River population has always consisted mainly of farmers.

When we recall the great length of time—more than half a century—which elapsed before even the severe feason administered to Great Britain by the loss of the thirteen American colonies could prevail on her to grant self-government to Canada, the promptness with which this privilege has been conceded to the conquered Boers of the Transvaal and the Orange River region may well seem amazing. As a matter of fact, since 1840 the whole attitude of the British Parliament toward colonies settled by white men has been revolutionized. There is scarcely a trace left of the jealousy and suspicion with which colonists used to be regarded. Even the Unionists, who brought on the war with the South African Republic, would, had they remained in power at Westminster, have yielded before long to the request of the Transvaal for autonomy, though, doubtless, the acquiescence of Parliament was accelerated by the accession of the Liberals to office. This is evident from the fact that the constituents of Unionist public men and newspapers on the constitutions granted to the Transvaal and the Orange River country have been, on the whole, quite favorable.

In these, as in some other cases, Britain's exhibition of magnanimity has not missed reward. There are signs of a corresponding approach to good feeling on the part of the Boers, especially those who bore a leading part in the late war. Incredible as it may seem to those who remember the raid which brought on the contest, Dr. JAMESON has since become the Prime Minister of the Cape Colony, where the Dutch-speaking element is numerically preponderant; and CRISP, KIMSON has found his eulogists among Afrikaner citizens of the Orange River community.

Lord Kelvin and Submarine Telegraphy

MANY as have been the articles which have been published since his death about Lord KELVIN, better known as Sir WILLIAM THOMSON, inadequate attention has been paid to the reason why American citizens feel especially indebted to the great English mathematician and physicist. We would not go so far as to assert that but for THOMSON we might not even yet have a workable and really useful submarine cable, but we do say that we should not have got on so soon.

It will be recalled that during the fifties and the sixties of the nineteenth century the civilized world, and particularly the two main divisions of the English-speaking people, were deeply interested in the possibility of an Atlantic cable. The first cable had been broken while it was being laid. The second cable snapped after a very short term of existence. The third cable snapped after 1100 miles had been laid, and, although many attempts to pick it up were made, this cable also had to be abandoned for a time. Even had the cables of those days remained workable for considerable periods, they would have been of relatively little commercial value, owing to the difficulty and delay involved in the transmission of messages. For example, signals sent through the 1858 Atlantic cable were so weak that a message from President BAYANAS in Queen VICTORIA took thirty hours in transmission, although it contained only 150 words, which could be communicated

in three or four minutes in any good Atlantic cable of to-day. It turned out that when one attempted to send a series of electric signals through an Atlantic cable, with its same apparatus and at the same speed as messages were sent between New York and Philadelphia, the signal at the far end would not have the slightest knowledge that the signal at the near end was trying to send a message, whatever might be the strength of the current sent into the cable. It soon became a matter of demonstration that, in order to work a long submarine cable, either time must be allowed for each signal to "grow" at the distant end, or, as this would make the sending of messages very slow, the receiving instrument and the signal at the distant end must be able to interpret the faintest indications. Sending the letter "a," for instance, produced at the end of a long cable a totally different result according to what had preceded it. In no case, at a speed of even thirty words a minute, with a three thousand mile cable, would the signal be more than a suggestion.

THOMSON recognized the need of and determined to invent a receiving instrument which, unlike the ordinary telegraph instruments used in post-offices and railway stations, should render the interpretation of such faint suggestions easily and quickly possible in the hands of an expert signaler. To that end he devised the mirror galvanometer "speaking" instrument. It is not forgotten that this invention was deemed of such national importance that a private act of Parliament was sanctioned by the Privy Council to extend the normal life of fourteen years for the patent. Another act of great moment in submarine telegraphy brought out by THOMSON was that no increase of battery power can counteract the retardation in signals produced by any impurity existing in the copper conductor of a cable. The deduction was obvious that every yard of copper wire used in the thousands of miles of a long cable must be tested electrically for resistance before being used.

It is due to Lord KELVIN, more than to any other man—more, perhaps, than to all other men put together—that the London stock exchange is to-day by cable within thirty seconds of Wall Street.

What Is Worth While?

THERE is a great deal of theory of life afloat nowadays, and as one moves about in the world one is continually being introduced to new paradoxes, new ways of making this little trip of mortality worth while. As a matter of fact, wisdom is as old as the ages. All that can be said about life, by and large, has been said and repeated and reiterated, but men will not take wisdom at second hand. Each man not only does repeat the history of the world in his person, but he insists upon doing it. You may caution the child a thousand times that hot things burn, but he never realizes it till he is burned, and then he admits that little fact to his data of the indubitable truths of the world; too much heat burns.

So it is humanity goes stumbling along towards wisdom; each generation repeating with slight variations the mistakes of the last, or varying them a little and inventing new errors. No wise observer of life to-day but will see that the error of the average man is setting his whole faith in money and competition; instead of getting life out of a living, his whole energy is flung into getting a living out of life.

And yet the pagan of the world, the myriad colored flood of the hours, the unutterable beauty and glory of the changing aspects of the world as it wheels itself along through space, is a vision too wonderful to harbor for mere bread and meat and shelter. If it took as little time to convince men that money will not buy happiness as it does to teach the little child that fire burns, what a stride in progress would be made! If the man of moderate means could but realize that a multiplication of things will not advance him one step toward contentment, that all the things that are really worth while are free for the taking; and if we could make the rich man realize that all his pomp is powerful only in as far as he uses it for the good of all men, and that mere display is vulgar, and mere luxury senseless—what a good work of uniting we should accomplish! And this is the chief task of our present day. Not to do away with differing conditions; that is impossible—and vice, with open eyes for life in all its color and variety, would like to reduce it to a mere drab, dreary uniformity—lest to so increase the sympathetic understanding of all classes and kinds of men that rivalry may cease to impede progress, and the work of the world may be done for the joy of doing it, and the labor of the world may be so divided that each man shall live while he works, and his work shall not blunt all his finer perceptions and swamp his keener, more delicate feelings, but shall heighten every power of enjoyment.

This is no mere Utopian dream, but it is the step in progress toward which Western civilization has been stumbling through the centuries. Man has had to learn what his life is; he has had to learn, just as the child learns that fire burns, that the things that burn go beyond his reach and seems so desirable is not really all that it seems, and that once he has grasped it in his

hands it is as like as not to crumble into dust and ashes. And then, when he passes to look, he will see behind him but the mud strain, the feverish anxiety, and in the present he will have but the bitterness of satiety.

What is worth while, then? It is worth while to spend a life in multiplying comforts and luxuries? After all, to have the best of food and the best of drink and the finest shelter is to put oneself on the level of a well-stalled ox or horse. To accumulate money and property, to heap them up and guard them and keep them, is to degrade the intelligence to the level of the bee or the ant. All these things are good; some of them are necessary. Food and drink and proper shelter, work and gain and increase of facilities are the by-products of living; they are necessary; but who mistakes them for the life itself must pay for his error as if it were a sin.

And the life itself? Let us quote from a book we may all be reading in a month or a year from now: "Of a sudden it came to him that life itself was beautiful. Not effort only, not work nor play, success, achievement, wealth or fame or honor, but life itself. To live was good. The hours, the golden hours, were not just empty spaces between two clocktimes, to fill with acts. They were themselves a glory. To sit and let the crystal flow of time pass over him was purest pleasure. Not his life only, but all life was good. To feel the great and glorious stream of the world's life pass on, to be one with Nature and hear her sing. For she goes forward to music. It is not always a battle-chant she moves to. In her song there are all things. The shout of triumph and the cry of those who fall are there; but there are also other notes—the ripple of the river on its stones, the murmur of the trees, the rhythm of the sap that rises in them, the thunder in the hills. It is the song of infinite harmonies."

This is what comes upon us, with a misgiving that is almost a terror, when we pause to think that we stand here in the midst of mortal life and that we shall not pass this way again. Life is infinitely beautiful, and we, if we fail to find it, are, must search for the defect, not around us nor outside us, but in ourselves. And if in our chase for gross things and material things we have outgrown the power to live, to perceive, to enjoy, no mist you the penalty, for Nature is inexorable: we pay for our mistakes to the last not just as we pay for our sins.

But, after all, the outlook is not so black. Mistakes are just the steps of the stairs up which we are climbing. Every time we recognize one for what it is, and call it a step instead of a peak, we move on up. And this generation is just in the act of lifting up one foot off the step of materialism to a step that shall be better worth while. We shall stand next on a plane where we shall realize, as the child who has been burned realizes what fire is, that life is not all in the body, but that life is happiness. And happiness is not bread and meat, nor yet is it sport, nor gaiety, nor excitement, nor rivalry, nor prominence. Happiness is growth and enlargement. He is happy who sees more, who understands more, who effects more this year than last. He is happy who finds his perceptions sharpening, his powers increasing, his sympathies widening, his holinesses branching. He is happiest who includes most life in himself and radiates most life around him.

And how shall he face death who has grown to full stature in this life? If, on this chance journey we call mortal life, he has not only found goodness and security and happiness, but has himself had power to create more goodness and more security and more happiness, shall he believe for an instant that all this can be blotted out of existence by a mere shadow called death? "Lying is hard; but death is easy," wrote a hero, as he lied to death alone at midnight by a flickering camp light. The change, like all strange and new experiences, has its difficulties and pains, and then comes the new adventure, strange and thrilling and surely gladder and greater than the experience we have just exhausted and cast behind us. Death is nothing but just the step above us.

And there is but one more word to this little sermon about what is worth while. Men who are willful and stupid and unworthy for themselves, often enough lay all this aside when they begin to think for their children. There is a truth as indisputable as that fire burns, and it is this: As we choose to-day, so shall our children inherit.

What man is willing to leave his child nothing better than mere material gain? What man does not secretly hope that his child will have real happiness? What man would not, if he could, give his child some part in the joy of the artist's perceptions, some of the peace of the sage, some of the strength of the conqueror? Well, and the moral of this is, as Alice's Duchess used to say: As we choose to-day, not only so shall our life be in the future, but so shall the life be which our children inherit. And so the main business of life is to pause long enough to look around us and reflect and choose wisely what is worth while.

Personal and Pertinent

SENATOR WETMORE of Rhode Island, who has just been re-elected after a troublesome term, is a pleasant legislator, and he

likes his club. He is a Yale man of 1867, and a Columbia College Law School man of 1870. This was when Wetmore was at the head of the school, and when it was demolished in Lafayette Place opposite WILLIAM B. ACADE's house and library. It was in that familiar row with a fine colonnade in front of the second story. Perhaps WETMORE did not learn much law there, but he had good society. Among the men in his class was United States Judge HOLY in eloquence at Yale, too; Judge ISRAHAM of the New York Supreme Court; Judge FRANCIS M. SCOTT, of the same bench; FRANCIS LEVINE STEVENSON, and HAMILTON W. MAHER. The latter's love of literature ruined a great jurist. WETMORE's chief achievement at this time consisted in driving to the law school in his own car and with his own man. Nothing of the kind had ever been seen before by the men from the rustic colleges like Williams and Amherst and Dartmouth and Brown, and they need to wonder if their clients would ever pay for such elegance as that. But while WETMORE never had, nor even desired, any clients, he obtained a United States Senatorship. How much public service Rhode Island demands for this place we do not know. Doubtless enough—just enough. WETMORE is an agreeable adjunct to the library committee, and there is felt to be a fitness between good clothes and well bound books. He is a useful man there, for he has faith in the expert who runs the library, and is not astounded by his requests, as a Senator might be whose sole friend among libraries is that which is kept in the stationery store and from which adorning volumes are borrowed for comely counts. WETMORE knows that big libraries make big demands that ought to be gratified, and he has been a serious assistance to HERBERT PUTNAM, who is making the Library of Congress worth while, worthy of its name. It is a good thing for the library, which is growing in grave even when it is compared with great foreign libraries, that WETMORE should have been selected. It is to be hoped that the Senators will have sense enough to put him back on his old committee.

HARVARD, PA., January 27, 1902

To the Editor of Harper's Weekly:

Sir,—Since nobody else seems to have thought of it, I beg to suggest that what is needed to settle the hospital ship difficulty is the institution of something analogous to that arm of the British service of which KARLINS sings, to wit:

A kind of a bloomin' am-ophosphate,
Doctor and sailor both;

I am, yours in the interests of peace,

H. S.

What For?

Read at the Harvard Dinner in New York, January 31, 1902

By E. S. MARTIN

What do we go to Harvard for?

Our fathers knew of something there
They thought it worth our while to share;
Something we think our boys can't spare,
So they go too; and all the more.

The noble press, "What's it for?"
What's it in Harvard that men misdoct
Twere futile thrift to do without?

Wisdom's there for youth to get;

What is it all about?

Did ever youth learn wisdom yet

But glared at Folly too?

Between the covers of books

Stands knowledge in noble store;

But it's not all there it's every-where;

And to learn to know its books

And find, and use it more and more,

Is what we go to Harvard for.

To get in touch with men, men,

And to get close up to a fern,

To make wise marks with a doubtful pen;

To and to guess, and have it come true,

To learn to make food and drink

With labor and mind and grace;

To learn to live, and learn to think;

And to learn to be happy though free—

These at Harvard seek our Youth,

See in their seeking

And they gain between the vision of truth;

And they play some games with Yale,

If they don't "most always win."

The reason's really shown;

The least at home we're rich in fare

They can't get hungry enough to care

With due concern and enough despair,

Who gets contention's bone.

The Royal Tragedy at Lisbon

The murdered King of Portugal, Carlos I.

The Crown Prince Luis Philippe, killed beside his Father

THE long drawn out political unrest in Portugal has culminated in the assassination of King Carlos and the Crown Prince Luis Philippe in the streets of Lisbon.

The King and Queen, with their two sons, had just returned from Villavieja, where they had attended the annual fair. At the moment when the open carriage which conveyed them had turned into Arsenal Street from the Praça do Comercio, a group of men who had been loitering under the trees rushed forward with carbines and revolvers, which they had concealed under their long cloaks, and poured in a succession of volleys.

The King, pierced through the throat and shoulder by three bullets, fell to the floor of the carriage. The Crown Prince, who tried to rise to his father's assistance, was immediately shot down, while his brother Manuel was wounded in two places. The Queen bravely flung herself before the bodies of her son and husband, and escaped almost miraculously, her hat and bon being pierced by several bullets. The carriage was driven at full speed to the Arsenal, where the King and Crown Prince expired within a few moments. The assassins were at once pursued by the police; three of them were riddled with bullets and the remainder captured.

The courage shown by the Queen was remarkable. She saved the life of her second son by throwing herself before him and beating at the faces of the assassins with her bodice. One of the ruffians was thrust through the body by a cavalry officer, and immediately blew out his brains with a revolver.

The outcome of the tragedy was a strong reaction in favor of the monarchy, personified by the young King Manuel II. Almost simultaneously with the assassination an attack was made upon the house of Premier Franco, in which several men were wounded; but Lisbon as a whole remained quiet and the people appeared stunned by the blow. It is believed that the design of the conspirators was to exterminate the royal family, murder the Premier, and proclaim a republic.

The origin of the political disturbances dates back to last May, when the King dissolved the Chamber by royal decree, in violation of the constitution, and conferred dictatorial powers upon Premier Franco. This action was taken on the ground that the government had fallen into the hands of a clique of spoilers, who took office alternately and held high salaried sinecures; but the King proved to be one of the worst offenders, and his debts were paid out of the country's finances. It was reported that on one occasion he hypothecated the crown jewels in London. The immediate cause of the murder appears to have been a decree issued by the King the day before, giving the Premier unlimited power to repress revolutionary agitation and suspending parliamentary immunity. All persons suspended for political agitation were to be treated as criminals and deprived of civil rights. King Carlos resolutely supported Premier Franco on all occasions.

Nevertheless the murders occasioned the greatest sorrow and sur-

prise. Carlos was by no means a tyrannical ruler. Affable, democratic, he was one of the most popular kings in Europe, especially at the English court. He was a fine athlete until his ponderous bulk got the better of him; he could fire a rifle unerringly with either hand; he painted well, and had a celebrity as a gourmet. The Queen is famous for her medical skill, and on one occasion won a medal for life saving. It is said that on the occasion of a recent visit to England King Edward strongly urged upon her the necessity of inducing her husband to return to a constitutional régime.

The Queen of Portugal and her remaining Son, the new King Manuel, driving to Lisbon in the kind of Carriage in which Carlos and the Crown Prince were Assassinated

The Man Who Heard Voices

By FREDERICK I. ANDERSON

LOOKED against the sky on the crest of a barren hill of sand that rises six hundred feet above the river bottom is the solitary figure of a man kneeling in prayer. Two seraphs recline upon his shoulders, to magnify his loneliness. A living being, he seems as motionless as the trees for hours under the blazing sun; bare-headed, with hands raised, has face upturned, truly his arms more devoutly, like seraphs against the white blue of the sky. There are farmers around him in the valley of the Androscoggin, working in the fields. They have seen his strange figure for days, and the countryside is full of talk of an odd, half-clothed man who has been praying in the pine forest for more than a month.

One of the farmers leaves his horses in the fields and turns toward the sand hill, drawn by curiosity, and something of wonder at pity that knows neither hunger, thirst, nor exhaustion. The farmer climbs up the hill through fourteen inches of loose sand. The solitary figure might not be aware of the intruder, so intense is his devotion. The onlooker sees a man half clothed, and that little in tatters. He is small, wiry, has brown hair and mustache flowing, his head unkempt and knotted. The sun has blistered his forehead, his cheeks are hollow, and under the transparent sunburn is bloodless pallor.

The farmer receives no greeting. Ace takes possession of him, and he returns to his fields, full of wonder. The next day the dark figure again is seen unsmothered against the sky. Again the farmer leaves his horses and plow. He is joined by others at the foot of the hill. Many have seen from a few ways off and wondered. The pioneer of yesterday tells them what he has seen. They watch and wait a short time at the foot of the hill. The solitary worshiper pays no heed, though a fringe of people now surround his sanctuary. Several climb the side of the hill and form a little circle about him. Some are inclined to laugh, but instead they have their hands. Women are joining the group below in the valley. They are gazing upwards and talking excitedly among themselves. Some has an explanation. Children begin to cry and run about. Dogs are barking. A few women climb the hill, timidly, and join the men. Broadly they watch the meekest person.

A woman falls in her knees and prays quietly. A man joins her. A second woman cries. One by one men and women toil up the hill. Now there are a hundred about the lone man, soon two hundred, a few laughing, many praying, but soon all are awed by the mystery. No word is spoken to the throng, and towards evening the curious ones go away, wondering more and more. The next morning the watchers in the fields see him ascending the hill with a wheelbarrow and a few. He reaches the spot where he has made his sanctuary and begins to dig. Again comes the procession across the fields, now spurred by new interest. By two and three and in files the simple farmers tread up the hill, again forming a circle about the pious man. The some consensus of their presence now, but speaks not. He digs and prays alternately.

The onlookers crowd to smile. They listened to the spasmodic prayer. Women were falling to their knees, praying and weeping, at the sound of the hollow voice. At noon

a farmer came up the hill with shovel and wheelbarrow. "Let's give him a lift," he said to his neighbors. Many were willing. When these first recruits volunteered the leader knelt and burst forth in hysterical prayer. All the time the lone penny rested in his hat on the ground beside him. A woman was dropped beside it. Then came a nickel, then a dime. Neighbors told John Henry Douglas about the man on his hill top. When Douglas went there the strange man fell on his knees again.

Prophet Sanford building the Temple

"The Lord has commanded me to build a temple on this hill," he cried. "You are commanded, in the name of the Lord, to give this hill for His Work."

The owner of the hill became interested. He found himself working with a pick and shovel, before the end of the afternoon. The next morning he devoted the hill to its strange claimant.

"What is your name?" asked Mr. Douglas.

"Frank W. Sanford."

From such a beginning sprang the Holy Ghost and F's Bible Society, which in less than fifteen years has come to be one of the strongest of many strange religious sects. It has come into possession of lands in all parts of the world valued at more than \$1,000,000; a temple on which the first stroke of work was performed that July day in 1893, in the presence of the curious farmers, valued at \$250,000; a fleet of ships; a bureau of international proselyting; model farms, printing establishments, shoe factories, and other industrial concerns; and converts in the old world as well as in the new ready to give their last dollar at the call of their leader.

Born in Florence in 1862, Sanford passed through a not unusual boyhood, and was sent to Bates College, and later studied in the Yale Divinity School. Before he was sixteen, the spirit that led him on through his strange career in after years, began to whisper to him. But at college he distinguished himself principally as a star pitcher on the college nine. So much of a star twirler was he that when he left college he became captain of a professional nine, and for a season was the hero of the local circuit. Then, as he explained it, finding himself in doubt between professional base ball and professional piety as a career, he chose the latter, and entered the divinity school. He failed of graduation, and his instructors tried to prevent his ordination when he was called to a little church at Topsham. They failed to thwart him. From Topsham he went to Great Falls, New Hampshire, where he received \$1500 a year. Topsham had paid him \$500. His imagination ran riot; varying creeds jangled on his un-settled vision were beginning to talk to him, and his congregation fed and left him alone. He started on a trip around the world, and was shipwrecked on the coast of Palestine, off Cyprus, in February, 1891. A host of passengers was drowned. He attributed the accident of the ship striking a rock to the bad character of the passengers and his own rescue in his faith. He being dragged out of the water he refused baptism. When he revisited the Holy Land in 1896, and again in 1897 and 1898, he met the man who saved his life, a Syrian business of a tourist agency. That man is now a disciple.

Frank W. Sanford returned to Topsham, Maine, in 1893, having discovered in his tour of the world that there are 250,000,000 more heathens than when Christianity was born. He took to the woods, fasting, praying, and listening to voices.

"Amazebaiden!"

"You will change the religious map of the world."

"Yes!"

"That word changed my whole life," said Sanford later. From that moment he recognized neither isle, nor symbol, nor control. To the laughing farmers who worked with him on the hill with his borrowed wheelbarrow — for

Shilo, the Temple and Headquarters of the "Holy Ghost and Un" Society

he borrowed that first wheelbarrow—who asked him to lay off and pitch ball, some of them having recognized the ball-player, he said quietly:

"I am Elijah. I am David the Prince, I am Tamech the Branch, a great forever after the order of Melchizedek."

The power of Sandford's prayers moved two hundred men to toll with him on the hill-top without pay. When the ground was cleared the pious men prayed for money, and his words were like the words of Aaron. Gold flowed. It came chiefly at first, prayers to join the line penny in the hat. Soon the convertible was taken with religion. A farmer in Amestock, S. M. Shaw, and his family became inspired with the idea that they should sacrifice all in the pursuit of spirituality of which Sandford preached. They turned all of their belongings into money, and went to Shiloh. Shiloh was the biblical name the Holy Ghost and its exhorter gave to his sand hill. They arrived on a day when wind-laid, bare-branched and bare-limbed, was at prayer for money. They laid \$8000 at his feet.

"Is there any more?"

There was \$4000 life insurance and \$300 in live hogs.

"Life insurance is sinful. Some are unclean," cried the minister. No art better illustrates the strange obsession of a convert to Sandford so well as the act of Shaw. He destroyed his life insurance policy. He drew his hogs into a swamp and buried them. Retreating to Shiloh, he was greeted with silence. It is the irony of his fate that Shaw and his wife were driven penniless from Shiloh where their children run away from a pestilence of smallpox. The parents were ordered to leave as being under the influence of the devil.

Among others came Stephen Higgins from Levant, a village near Bayside. He, too, converted his goods into cash, and led a fine herd of hogs into the swamp and unnoted his readiness to become an evangelist. He was sent to his native town and began to preach after the manner of the man of Shiloh. Whether because Stephen Higgins was born and raised among them, or because he lacked the insinuating eloquence of speech and silence possessed by the founder of Shiloh, he failed. He was tarred and feathered, tied to a tree, and a torch applied. Stephen escaped in his coat of tar and feathers to Shiloh and told of his martyrdom. In the salvation of the evangelist was seen the first miracle of the new sect. Sandford pointed to the suffering man, and persuaded his followers that divine intervention had prevented the inflammable tar from burning and destroying the preacher.

The goods of Shaw and Higgins were but waxes to the gold that flowed into the hat of the original penny. That original penny was borrowed, by the way, as was the wheelbarrow. Artisans were employed, union wages were paid. From the hole dug on the July day in 1893 a great building arose. Sandford's guild had no room for small things. This house of worship was to seat 20,000 souls. Next time they worshipped in tents. The Bible and the hymnal were the only books at Shiloh.

"The thousands will come," he told his followers. And in later days his words proved true. The temple was to have dormitories, a school; there were to be two towers for prayer. "Let there be no moment of the day or night when prayer is not offered to God." Since March, 1897, there never has been a moment when a worshipper was not at prayer. The towers were planned as a testimony to the miracle of Stephen Higgins and the unborn tur. At times Sandford would disappear. Sometimes he would be heard from in Boston by telegraph, thus:

"Hallelujah! Raised \$9000. Hallelujah!"

Again it would be Brooklyn, Kansas City, New York, or Chicago. Weeks would pass while the devout farmers were harvesting when nothing would stir on the sand hill. Then again there would be a rush of activity. Always came the converts. Women arrived from the far West, a little blind girl from Montgomery, Long Island, who had heard Elijah Sandford possessed the power of healing, a "Brother from Sioux City," who had started East, as he told it safely, to hear his father pray in Pennsylvania, but decided to go first to Shiloh to hear Elijah; converts from far and near, wherever the voice of a proselyter or the closely worded appeal of world-evangelization could reach.

So time passed on until 1899, with buildings on the top of the great hill growing tall and stately. Funds ran low and carpenters, rapidly, left their work. Elijah and his followers mounted the scaffolding and took their places. "The beautiful was that it all is that when my people clutch a shroud instead of a nail they sing psalms of praise," said Sandford.

Sundown of August 18, 1899, was set as the time to dedicate the temple. At daybreak the country roads were deep in dust

from the farm wagons that drew to the hill. Shiloh was black with people, men, women, and children. Some were believers, some were not. They had heard that a miracle was to be worked that day. Elijah, the Prince of David, had announced that the magnificent temple would not be consecrated to the work of God until every penny of debt had been paid. This, on the morn of the day when sunset was to see the fanning of four banners from the four corners of the temple! The debt was \$20,000. The Prophet, for so he was fond of styling himself, just talked—talked of the needs of Shiloh, quietly at times, in a frenzy of passion at others, but talked, talked, talked, all morning, all afternoon. He was applauded each gift and itemized it. The devout sang: "There's a plenty, yes, a plenty, is the Father's bank above."

"Just a little penny," said Elijah, gazing down at the great throng. He held up the penny, tears of joy in his eyes. Then he prayed that God might take that cent and work his way. When he ceased to pray people crowded around. Giving is a strange malady, a contagion. Farmers placed fat rolls of greenbacks on the table. Women emptied their pocketbooks of silver. Others gave watches, jewelry, valuables of every kind. There were rings and silver spoons. A clerk apportioned each gift and itemized it. The devout sang:

"There's a plenty, yes, a plenty, is the Father's bank above."

The men from Sioux City got there just in time to deposit his mile after travelling more than a thousand miles. A woman walked from Boston to save \$10 which she put on the plate. Towards sunset, an aged woman went forward, and whispered in the Prophet's ear. He answered, she nodded, and she counted out \$46. "Praise His Holy Name," cried Elijah. "The mountain has been moved into the sea." Sandford arose, stretched forth his hands and prayed, while the crowd knelt like a field of grain bowing to a hurricane.

The four flags were taken in the evening breeze; the white flag of Victory, the blue flag of Israel, the Stars and Stripes, and the English Cross of St. George. The stars were cut from Mrs. Sandford's wedding dress. "And now," said Sandford, "even with that \$20,000 facing me, I feel so easy and unconcerned that I am going to hitch up the team and drive over to Lisbon Falls and have my hair cut."

A few weeks later the Prophet received a letter from Durham, in which township Shiloh is located, transferring the property

Frank W. Sandford, his Wife, and the "Holy Ghost and Us" Banner

of Shiloh to God Almighty, "to have and to hold for His works," naming himself and his elders as trustees. The instrument, filed in the Androscoggin County records, is unique. In the jubilee of the dedication of the temple seventy followers of the Prophet were

The Tent where the first Meetings were held

so inspired by his zeal that they started forth penniless, "without staff or script," to evangelize the world. Converts flocked to them. Money came from all quarters. The mails comprised three bags a day. There came a horse trader with four white horses and a chariot, a printer with a plant to print *Tongues of Flame*, a shoemaker to start a factory, a butcher, a baker, artisans, and mechanics of every trade. Later an electric road and a wooden mill, and, in 1868, the little town of Durban arose to find that Elijah and his followers controlled the political destinies of the township, and had named the school board and the supervisors. Elijah was the boss.

"We will have a fleet of ocean liners to carry the Word to the heathen and the unbeliever," said the Prophet. His people, having seen, believed. The fleet started with a rehabilitated brigantine. It cruised the islands off the coast of Maine and Eastport to Kittery. The good fishermen of Drain Island stoned the missionaries, and drove them back to the sea. On Beal Island, near Jonesport, so intense was the zeal of a family of converts that they wished to sacrifice their little child on an altar of fire. Boston was found to be ripe for evangelization, and hundreds of converts became disciples. The village of Ridge Mills, near Utica, New York, was almost depopulated by a pilgrimage of believers, who thought to see the end of the world from the top of the far-famed sand hill. Brooklyn was less hospitable. After Elijah had baptized seven converts on a cold winter day, he was driven out of his hall for non-payment of rent. He declared the city unregenerate, and said it would be destroyed by fire. New York was barren.

There were rough places in the path of the Prophet. His indomitable will overcame them. A hard winter brought the Prophet to the study of economics. He acquired arable land in the valley, and farmers near by who did not adopt the faith and give their all to the cause drove shrewd bargains with Sandford. Soon he owned twenty farms in the valley. One farmer who refused to sell was pronounced as possessed of the devil.

Followers of Sandford helping to build the Temple

Meantime, as Shiloh grew rich in money and disciples, the outside world heard of miracles. The Prophet persuaded his people that he raised a woman from the dead, Oliver A. Mills, and she corroborated it; that he cured a case of blindness, that he re-

moved scrofula, that he caused a shrunk leg to grow, and that he cured cancer. In the twenty-one months covering this period of miracles there were six deaths from small-pox at Shiloh, two from diphtheria, and twelve from other diseases, among an average of 300 members of the colony. The revival of such miracle added wealth and converts throughout the world. Charged with manslaughter in the death of a child without medical attendance from diphtheria, Sandford fought through three trials, one a conviction, and went free. He was convicted of cruelty to his own son, John the Baptist as he called him; some of his followers turned against him, among others the horse trader, who wanted his white horses and chariot back. Forty days of prayer was the penance for the Prophet for all ills. Forty days of fasting was an uncommon, and to this system of penance was laid many of the charges of cruelty against Sandford.

Governor Cobb directed an investigation of Shiloh in 1906. The investigators found well-ordered buildings, and absolute discipline, and so few malcontents to give information against the Prophet that the investigation came to nothing. It became Sandford's dream to establish a Kingdom in the Holy Land, and make it the centre of his scheme of world evangelization. The gift of a house in Jerusalem, and at Joppa broad acres on which a city could thrive, furthered the idea, and he hastened to acquire vessels. There are three sailing ships in the "fleet." They comprise the "Kingdom Yacht Club," which some of the followers thought a sportive title. For that matter, there are a dozen horses in Sandford's stables that can trot 2:30 or better.

The secret of the remarkable rise of Sandford is his infinite personal force. His gray eyes have been described as magnetic. He has been called a paragon by several alienists, yet none of them have been able to give a satisfactory explanation of his extraordinary hold on his followers.

He is insistent, persistent, despotic. He will brook no opposition to his will, which is absolute law at Shiloh—which has been absolute law since the day, fifteen years ago, when he turned

Sandford exhorting his Disciples to finish the Temple

the first spadeful of sand on the hill-top. His whole life has been one of intense individualism. In his baseball days he was the absolute boss of the team; in his college days his companions had to stand with him or fall before him. When an idea obtained ascendancy in his mind, he worked it out to its conclusion as he saw the conclusion. He did not seek, nor did he accept, advice. Coupled with this intense egotism the development of the belief that he, like Moses, Muhammad, and Jean d'Arc, was divinely inspired, and had direct communication from the Deity, that the voices he heard were as real as the whispering leaves of the trees in the forest, where he prayed and communed, and you have an explanation of the man. The one idea that he was sent obsessed him. Nothing could daunt him. Fierce at times, gentle as a weeping woman at others, he pleaded, entreated, begged, stormed, and raged. Intensely human, with humor, with none of the scornful spirit that has marked his prototypes, he was a man above all to his people. His unlimited self-confidence caused his followers not to limit their confidence in him.

The psychology of the contagion of faith that met him is not difficult of analysis. It is a state of mind common in country communities, similar, though more restrained, to the hysteria of a Georgia negro camp meeting. The French describe it as "Folie à Deux," a term for which we have no equivalent.

Early in December Sandford was at St. Thomas, returning from the Holy Land with seventy of his followers in two ships, the *Cowart* and the *Kingdom*. For many weeks the two frail vessels were storm tossed, and their appearance at the West Indian port was taken as another indication of divine indulgence by the worshippers at Shiloh.

During his absence a sentiment has crystallized against Shiloh. Prophet Sandford is said to fear that an effort will be made to declare him insane if he returns. He has declared that he will live permanently in the Holy Land with all of his sect who will follow there to further the propaganda.

Thirty Years After

TWO VIEWS OF THE SAME SECTION OF NEW YORK FROM THE TOP OF THE BROOKLYN TOWER OF THE BROOKLYN BRIDGE

NEW YORK'S SKYLINE OF 1877

THE SKYLINE OF 1908

THIRTY years is a brief space in the life of the average city, but the changes that have been wrought by the growth of New York during that period are so startling that mere description of them seems beyond comprehension. Even with the aid of the pictures here presented it is difficult to believe that these are actual photographs, taken from the same point of view, of the same section of New York as it has appeared within the lifetime of men who are still young. The one presents a mass of small buildings which seem poor, almost squab, by comparison with the gaunt craggy towers that stand closely arrayed in the other.

In the early photograph the *Trinity* building, (marked C in each photograph), the Post-office (H) in each picture, and the towering spires of Trinity Church (A) and St. Paul's Chapel (D) stand boldly against the skyline. In the picture of to-day the *Trinity* tower still appears, thanks to a recent thrust heavenward by the builders, but only the top of the cupola of the Post-office can be discovered by careful scrutiny, while both the churches have been swallowed in the great steel and stone canyons devoted to commerce and finance. The St. Paul building (D in the lower

picture) of the present day so far outstrips the old chapel in height that the house of worship viewed from the roof of its gigantic neighbor seems but little more than an ancient stain of rusty brown upon the flinty ground.

The curious who explore the 1868 photograph for some trace of Trinity's spire will find no vestige of it whatever. The Empire building both dwarfs and obscures it from view. It is somewhere below the arrow extending downward from the letter A.

A forecast of the city's future development may be had by a glance at the Park Row building (marked E), which for a decade was the loftiest office building in the world, but now stands sadly reduced in rank by the gaunt steel ribbed Singer building, indicated by F.

The most impressive circumstance in the contrast of the photographs is the disappearance from view of the Hudson River and the Orange Mountains of New Jersey, which, easily visible in 1877, are now screened out of the picture by the curtain of vast edifices. Another disappearance, almost as startling, is that of the ships which, in 1877, carried American goods around the world, and of which in the 1908 photograph no trace can be discovered.

Washington's Surprising Ancestor

By CAROLINE TICKNOR

 and justifies the means." This motto, from the coat of arms of Washington, will no doubt flash into the minds of certain enthusiastic admirers of the Father of his Country who glances at the accompanying geographical title, which is England's latest contribution to the oft-quoted question of Washington's ancestry.

"Let no man fancy he knows sport," said the late Moncreif D. Cowley, "unless he has family trees of his own." Doubtless the same may be said of clever scholars and antiquarians of America who have tried their hands at this "sport." It has remained for a Fellow of the Royal Historical Society of England, Rev. Frederick W. Hagg, to contribute to us the latest interesting revelation regarding the ancestry

Barring those that champion the truly democratic standpoint, less prevalent to-day than it was in 1629, which accords to connect itself with old-world titles and alibis royalty, there remain many liberal souls among us who do not grudge to one who was acknowledged first in war and first in peace a share in the homage accorded the first family of England.

Edward I. was himself a mighty warrior, and firm in many of his opinions. He was involved in the Turke, during that last crusade ever embarked on by England's kings, and when the throne became his own he successfully carried out his project of uniting England, Scotland, and Wales. He brought the famous Stone of Scone to Westminster Abbey, and under him England became a mighty nation. He was a monarch wise and great, even though he had little leaning towards democratic government and no sympathy especial towards the Magna Charter. Edward Longshanks was a great king, and his reign was followed by his descendants, George, of kinder bearing and equally keen, for

That this direct line of descent has not until now been established may seem a bit surprising in view of the exhaustive research that has been devoted to the Washington ancestry. The reason is, however, not difficult to understand when one reflects that such research has been concerned exclusively with the male line, while this royal blood is introduced into the family by Margaret Butler, who married Laurence Washington in 1598.

Margaret Butler's married Laurence Washington in 1988. Mr. Worthington Chaffery Ford and others who have made a special study of the Washington pedigree, trace the line back to John Washington of Whitfield Ave generations back of the aforementioned Laurence and his wife Margaret. These students state that this Margaret Butler was the daughter of William Butler of Tipton, Sumner, but do not follow the Butler pedigree back of this point. Here Mr. Eggz has taken up the quest, and after careful study of old records, tombstones and entries in church registers, has proved that William Butler, father of Mrs. Laurence Wash-

Reference to the above genealogical tree just completed by Mr. Bazzy and verified since its arrival in America by various genea-

[illegible]

great-great-grandson of Edward I. Plantagenet, the
Frederick of the Northamptonshire, with
when wrote the *eredit* of making this discom-
patriarch with a keen interest in the architecture of the English
parish churches, in the restoration of which he has done some
notable work. While rector of a certain church in the south of
England he was, for twenty-five years upon his self appointed
task of restoring the twelfth century church, the tower of which
and also since cutting in order personally to aid in repairing the
nave and choir of the church. At the end of this laborious under-
taking Mr. Rogers university presented this church with a stained
glass window in token of the appreciation awakened by his ac-
complishments.

Having removed to the lovely Midland country which was the home of the ancestors of Washington and Franklin, as well as of the Bard of Avon, Mr. Ragg, who had on account of ill health resigned from active parish work, became interested in the restoration of the church of St. Andrew, which is situated in the hamlet of Le Walle, Northamptonshire. The architecture of which, as well as its historic associations, made its preservation particularly desirable, although the possibility of such an accomplishment seemed dubious in a poor parish with a population of but 170 souls. Mr. Ragg, however, was not deterred by this, and he has been a noble example of early church architecture. Mr. Ragg has taken up the work with enthusiasm and has done much towards raising the necessary funds, of which some \$5000 is yet needed to complete the work. The cost of the restoration is estimated at £10,000, the balance of the work is already well advanced, and it is likely to mean the revival of the town in general.

of the subject in question.

It was particularly agreed by the association of this church with the Washington family. Here on the parish register stands the record of the marriage on August 3, 1588, of Laurence Washington with Margaret Butler, who was the great-great-grandmother of George Washington, and who by her marriage united the royal blood of England with that of the house of York. It was also agreed that Mr. and Mrs. Butler were the first discoverers while casually investigating the ancestry of Margaret Butler, whose forebears were closely associated with this locality. Step by step he mounted Margaret's family tree, and found by careful research that she was a direct descendant of Edward I., as he learned from the accompanying chart, which he has placed in the album. He said that he was not a native of this country, but that his heart is in the absorbing work of restoration which he is struggling to accomplish, but he makes no appeal to this country for financial aid. He cannot but hope, however, that transatlantic interest may do a little something towards furthering the preservation of the old buildings, and that the people of this country will be so sensible as to make their own share towards the work.

The Family Tree which demonstrates the Descent of George Washington, showing him to be the great-great-grandson of King Edward I. of England.

President of the United States a lineal descendant of the kings of England.

Not many miles from Aston-le-Walls, in the village of Great Brington, is another notable church containing many memorials of the Washington family. Among the most interesting of these is the epitaph of Laurence Washington and his wife Margaret; this is on a stone in the pavement of the chancel, on which the Washington arms, impaled with those of his wife (Margaret Butler), are deeply sculptured. The inscription is as follows:

"Here lieth the body of Laurence Washington, squire & heir of Robert Washington of Soulgrave in the county of Northampton, Esquire, who married Margaret, the eldest daughter of William Butler of Tere in the county of Sussex, Esquire, who had issue by her 8 sons & 9 daughters, which Laurence deceased the 13 of December A. D. 1616."

According to this record, this union of the house of Plantagenet with that of Washington was productive of seventeen children, a goodly family, to be sure, to have blessed the twenty-eight years of married life vouchsafed this distinguished couple ere the taking off, in 1616, of Laurence, who was survived by his wife some twenty years.

The quiet antiquarian does indeed find more than mere "sermons in stones," for he reads there lost pages of history which may be sought in vain in countless musty books. Yet he who reads

The Church of St. Leonard at Aston-le-Walls, Northamptonshire, England, where were found the Records establishing the Fact of Washington's Royal Lineage

The Tombstone at Great Brington, England, marking the Burial Place of George Washington's Ancestors, Laurence Washington and Margaret Butler, his Wife, and bearing their united Arms. Here may be seen the Stars and Stripes often referred to as significant on Washington's Coat of Arms

those wins usually little credit compared with him who writes down something though he it is who really provides the most valuable copy.

If after studying the accompanying document the democratic scuffer cries aloud that it does not add to the prestige of Washington, this descent from mere royalty, one may respond: "Quite true, the fame of Washington stands by itself, so royal pedigree can better it; but what is to hinder Washington from doing something for the Kings of England? Even the democratic scuffer must look with more indulgence on despised royalty which can bring forth a lusty son like George Washington."

Whisker Husbandry

By HENRY UNDERWOOD, D. W.*

DRAWINGS BY DAN SAYRE GROSSBECK

THIS is the time of year when wise men look to their whiskers. More real and lasting good can be done to the crop during this month than at any other period. The careless and improvident may suitably put off until to-morrow the pruning and moulting that should be done today; the flippant may in their blindness go so far as to jest.

The following suggestions on whisker cultivation are not intended for the improvident or the flippant. Such persons are respectfully asked not to read them.

These helpful hints are the outcome of many years of patient toil and incessant devotion to the gentle art of whiskerage. They are addressed to serious whisker devotees, or whiskerers, not triflers.

For the sake of impressing upon all our whiskerers the importance of early attention to the sprouts, shoots, and tendrils, I shall not rest content with quoting the immortal Alexander Pope, who wrote:

Just as the stubble's bent
the whisk's inclined.

My admonition is not sufficient unless reinforced by concrete example. A careless neighbor of mine near Kokomo, Indiana, raised a few years ago as fine a field of No. 1 Red Wavy Winter whiskers as ever delighted the eyes of the connoisseur.

He put them in the Whiskers Show that fall, and certainly they were blue ribbon winners for length, conformation, and glossiness. But Henry didn't even get a v. h. e. f. a. got the gate. And why?

Because the whiskers were bent. Henry's whisker plantation was on the lake shore, where the prevailing breeze was southwest, so his whiskage was all bent to the northwest. Had he erected proper windbreaks around the sprouts at this time of year, as I often warned and begged him, he would not be to-day an unkempt, lorn wanderer, ever hoping against hope that some day his distorted No. 1 Wavy Winter lines will straighten.

Let us remember that eternal vigilance is the price of whiskers. Give them a good start now, and by the time the first blizzard carols they will repay your kindness by blooming in marvellous beauty.

The coldest time of winter is the best time to prune the whiskers. If pruning is delayed until after the sap is running, the result may be a failure of gloss or tasselling when the crop is ripe for harvest.

In the case of exhibition whiskers, cut out all the old stock and thin out the poor shoots. In thinning out the shoots remember that you want to keep the branches open enough so that the wind can get at every part. The wind does more for the foliage than anything else. The advantage of cutting off old growth now is that there is no danger of breaking off good spines from the living stalks.

* D. W.—Defender of the Whisker.

Young climbing whiskers ought to be cut back to a strong eye, and the side shoots pruned so grape vines are pruned, that is, a couple of eyes from the stem.

In all trimming, be sure that the stems are cut cleanly. Mother and the girls ought to help in the work of pruning and training father's whiskers. It will keep them away from unprofitable club meetings, and cultivate a taste for the beautiful. Besides, such gentle employment fills the heart of man with admiration.

It is possible that some of our whiskerers are not familiar with

hotteds and forcing frames as applied to the cultivation of whiskers, and for their benefit I shall now briefly describe the device I invented last winter, by the use of which I was enabled to win first prize at our own county fair in Class A—Homegrown, early ripe whiskers—for length, strength and glossiness. Let me confess that it is not modesty which impels me to ascribe my gorgeous whiskers to the forcing frame, but rather it is honest pride in the mind which invented the frame, and thus relieved a longfelt want among those who would grow longwhibbed whiskers.

Edison, I think, was the discoverer of the principle that whiskers can be grown in hotteds under glass, but as Edison does not wear whiskers he did not develop the idea. A casual remark of his led me to realize the concept last winter. Let me urge the thoughtful and forerhanded whiskerers to give my method a trial.

First, prepare the whisker-bed by close shaving. Then for the forcing frame. Any handy man can build one out of an old soap box, and the glass can be had for a trifle. After constructing the frame and glazing it, hang it from the head with a wire strap, insert the chin, close the door—and whisk. Be sure not to let the glass come within two feet of the whiskers, for too great a concentration of the sun's rays is apt to scorch the whiskage and turn it to a sickly yellow. Modification of color schemes may be obtained by using varicolored glass in the forcing frame. Green glass, oddly enough, will produce blue whiskers, yellow glass very red whiskers, and pink glass adds a deep metallic lustre to blacks. My brother Silas, thanks to the use of nicely adjusted colored glasses in his forcing frame, won a special prize at the fair with only a few yards of whiskage. Everybody thought his exhibit was a handsome crazy quilt until Silas explained it was whiskers.

Remember that, like all living things, whiskers need air. Whenever the day is mild and fine, raise the top of the frame a little and air the whiskers. I know of no more touching sight than that presented by a careful old gentleman walking southward on a pleasant February forenoon with the top ask of his whisker forcing frame slightly raised to give the whiskage air, while with open umbrella he keeps off any nipping breezes that may stray from the cold north.

The whiskers were bent

What Silas grew

Close the door and—wait

Many whiskerees and relatives of whiskerees have written to me seeking guidance and consolation. Most of the points raised have been already treated or *are* will be treated in these columns; but here is a cry from a tender soul whose plight is shared by many, and therefore deserves immediate notice:

"We are in a sad dilemma," she writes, "and look to you for advice. When father puts away his whiskers for the spring, how shall we treat them?"

Carefully, dear child, carefully. More good whiskers have been spoiled by careless storage than in any other way. Some authorities advise doing them up in curl papers. This custom was followed by the ancient Babylonians, as can be seen by a glance at their portraits in the Metropolitan Museum. I think the use of curl papers is risky, because the whiskers may become

so tightly matted that the owner can't breathe. And of what use are the most beautiful curly ambrosial whiskers to one who can't breathe? My advice is putting whiskers away for the winter is to wrap the hanks or skeins in old newspaper and tar paper alternately. Sprinkle a little salt over them to keep them sweet, and there you are, all snug and secure till spring.

Our renowned friend the illustrious Herr Professor Weissenschwam, of the University of Gooznigau, has perfected a system of whisker storage that is peculiarly adapted to those whose daily activities prevent their indulging in newspaper and tar paper packing. The Herr Professor was an enthusiastic yachtsman in his youth, and learned how to make all the intricate knots that old sailors know. He advises for the average business man a combination of sheepshanks, running bowlines, and cloveknots with occasional use of the Figure 8 knot. These make for grace no less than for compact and easy carriage. The Figure 8 knot is the easiest to arrange as well as the most majestic and beautiful. To prepare it take three strands of whiskage and roll them in contrary directions so they will grip one another when they are cable laid. Now take the whisk cable in both hands, and by a few deft movements tie it in a knot that can be made to look like a Figure 8 or a pretzel, according to the taste and fancy of the wearer. Repeat, until all the whiskage is used up.

Members of the Stock Exchange, and other very busy men who venture among pushing throngs where the vandal whisker pullsers lurk for their prey, will do well to arrange their whiskage in the Turk's Head or Mathew Walker knot. The directions for making these knots are too complicated to be printed here, but any old

"Sir, you are standing on my whiskers!"

sailor will show you how the thing is done in a few minutes. The great advantage of this style of whisker furling is its great compactness, for all the strands, down to the finest fibres, are rolled, tied, and made fast in a solid, gnarled mass that defies alike the touch of time and the tweak of the tormentor. One asks:

"Will you tell me what to do when some one steps on my whiskers? Every evening when I join in the Subway rush for a direct express on the City Hall platform some ruthless hustler steps on my whiskers and causes me much pain and annoyance."

I must confess that I do not approve of wearing whiskers on trains, as foolish women sometimes wear trailing skirts. The same objections, artistic and hygienic, apply to both practices. But if you must wear them long and trailing—*for* who can guinea the

whims of the whisker!—then let me beg that before you enter the Subway you reverse spinstaker labyrinths to them, away then up all standing, head bent on your elevators and belays. But if even these devices do not appeal to you, and you still insist upon wearing your whiskage intact, here is your course: When the ruthless hustler steps on your whiskers, stand perfectly still, and in clear, firm tones say to him: "Sir, you are standing on my whiskers!" If he does not then move off, throw a loop of the strongest face vine over his head and yank him out of the way. Life will be too surprised to show resentment.

Possibly, Brethren, your whiskers are very fine and silky. Their profusion suggests that quality. If that be the case, beware of those when you sleep, and be sure to fasten them high on a trellis or spreader. For if not, you may breathe in a lot of the fine whiskage some night and choke to death. If they are red, your danger is all the greater, for Hæm was right when he wrote: "He that inhales red whiskers inhales fire!"

Many inquiries have been made as to the best way of ridding whiskers of the moths. For a time mothballs were tried with a fair degree of success, but since the recent experiments in the United States Department of Agriculture these have been entirely superseded by this formula:

BUILDING A RAILROAD ON PANAY ISLAND IN THE PHILIPPINES

A Pile-driver at Work at the Track-head Ten Miles north of Iloilo

Natives Working for the on-coming Track-layers Thirty-five Miles north of Iloilo

This road is to connect Iloilo with Capiz, a distance of about 100 miles. Although grading is done almost entirely with picks, shovels, bar-levers, and wheelbarrows, the cost is surprisingly low, much less than the cost of similar work in the United States, where excavating machinery is used. The laborers receive twenty-five cents a day, and are fed by the railroad company.

The Hegira of Sing

By H. R. SPENCER

DRAWINGS BY H. E. TOWNSEND

"Done!" said Schmitt

IF wooden natmeg or bone pepper mill flew over flourished in the Fatherland, Schmitt should have been crowned king of them all. My observations of the man and his methods in Port Arthur before the war justify me, I think, in making this statement. But, he was nothing if not progressive, and it is not of his petty achievements that I wish to tell. In Port Arthur they are still talking about the grand coup he planned, and of how it was carried through to a successful conclusion.

At the time of which I speak, Schmitt had captured

the hearts of the military by his jovial activities, and had become the social hub around which the social spokes revolved. Then a man was judged by his storage ability; and for the various and sundry brats on the Manchuria market Schmitt had a capacity like a bulk-oil freighter.

Moreover, he had a good, solid, North Country headpiece, so firmly set on his vast shoulders that the highest tide of burgerlicks here could not budge it from its base. Vasilievitch, the Russian colonel who used to be the champion sharber, tried conclusions with Schmitt a few times, but always floated away from his moorings, and finally resigned his title, and became thenceforth a humbled but ardent adviser of that mighty man.

Schmitt flourished in those prosperous days, and the adulterated foods, French wines, German beers, and other necessities of life which he supplied to the Russian lordlings enjoyed a tremendous popularity. Vasilievitch was really responsible for this satisfactory state of affairs, for he let the contracts for all supplies of the kind. He exacted the usual Russian "squeeze," and Schmitt his one per cent., so both seemed satisfied, loved each other apparently, and became bosom companions. There where the colonel made a mistake. He was all kinds of a rip-roaring good fellow, but he allowed valuable information to spill over from time to time that should have reposed forever in his faithful breast. Governmental secrets thus came into the possession of Schmitt the asscragulous. Every rainbow dream of mile high stacks of rubles lured to slumber every night that acquisitive, deceitful, thieving, tricky, treacherous son of Gismirinus. In an old, yellow bank in his native city he had what he called his Hamburg stake, which consisted of a goodly store of ill-gotten gold, drawing interest and awaiting his return.

On the other hand, Vasilievitch was generous in a fault, and spent his money like the royal prodigal he was. Schmitt shared the Colonel's pleasures, took delight in his company, and accepted his hospitality, but clung to his own cash like a burdock to a

little woolly lamb. And so it was wine, feasting and song to an unconceivable degree, and both of the warlike were having the times of their lives. But one bright day it changed, as all things will, and this is the way it came about.

At four o'clock on that calamitous afternoon the Colonel closed with Schmitt a monster deal for army supplies, and to celebrate it they repaired straightway to a drink emporium. In a retired corner they talked things over again, meanwhile consuming just enough liquor to raise their spirits to a never-mind pitch. Soon they had not a care in the wide, wide world—all was merriment, roars, and merriment, and the more good friends who came in to join them in a draught, the more cars free they became. In fact, Vasilievitch became downright reckless.

"I tell you what," said he, his mind reverting to a former occasion when the same convivial crowd sat grouped around the same table; "I let you a thousand rubles for a drink more beer than you this one."

"Done," said Schmitt. "I take it."

Rabecis could have described the toast that ensued. I cannot. Suffice to say that at the end of three hours of strenuous application Schmitt was still bright-eyed and rosy cheeked, whereas poor Vasilievitch sank back in his armchair with a gurgling cry of "No more!"

"Get him to his room at once," said one, and this they did with the assistance of some Chinamen, with a wheelbarrow.

"What has happened I don't know, but I order it," said Schmitt. "Leave me to him;" and he waved the crowd from the house.

Schmitt addressed the unfortunate fellow to the accompaniment of a string of sputtering, gasping, choking protestations, and placed him on a couch.

"I'm down," murmured the Colonel, feebly.

Schmitt worked harder than any coal-heaver. He was past master of all the arts of first aid to the injured in a struggle with the amber tide. Soon he had the satisfaction of seeing the Colonel established in comfort upon his bed, where he snark forthwith into deep sleep. Poor, poor Petrosky Makaroff Vasilievitch! His life was saved, but at what a price!

And now Sing makes his appearance. Sing was a Shanghai man, bright as a shiny brass button, and crooked as a hopline gone wrong. Schmitt and he were afterwards together, and together they had pulled off many and many a shady deal. They met presently in the street, exchanged a few words, and at seven that evening Schmitt alid through the side entrance to Sing's house. Dinner was ready, and the two sat down.

"What time?" asked Sing, munching a fifty-two-year-old egg. His beady black eyes were two glittering interrogation points.

"Fine pigdin," said Schmitt. "This time have catches telegraph code and plans all garrisons Manchuria Siberia side."

"How much?" inquired Sing, significantly, jumping at once to the gist of the matter.

"What think?"

"Meble one lot, meble two lot, a'pose can do."

"Two lot. One b'long my, one b'long Sing," said Schmitt.

Sing turned to his dinner with a thoughtful air. Picking up the end of a strip of duckskin, he put it between his teeth and snapped it out of sight with a noise like a banana man denouncing mavericks. Schmitt toyed with the shark's fins, and culled for beer.

"Who b'long?" asked the Chinaman.

"Vassilievitch,"

Sing gave a few exhibitions of sword-juggling with his chopsticks, stared up his ris a'rie thoughtfully, and finally remarked, "I can do." Whereupon Schmitt delivered into his keeping a fat bundle of papers, and vanished.

That night Schmitt laid himself down on his feather bed with a contented mind. Flow dreams of mile high stacks of rubles lulled him to a sound and soothing sleep. When morning came he awoke at the usual time, shaved himself, took his shower, and climbed into his clothes better satisfied with himself than ever before in his life. He was gay, very gay, and he softly murmured, "The Blot wie

Sing

Elise Blume" as he was sitting down to his fruit, porridge, fish, ham and eggs, steak, cold beef, hot rolls and coffee. The morning paper indicated the probability of war with Japan in the very near future, and Schmitt's agile mind immediately conceived the idea of setting a price of three lacs instead of two on the papers he had placed in the hands of Sing. Why not? Japan would pay the price. If they were worth it to the Japs, why not the same amount to the Russians? Why not, indeed! But suddenly there came a knocking at his chamber door, and his chain of thought was thereby broken. "Hervin!" he called, and Vaselinovitch entered, pale, haggard, and groaning pitifully with every step he took. Schmitt welcomed him, and drew up another chair.

"Ah, to-day I die," moaned the poor Colonel. "I am come to express my farewell. The night that passed I cannot sleep, but, my friend, I owe my wretched life to you, and for that I express my deepest gratitude. Ah, had I but died and ended all! General Robberofsky gave me some important papers to deliver for him, and they're lost—lost! I forgot all about them, and they have gone from my pocket forever. At six o'clock Robberofsky is shooting himself, and I join him if the papers are not found. The General says he cannot live longer, since he should have delivered the papers himself to the Commandant. Instead of trusting them to a fool like me. So here can I live! I die!"

Schmitt had been thinking. "Why not offer a reward?" he asked. "Ah, and then every one would find out. It is that which must be avoided. It is the disgrace to the General and to me about which we must think. Still, we would pay, we would pay gladly. My good friend, my dear friend, I commendation you to spend anything, everything, for their recovery. I beseech you to find them. Will you not do so for me?"

"I will try, but I must think, my dear Vase; so leave me now, and I will call on you at two o'clock. I have your authority in spread as much as three hundred thousand rubles for the papers, yes? Well, then, I will ask you to sign a letter I shall prepare."

Schmitt disappeared for a few moments. When he returned he held a letter in his hands. This the Colonel signed, and departed.

As Schmitt closed the door on his visitor a large smile of jubilation lit up his beery face, and he leaped into the air and clapped his feet together in ecstatic thrills of joy.

"Too good; too easy!" he confided to the room at large. "Now to tell Sing, and at two o'clock I take the money."

Sing was indulging in a little opium preparation to having a few rosy ruble dreams of his own, when Schmitt burst in upon him, all breathless and eager. The Chinaman grunted and stolidly waved his visitor to a dark, backless seat of iron.

"What thing?" he inquired, languidly. "Can make any paper when two o'clock. You give me paper back now, I settle by word by."

"No can do. My first have look up. S'pose you pay one lac, can catch. S'pose you no pay, no can catch."

"By and by can pay," said Schmitt, angrily. "Sing, this no thing white man fashion. Before never have hobby, Sing. What thing happen now?"

But Sing wasn't in the mood for argument. There was a steamer leaving at three and Sing knew it. He was afraid Schmitt knew it too, and he wisely decided it would be just as well to get his share on the transaction before giving the papers up.

"Sing, I pay you four o'clock. First must catch papers, then can settle."

"No can do," reiterated Sing the sly.

Schmitt was furious, and finally left in high dodginess. What a blithering idiot he had been! Of course, if Vaselinovitch had not come to him he should have been obliged to use Sing in effecting the sale of the papers, but as it was, he was simply throwing away a hundred thousand rubles.

"I will strain a point," he said to himself. "I will go to the bank, borrow this money for Sing, and when Vase digs up I will return it again."

So he went to the bank and obtained a big collection of nice new paper bills. Sing was out when Schmitt reached his shop, but he had left word to wait, so he would not be gone long. Schmitt fumed and stewed around until two forty-five, when Sing reappeared.

"Here's your money," shouted Schmitt. "Give me the papers."

Sing counted the bills deliberately, and thrusting them into a pocket somewhere in the depths of his house, he walked to the safe and turned the combination. He handed the papers to Schmitt, who examined them hurriedly, saw that all was right, and tore from the room. The banks closed at three o'clock, and there was no time to be lost if he was to get his money that day. Colonel Vaselinovitch and General Robberofsky were in the General's apartments when Schmitt entered.

"My dear Schmitt," they

Sing finally remarked, "Can do"

cried in unison as they embraced him and covered his face with kisses. "You have saved our lives! It was so kind of you to find those papers! Sing brought them to us only a few minutes ago, saying you had told him they were ours. Dear Schmitt, what can we do for you? Name it!"

But with these words they stopped and exchanged glances. "I forget," said the Colonel, apologetically. "We must wait. You have, dear, dear Schmitt, our undying gratitude and affection; but, as for this world's goods, alas! Sing demanded all we had on earth, and we have paid."

Schmitt gasped, drew his precious papers from an inside pocket and looked at them again.

"Copies!" exclaimed his companions, in the same breath. Schmitt covered his eyes with a pudgy hand, and sank into a chair with a deep groan of misery. Through the window could be seen the good ship *Lentoon* moving majestically across the bay. Hanging over the taffrail was a yellow-skinned Celestial, gazing at the whirlpools churned up by the propeller. Rosy rainbow dreams of mile high stacks of rubles were fitting through his beak, while dinner and dinner in the distance grew Fort Arthur.

Schmitt covered his eyes with a pudgy hand

Why Suffragettes Win in England

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

Y will already have heard of the raid of the suffragettes upon No. 10 Downing Street while a cabinet council was in progress. By the time this letter appears in print Parliament will have re-assembled, and yet another demonstration may have taken place. There have been many of them during the past eighteen months; there will be more, and they will be more and more successful. The year 1907, I should imagine, will always be marked with a white stone in the calendar of the women's suffrage movement in Great Britain. Its leaders have forced it upon the notice of the public in a way there was no escaping. They have been in the lobby of the House of Commons; they have disturbed meetings after meetings; no cabinet Minister can address his constituents nowadays without a cohort of "chickens-out" ready to pounce upon the first suffragette who opens her mouth; the law courts have heard the protests of women against manhood law, tumults and disturbances, some rough handling, fines, and imprisonment have marked the progress of the propaganda; and the general public, formerly apathetic on the whole question, has been goaded and exasperated into at least trying to think about it. There is no need for me to detail the reception which each tactic has met with from English opinion. The land of the calm proprieties has been quite painfully shocked. Ministers have valiantly declared that they would not be bullied into surrender by such unseemly conduct. The leaders of the agitation have been denounced with every epithet of contemptuous abuse that comes natural to a country that hates realities and fights to the last to keep up a show of appearances. But there cannot be the least question that in the last year or so, and as a direct consequence of the new tactics, the cause of women's suffrage has advanced with a rapidity that never could not have been for it in a generation. A movement that has passed beyond the stage of writing and discussion and has entered that of action has taken a long step towards its goal. That is the answer of the suffragettes to those who urge them to return to the paths of peaceful pamphletting. So long as they talked and held their peace and formed no one took any notice of them. But now that they have made up their minds to follow the example set them by the politicians of the other sex, indifference becomes no longer possible.

It is rather interesting to compare the different attitudes of English and American women towards the general question. I do not know that American women have added anything to the stock reasons in favor of women's suffrage. Like vegetarianism, the subject is one on which all that can be said, for and against, has been said. But American women have certainly added a new point to the old arguments. They have made resistance to them argumentatively more difficult for the men of America than it is for the men of any other country. America, they proclaim, declares herself to be the only land of equal rights, yet she gives to one-half of her population a privilege which she withholds from the other half. She boasts that the very essence of her system is individual representation, yet when it comes to political rights she divides her people not into individuals but into sexes. And the sex which she excludes, to complete the irony of the paradox, is, on the whole, the better educated of the two, has been granted the most extensive civil and legal rights, and is freely admitted to the professions and to almost all avenues of business. American women control the education and culture of their country almost to the point of effeminization. The divorce laws from Maine to California impress a high standard of morality upon men to meet their convenience. Some six millions of them work for a living, the majority of them in ways that admit not only of economic but of social independence. In the so-called professions, as teachers, writers, lawyers, physicians, ministers, architects, and so on, more than half the total number employed are women. Philanthropic work has largely passed into their hands; without them nine-tenths of the American churches would have to close; their clubs and organizations and mutual improvement societies cover every inch of the continent; and socially they are supreme with a supremacy such as the women of Europe can only envy from afar. The whole tendency of things in America is to reverse the old position of the sexes and to make woman the superior of man. On all non-political subjects she determines American opinion, and even on subjects that are primarily political she is by no means without influence. Whether the English moral law has been at stake, American women have often and effectively rushed into the arena. The anti-slavery agitation owed much to them; they are still the backbone of the Temperance crusade; and in the municipal uprisings that from time to time disturb the even tenor of American business they frequently play a conspicuous and useful part.

But on the normal everyday course of politics American women, so far as my observation goes, have no effect whatever. They cannot vote. The negro can vote, the immigrant from southern Italy can vote, the criminals and paupers of the slums of New York and Chicago can vote, but the highly-developed, alert, and intelligent American woman cannot vote, unless she is so un-

fortunate as to live in the somewhat primitive States of Utah, Colorado, Idaho, or Wyoming. And American opinion in general seems to be perfectly satisfied that this should be so. Practically all American men appear to regard politics as a purely masculine affair in which women have no concern. I can well understand, moreover, that the big corporations and their allies, the bosses, would find all their calculations upset by the intrusion of this unaccountable element; that the liquor interests, especially, would exert all their power to keep women away from the polls; and that they would be seconded by the same influences that have hitherto thwarted all attempts to minimize or prohibit child labor, and to write anything approaching the English factory acts on the statute-books of the American States. But the greatest obstacle ahead of the movement, in America as in England, is the apathy of the women themselves. Not only do they have no interest in it, but a considerable number actually go to the trouble of forming associations for the single purpose of opposing it. Nor, after all, is that so very surprising. As a sex, women in America have virtually no legal or social privileges. As women they enjoy a full measure of freedom, but they have no authority as individuals which is the mainstay of American life. The traditional inequalities and disabilities of the sex have been abolished, and the error is almost as freely open to feminine as to masculine talent. The American woman does not tremble about her "rights," because she has few, if any. "Woman's rights" has no meaning so far as politics are concerned, the collective sense of sex in the enjoyment of her personal privileges. Moreover, American politics are a good deal of a mystery even to American men. To American women they are utterly incomprehensible. I could as easily imagine a woman to be an author or an actor and an enemy of the operations that Americans call by the name of politics. Those operations are for the most part carried on by men who are not conspicuous for their refinement, and in an atmosphere which is anything but the atmosphere of the drawing-room. Politics and society in America, except to a very limited degree in Washington, do not go hand in hand.

In Great Britain the situation, while similar at some points, is widely different at others. As a sex, women in England are still the victims of many inequalities in the divorce laws, the laws of heredity, the laws of labor and the laws of taxation, and in the company laws—inequalities they rightly think they would be in a better position to remove if they had the vote and could bring a direct influence to bear upon the politicians. The whole trend of education, again, favors the hegemony of the girl, and the man at the expense of the woman—the universities, for instance, still refusing to give equal recognition to women for equal achievement. From a great many of the professions open to women in America, the Englishwoman is barred by her "professional" masculine fears, and statistics of legislation. Of the forty millions of women wage-earners in the United Kingdom, "a very large percentage," says Mr. Sidney Webb, "must be earning practically no better subsistence than their grandmothers did."

In all employments their pay is far lower than their masculine competitors receive—not because their work is inferior, but simply because they are women. In the Post-office, for instance, where men of the lower grade in the second division receive \$350 to \$1250 a year, women doing precisely the same work receive from \$325 to \$400 a year; and where men of the higher grade receive from \$1250 to \$1750 a year, women in a corresponding position receive only from \$425 to \$550 a year. First-class sorting clerks, if they are men, earn from 88 to nearly \$12 a week; if they are women, from \$7.75 to 28. The same disparity runs through every grade of the teaching profession—the profession of all others in which women as a rule are better equipped for their work and more successful in it than men. These inequalities exist to some extent no doubt in the United States, but there can hardly be any question that their cumulative effect is far more oppressive in England than in America, and that English women have more tangible reasons for desiring the vote than their sisters across the Atlantic. Moreover, women have always played a far greater part in English politics and in the business of government than American women. There is, indeed, hardly a single movement of political thought in England with which women have not identified themselves. Their appearance as platform speakers has long ceased to be a social misnomer. As canvassers they have no equals. The Primrose League is known all over the world as one of the best organized and most industrial election-eering agencies in existence. And there are still plenty of houses in London that rise regularly about the quarterly elections to elect a mistress and the mistresses of which play the game with more than a touch of the old style. They make and unmake men; they know the last least art of lobbying, and they pull strings with a frankness and audacity that a more manly man might well marvel at. In any country ruled as England still is, by a governing class, the political influence of women is bound to be very great. Indeed, they have so much that a great many Englishmen rather wonder that they should bother about such a trivial thing as the vote. I venture to predict that in five years' time from now the political ideas of women in England will be regulated on a basis of equal suffrage with men.

TWO FAMOUS WAR RELICS SECURED FOR AMERICA

The shot riddled flag of the "Chesapeake," captured by the British frigate "Shannon" in 1813, and now returned to America through private purchase

AFTER an absence of nearly ninety-five years, the shot riddled flag of the *Chesapeake*, captured by the British frigate *Shannon* off Boston harbor in 1813, is to return to America. The flag was put up for sale by auction at Deterham's, in London, on January 31. When the tattered and faded folds, blood stained and pierced by bullets, were displayed, much rivalry in bidding occurred between Englishmen and Americans, the flag finally falling to a man named Partridge, who is said to have acted as agent for either Mr. J. Pierpont Morgan or Mr. W. K. Vanderbilt.

Another relic of interest, secured by Partridge for \$1500, is the bugle on which was sounded the charge for the light cavalry brigade at Balaklava in 1854.

The historic bugle on which was sounded the charge for "The 400" at Balaklava. The relic has been secured for the same purchaser who bought the "Chesapeake" flag

AN AMATEUR SKI JUMPER LEAPING MORE THAN ONE HUNDRED FEET

During recent contests at Chamouni, in Switzerland, an amateur cleared more than 31 metres. In the photograph he may be seen in midair at the beginning of his leap

The Season's Plays

"LORD DUNDREARY," FROM FATHER TO SON

By "I"

GENERATION ago the celebrated actor known affectionately as "the elder Sothorn," otherwise E. A. Sothorn, convulsed our fathers by his exquisitely droll and wonderfully finished portrayal of the rôle of a gentlemanly British ass, one *Lord Dundreary*, in a play called "Our American Cousin." Sothorn died in 1881, after having played

the famous part for more than twenty years in America and England, and now the character and the play have been revived for the benefit of the present generation by his son, Mr. E. H. Sothorn. The two may be seen at the Lyric Theatre, where they have made an indisputable appeal to the playgoers of this town.

It was a risky experiment, as Mr. Sothorn must have realized. He has modestly expressed the hope "that a new generation may, through his (the living actor's) recollection of his father's work, derive some entertainment from this repetition of the character created by him." This hope, as has been said, is being fulfilled. Those who remember the elder Sothorn in the part allege that its embodiment by his son is an astonishingly faithful and ingenious reproduction. Certainly it is, in its elf, a delicious and a finely artistic achievement. Here are the luminous, silken, jet-black whiskers, the mincing walk and hop, the lip and stutter, the vacuous stare; while the mixed stupidity and shrewdness, and withal the undoubted gentility of the man, are perfectly expressed. Here, too, are the antique jests, the moss-grown coturnedums at which you laugh half because of affectionate recognition and half out of sheer surprise. You even, incredible as it may seem, find yourself haw-hawing at *Dundreary's* question to *Georgina*: "... well, if you did have a brother, would he like chess?" And at the fatuous noblemen's confusion over certain proverbs, no less than his perplexity in the matter of his eleven fingers.

The play is, of course, nothing more than a frame for the exhibition of *Lord Dundreary*, and a very shaky and shabby old frame

it is. Considered as drama, it is altogether beneath contempt, for it is as crude and inept in construction as it is grotesquely foreign to reality. Yet it has served as the occasion for a delightful re-erudescence, and for that particular event let us give joy. Mr. Sothorn has never done anything that reflected more creditably upon his brilliant power as a comedian.

The beneficent power that tempers the wind to the shorn lamb has mercifully provided for the amelioration of these torments a seemingly endless procession of operettas saturated with waltzes. He who would drive dull care away need only drop in at the nearest theatre and read the nasal splashing on his course to the mellifluous pleasing of a dreamy tune. The celebrated *Widow* whose waltz seems likely to whirl on forever is perhaps the most attractive of these amelioratives; but she has a rival, an able, useful, beautiful rival. Originally heard in Vienna, and famous in Europe as "Eie. Waltzmeister," the book by Felix Dornemann and Leopold Jacobson and the music by Oscar Straus—the relation of the composers who spell the name with three S's—the operetta is now presented at the Broadway Theatre as "A Waltz Dream," staged by Herbert Gresham and done into English by Joseph W. Herbert, who has—not with entire success—disinfects and deodorized the story.

Let it be said without delay that the score is pleasing at once to the musician and to him who listens in order that he may carry away something to sing, hum, or whistle as much as the patience of his neighbors will tolerate.

Edward Johnson, as the abounding bridegroom, brought to the production a fresh, sympathetic, and well-trained voice, a manly personality, and a high degree of intelligence.

Charles Bigelow in very funny as *Prince Joachim XIII.*, and Josie Sadler as *Fifi* in feisty and funnier than even Joseph W. Herbert as *Princess Luthar* does wonders with a dull part.

The present commentator has never been called a prude, nor is he over-scrupulous; but he ventures to believe that a free use of the knife and a plentiful exhibition of antiseptic would greatly benefit certain lines and situations in "The Waltz Dream."

Mr. E. H. Sothorn as "Lord Dundreary," the famous Character created by his Father, E. A. Sothorn, almost half a Century ago

Miss Adeline Genie, the remarkable Danish Dancer who is appearing at the New York Theatre

The first appearance in New York of the little Danish dancer, Miss Adeline Genie, was recently effected at the New York Theatre in a concert called "The Best Kiss." She gave only four dances, but she danced herself straight into the hearts of her audience and stayed there. Miss Genie made her debut at the age of eight, and danced her way through the courts and theatres of Europe until eleven years ago, when she went to London for a six weeks' engagement and was not permitted to leave. There is as much difference between Miss Genie and the ordinary toe dancer of commerce as between the toe dancer and a performing bear. Imagine a small, fairylike creature with a mass of pale amber hair piled over a small face, doll-like in repose, but radiating an extraordinary variety of expression; the whole seen in a supple, as a revolving wheel, through a filmy, foamy veil of whirling gauze which alternately creates and dissolves lines of classical beauty. She glides, it seems, through the air, in defiance of gravity, till one stands up to gaze over the hirsute crown of the lady in the front row, and sees the swift, deft, certain movement of her toes over the boards; and then she whirls within a series of interlacing circles of draperies, till she stops suddenly, and the wooden doll's face dissolves into the quainted series of frowns and smiles. Now that New York has got Miss Genie it should insist upon keeping her, as London did.

Luring the Army Recruit

A NEW PLAN FOR ATTRACTING YOUNG MEN
TO THE THINNING RANKS OF THE SERVICE

By CHARLES A. SELDEN

SOMETHING over a generation ago every American boy, when asked what he was going to be when he grew up, would reply, "Going to be a soldier." Topshop windows in those days were filled with drums and muskets, soldier caps and epaulets, and whole regiments of leaden warriors. That was in the days of, or immediately following, the Civil War, when North and South, every youngster's father or uncle was in the army or just had been.

But nowadays the topshop windows are filled with dynamos, trolley cars and motor boats, railroad trains, and airplanes that are fully as delightful and dependable as the real ones. Across any boy gazing into such a window with a question as to what he is going to do when he grows up, and he'll decide, without the slightest hesitation, his unalterable determination to be a motor-man.

The older boys, too, those of the right age to make good recruits, are not the sons, but the grandsons, of the soldiers of the '60s, and, strange as it may seem, the farther away the country gets from the conflict of those years the less becomes the fascination of the army. All of which accounts, in part at least, for the difficulty that the government is having to fill the ranks.

Perhaps the War Department might profit by the example of the topshops. The young man is not attracted by the bright colored pictures of figures in uniform standing at salute, which he sees, or fails to see, tacked up in the post-offices and in front of the recruiting stations. He is interested in dynamos and railroads and bridges. Why not let him know that the United States army builds roads and bridges, operates great power plants, and carries on wonderful work in communication by wire and wireless and by a dozen other contrivances, the very names of which are fascinating to the young man?

To suggest just one source of supply that might be tapped by such a method, there are over 25,000 boys enrolled in the technical and manual training high schools maintained by the cities of the United States as a part of the public system of education. The entire enlisted strength of the army, according to the latest report of the Adjutant General, is 52,168, or 20,513 less than the authorized number of officers and men.

It is altogether probable that some of these boys might be induced to fill some of the vacancies in the ranks with suitable benefits to themselves and to the army. If they knew the advantages of the service for men interested in electrical and mechanical work, and who expect to make a living by it, it is also probable that some of them could not be kept away from the recruiting sergeant.

But the chief trouble is that they do not know of these things. Neither do their parents nor the general public. To the average citizen of the United States the army of his country is either a myth or a thing of evil. He knows nothing whatever about it, or he knows many things that are not so. Probably the only figure that he has ever heard in connection with it is "thirteen dollars a month." The regular army soldier means to him simply a man who works or loafs, according to the point of view, for that amount of compensation. If he gives a second thought, it is that the man so compensated is a worthless sort of vagabond who has enlisted to escape jail or starvation. Another notion, just as far away from the truth, is that men in the army are scantily fed on poor food. Still another that a man is sure to be morally wrecked by the service if, by any chance, he weren't ruined before he entered. For the rest the army is a vague institution about which Congress quarrels periodically, and an aggregation of men who should or should not have a centen, or who should or should not have more pay. Such is the general public idea, in time of peace, of the United States army, and nothing could be more superficial or misleading.

Thirteen dollars a month is the minimum pay. Nothing is ever heard outside the ranks, of the other extreme—the eighty-five dollars which a master electrician of the Coast Artillery gets. And between the two there are many grades of pay, attained by good men, which compare favorably with the wages of civil employment, where it is taken into consideration that the soldier is housed and fed and has the best of physical and medical care at the expense of the government and only look forward to retired pay if he stays in the service long enough. In what industrial or commercial business of the whole country is the lowest wage of the raw apprentice held up as an example and hurled upon as the only man to be considered?

The soldier is not scantily fed on poor food. On the contrary, he has excellent fare and plenty of it. The army does not receive the derision and the dereliction which is heaped on a last resort. There can be no more effective answer to that widely held opinion than the figures of the Adjutant General's report. Last year

70,525 men applied for admission to the service, and 54,638 of them were rejected at the recruiting stations as morally or physically unfit.

All of this has a bearing on the question of these boys in the technical high schools merely as showing that the army is not synonymous with perdition.

As most of the schools referred to have four-year courses, six thousand graduates approximately come out each year. Some of them continue school work in the colleges and higher institutions of technology. Many of them are obliged to take immediately the best paying jobs available and do what they can to aid their families.

But there must be others, hundreds at least, and perhaps thousands, whose families are on the border line between moderate and ample means, who are not sent to college, but who, on the other hand, are not expected to contribute to the family fund. It is from this third group that the army might get some good soldiers for its depleted ranks. Show them that the army has something to give leaders, its pay and beyond what is suggested by the gayly tinted lithographs. In the Corps of Engineers, for instance, the enlisted men learn the use of instruments, and the best of them may become competent as surveyors before they leave the service. In the Signal Corps the soldier learns, on the practical way, about all there is to know of communication.

But it is in the Coast Artillery, which, by the way, lacks about nine thousand men, that the advantages for young men who want electrical and mechanical training are most apparent. The official report of the School of Submarine Defense, which is under the direction of the Coast Artillery, reads very much like the prospectus of a high grade scientific institution with big tuition fees. The electrician sergeant's department of that school is for the enlisted men.

The courses there for the private soldiers include 250 problems in practical electricity and magnetism, seventy problems in practical steam engineering and the operation of power plants, and 100 problems in machine-shop practice.

In mathematics algebra, geometry, and trigonometry are taught, and under the head of electricity and magnetism there are such subjects as induction, interaction, work with dynamos and motors, armature winding, magnet making, and the application of the laws of magnetism, in-stalling and connecting up electrolytic cells, examination of all sorts of motors, measurements of resistance, location of faults, and operating of transformers. In the machine shop there are bench and lathe work and operation of the drill press, the chaper, the grinder, the milling machine, and the gear cutter.

Besides these courses in the school the men have practical training in running the big and complicated power plants, installed at the coast fortifications at Fort Totten and for the lighting, heating, and telephone communication for the post quarters. Furthermore, a soldier must know how to install and repair machinery of all types and how to make new parts before he is considered fit to receive the school's certificate of proficiency.

While a member of this school the enlisted man is relieved from all other army duties, except in case of war; but he is, of course, subject at all times to military discipline. That is not the rest of the advantages of the system.

The question of what a man may get in the Coast Artillery in addition to his army pay, food, clothing, and housing. Suppose he is graduated from his manual training high school at the age of nineteen and isn't impelled by necessity to enter the army, how can he better spend the next three years than in the army? In all probability he will lose nothing financially, for after his service he will have a thousand times better equipped to obtain and hold a good place in civil life. He will also derive the physical benefit of the military training before and after his term in the School of Submarine Defense, and he will have the satisfaction of having been in the army.

That last, of course, is a matter of sentiment; but normal healthy minded men in their twenties are full of at least latent sentiment, regardless of what has been said about the inefficiency of recruiting office posters. And a little old-fashioned sentiment and love of the army for its own sake would do no harm.

Officers of the Coast Artillery and of the Engineer Corps to whom this plan has been suggested have approved, although it might provide necessarily for a good many reverses, which is always to be desired. Perhaps the practical certainty of provision for the graduates of army schools would remedy that in many cases.

"We would train good men," said one officer, "and then lose them at the end of three years. But even so the plan is surely worth trying, for the source of supply from the high schools would be continuous, and even a hundred such recruits each year would act as a leaven for the whole service."

Music and the Opera

TSCHAIKOWSKY AS OPERA-MAKER

By LAWRENCE GILMAN

TSCHAIKOWSKY, known in America chiefly as a composer of symphonies and symphonic poems, was yet a fairly prolific and a successful writer of operas. Certain of his stage works have achieved marked popularity in Russia, and have made their way in other countries; yet no opera by Tschai-kowsky had ever been produced in America before Mr. Walter Damrosch, with the aid of a group of solo singers, a chorus from the Glee Society, and his regular orchestra, performed the greater part of the music of "Eugene Onegin" at the sixth evening concert of the New York Symphony series on February 1, in Carnegie Hall. Let it be said at once that the enterprise

was interesting and of educational value, and that Mr. Damrosch merits public gratitude on the score of its accomplishment.

"Eugene Onegin," an opera in three acts and seven scenes, the libretto based upon a tale in verse by Pushkin, was begun (as to its dramatic framework) in the spring of 1877; the music was completed early in the following year. It is thus contemporaneous with the anti-biographical "Fourth Symphony"—the symphony stimulated by and dedicated to Tschai-kowsky's strange headmaster, M. as von Meek. He had already composed the first three symphonies, the "Romeo and Juliet" overture, the "Tempest" and "Francesca da Rimini" fantasies, the E-flat minor piano concerto, as well

as those glowing in its adherence to antique forms as if Wagner had never lived, composed, and preached his reformatory doctrine of music-dramatic art. Here are the distinguishing earmarks of the old-fashioned opera—the "set pieces": arias, duets, trios, ensemble numbers, choruses; the formal and regularly cadenced melodies, the disconnected scenes, the lack of delicate and detailed orchestral characterization.—the whole naive and tawdry apparatus, in short of the pre-Wagnerian opera. Previously what the effect of "Eugene Onegin" would be upon the stage, with its proper adjuncts of action, costume, and scenery, it is impossible to say; but in concert form, as Mr. Damrosch presented it, it is unconvincing and unimpressive. One finds difficulty in discerning the greater Tschai-kowsky here—it is hard to realize that this music came from the brain of the man who gave us the "Romeo and Juliet" overture and the later symphonies. There is much in it that is pretty, much that is grateful to the casual ear. It is melodious in a facile and quite unimportant way, and it contains certain things which it is right enough to call "effective"—some taking choruses, some attractive orchestral passages, some agreeable songs, warm in sentiment and refined in style, in the writing for the solo voices. But if this work represents the best that the operative Tschai-kowsky has left us, as there is some reason to believe it is, then it was surely better for his fame that we hear as little of him in this character as possible.

The truth of the matter would seem to be that this extraordinary genius needed, for the fring of his imagination, a kind of poetical stimulus more general and suggestive than specific and detailed. Contemplating in their outline such subjects, such dramatic and emotional figures as Romeo and Juliet, Francesca da Rimini, Manfred, Ferdinand and Miranda and the Enchanted Isle, he was aroused to the production of music—in the form of symphonic poems, program-symphonies, overtures, "fantasies" (as he chooses variously to describe it)—which is as eloquently communicative in its power of dramatic and emotional entrance as it is passionate and individual in style. But given a dramatic text to set, definite and exacting in its expressional requirements, and his imagination seems to have faltered, to have suffered a kind of palsy; his style seems to have turned aseptic and unadorned.

There would appear to be in his case, as in the case of Liszt, two conspicuous and distinct personalities at work: the Tschai-kowsky of "Francesca da Rimini," "The Tempest," the "Pathetic" symphony, and the Tschai-kowsky of the operas.

Into the midst of the Tetraxian future at the Manhattan Opera House Mr. Hammerstein has injected a fresh and contrasting element in the person of Mme. Ernestine Schumann-Heink. The eminent and admirable contralto, whose fame has for years been associated with the Metropolitan Opera House, has been added, for the moment, to Mr. Hammerstein's company, and she made her debut at the Manhattan, on January 27, as *Desdemona*. She sang and acted it with an extraordinarily keen instinct for every emotional and dramatic facet of the character, with sweeping power, with authority, and with breadth.

Mr. Hammerstein's former pupil, "H. Tronheim," very well indeed—with notable dramatic vigor, with a sense of the character-istic qualities of the music, and with results which give pleasure to the lovers of intelligent and pure-toned singing. Mme. Schumann-Heink, it may be interesting to record, sang in German.

Mme. Schumann-Heink as "Desdemona" in Verdi's opera, "Otello," at the Manhattan.

operas "Undine," "The Opheleia," and "Vakula the Smith," beside numerous lesser works. Later in the year which saw the completion of "Eugene Onegin" (1878) he wrote the first suite for orchestra, and the opera "The Maid of Orleans." He was therefore in the first splendid flush of his creative activity—he was thirty-eight years old, and he had given two superb and indisputable demonstrations of his astonishing gifts: namely, the "Romeo and Juliet" overture and the two symphonic poems, "Francesca da Rimini" and "The Tempest." "Eugene Onegin" was first performed at Moscow by students of the Conservatory on March 17, 1879. It was not, says Tschai-kowsky's brother Modeste, his biographer, well performed, and the opera made an indifferent impression—though, as was the case with others of Tschai-kowsky's works, the character of the initial reception was afterward reversed.

The story of the opera may be briefly indicated. The action takes place partly upon a landed estate and partly in St. Petersburg, in the second decade of the last century. To the family of the Lerins is introduced a fascinating metropolitan artist, Eugene Onegin. He is greeted by his friend Lensky, the brother of Tatiana's birthday. Onegin tones Lensky's jealousy by flirting with Olga. A duel follows, and Lensky is shot. Some years elapse. Tatiana attends a ball at the house of Prince Grebenko in St. Petersburg, and in the person of the Princess Grebenko, a Russian belle, he recognizes the once humble and ingenuous Tatiana. He falls passionately in love with her, and extracts her to renounce her elderly husband for him. But Tatiana, repudiating her newly awakened love, resists him, though she confesses her longing; and the curtain falls on Onegin left alone and despairing upon the stage.

Tschai-kowsky has cast this tale into an operatic mould that is

TWO OF HER—FRIENDS

The Greatest Lumber Cut

More lumber was cut in the United States last year than in any other year in its history. The enormous amount of 37,550,736 board feet was produced, and the mill value of this was \$621,161,208. In addition, there were produced 11,658,200,000 shingles, valued at \$24,155,555, and 3,812,907,000 lath, valued at \$11,400,576. On the whole, it is safe to say that the present annual hauler out of the United States approximates forty billion feet, and that the total mill value of the lumber, lath, and shingles each year produced is not less than \$700,000,000. These figures give some idea of how vast is the lumber industry and how great is the demand for its products.

A glance at the kinds of lumber produced shows very clearly the pre-eminence of white pine and oak, one of the greatest soft woods and the other the greatest hard wood which the forest has ever grown. Since 1899 the cut of white pine has fallen off more than 40 per cent., while that of white oak has fallen off more than 36 per cent. To-day yellow pine leads all other woods in amount cut, while Douglas fir—and this will be a surprise to many—comes second. Since 1899 the cut of Douglas fir has increased 186 per cent. Louisiana is the foremost yellow pine State, with Texas,

Mississippi, and Arkansas following in order. Washington produces by far the greatest amount of Douglas fir.

A comparison of the lumber producing States shows that since 1899 there have been many changes in their relative rank. Washington, which in 1899 stood sixth, now leads, while Wisconsin, which eight years ago led all others, is now third. In the same period Oregon, Louisiana, Mississippi, Idaho, and California made great strides as lumber producing States, though, on the other hand, the amount produced in Michigan, Wisconsin, Georgia, Kentucky, Tennessee, Missouri, Indiana, and Ohio fell off anywhere from 29 to 54 per cent.

The highest priced native woods are walnut, hickory, and ash, and the cheapest are larch and white fir. From the fact, however, that since 1899 the average increase in the price of lumber has been 49 per cent., it will not be long before cheap woods are scarce.

Emergency Currency

An Indiana Glass Company has a sublime confidence in the ability of its customers to meet their obligations even if they may be temporarily unable to remit in the conventional forms of exchange. In a highly

colored and very attractive folder which it recently issued, this generous concern invited orders for the commodity it manufactures upon the following unique and liberal terms: "Payment can be arranged with our treasurer to suit conditions. We take anything but counterfeit money. Our per list: Canadian and Mexican money, Wampum, Buckskin, Tarnished Coins and Moldered Bills, Double Eagles that will not pile up and with Billial references omitted. Tainted money solicited. No questions asked. Promissory notes, your own than with privilege of renewals. Postage stamps. Clearing house certificates. Stage money. Meal tickets, bridge tickets, milk tickets, and rain checks, trading stamps, mining stock, Bay State Gas, marriage certificates, cigar bands, and rumors that are likely to gain currency."—*The Believer*.

The Proper Implement

ROGER. "There's Giving over there. I'd like to catch his eye."

RANDALL. "Well, here! Take my umbrella."

The Ambitions of Youth

"JONNY, why don't you be a good boy like your brother Willy?" the mother was sternly admonishing her naughty son.

"Willy here may be President some day, while you will have to dig in the sewer."

"But, mother," said Willy, "can't I dig in the sewer sometimes too?"

Explained

"MAMMA," asked a little girl, "why do bouillon cups have two handles?"

"Well, you are stupid," cried her young brother. "Don't you know it's because some people are left-handed?"

BROOKLYN'S NEW ACADEMY

By E. HUNGERFORD

VER on a broad street in Brooklyn you may notice a great white building rising high above the wall, and covering an enormous block front. You may wonder to what purpose it is to be put, and you ask an interested citizen who is standing close by watching the workmen place the finishing touches upon the structure. You are lucky, because the interested citizen is one of the Society of Old Brooklynites, and he tells you the big white building is the new Academy of Music, at present the pride and chief joy of the settlement that lies just across the East River from Manhattan. You express further interest, and he tells you still more of what the Brooklyn Academy of Music means to Brooklyn.

It seems that when the Brooklyn men and women of to-day were Brooklyn boys and girls there was a Brooklyn Academy of Music, and to it they were taken on certain great occasions to hear a splendid lecture with magic lantern pictures, the Swiss Bell Ringers, or perhaps even real drama, or real opera, although play acting was frowned upon in the early days of the old Academy. In those days it stood on Montague Street within a stone's throw of the Brooklyn City Hall, and was a grand building structure, the exterior gleam of which was not even dimmed by the flickering gasjets at its entrance on the nights when Brooklyn flocked to it. It opened in '61 with a concert by the Philharmonic, and within a few weeks its directors were wrestling with the problem of permitting drama upon its vast stage. To a horse-drawn show they readily acceded, but it was a long time before Richard Irod those boards waving his long sword and declaiming as to the "winter of his discontent," and an even longer time before opera was sung there. And then the opening opera was "Traviana." Not that the naughty music drama was given without protest. A discussion went up that shook the sacred portals of Brooklyn Heights, and ended in the final surrender of the directors of the Academy.

The directors took their responsibilities as no slight affairs. The Academy was decidedly a classish affair, with its stock all parceled out among the older families of Brooklyn. Each stockholder was entitled to a seat at every entertainment given, and it is related that one thrifty merchant divided his shares between the members of his numerous family. That being done, he would go to the front of the opera house on its great nights and cause disorder in the box office by standing on the sidewalk and disposing of his share of tickets at something less than regular prices.

Brooklyn went to its Academy for fun and for serious thought. It saw all the great actors of two generations on that stage—Forrest, Booth, Charlotte Cushman, Laura Keane, Jefferson, Lester Wallack. It heard such lecturers as Edward Everett and John B. Gough, when lectures were entertainment not to be tossed light-

ly aside; it listened to its own great preachers, Beecher and Storer and Talange—between the lines that unsparingly destroyed his Tabernacles; it crowded into its spacious auditorium at the Commencement exercises and the amateur dramatics of its boys and girls. The old Academy was the veritable social fabric of the old Brooklyn.

Therefore Thomas used to give rehearsals of his orchestra during the afternoons before his concerts, while the women sat tating tidies and gossiping between numbers; for Brooklyn always was and always will be—Brooklyn. Strakosch and Mapleson knew that, and when they took their troupes across the river they left half of their camp followers behind. Surpassing would be the wrath of the Old Brooklynites, who finally brought latter-day imperialism to a realization that critical taste grew shrewd and exacting upon Long Island soil.

There comes an end to all things, and a winter's morning five years ago saw the historic opera house go up in a truly theatrical puff of smoke and flame. At that the *Exile* quired: "Brooklyn has lost that by which it was almost as well known as the Navy Yard and Plymouth Church. The Academy of Music, which in its day was the peer of any place of assemblage in America, has been destroyed by fire."

Before the ruins in Montague Street were cool there were demands that the Academy be rebuilt. To Brooklynites it had already seemed as if the Brooklyn they had known was fast disappearing. Beecher was dead, the last of the Tabernacles had been burned, and the old town was fast becoming a new corner of the great New York to which it was so frailly linked by its stupendous bridge. The idea of becoming a second Harlem was appalling. The rebuilding of the Academy was a popular measure, a test as to Brooklyn's ability to preserve at least a vestige of civic unity unto herself.

It was a hard test, and it all had failed. Subscriptions to the stock of the new Academy came slowly, and there were several times when it looked to the Old Brooklynites as if they must give up in despair and join the throngs that hurry at all hours to and from sodden and unsentimental Manhattan. It appeared possible that Brooklyn would become the Cinderella of all the boroughs.

But it seems that there are still other institutions in Brooklyn, and not the least of these are the Institute of Arts and Sciences. This is a sort of civic Chautauque. Toward it several thousand men and women pay five dollars a year for an opportunity to gain culture and entertainment at the same time. They have lectures, museums, picture shows, rentals, and the like, and this institute has as its aim to put the impressive or prima donna in yet to be found who is strong enough to withstand its pleadings.

This institute came valiantly to the aid of the Academy project and perhaps saved the day. While it has no proprietary interest

A Good Ending for a Popular Paper Up-to-date Novel

Conclusion

"WHERE am I?" As Claude feebly uttered these words he looked up at the face of an old fashioned clock. Owing to the hard times, the clock had laid off one of its hands.

Claude was reclining on a lot of soft sofa pillows, and all about the room stood tumbled furniture, the kind usually found in the wealthy Spanish houses.

Thence the inspection of the place was suddenly interrupted by the tread of tiny feet.

"Are you longing for anything, sir?" asked a sweet feminine voice.

"Yes," gasped the injured young man, "I am longing to know how I got here."

"I'll tell you," responded the pretty woman, seating herself on a costly tiger rug beside Claude.

"The other day from my latticed window I have watched you laying bricks on yonder skyscraper. Strange as it may seem, my heart went out to you. I became infatuated with you. Perhaps my loneliness helped, for, you know, my husband is a coffee salesman and lives himself to our coffee plantation eight months out of every twelve. But he has been away so long now that I fear he will never return. Yesterday, at the thought of this and in a fit of despondency, I wanted to throw my weak form to the cold pavement below; but, on reaching the window, I caught a glimpse of you. My horrible intention was arrested. Upon realizing that I had committed near suicide, I let out a hysterical shriek. The shriek startled you. I saw you step back suddenly into a tub of mortar. In endeavoring to extricate yourself, you made a fatal misstep and went down, down, down through the forty short stories, as a magazine reader would say. On seeing this, I had no time. Changing my clothes and putting on all my rings, hat, and furs, I rushed down to the street just in time to—"

"See my tangled form lying on the architect's blue print on the ground floor," interposed Claude.

"No; but just in time to place where I thought you would fall this—my precious ring. It saved your life."

"How can I thank you," began the rescued man. "Perhaps if I am allowed to remain here—"

"No, no, no," almost shrieked the woman. "It is impossible. My husband is of a frightfully jealous disposition. He once threatened to kill a doctor for looking at my finger. I am certain he would kill me instantly should he enter and find that I am sheltering you, a stranger."

"For our safety, then, I will stagger away. But I beg of you permit me to take with me just one little token of your kindness; something that I can remember you by."

"But what can I, the wife of a poor millionaire, give you?"

"A kiss!" Claude whispered these two words nervously, anxiously.

"You forget! I told you my husband is liable to return and kill us both—"

"But, my dear, he is thousands of miles from here."

There was a few moments of deathlike silence. Then, after looking cautiously all about her, the sweet little woman bent over Claude, and her lips were just touching his when the door flew open, and three, eyes filled with jealous rage and fingers twitching madly, stood—CLAUDE'S WIFE!

THE END.

Now, honestly, didn't you think it was the woman's husband?

E. P. FIZZER.

The Food Fads of Royalty

"LIVING like a king," is a favorite republican expression to designate the acme of luxury, but, as a matter of fact, most modern rulers live very simply. Edward of England's cook receives a salary of \$10,000 a year, but he is rarely called upon to prepare an elaborate meal. Both the King and the Queen prefer simple dishes. Plain and nourishing food is what the King likes. He is very fond of oysters, and of vegetable soup. Potatoes, with toasted bread and asparagus, is quite a favorite dish on the royal table, and his majesty generally takes a second helping of prepared fruit and lamb.

Queen Alexandra is very fond of pastries and sweets. "I have the appetite of a dairy maid," she once declared. A cook was brought from Germany to prepare her steamed fruit, for which she has a remarkable fondness, and to which she attributes her unusually long complexion. She is also very fond of the American "fritter," and until a short while ago an odd Virginia cook was employed to make oven fritters, poach fritters, and to prepare egg-plant with butter and butter sauce.

The Queen of the Netherlands is especially fond of chocolate in all its forms, and has a special "chocolate chef." Queen Wilhelmina has also a devoted penchant for all kinds of milk dishes, and for everything made with cream.

King Alfonso of Spain was formerly noted for his liking for highly seasoned and French dishes, but his Queen, Victoria, has taught him to like roast beef and Yorkshire pudding. It is said Spanish dishes, this English Queen of Spain declares, are "too oily and too garlicky."

TEN TO SEVENTEEN

A Boarding-School Diary

By **JOSEPHINE DASKAM BACON**

Author of "The Memoirs of a Baby"

From "Ten to Seventeen"

THIS is a diary of girls in boarding-school during those years when the world is made up chiefly of two kinds of excitement—sentiment and scrapes. Those who are concerned with the story are all healthy, charming girls—Roberta, who writes the "events," "Ben," whose cleverness inspires them, and Constantia, who prefixes to each event a kind of "poem" truly remarkable. The story involves grown-ups and their various affairs, seen from the gen-

uine school-girl point of view, and expressed in the exact language of the age. Any one who had forgotten what girls at school are like between ten and seventeen would need to read only a single page to remember. The book is sure to please equally those who are young and those young no longer.

STORIES OF SYMPHONIC MUSIC

A Guide to Modern Orchestral Programme-Music

By LAWRENCE GILMAN

Music Critic of "Harper's Weekly"

This book fills a genuine need of the music-lover, for it offers in compact, accessible, and easily intelligible form information which will help him to listen understandingly to the music of an orchestral concert. It presents clearly and without technical analysis the poetic or pictorial or dramatic basis of every important example of programme-music in the symphonic repertoire, putting the reader in possession of information which will enable him to listen comprehendingly, for example, to a symphony by Berlioz, an overture by Mendelssohn, a symphonic poem by Liszt, or a tone-poem by Strauss or Debussy.

"The best thing for every concert-goer to do is to get a copy of Mr. Gilman's book and prepare himself beforehand."—*N. Y. Evening Post*.

"From Berlioz and Liszt and Raff and Wagner, down to the latest works of Strauss, d'Indy, Debussy, Sibelius, Rimsky-Korsakoff, Elgar, Chabrier, and Converse, with many others that will occur to concert-goers, Mr. Gilman has left nothing that has any claim to the attention of music-lovers. . . . It is a useful and interesting book."—*The New Music Review*.

"A valuable contribution to the music-lover's library."

—*Chicago Post*.

ELMORE ELLIOTT PEAKE
MARGARET SUTTON BRISCOE
Mrs. HENRY DUDENEY
Etc., Etc.

Mrs. HUMPHRY WARD'S
GREAT SERIAL

"The Testing of
Diana Mallory"

A Delightful Novelties by Henry James. Mr. JAMES has never written anything more whimsically charming than his two-part story "Julia Hyde," which begins in the March number of HARPER'S MAGAZINE. The situation presented is unique in fiction. Not since "Daisy Miller" has Mr. JAMES done anything that will have so wide an appeal. The illustrations by W. T. Smalley are peculiarly sympathetic.

The Esparto Pickers of Tripoli. Esparto is a grass, the harvesting of which is one of Tripoli's chief industries. From this grass a very light paper is made, which has been much used in books, particularly in England. Mr. CHARLES W. PERLONG writes interestingly of the work of the natives and of scenes among the esparto pickers, and has made many delightful illustrations, which are reproduced in tint.

The Spring Awakening of the Sea. Mr. H. J. SHANNON has made a study of some of the curiously interesting forms of vegetable and animal life of the sea which the naturalist watches in the early spring, and has made a group of drawings which show most interestingly some little-known sea life in its course of development. His article opens up a delightful new field.

Some Diplomatic Recollections of Italy. Madame DE BUSEN contributes a most interesting paper of familiar recollections of her life at Florence, where her husband was attached to the German legation, in the days immediately following King Humbert's marriage—a paper which gathers importance from the familiar pictures which it gives of many of the great personages of the day.

At the Minerva. A delightful sketch of a quaint old English inn at Hull—formerly much frequented by seafaring men from all corners of the world. Mr. THOMAS A. JANVIER went there to look for them, and tells in his characteristically charming way of his experiences.

How Geography Regulates Commerce. The geography of commerce is an important and new recognized study. This branch of geography shows how the natural formation of continents, the character of soil, lines, harbors, etc., influence the trend of the world's trade. Professor GILBERT and Professor KELLER, of Yale, have made a special study of commercial geography, and together contribute a most interesting article.

Seven Great Stories. In addition to the beginning of Mr. JAMES'S two-part story, there are six complete short stories in HARPER'S for March. MARGARET CAMERON contributes an unusual live-story—a story of amusing complications and peculiar situations, but a happy ending. In contrast with this is Mrs. DUDENEY'S strong story, "The Night," a love-story of a different sort—of a man and his wife who have lived almost all their lives apart and of their final reconciliation—a story of power and tenderness. ELMORE ELLIOTT PEAKE writes of an Indian, whose ideas of justice were those of the savage, but whose sense of honor was keener than that of his white captives. ROY ROOPER GILSON, GEORG SCHOCK, and JAMES BRANCH CABELL are other notable contributors. Mr. GILSON writes of an old man whose interest in his centenary in the son who gladly accepts all the responsibilities of success which his father had allowed to pass by. GEORG SCHOCK, a writer to whose work much praise has already been given, writes again of the quaint Pennsylvania Dutch folk—a wonderful story, in which there is both comedy and drama—a story of a girl and her two lovers, and how she decided. Mr. CABELL'S story takes us out of the life of to-day back into the ringing scenes of romance when the world was younger and men lived, daringly and loved well. Illustrated by Howard Pyle.

COMMENT

The Government's Activity for Taft

THE WEEKLY has no desire to criticize, certainly not to condemn, the wish of the President that Secretary TART be his successor; nor does it intend to discuss, as if he were possessed of malign motives, Mr. ROOSEVELT's attitude toward the active work being done by officers of the Federal government calculated to procure Taft delegates to the Republican national convention. Mr. ROOSEVELT denies that he has employed the Federal patronage in aid of his friend and colleague. Mr. TART asserts that he will not accept a nomination procured by the abuse of patronage. The facts are, however, that the Federal officeholders of the country are actually working to procure the nomination of Mr. TART, with or without the consent of the President, and undoubtedly contrary to the wishes of the Secretary of War. This has now been demonstrated, and it has caused trouble, as it ought to. One phase of Mr. ROOSEVELT's conduct cannot be understood. He is professionally opposed to such pernicious activity on the part of Federal officeholders. He is on record in private and official documents as taking the position which GROVER CLEVELAND so persistently maintained, that a public officer must serve the whole public, and must not take an active part in party politics. Some of the Federal officers, however, whom Mr. ROOSEVELT has appointed are working for Mr. TART, while some have been working for other candidates. They are using for these candidates their influence and power, included in which are the power to grant official favors and to give public employment; the discretion incident to the selection for purchase of materials and other goods and to the routing of buildings; and the duty of reporting upon the efficiency or inefficiency of their own subordinates.

Public Servants in Active Politics

The power and influence of a public servant to control primaries and conventions are much greater, other things being equal, than those of a private citizen, and this excess of power is due to his official position. It is the right of American citizens to insist that their servants shall not interfere with their freedom of choice of other servants. Democrats have the right to demand that the servants whose compensation they help to pay, to whose impartial service, therefore, they are entitled, shall not neglect their public duty in aid of the Republican party, while other Republican candidates are right in denouncing the activity of Republican officeholders of the government in aid of Mr. TART or of any one else, and *vice versa*. Mr. ROOSEVELT has not only written and spoken and commanded against this sort of thing academically; he has positively forbidden Federal officeholders to

work for his own re-nomination. What ethical difference is there between working for him and working for his favorite? How can they be permitted to work for any one? The same principle is outraged in any case. If the President has been inadvertent, the Florida incident should recall him to the perception of the truth which he has so frequently advocated. If it does not, he is in danger of hearing from free-spoken, perhaps inconsiderate, people that he is a civil service reformer only when his own interests or his own wishes are not involved. It will not answer for him to deny this use of the Federal patronage; he must forbid the government's activity in party politics.

The Money Market and the Treasury

No good can come from the criticisms which have been made by some Senators of the action of the Secretary of the Treasury during the recent panic, and especially it is worse than useless to declare that Mr. CORTVELL favored the New York banks. It would be as wise if Senators should undertake to condemn Providence for making the place the great port of the country, at the same time snarling at the spectacle of the commercial prominence which the city has obtained. Such complainings are sectional, provincial, and essentially untrue. No preference can be given to any city in the depositing of government funds. The flow or distribution of money knows no State lines. The bulk of it may be deposited anywhere; it will, nevertheless, go where it is needed. Experience teaches, and Secretary CORTVELL's report proves, that nature's law is less obstructed by the New York banks than by the banks of any other city in the country. In the panic the New York bankers shipped more than \$100,000,000 to the interior banks, and recognized, more than other bankers, the soundness of the banking principle that currency should be free as a stream and as unbecked as the circulation of the blood. They were not wholly free from narrowness, as a matter of course; the panic was a bank panic; but they were more free of this vice than others were.

The End to be Sought

The end to be sought—an end very intelligently discussed by the Secretary of the Treasury—is the establishment of a system which will lessen or take away the Treasury's power and duty to intervene periodically for the relief of the money market. Mr. CORTVELL sets forth the evil of this extraordinary power, or unusual and burdensome duty, clearly and convincingly. No one should possess such a power, for the emission of currency to meet an emergency should be nearly as automatic as possible. This, too, is pointed out by Mr. CORTVELL, who refers always, as under existing conditions he must, to our present currency system as that on which any practicable effort of reform must be based. It is one of the virtues of the ALDEN bill that it answers the objection to the existing power of the Secretary of the Treasury. It is the present method to meet an emergency by the deposit in the banks of public funds by the Secretary. He chooses the depositories or localities in which the deposits are to be made, and he determines the amounts which are to be put into circulation. Not only is this an arbitrary power which no man ought to possess, but the money thus set free is government money which must be recalled when it is needed by the government. In this case, for example, the money deposited may be needed for the redemption of bonds or for the meeting of a deficient revenue. Under the ALDEN bill, the banks themselves—that is, the commercial communities—are to initiate the demand, and are to pay an extra price for the emergency currency. Thus the ALDEN bill, as far as is possible under the present system—which it is impossible to change for a long time to come—provides for an emergency currency that will not be issued at the discretion of government, but in answer to the demands of business, and that is an end towards which all bank reform must work if it is to be sound.

The "World" on Bryan

The New York *World* has published a remarkable pamphlet in which it undertakes to show that Bryan cannot be elected. So far as the future can be forecast, the *World* has accomplished what it set out to do. For twelve years, it truly asserts, Bryan has been the leader of the Democratic party, and the pamphlet says: "Under your leadership the party has not

been in power a single day, a single hour, a single minute"; on the contrary, "it has steadily lost ground, until at this time it is almost without force at the North." More than this, "it is menaced even at the South, where it lost Kentucky in the last November election." It may be added that the State was lost because of the domination of the BRYAN-BECKHAM machine in the Democratic party, the machine whose State leader is seeking the Senatorship, and in behalf of whom BRYAN has recently interposed with his eloquent and denunciatory voice. In 1890, BRYAN, as the WEEKLY has already shown, carried the Northern States. The pamphlet calls them Republican-Populist silver States. They cast 45 electoral votes. In the same year he lost the 82 electoral votes of doubtful or Democratic States, viz., New York, Connecticut, New Jersey, Delaware, Maryland, Kentucky, and West Virginia. This was BRYAN's swap twelve years ago—82 electoral votes for 45. In four years, in 1900, he lost 32 of these 45, and received 13 electoral votes from the Republican-Populist-silver States. In 1904, ROOSEVELT carried all of these States which BRYAN had retained in 1890. The *World* maintains, and with reason, that BRYAN cannot recover them against TAYLOR or HUGHES. ROOSEVELT has not only taken away BRYAN's policies, but he has taken back to the Republican party the Populist States, and there is no reason why they should return to their momentary, ineffective, and disappointing alliance with BRYAN. No Democrat can be elected President this year who cannot carry, besides the South, New York and New Jersey and some Middle West States. BRYAN cannot even regain the Northern States which he carried in 1890, under a misapprehension on their part—a misapprehension which has been enlightened. Even if he should carry them, he will lack many votes of a majority of the electoral college. The facts and figures show clearly the folly of nominating him, and they sustain the prediction that to do so would lead to the certain defeat and the probable disruption of the Democratic party. There is a wealth of argument in the *World's* pamphlet which make it well worth the study of all who desire to understand the character and the tactics of WILLIAM JENNINGS BRYAN—a demagogue, a false prophet, a political trickster ready to barter principles for votes, eager now to drop the few rays of Democracy with which he has sought to cover his naked guilt, and to put on in their place the particularized cloak of ROOSEVELT Republicanism. BRYAN recognizes and admits the force of the *World's* pamphlet by breaking out into screaming abuse of the paper and its editor.

Mr. Watterston's Hopeslessness

Colonel HENRY WATTERSTON when last heard from was at Naples-on-the-Gulf in Florida, getting himself in order, we trust, for political usefulness in the spring and early summer. From there he lately wrote a letter to the *New York Sun*, as follows:

"I am so used to being misquoted that I am growing careless in it; but some notice of the following, which I find in your Washington correspondence, seems to justify a word or two of rebuttal: 'In his talks with fellow Democrats Mr. WATTERSTON warmly approved Mr. BRYAN as the Presidential nominee of his party.' 'Some time ago,' he explained, 'I attempted to work up a sentiment against him, but failed. To-day he is the undoubted choice of a vast majority of Democrats and the strongest man in the country, and it would be wrong not to nominate him.'"

"I have at no time 'warmly approved' Mr. BRYAN for anything. Quite eight months ago I undertook a systematic and, as I thought, an intelligent campaign designed to organize such a volume of public opinion as would condemn the Nebraska bill short of some economic catastrophe he could not hope to carry any of the debatable States, and, therefore, could not be elected. All that is being said now against his candidacy I said then, though I wrote in a spirit of conciliation. The lesson of 1904 admonished me that he and his friends must be satisfied to unite the party and elect my ticket."

"Mr. BRYAN said in response that if the party could find a man likely to get more votes than himself he would be for that man, but that the man must be a 'regulation Democrat.' Then I said that if Mr. BRYAN were sincere in this I could name him a man answering his requirement who certainly fulfilled all other requirements. Ultimately it came out that I had Governor JOHNSON, of Minnesota, in mind. There followed six months of newspaper geysering of one sort and another; not a syllable of serious consideration. Mr. BRYAN naturally construed this to mean that my appeal had met no answering voice—he announced himself a candidate—such possible competitor Governor JOHNSON, Governor FOLEY, Senator CLEVELAND, declared they would not oppose him—BRYAN, a BRYAN stronghold, was chosen for the national convention—and nothing is surer than that he will be nominated. The only effect

of Mr. BRYAN's defeat would be a repetition of 1904. The BRYAN idea has so sandbagged the politicians and bounced the back settlements as to bring enlightened Democrats to a state of inanition, and to drive the independent vote away, except in the doubtful event of hard times."

"I simply threw up my hands in despair and accepted the inevitable. Yet if I had had, six months ago in timely cooperation, half the real nose displayed by the Eastern end of it, we could have carried our point, sending the party on some other than Mr. BRYAN; but it could not be, because you Eastern people, who think you know it all, in reality rarely learn anything of the country at large until it is too late."

This letter explains MURSE HENRY's frame of mind when he gave it out that it was too late now to beat BRYAN. It is evident that he is quite as unrecruited as ever to the fatality of BRYAN's nomination. We trust it is also becoming evident that he gave up trying to fend off that fatality far too soon.

Justice Dowling in the Shaw Case

It is not always, perhaps not often, that a New York judge can be congratulated on the dignified and purely judicial way in which he has presided over a criminal trial that may be termed a *cause célèbre*. Justice DOWLING, however, is especially entitled to commendation for the manner in which the second trial of the THAW case was conducted. The first trial lasted nearly three months, and the second less than a month. The first trial was a spectacle ending in a disagreement of the jury; the second trial was a judicial inquiry concluding with a verdict. In the first trial the real defendant was the murdered man; in the second trial the defendant was the murderer. It is not our intention to say that the presiding justice was responsible for all that made the first trial a scandal to the administration of justice in New York; he was the unhappy victim of conditions of which Justice DOWLING was fortunately free. The latter, however, was, as the judge should be, the strongest figure in the court room. He managed the case with a skill and a determined authority that ought always to characterize our criminal trials and that seldom do. One of the noteworthy, if not the most noteworthy, features of Justice DOWLING's conduct in the fact—a fact, as we are informed, without precedent in a criminal case—that not a single exception was taken to the charge. May Justice DOWLING provide at other trials that exalt public interest; and may other justices follow his example!

Another Decision in Favor of Free Labor

The United States Supreme Court has again rendered a decision in behalf of free labor. The Court holds that a boycott which affects interstate commerce is a conspiracy in restraint of trade, and is therefore within the terms of the SHERMAN anti-trust law. This is a judicial recognition of a proposition that has long been held by legislators and economists, who have regarded some of the pretensions of labor unions as bringing those organizations in the category of combinations at which the act was aimed. It is not, of course, true that the act intended to include labor unions in the definition of combinations, if, indeed, any definition at all was intended. We know, however, that some organizations have been included by the courts as within the intention of the act—railroads, for example—which the framers of the law did not intend to include. The Court must be bound by the language of the law, and not by the unexpressed or ill-expressed intentions of its framers. That a blow has been struck at the boycott—a cruel and barbarous invention, sometimes criminal in its consequences—is a subject for congratulation. It is a blow for individual liberty and industrial freedom. Three extravagant demands of labor unions, two of which have been embodied in Congressional legislation, have recently been overthrown by the Supreme Court, and while these decisions offend the unions, they also emphasize the argument for a fair and manly dealing with this vexed question by government. Congress has an excellent opportunity to do something that will be satisfactory at the present session. The successful Camptown experiment is before it, and in considering it each Congressman should seek to forget the number of labor votes in his district. Oftentimes they are fewer than his imagination pictures, and always their class interests are of less—much less—importance than the interests of the country.

Restriction of Intercollegiate Contests

Six weeks or more ago the Harvard faculty passed a resolution "that in the opinion of the faculty the number of inter-

collegiate contests should be greatly reduced." This expression of opinion they sent out to each college represented in the New England Association of Colleges. Four of the colleges thus addressed—Colby, Tufts, Vermont, and Williams—made favorable responses. Of these, the most important is Williams, which has since given evidence of the seriousness of its convictions in the matter by a resolution of its president and trustees suggesting to its faculty to provide that after this year no athletic contest shall be permitted with any institution more than two hundred miles from Williamstown, and that except in case of a tie there shall be no more than two contests in any one sport with any other one institution. This moderate but precise suggestion of restraint is based upon the report of FRANCIS LYNN STETSON, EUGENE DELANO, and FREDERICK B. JENKINSON, a committee of the Williams trustees appointed in the fall of 1906 to consider the matter of intercollegiate athletic contests. They reported that in the last eight years Williams had had an average of fifty-seven intercollegiate contests a year, very nearly half of them outside of Williamstown, in which a yearly average of twenty-three students contested, the number of contestants being insignificant compared with the number of students in attendance to look on and cheer. Admitting that the contestants got some good out of their sports, and that no wise friend of youth would wish to deny them the chance to get it, the committee found that "from the primary and proclaimed purpose of a college there had been such a diversion to a secondary and subordinate incident of collegiate association as to induce the student belief that the true college spirit is to be evolved not through the curriculum or in interchange of ideas, but most potently in the arena of athletic sport." Such in effect had been the formal declaration of the students' publications. This sentiment the committee felt unable to endorse. Our national temperament, they said, tends to push beyond bounds what in moderation may be good. They found their college to have been founded, and to be maintained, principally through the gifts of serious minded men and women, who denied themselves in order that generous youth might pursue those liberalizing studies which should establish them as men of intellectual power and integrity of culture. They said they would rather see the college decline in number than swell its lists by students whose interests and ideals were alien to those the college was founded to foster. Finding that generally in American colleges there is grave danger of departure from the essential ideals of a college as distinguished from an institute of physical culture, they assented to the view of the faculty that there should be a large reduction in the number of intercollegiate contests, and offered the moderate resolution to that end, which the board passed. It is a significant resolution which is likely within a year or two to be the pattern for others.

Anti-gambling Agitation

There is a lot of energy in the course of expenditure just now over gambling. The President has invited Congress to try to think of some safe way "to prevent at least the grosser forms of gambling in securities and commodities, such as making large sales of what men do not possess and cornering the market." In this State Governor HUGHES has condemned racetrack betting as conducted under the PECK-GLAVY law, and there is a very vigorous movement at Albany, led by the International Reform League, to abolish it. While their hands are in, the Albany legislators are invited to pass a bill punishing by imprisonment gambling in a private club, residence, or hotel, or buying chances in a church fair lottery. Also to pass the bill to amend Section 344 of the Penal Code making it a misdemeanor to buy and sell stocks, bonds, and such things, "on margins." The reformers find no trouble in getting testimonials as to the objectionable qualities of gambling. BISHOP DOANE, speaking against racetrack betting, says that all gambling "is essentially wicked, since its root is in the deadly sin of covetousness—the desire to get something for nothing." He cites the eighth and tenth commandments against it, not, we think, with entire justice, for a large proportion of gaming and betting is a playing with money rather than for it, and is done purely for amusement, and in a good many cases with almost Christian hope that the other fellow may win. Taking the other man's money is often repulsive to players and bettors who like the excitement of the game, and we are confident that of the men who

in a city like this play cards for stakes in clubs or private houses, only a small proportion are actuated by covetousness, or the desire to get something for nothing. What they are after is amusement, and to the pursuit of that they are often willing to sacrifice time, sleep, and energy, the money value of which is ridiculously out of proportion to the value of the stakes they play for.

Stock Speculation as a Symptom

We have not noticed, either in the President's message or in accounts of the proceedings of our Legislature, the suggestion that there ought to be legislation prohibiting a rising temperature in fever cases. We have always understood that a high temperature was exhausting and hurtful, and killed the patient if it went high enough or lasted long enough. But legislatures don't seem to care to make laws against it, nor is it down in the lists of the Reverend WILSON F. CHARTS as a thing to be suppressed. All that is done about it by the authorities is done by boards of health that try to prevent fevers. Stock gambling seems to us a good deal like the rising temperature in fever cases, a symptom, rather than itself a disease; a result rather than a cause. The disease that causes it seems to be the seizure called prosperity. When the times look good and stocks begin to rise, unscrupulous folk who think they see a chance begin to buy them, and if their confidence is strong or their judgment weak, they strain their credit all they can to do it. Keep prosperity down to a modest level, and there won't be much complaint about excesses of stock speculation.

The Horserace Business

As for the racetrack betters, we dare not undertake to demonstrate that the show they patronize is a highly moral show. Very likely the Adversary invented the horse, endowing him with possibilities of speed, and turned him loose in the world to lure mankind to perdition. Undoubtedly a horse that can be urged to go inside of three or four minutes is an immortal machine, fit to be grouped with the fare box and the roulette table. People play cards abundantly, and with happiness, for nothing but fun, but it appears that when horses run races it belongs absolutely to the job to bet money on them. Without bets, the horserace folk tell us, the horserace industry cannot be maintained, nor the breed of horses continue to be improved, nor the agricultural fair to be maintained in vigor. Shall racetrack betting be abolished, then, and horseracing with it in New York State? If it were ours to say, we would think a long time before abolishing it. It amuses a lot of people, wastes their time and money, and keeps them from doing other things. Nobody but ERNEST SINCLAIR knows what they would be doing if they were not at the races, but we fear the worst. The damage done to public morals by racetrack betting under the present law in this State does not seem so disproportionate to the joy diffused by the races that the races should be suppressed.

A Little Freedom is a Handy Thing

For our part we hate to trust the Rev. Dr. CRAFTS or any other oppressive reformer with too comprehensive a mandate for the regulation of society. We are always afraid that when the CRAFTS has perfected society according to their standards, it would be too much like a golf course from which all the bunkers had been eliminated. There ought to be a few temptations left in the world for us to grow on. Protect the young and the weak; shield the incompetent and the timid; but, in the name of all the Fathers, do not make pigs of all mankind. Leave some folks on earth who can take care of themselves, who can kick temptations out of the road, or keep them for playthings, and other way be safe. The President should shut us out of the mails if we corresponded with a broker. Not on any such meet as that did our CANNON feed while he was getting great, nor is greatness, nor even robust proportions, achieved on a diet of prohibitions. There cannot be freedom to do right unless there is considerable freedom to do wrong. There cannot be horseracing to keep away from unless there are horsemen to go to; nor rum to let alone unless there is rum to drink; nor stocks to avoid unless there are stocks to buy. Freedom is sometimes costly, but it is worth a lot of prohibition. As for speculation, it is the very breath of business, and almost of life itself, since the greatest speculation on earth is a new baby.

The Length of Human Life: Other Facts and Opinions

We referred the other day to the method of prolonging life advocated by Professor METCHNIKOFF, the well-known discoverer of phagocytes, and present sub-director of the Pasteur Institute. The distinguished Russian is by no means the only scientist who has held that human longevity should not be so short as under present conditions. It generally is. HALLER, a conspicuous Swiss physiologist of the eighteenth century, thought that man ought to live two hundred years. BUFFON was of the opinion that if a man did not die from some accident or disease, he would reach ninety or a hundred years. METCHNIKOFF holds that the fact that many men over seventy years old are well preserved, both physically and intellectually, makes it impossible to regard that age as the natural limit of human life. There is no doubt that such philosophers as PLATO, such poets as SOPHOCLES, GOETHE, and VICTOR HUGO, such artists as MICHAEL ANGELO, TITIAN, and FRANZ HALS, produced some of their most important works after they had transcended the Scriptural age of threescore years and ten. Significant also is the fact that deaths of people at an advanced age are seldom due to senile debility. In Paris, for instance, in 1892, of the cases of deaths between the ages of seventy and seventy-four, only 8.5 per cent. were attributed to old age. Confirmation of the theory that the natural limit of man's life is not at seventy or seventy-five years is to be found in the well-established fact that very many men reach a much greater age. It is now demonstrated that centenarians are really not rare. In France, for example, nearly 150 people die every year after having reached the age of one hundred or more. In 1830, out of a population of thirty-three and one-half millions, there were 146 centenarians. In some other countries, particularly in eastern Europe, the number of centenarians is still greater, relatively. In Greece there are nine times as many as in France, proportionately to the population. According to M. CUMBY, there were living, in 1896, in Servia, Bulgaria, and Roumania more than 5500 centenarians.

What is the greatest age that can be reached by the human species? Passing over Scriptural, Homeric, and legendary data, we find an astonishing case of longevity recorded in Hungary, where an agricultural laborer in 1539, died in 1724, or, in other words, at the age of 185. The Hungarian records of the eighteenth century contain other cases of death at ages between 147 and 172 years. The case of DIARENDEG is even more authentic. He was born in Norway in 1626, and died in 1772, at the age of 146. The well-known case of THOMAS PARK seems likewise to rest on good authority. PARK was a Shropshire peasant, who did hard work until he was 130 years old, and who died in London at the age of 152. The celebrated HARVEY, the discoverer of the circulation of the blood, examined PARK's body after death and was unable to detect organic disease; even the cartilages of the ribs were not ossified, but elastic, as they are in a young man. PARK was buried in Westminster Abbey, as certainly he would not have been had any doubt been entertained concerning his longevity. We add that on January 26, 1896, there died at Bristol, Virginia, one Mrs. MARY RAMSEY WOOD, at the age of 129 years. Her age is authenticated by the record of her family Bible. In view of the strain to which their constitutions are subjected by child bearing it is a curious fact that women more frequently become centenarians than men do. For instance, in Greece, in 1883, there were 274 persons aged from 95 to 110 years, of whom 123 were males and 145 females. In the seven years from 1833 to 1839 there were in Paris 26 men over the age of 95, and 45 women.

Should we try to prolong human life? Would it really be for the good of the human race to extend man's existence beyond its present limit? Already we hear the complaint that the burden of supporting old people is too heavy, and statesmen are perturbed by the enormous expense which would be entailed by state support of the aged. It is taken for granted by objectors to the prolongation of human life that the more man's existence is extended the more will the resources of the young be reduced. This is not necessarily true. The prolongation of life would be associated with the preservation of intelligence and of the power to work, and it would no longer be needful to give pensions at the age of sixty or seventy years. The cost of supporting the old, instead of increasing, would diminish progressively. It has also been argued that the natural selection should be allowed free play, and that unwholesome people ought not to be preserved by scientific means. As a matter of fact, vast services have been rendered to mankind by men suffering from a feeble constitution and precarious health. Even amongst tuberculous persons and so-called physical degenerates there have been individuals who have had a large share in promoting the advance of the human race. We may mention, for instance, the names of FROELICH, LEOPARD, WEBER, NICHUMANS, and CHOPIN. It seems to follow that the sympathetic and merciful course is also the wise course, and that we should use all our endeavors to permit men to complete the normal term of life, and to make it possible for old men to play their parts as advisers and judges, endowed as they are with long experience.

The Regicidal Horror in Portugal

The aim of Greek tragedy was to excite fear and pity by depicting the great ones of earth as subjected to the most appalling calamities that may befall mankind. The conditions prescribed for the Athenian stage were satisfied by the atrocity of which Lisbon was the scene. Of the four occupants of the royal carriage, King CARLOS and the Crown Prince were killed, the second son, Don MAXIMIL, was wounded, and Queen AMALIA only escaped death by a hair's breadth. Pathetic is the account of her attempt to leap off one of the assaulons with a lampet—her sole weapon of defence. Thither it had been the boast of the Portuguese that their country had never bred a regicide, and the too successful endeavor to exterminate the reigning family seems to have had the effect of reviving a passionate loyalty and provoking a violent reaction against republicanism. The pretext for the homicidal demonstration was, of course, the decree which the King had signed the day before, and which increased the dictatorial powers of Premier FRANCO by suspending all the constitutional guarantees of civil rights. If revolutionists were ever logical, they would not have held Queen AMALIA and her two sons responsible for the decree, but would have confined their vengeance to the sovereign and his Prime Minister. As a matter of fact, it was in compliance with his mother's earnest request that her second son, become King MAXIMIL, dismissed Premier FRANCO and directed his successor, Admiral FERREIRA, to re-establish the constitutional guarantees and order a parliamentary election at an early day. The ex-dictator has fled from the country, and, as the fallen have few friends, it is most unlikely that he will ever return. Nevertheless, the historians will say that the abuses to which Senhor FRANCO was determined to put an end were real and grievous. For many years Portugal has been more governed than any other European country professing to enjoy parliamentary institutions. There was a corrupt understanding between the principal political groups, in pursuance of which each of them was to acquire by rotation possession of the offices. There was an abuse between these groups as regards the multiplication of sinecures—a single minister has been known to hold a dozen salaried posts—and the malversation to dishonest purposes of appropriations made ostensibly for public education or the army and navy. Senhor FRANCO, whose personal integrity is undoubted, made up his mind to abolish the rotative system, suppress all sinecures, and institute a rigorous economy in the public expenditures. To do this by means of a parliamentary majority was impossible when he took office, and, accordingly, he dissolved the national legislature, and refused to permit a general election until he felt sure of carrying it. In the execution of this programme, which was commended by good intention, he had the support of his sovereign; but, undoubtedly, he violated the Portuguese constitution, which limits the time within which a general election must be held. BISMARCK also in the early sixties violated his country's constitution; but BISMARCK succeeded in attaining his object, whereas FRANCO has failed.

Our National Blight

If one were to hail the first best corner in the street with the question, "What is our national blight?" he would reply now-days, according to his station in life, "Rascovism" or "materialism." But it would be a superficial answer. These evils are, after all, of a transitory nature. Mr. ROOSEVELT is not immortal, yet, and there are always painters and musicians and sculptors and foreign novelists to join us in annihilating materialism with distillates. But one is in no such hopeful case with the national blight. It has spread itself thick over our entire continent; it jumps out at us from every paper we unfold; it runs riot through the magazines, even through the most entertaining series of them, the advertising pages; it plays vulgar pranks in cheaply legitimated books; it is the spoken language of the people we meet in society, and is assuaged by those we know out of it. It is so insistent, so pervasive, so omnipresent, one lacks courage even to solve one's self with the soothing and ancient song:

"O where shall rest be found?"

When one sees it thus carpeting up the highway and through the hyacinths of life, one longs for wings to flee away and light on Mount Parnassus, there to sit down in the midst of the nine Muses and hold their hands and cry with them, but that the Muses died long ago and reincarnated, it is to be hoped, in another planet more fit for Muses to dwell in than this one.

For our national blight is none other than that cheap smartness which Mr. Kipling warned the students of Magill University against last October. Mr. Kipling himself took to the vocation of letters very early in life, and in such spirit that our own "Dean" dubbed him "a smart young man with his hat on one side," and the designation was too witty to be wholly incorrect. At any rate, as the years advanced Mr. Kipling straightened his

bat and set his square jaw, and now he is in a position to counsel the young men of Magill University.

"I have no message to deliver," he said to them. "But if I had a message to deliver to a university which I love, to the young men who have the future of their country to mold, I would say with all the force at my command, *Do not be smart!* If I were not a doctor of this university with a deep interest in its discipline, and if I did not hold the strongest views on that reprehensible form of amusement known as 'rucking,' I would say that whenever and wherever you find one of your dear little playmates showing signs of smartness in his work, his talk, or his play, take him tenderly by the head, by both hands, by the back of the neck if necessary, and lovingly, playfully, but firmly, lead him to a knowledge of higher and more interesting things."

And will Mr. Kipling's eloquence prevail? And will others of the suffering lift up their tired voices and protest against this inundation of cheapness and smartness, smartness whose relation to wit and humor is as distant as the relation of the smirk to wit? Will they parading its effluence in a hairdresser's window to a living and beautiful princess, not born in America?

Those who maintain a close watch upon foreign literatures, upon the outpouring books of France, of Germany, of Italy, of the best in England itself, will be the greatest sufferers from our national blight. It is the most depressing element in life. It induces the saddest reflections upon the scheme of the universe, the tremendous convulsive efforts and the dull and meagre results. To follow the smart young writer's account of something he has seen or heard is as painful as to see a man choke to death of a crumb in his windpipe; we see the blood rush to his face, his veins swell to bursting, he gasps for breath, he convulsively clutches the air—but the picture is too harrowing. We read, and our hearts sink lower and lower; we are overcome by that uncountable, that terrible sadness which seems to involve the whole creation, which we cannot analyze into nothingness, and cannot, by any means, away with. It is sordid there before us, increasing day by day, this mass of ridiculous effort and amazing basality. Its facility is miraculous. It almost compels our admiration by its conquering air, this vulgar and smart journalism with its hideous verbiage. All that it touches is translated from the original divine essence into a cheap point of view. The most sublime subjects cannot escape it; the moral law and the starry heavens are tainted; the soul's inner life, the heart's most exquisite secrets, the beauty of the world and the wisdom of all the arts, built up by man through the centuries, are degraded to its uses, and it filters through the seven ages of man. Years cannot cure it, and the eight-year-old boy chanting lustily to himself as he runs his toy steam engine has learned to substitute for the busy old lady who lived in a shoe, a more modern and smarter song.

"Little dabs of powder,
Little globes of paint,
Make the chorus lady
Look like what she ain't."

And one is led to believe that these people who look at life through the wrong end of the open glass, seeing all creation befuddled and belittled, yet really enjoy living in the world they have invented. It is inevitable! Take them, as Mr. Kipling warns you, lovingly, gently, playfully by the hand, and lead them to a knowledge of higher and more interesting things.

For there are things to fill the spaces of cheap smartness. Truth, for instance, though it be an unpardonable retort to state it again, is vastly more astounding than fiction or cynicism or smartness. Sincerity and simplicity never pale, but blow upon us like a fresh, wood-fringed mountain breeze when we clutch high enough to meet them. Beauty never saddens ignobly and never wearies.

But DAVIS GRAHAM PHILLIPS is telling the smart ones that what they need is more originality. More of this same smartness? Never. Do not be persuaded! Do not let any one flatter you into believing you can originate anything. Seeing individually is not like to be more than dragging to light some ugly twist or excremental real artists were trying to hide. Believe Mr. Kipling when he warns you against being smart. The real masters of faithful living, the real secrets of souls, the great truths of art will never reveal themselves to smart thinkers or cheap cynics. They are to be won patiently and religiously, with subtlety and—oh! that we had eloquence to convince even the least of the little ones—with depth of consciousness and reverent awe.

Personal and Pertinent

How have the ways of the prophets changed in a few thousand years? Today, when a prophet comes from one abode to another, she has two hundred men working overtime for three months making the abode ready for her. It takes three engines and a private car and a host of the faithful to effect the little journey. Her garb is of a magnificence that would have shamed a queen of

few hundred years back, and yet this is the prophet who teaches us that there is no reality in matter. Can one conceive of AMENSA, or of JAMES the Baptist with his raiment of camels hair and his brethren girdle about his loins, setting so much matter in motion for the purpose of a little journey across the country? It would almost seem as if the less we believed in matter the more dependent we became upon it. There have been prophets who walked upon water, who defied fire, who averted through the world unbelieved material obstacles, but that was long since, and it now takes three engines to move one frail little old body from Concord to Brookline. One is irresistibly reminded of *Punch's* old queries and answers: What is mind? No matter. What is matter? Never mind.

CHARLES FORTY SMITH was a careful gentleman, and had a good deal of influence. The daily press has told us how many newspapers he edited, and from that enumeration and from our knowledge of his official position we discern that his chief activity, whether as editor or citizen, was political. From his youth up he was a politician, and when he dwelt in New York and edited papers in Albany and in Syracuse he used to draw platforms. He was possessed of the gift of platform rhetoric, and could induce ringing sentences that meant much, or that covered up, with a blizzard of words, an evasion. Thus he was useful to his party. He was sincere from THURGOOD WELLS. He did not make candidates, but he constructed something that they might stand on for the two or three months during which they had to stand on something that would not give way suddenly and, therefore, dangerously. He was a quiet and unostentatious man, living calmly and according to law. He did not like a fuss, and never made one. He liked people, and they liked him, and some of the first people—political people—of his time owed him much and he was paid. He never seems to have made any enemies. We have already been told that he retained the friendship of both BLAINE and CONKLING when the two were bitter enemies of one another, indulging in such enmity as can be best engendered by an interchange of billingsgate. Mr. BLAINE wanted SMITH's support in the Presidential campaign of 1876, but he could not have that, for then SMITH was a New York editor, and New York Republicans followed the leadership of CONKLING. If SMITH had then lived in Maine, and if CONKLING had requested the editor's assistance and had been refused on the ground that as a Maine Republican he must follow his leader BLAINE, CONKLING would never have forgiven him; on the contrary, he would have taken the first opportunity—not that presented itself, but that he could catch up with—to pour vituperation upon SMITH'S TROTTER head and heels. He would have made another of those "gratuitous efforts of his life." BLAINE was different; he understood and greatly profited by the rationation of SMITH'S friendship. His head, as they say, came back to him. After GARFIELD'S death and ARTHUR'S accession, BLAINE was determined that he must remain in the cabinet as Secretary of State, and it was the effort of his friends, stimulated by himself, to convince the country and, incidentally, Mr. ARTHUR that the GARFIELD tradition must be preserved, and that BLAINE must remain in the administration to keep it alive. Mr. SMITH, who was then editor of the Philadelphia Press, agreed with Mr. BLAINE, and gave to the theory a valiant support. A friend of the two saw SMITH every afternoon, and learned from the Secretary the developments of the day, with BLAINE'S entire views of the situation. All this was telegraphed to Philadelphia for Mr. SMITH'S information and guidance, and so BLAINE had an official organ of much enlightenment and power. The service of Mr. SMITH'S friend came to an end one afternoon, after a brilliant meeting. At that meeting there had occurred a conversation between Mr. ARTHUR and Mr. BLAINE concerning the THURGOOD and WALKER BLAINE mission to Chile, and the atmosphere of the cabinet room at its close indicated that Mr. BLAINE'S place in the political family would soon be vacated. As it was, the effort of Mr. BLAINE and his friends to keep in were useless, for Mr. ARTHUR had stopped in Newark on his way to the White House to offer the Secretaryship of State to his old friend Mr. FAIRBANKS.

Correspondence

A PANIC PANACEA

SONA CITY, CA, January 29, 1901

To the Editor of Harper's Weekly:

SIR,—Mr. E. J. DeBell, in your issue of January 25, offers with childlike confidence the financial system of guaranteed bank deposits to cure the bad home-made "run on a bank," and to eliminate the last "panic" miracle. The writer assumes that there would be no delay, on the part of the Treasury, to hand over to the individual depositor of a closed bank whatever amount stood to his credit on the books, as soon after the closing of the doors as the necessary clearing could be done.

Would the Treasury close the business in that manner, or would the receiver of the failed bank be required to realize on the assets of the bank, paying pro rata to the depositors, the residue only

being paid from the guarantee fund? The latter course would, most assuredly, be pursued, and the process might require months of time. Another thing the writer of the article referred to has forgotten, if he ever knew the fact, namely, that the deposits of a bank are largely—much more than half—mere credits secured by some form of "I promise to pay" at some not very remote day. Now suppose Mr. Debell's proposition should be carried into effect. John Doe goes to the bank and secures a credit of \$10,000, giving his note with such security as the bank, at the time, considers good; suppose "financial stringency" comes before the obligation of Mr. Doe falls due, and the bank is forced to close its doors; suppose Mr. Doe receives the amount of his bank credit from the guarantee fund, or from the United States Treasury in case the "fund" is insufficient; suppose Mr. Doe pays the money so received to other personal creditors; suppose, further, that when Mr. Doe's obligation at bank becomes due he is not able to pay, and suppose that his security is "hundreds" or is worthless—what is the result? Simply and solely that Mr. Doe has a clean slate of \$10,000 with which to pay his matured personal debts, or to tack away in some place where the law can't find it—if, indeed, he would be "liable" if it could be found. Better at once "guarantee" all private debts and bring in the full financial millennium, a beneficent vision of which Mr. Debell seems to have had.

f am, sir,

J. W. RICH.

LOST STANDARDS

BOSTON, Mass., January 30, 1901

To the Editor of Harper's Weekly:

SIR—There never existed in this country but two sets of decent prices—the old-time blue-bellied Yankees and the cultivated Southerners. All the rest have ever been mongrels and mongrels, and, unfortunately, they run rampant. The American people learn from their money and will be until the American people learn something of the old deceptions existing where women were ornaments and men frequented the pathways like unto the full-breasted goblins.

We will have no parts again in the next hundred years, for it will require all of no time to outdistance the coarse people who outnumbered Bob Lee at Appomattox.

f am, sir,

J. W. McCORMAC.

SOLEMN SUGGESTIONS ABOUT SILVER

BOSTON, Mass., January 30, 1901

To the Editor of Harper's Weekly:

SIR—There are people who are made unhappy by the prospect that it has again become necessary to discuss the questions of currency, monetary standards, and the ratio of silver to gold. But truth is truth, and there was no connection between the two in returning again to the fray because the gold standard has brought about great evils and threatens us with commercial paralysis. There are two subjects which ought to be kept distinct in the thoughts of all men—the fatal rise of prices and the recent panic. It may be said at once that there was no connection between the two. It is not my intention to write one word about the latter, save to say that it was created artificially, and that there should be a Congressional inquiry into the matter. But with regard to the high prices that are giving all reasoning men great uneasiness, it seems to be conceded that it is the result of the lowering of gold, which is itself the result of the over-appropriation of gold due to the general adoption of the gold standard. Other things being equal, it is plain that the gold standard is preferable to the silver standard, if only some nations will be so obliging as to retain the latter. But they won't. They obstinately refused to play the part of silly sheep and allow themselves to be deceived. Every nation that has been able to do so has placed itself upon a high ledge, and the consequence is that there is not so much advantage in being a gold bug as there used to be.

If we examine the causes that led England to force the gold standard upon India, and to close the mints of that country to private individuals, we shall find there without difficulty. There is not a doubt that in the first place it was an act of vengeance for the successive bankruptcy of all the Anglo-Indian banking establishments and agency houses that had been created. They were all wrecked by the native bankers, who forced from time to time articles of merchandise of silver and then descended upon the firms with demands that could only be settled with rapers. The ruin wrought by the failure of one great bank among the families of the army and the civil service was so widespread and so terrible that English statesmen lost their heads and rushed upon taking measures that would move the situation for all time. But there was another cause, and that was that the profits of banking in India were very great, and the English wished to have the business which they created. But the native bankers were by no means satisfied to restrict themselves to purely native business. See the mints were closed and the gold standard adopted—practically if not formally. Since that time there has been unrest in India, and there is an ever-growing demand for autonomy which is puzzling the English very much. It is simply the form which the native bankers have selected as the best method of making war upon the financial tyrants of their nation. The native natives, in a word, are in a very bitter mood since India is a land of many nations, all of whom, however, are a unit upon the question of open mints for silver exchange for individuals. And this unrest has gained Egypt, which has been raised from a condition of intense misery to one of remarkable prosperity. The cry, "Shah ba shah, su Arab" ("Shoulder to shoulder, O

Arab!"), which is being circulated among the fellahs seems almost a gratification to the English, and so it is. For it would be heard as surely as Egypt should be placed upon a silver basis with the English five-shilling piece as the monetary unit. If the English do not understand these facts, then it is because the Spirit of Infinite Love that shapes our ends, roughens them how we will, has smitten them with judicial blindness. "Quem Deus urit perire, perire decrevit" as an ancient sage said.

England, having in an evil hour adopted the free trade fallacy, feels a constant necessity for lower prices, because free trade is a challenge to other nations in competitive manufacturing. England requires cheap food and cheap raw materials, and therefore the rise in prices is highly prejudicial to English interests, that their superiority as the money power serves them well, for it enables them to dominate the produce exchanges of this country, which in consequence of the tie of a common language is very open to attack. This power of the purchaser to control prices is the inherent defect of exchanges, since it is obvious that the largest purse must win. Admitting for the sake of argument that there are a number of brokers who desire to get the best prices they can for the producers of wheat and cotton, copper and silver, they can do nothing in the face of organized determination to give much less. So the wheat pit and the cotton exchange, and the tobacco exchange and metal exchange, become centers of commercial life in which the matters produced under a high tariff necessitating high prices are lowered to the rates demanded by free trade, that necessitates low prices. The exchanges do not and cannot guard the interests of the producers, and that is why there are "Night Riders" in Kentucky, and there may be something similar in the cotton States. Protection does not protect the producer, and this is a grave defect in our otherwise admirable tariff system. Those who imagine that free trade would be an efficient remedy are one-sided doctrinaires whose minds are too narrow to take in the whole of a subject.

Things are assuming a gloomy aspect entirely independent of the panic. The ten-cent can of condensed milk is twelve cents, the ten-cent pie is the same, and there is a general rise in all those little things that have made bearable the condition of the very poor. Bread is still five cents a loaf, but there is a constant diminution in the amount of flour in use, and if prices continue to soar there must be a change in the price of bread. When there is there will be bread riots as there were in Paris prior to the Revolution. It is undeniable that there is a widespread belief that the rich are responsible for the existing state of things, just as the French held the crown and the nobility to account for their wretchedness, which in fact was due to the absurd financial system of the farmers general, and to the great number of peasant proprietors trying to live on half an acre. No honest writer can deny that there is a growing hatred among ourselves of the 10,000 rich families, and a conviction that their money is tainted. As to the others who know our secret, certainly there are not many whose wealth is untainted, and is the result of successful commerce and manufacturing. We hear much of "predatory wealth," but the fact is that it would not be possible to name one hundred families whose heads owe their immense stacks of securities to that form of speculation which consists in buying mortgage bonds, selling them, and perfecting the proceeds. That is what we have in mind when we think of money robber barons. And they are enabled to float these securities through the national banks, because they own nearly all the stock that represents the capital, and the bankers must do their bidding.

However sadening it may be to those who wish to preserve the present state of things, there must be a change in our currency, in our monetary standard, in our system of banking, and in our produce exchanges. Otherwise there will be what there was in France at the end of the eighteenth century, and the money interest will be punished for the guilt of the few, and the incapacity of Congress to comprehend the meaning of very plain facts.

f am, sir,

EDWARD GARTYNSKI.

AS TO MR. ROOSEVELT

CLEVELAND, O., January 30, 1901

To the Editor of Harper's Weekly:

SIR—We have been a subscriber to the HARPER'S WEEKLY for a great many years, and while we recognize it as a great publication, we have not taken your editorial department has not been conducted in a fair and just way for the past year or two in reference to President Roosevelt. Referring to correspondence on page 9, January 18, we think the gentleman has gone as much too far the other way as your criticisms on the President have gone the other way. We think the President is entitled to criticism for the great many matters. However, we feel that the editorials which you have published in the past year have not only been unfair, but unjust in the criticisms of his actions. We think all Americans like to see fair play and justice done.

If you will refer to your correspondence of few years back when Theodore Cleveland was President, you will see no such criticisms in your editorial department as have been carried on during the past few years in reference to the President. We are satisfied that the majority of your readers think President Roosevelt is as patriotic and sincere in everything he does as was President Cleveland, and with this extreme radicalism on your part, it gives your readers the impression of unfairness on the part of your editorial writers, and when a journal gets into this condition it certainly will lose the confidence and its subscribers.

f am, sir,

W. D. TAYLOR.
The George Worthington Co.

"Crossing the Line" With the Fleet

By ROBERT DUNN

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY" ABOARD THE BATTLESHIP "RHODE ISLAND"

U. S. S. "RHODE ISLAND," OFF RIG DE LORAIN, BRASS.
ELL, everybody aboard is a real shellback now. Early on January 6 our seven hundred peevish fed lubbers sought initiation to the domains of Neptuneus Rex, Ruler of the Raging Main. By the afternoon watch they were members, if somewhat unclean-faced lampblackened, and half drowned in the tank. All mermaids, sharks, skates, eels, crabs, suckers, pollywogs, take notice, He understand the Mysteries of the Ancient Order of the Deep.

No one seems to know the origin of "Neptune Day" in the American navy. Responsibility is sometimes thrust upon the Dutch, whose sea supremacy, if short, showed a sense of humor in not a few ways. Theoretically, for the twenty-four hours nearest to the time of crossing the equator, every warship from bridge to skipper's cabin is turned over to its crew; every man, from admiral to "rookie," if he has not crossed the line before, is put through a course of sports to make a Montana Elk Lodge or the Harvard "Dicker" blush with envy. Of course the exigencies of responsibility and discipline do not allow this to be executed to the letter, but the initiated man is supreme enough to mark the day with maybe the reddest letter of his life, and saute chow enough to the wind of license to make any foreign navy man's hair stand on end.

From our complement of some 800 men, perhaps 70 had "gone through" before, so the rest of us were neophytes. Ever since leaving Trinidad, the crew was strangely busy. Forward on the gundeck old suits with grey hair, and the peels of civinet, were to be seen doing a bit of light semipretentious with hand saws, machines and green and yellow calico. Behind ventilators, in the blacksmith shop, in the launch, rope was being shredded into lanky wigs, until it became demoralizing to imagine the number of chemical blondes in prospect for old Neptune's release. Veterans assumed an air of mystery and intimidation. Some youngsters got phlegm poured at their talk, which, therefore, became the more saturnine.

"What was the name o' that coal-passer they killed on the *Iracheen*, Neptune day?" would be asked after a young yeoman, and his eyes would stand out as big as saucers.

A bucket labelled—

COLGATHILLIAMS' SHAVING DOPE

appeared behind the after turret, for the initiation pivots on barbering and dentistry. Flavors of oak a foot long, with blades beautifully abraded, came from the "lawyer's" quarters, and a turret crew spent a whole watch, heads together, over the after life-boat locker, painting a flag in green and red—

WE drink

BEER

Any brand

W. H. McDonald, chief water-tender, who was in the Neptune himself, staided up his rifle, what he should say, what the skipper reply, when, as Rex, he came over the side to take pos-

session of the ship; for that part of the ceremony has been handed down by word of mouth for years, and so likes the whole to an Elizabethan pageant. The new navy has at least one tradition!

Actually we crossed the line in long, 38° 10' 24" W., at 11:42 P.M., January 3, when some of the ships had a bit hastily put through their evolutions. Early as the night of the sick, the flag-ship signalled to disregard any lights or burning barrels set alight (they might be mistaken for moon-overboard hoys); and that night and the next several flaming pyres drifted down the avenue between the alternate ships of this first squadron, weirdly illuminating their steel immensity. You see, Neptune, with his wife Amphitrite, and release of scurries, cops, barbers, and bears, elicits overside from the deep, out of his fiery chariot, on Neptune eve, to inform the skipper of the dire purposes of the morrow. Neptune and his train carry the deep-sea mail bag, filled with subpoenas of such import that when you read yours you go shiver your head and get your oldest clothes ready.

His Majesty boarded us at 7:30 Sunday night. To be literal, he must have crawled through a hatchway, for his barge burned past some time after he had appeared. Under a golden crown embossed with zodiacal pieces, and with a truly Homeric tunic, he led his long-haired minions and coy Amphitrite—who needed a chair—to the quarterdeck. As seen in the darkness, the procession would have done credit victoriously to the amateur sumo-wrestlers of a dreary suburb, the cops to slapstick work at a variety house.

The skipper was hailed, and ship-aboard; Neptune was informed that this vessel landed was the *Rhode Island*—and what was his royal behest?

That the bridge be turned over to the denizens of the deep at 8:30 next morning.

Granted.
"Thank you, sir!" answered the King, with involuntary respect.

He introduced Amphitrite, with long flaxen hair arranged *a la Vivande*; and, in order to be of the occasion, the skipper

encourage the social phantasy sought to compliment that lady:

DM. MATTY PERSHORE.

NEPTUNEUS REX, W. H. McDonald, Chief Water-tender, AMPHITRITE, MIA WIFE, W. H. P. Power, co's.

THE SKIPPER, Captain Warder.

SKIP.—And Mrs. Neptune looks even younger than when I first saw her thirty years ago.
NKP.—Well, she's not. She's a thousand years old, and she drinks like a fish!

(Amphitrite blushes, cops distribute the deep-sea mail, Neptune and release retire through the hatchways.)

But next day Neptune forget to take the bridge. After screaming on it with his herds, to see if the navigator was keeping proper distance from the *freeway*, even his mermaids found the beer and cigars forward of the quarterdeck turret for alluring.

There the tank was set, made of scurries lashed to a launch beams fixed to the rail, and to the boat deck, on the edge were

Neptune's Arrival
CAPTAIN MURDOCK WELCOMING THE RULER OF THE
SEA ON THE "RHODE ISLAND'S" QUARTERDECK

perched the barber chairs, two of them; and they marked the devilish ingenuity of our celebration, though they were minus cushions and their saw-boards were somewhat angular. The point was, they were rigged with their backs to the pond, their fronts held by a big spiral spring, the backs propped by a swinging stick like the deadfall of a trap, so that when you sat in— But wait. The three dentists set up just aft, along the bulk of the pond. The first had painted on his box that served as a chair, in white on a maroon ground—

CROWNS PAINFULLY EXTRACTED

The second had a camp-stool and a big brass oil syringe from the engine-room; the third, no seating accommodations, but was equipped with a syringe and a barrel of liquid which was a fluid extract of the shaving dope administered. That little tub was early seen in be quite inadequate, so a hophead was substituted, which contained, by analysis:

five analysis this prescription: Cylinder oil, molasses, flour, lamp-black, graphite, soap-powder, aqua immora. Apply with a broad paint brush, all over the body, and as fast as you can. Near by, Neptune, Amphitrite, and two scribbles sat behind a board propped on barrels. The flex, in a grass green and scarlet kimono effect, directed affairs with his quivering trident, the scribbles checked off the names of candidates from long typewritten lists, and Amphitrite smoked cigars and looked stumping. She wore an Old Sherry skirt of *peau d'octopus* with wide red and blue insertions; a waist of real starfish stars on a blue background, edged with silvery ermine off the wardrobe Christmas tree, over a low cut, baby-blue gimp. The barbers affected red and white harlequin suits, with broad collars and rope ruffs on sleeves and leg bottoms. The dentists wore plain bayonet clothes, long chin-beards, straw hats, and jumpers of the best-room chintz. Blond hemp wigs vied with black hair mattresses nose, the scarlet and purple kimono with the plain white nightgown, the Jacobean collar with the square jerk, rouge and white lead with the balloons and rosy pantomime mask. In the tank were the bears.

Why bears, only the mist of tradition might tell. Their fur was shrouded rope, and they wore red shellacked masks with prominent ears. The natural impulse was to call them mermaids, and very rough and unwholesome cures they were at that, with a strong taste for beer, great dexterity in drinking from a bottle, and a long arm reach for the cigars dispensed at the feet of royalty.

Neptune, Amphitrite, and their Retinue

NEPTUNE HOLDS HIS TRIDENT, AND THE "LARY," SOMEWHAT IN NEED OF A BRAVE, STANDS AT HIS LEFT IN HER WEALTH OF MOKE HAIR

So the neophytes were twirled through the treatment, to the endless shouting and squeal, shooless and generally stripped to the waist. But that made no difference. If you wore a shirt, it was yanked up in the barber chair, and the black later was swabbed on from the location for appendicitis up to the crowning hair of your thatch.

The first dentist syringed with plain salt water, tossed something from a bottle up your nose—something in the anastethin class—rubbed your face with disinfectant from a broad-necked jar, and then ordered your mouth open. Inside, you got a nice big bolus of—

HASH'S PILLS

The name was heaped across the doctor's back, and they were made entirely of salt water soap, and your jaw was held and your nose pinched until you had to taste them.

The second dentist plunked you in his chair and scrubbed your face with foam and molasses. Any syringe not being otherwise employed, and loaded from any one of the half dozen tanks of oily stuff, played all over your features. Number three stood up, ordered open mouth—gagged you till you obeyed—and filled it with a pint of the black mixture, from goblet to eyeballs. And then you were tossed into one of the barber chairs.

First it was a thorough lathering with the "dope." The barber's broad paint brush started over you—marked favorites got a shine on their bare feet—until you looked like one of the inky boys in the Sherniny Peter book. Mr. Barber moving his oaken razor, and slapped it across every inch of nakedness, and then—dip! The weapon hit the deadfall in the back of the chair. The spring in front, encouraged by a good deal of the barber's elbow grease, did the rest. You shot into the air, and convulsing a perfectly good back sawn plank, landed face down in the tank, at the mercy of Signalmann Andy O'Connor and his brother bears.

That was the climax. Above, if one had some inkling of how he was being manhandled, now he lost it utterly, dazed and spluttering in the head-clogged tank water. The bears held you under; they executed the most refined tortures in the arts of rough-house; they shouted "This way out!" and heaved you for'ard when the exit ladder was aft, just to get at you again. From the bridge above, through the spray and the squirt of the hose lines that made up for the loss of water by leakage and otherwise, one couldn't tell half the time what was doing down there; but the

A Neophyte describing a Curve on entering the Tank

IN THE TANK ARE THE "SPARKS" WHO RESERVE THE NEWCOMER FROM THE BARBER'S HANDS, AND TREAT HIM TO AN AMAZING "BATH"

follow with a Napoleonic coat of arms on his back—"N. R." quits properly, only the emblems flanking the crest were points of eye whiskey—was certainly very, very busy.

Within the first hour the tax on the deadfalls had been so heavy that a halt had to be called for repairs. Remember that, with both chairs working, the air-consumers went off in pairs; that seven hundred men were being "got through" as fast as seventy no-leashed husky sailors could handle them—and you get a faint idea of how the ceremonies started. Now screw-drivers attacked the catapults, wrenches strengthened the springs. More ammunition, in the shape of tinfuls of graphite and buckets of flour, were stirred into the hogheads. More beer was set boiling into the tank, and the game was on again, keyed up a few notches in moonshine.

The executive shouted to the men perched on the frail Morris-tube frame to climb down, and though he used a megaphone they could not or would not hear and didn't budge. Water began leaking from the tank. Once it got so low that the ship's medical force became nervous, fearing some one would land on the neck and break it. As the crowds "went through" and washed up, the grimy old clothes of the hosts on turret and stay were replaced by glistening whites.

"Strike her up! Play!" the bears shouted to the ship's band gathered under the tower bridge. "In we'll put you 'er' at once!" And of course that band played, and played "The Souler."

A barber struck the deadfall of his chair so hard his razor flew overboard; but a royal daughter of the deep at once whittled a handle to a board and honored him with it, so he went right on shaving.

Now and then the neophytes concerted a rush against the ropes, till it seemed as if barbers, dentists, and all might landslide into the tank. "Note of the cops' flexible and whacking billies. Tommy Watson, all turret captain, but now master barber, did slip in, but it cooled him off and cleaned a deck of the black from his head and scarlet pajamas; so other barbers began to duck themselves regularly. The black from the hogheads slowly was being transferred to the tank water, which assumed a soupy, smoke gray tinge. Syringes and brush were fatally spattering gay barbequins and bayoned into a neutral slaty hue, and the deck looked as it does when ship is coaled in a deluge. As the bears roared their rosy hides, they eluded them overboard. Amplitude was getting very expert at ducking her golden locks as she threw her head back under a beer bottle.

About half past ten the tank burst a leak. Maybe one of the mermaid-beasts, if you must—put her foot through it in seeking for a cigar. When it had been fixed with a new awning, the game went on faster and more furious. One man did rise from the dip stunned for a moment, with a streak of blood under his nose, but he climbed out of the tank unaided and unaided. That man and a boy named Minkov, who had his shoulder dislocated, were the only ones who suffered mishaps. The medical department set up and marvelled as the human pinwheels revolved, that not even a stray foot banged a careless nose into bloodfrenzy. But the marvel of all was that less than eight hundred men, confined on the largest between port cruise an American fleet has ever taken, with its unusual residents to amuse natural and human bickering—there was all day not one flash of ill feeling, not a single scrap. Not a personal score was settled, because this ship, as they say, is the "happy" one of all the fleet.

Those who "got it worst" were either the most popular or the least popular; any one of an incident personality up forward had to pay for it in tank and barber chair. As a rule, yachtsmen—"gyrenes" (slang for marines), real barbers, masters-at-arms, and negroes furnished the most diverting spectacles. A couple of bears ferried around a ship's cook on their backs, so obese was he. Andy the Signalman was certainly having the best time of anybody, as the roughest man in the tank. With his shirt and half his trousers torn to shreds, it could be seen that about the finest physique in

Neptune's hard earned Certificate

THIS ENDOUSSED DOCUMENT, ELABORATELY MIXED AND BEATED, IS DELIVERED TO THE NEOPHYTE AFTER HE HAS SURVIVED INITIATION

the navy was holding the negro men attendant under. And it was great to watch a neophyte lean back in the chair, shut his eyes and content his face all ready for the lather, and then get the lather at his expression from eight hundred throats, as the barber shyly held off to give him the liniment.

I have been using the phrase "you" not unduly advised. Dangling one's legs from the upper bridge, it was simply impossible to watch it all and not take off my socks and make a dental appointment. (None of the officers did, though; not because they didn't and dare or want to. But some things, even on Neptune Day, may be false dig, and the custom is for them to buy off the mummery; hence all the beer and cigars.) The sensation was about as

acute as that of a figure in a runaway limousine went through so like lightning. And if I was disappointed as to thrills, perhaps Dr. Hush is never that he couldn't lookmate a pill, and Andy that a full minute sitting on some one under water didn't feel a choke. But they say it was an exquisite lack something that one quite black "er" turned from the chair. It is very hard to keep away from certain varieties of sailors.

By dinner time, most willing victims had received their medicine. The afternoon session was devoted to the timid and the perverse. It was now up to the cops of the deep to drag them out of hiding. The ship was pulled from fighting-locks to double bottoms. Struggling culprits came on in the arms of Neptune's Tropicana.

There was a white-mustached Swede who showed real fear. Not knowing a word of English, the game probably thrilled him with the mystery and terror of an inquisition. He started in with his boots on, which is strictly against rules, so his feet and his soles almost left him together. He turned white as green-jackets in the barber chair, and tried a second of quickly rattled resistance in the tank. A yeoman caught all in a watty duck shirt and bonnet was doused under polite protest. Salswell, head master-at-arms, of whom you had heard for days, "He'll get it good," had fixated upon sick list, so he was dragged off and revived with unexpected charity. After studied pleading, ambascadors from the Royal Court expiated the executive into delivering, on a guarantee of immediate return, the five bad men who since trying to "jump ship" at Trinidad had been pondering their sins to double form. Their reception was royal. The eighth youth who at Port of Spain attempted to drift ashore in a life-preserver—but the current handed him on the Concordeist, then into our look-up—was handed gently, for confinement had weakened him. And one seaman—who shall be nameless—sank down by a ventilator in a pretended faint, where he was left flat.

To finish, Neptune flaked a sensation. Toward three o'clock, he rose on his hind legs and commanded that the Order's necessary. If painful, duty be done. The cops pounced upon none less than a member of his own court, the purple-tinted scribe who handled the typewritten list of names. His job aboard ship cuddles him close to a typewriter, but he had gained general unpopularity—never mind how. The deep-sea hero, in the true manner of deep-sea, having put him to their use at the keyboard, now turned against him. They trumped up a charge of dishevelled that he had ever crossed the line as he averred. They tore off his pink mask and hustled him toward Dr. Hush. Halfway there, he broke loose and plunged into the tank. But it was no use. The boys leaped in after him, carrying buckets of a medicine specially concocted for him. And his father was nothing milder than pure pitch, which doesn't wash off as easily as graphite. They gagged and swabbed and shaved and suffocated him under water; and when he finally escaped from the maelstrom of spray and muscled arms, he was black—almost as irreversibly black—as the darkest mess attendant looking on.

Then the skipper entertained the royal severity on the deck aft. And all over the ship you saw private winking and ear-cleaning parties, naked pairs doing love about a bucket of water, the while the Neptune present, which officially is a couple of stars, inverted on a blue field, fluttered downward from the mainmast.

The Republican Party of the Doubtful South

By EDWARD LISSNER

A QUESTION of import from the standpoint of party management in the approaching campaign is whether the solid South has become the doubtful South. By the latter term is not meant Maryland or West Virginia, but those States of the Southern section which in the absence of party discussion have hitherto been looked upon as *sure* Democratic. There are at the present time three Southern States rated as doubtful and two disputable. Under the first head are placed Kentucky, Tennessee, and Mississippi; under the second, Virginia and North Carolina. Democratic leaders may deny this, but it is more whistling on their part to keep up courage.

By the existence of a doubtful South in place of the hitherto solid one, four changes are inevitable in the political situation of the future.

First, a diminishment of the prestige long enjoyed by New York, New Jersey, Connecticut, and Indiana at national conventions as pivotal States. They will have to share this with some of the Southern ones in the future.

Second, the ending of an almost solid North, the reply of that section to the solid South.

Third, greater influence of the Southern States in the councils of both parties, one that ought to prove beneficial in character; and

Finally, the breaking down of all barriers which since the close of the Civil War have prevented men from the South being candidates on the national tickets of both parties.

An answer to the question whether the solid South has really become the doubtful South involves a consideration of the Republican party in that section, and more especially whether it has now made itself acceptable to the great mass of voters there who supported the Democratic ticket at the polls in the past merely as a protest against the manner in which the opposition party was conducted. This is the purpose of the present article.

The point to be considered at the inception is whether the Republican organization in the States mentioned has at last begun to realize its strength—not to add, importance. Sixteen years ago, prior to the commencement of the campaign of 1892, a national leader, Senator Depew the writer believes, complained of the state of affairs which gave the Democratic ticket the entire electoral vote of the South without its being obliged to lift a finger to obtain it. He did not in the same breath condemn his party managers for allowing the election to go by default, principally because he realized that it would be a waste of time to contest with the Democrats for the Southern States, and necessarily prevent adequate attention to the doubtful and debatable ones elsewhere. The Republican Congressional Committee, with slight exception, has pursued the same policy, and, one may also add, is not entitled to condemnation either for so doing. But with the State and local committees the situation is different. The vast majority have followed in the footsteps of the National and Congressional committees. Presumably existing to dispute control with the Democrats, the Republican organizations in most of the sections of the South have been content to allow election after election to go by default. This perhaps was as instrumental in keeping the Democrats in power as anything else. The local Republican leaders were satisfied with the mere skeleton of a party, not designed to keep alive before the voters Republican principles and policies, but rather as a basis to the claim for Federal patronage in their sections. Small wonder, therefore, that Secretary Taft said in his Green-shoro, North Carolina, speech, it would be better for the Republican party in the South if Federal offices were filled by Democrats.

The situation mentioned exists in Virginia at the present day. The impression prevails there among the people of all parties that no real desire exists on part of a majority of the Republican leaders to make a showing at the polls, excepting in the Ninth Congressional District. Their real object is to keep the Republican party a close corporation for use in the distribution of Federal offices. As one sums it up, the larger the cadre, the longer the division. Republicanism suffers in North Carolina from much the same cause. There are more voters in the western part of the State whose principles lean toward the party as they are understood than go to the polls. The claim is made that North Carolina has 87,000 white Republicans, though at the last Congressional election the party vote was but 67,000. The cause of this apathy is very simple: the dissensions among State and local leaders over the distribution of Federal patronage. Their quarrels on the subject are constant. It is said to be inferred, however, that the entire Republican leadership of that State is based on the foundation of Federal patronage. This would be unjust to some of the men there who write and talk for the party principles,

though they refuse to have anything to do with the organization so long as it means a squabble for office and nothing more. The feud between Henry Clay Evans and Congressman Brownlow has done much to keep Tennessee Democratic. It is the only issue for Republicans in the State. Federal patronage is the stake both sides are playing for. There is not the slightest pretense of an appeal to the people on national issues. Thousands of voters disgusted by the quarrel have either supported the Democratic candidate or remained away from the polls. The Federal administration has been lacking the Evans faction with patronage, and this has added to the intensity of the bitterness. It should be said, however, that no election goes by default in Tennessee. The Republican leaders there are run to win, though a candidate for office identified with one of the factions is bound to be knifed by the adherents of the other. The situation in Missouri is more encouraging for the Republicans. Their party has profited by the personal popularity of President Roosevelt with the great mass of people and dissensions among the Democrats. During the legislative session of 1903, there was a fight on among the Republicans over the election of a United States Senator between Richard C. Kerens and Thomas K. McElrath. Senator Warner was finally chosen. It is not believed this quarrel is going to affect the party strength in the coming election. The view of impartial observers is that, next to Theodore Roosevelt and Governor Folk, William J. Bryan is the strongest man, politically, in the State and may carry it next November. A conservative of the type of Alta B. Parker could not. The Republican party in Kentucky, partially free from the domination of Federal patronage, has been successful, and is strong at the present day. Its leaders believe that two things will give them the State in November: first, the quarrel which is destined to grow more intense between the machine of ex-Governor Beckham and the Democrats opposed to it, and second, the nomination of Roosevelt. The Westerner is not strong in Kentucky. In 1900 McKinley carried the State. Four years later it went for Mr. Bryan by a plurality of 8000. In the last campaign Judge Parker, despite the strength of President Roosevelt, carried Kentucky by 12,000.

The Republican stronghold in Virginia is in the southwestern part of the State, lying next to southern West Virginia, eastern Kentucky, eastern Tennessee, and the western part of North Carolina, this territory forming the Ninth Congressional District. The better classes of the native population are overwhelmingly Democratic. The Republicans are mainly from the element which furnished Union soldiers during the Civil War. This class has always been opposed to what it terms the aristocracy, especially of eastern Virginia, and hence, it is charged, plays some part in its vote. The Republican strength in North Carolina, the same as in Virginia, lies also in the mountainous section of the State. The Union spirit prevailed here in 1860 because there were few negro slaves, and the people at that time were opposed to the dominant element of the State. The bulk of this vote is white. These Republicans stand as well socially as the Democrats, but in the east there is, practically speaking, as such thing as a decent white Republican. The main strength of the party in Tennessee is in the eastern part of the State. The voters there are Republican because they are Republicans. Many hate the Democrats because of Civil War memories. They were poor before that time and hated the slaveholders. The Republican strength in Missouri is confined mostly to the large cities. The party has also been dominant in the northern tier of counties near the Iowa line, and has progressed much in the southwestern or mining section. The Republican strength in Kentucky is in the eastern or mountainous section for the same reasons as exist in North Carolina, eastern Tennessee, and western Virginia.

The character of Republican leadership throughout the doubtful South is no better or worse than the Democratic. It may be said that the old reconstruction type of leader has become extinct. For those unfamiliar with conditions in the South, it is only fair to add that the Republican leaders of to-day are all white. The day of the negro boss has also passed.

Bacon Sloop is chairman of the State Committee in Virginia. E. F. Summers, Collector of Internal Revenue of Abingdon, George E. Bowden, of Norfolk, member of the National Committee, L. L. Lewis, of Richmond, and Charles Canney, of Suffolk, are some of the more prominent leaders. A. Brown Allen, of Winston, and Mervin Treat, both Federal officeholders, are also factors. Most of the men mentioned are of the machine politician type. Bacon Sloop became chairman of the State Committee through depositing Park Agnew, of Alexandria, from that post. Agnew was one of the higher type of leaders and widely known and respected. As a candidate for Congress he carried a considerable vote. W. H. B. of the great Confederate leader, Marion Butler, former United States Senator, who now lives in Washington, claims to be boss of his party in North Carolina. Its other leaders are Jeter C. Pritchard, United States District Judge of the Western

District; his son-in-law, State Chairman Thomas H. Rollins, of Asheville; Judge A. C. Adams, of Greensboro; Thomas W. Nettles, a leading member of the Asheville bar, whose pamphlet on his party in the South attracted much attention some months ago; and Walter A. Hildebrand, editor of *The Industrial Area*, Greensboro. The Republicans in Tennessee are all men of high social standing. The fact is, more having the upper hand, led by H. Clay Evans, ex-Union Commissioner, First Assistant Postmaster-General and Consul-General in London. He is Northern born, his face changes him with being a carpetbagger. His chief lieutenant is Sewell Sanders, chairman of the State Committee, who is a prominent churchman. Evans, it is said, holds his present power by forming an alliance with Congressman Nathan Hale, of Knoxville. Mr. Hale is a candidate for Congressional nomination and also reelection to Congress. The opposing faction is headed by Representative Walter P. Brownlow. His chief lieutenant is Richard W. Austin, consul at Glasgow, Scotland. Austin is now a candidate against Nathan Hale for the Congressional nomination from the Second District. Brownlow was reelected to Congress in 1906 by a majority over both the Democratic and leading Republican candidates. The independent Republicans had the support of the State machine. The factional quarrel in Tennessee has a peculiar history. Tennessee is the only one of the eleven seceding States which did not have a carpetbag Governor just after the war. A Tennesseean, Andrew Johnson, was President, and he upheld the administration of "Furson," William H. Brownlow. The carpetbaggers then appeared and attempted to secure control. This was H. Clay Evans. Thus began the Evans-Brownlow feud, which has continued in one form or another at intervals since 1870. A peculiar feature of it is that the Evans faction, on the one side, and the other side, have high standing with leading Democrats. In Tennessee the native-born Republican who hates a carpetbagger. The character of Republican leadership in Missouri is better at the present time than it has been for years. Some of the party leaders are Thomas K. Veal, Attorney-General; Walter S. Bailey, State Chairman; Attorney-General Herbert S. Bradley; Thomas A. Atkins, National Committeeman; Cyrus P. Wallbridge, former mayor of St. Louis, and Charles Nard, an eminent attorney and close personal friend of the President. In Kentucky, the Republican leaders at the present time are Governor Augustus D. Wallace, a man of much standing and ability; former Governor W. O. Bradley, the present incumbent of his party for United States Senator; William Marshall Inghill, R. P. Ernst, and Mayor Grinstead of Louisville. The only danger of this leadership being ended or tainted lies in interference from Washington, which has given in the past to be the cause of the party not alone in Kentucky, but throughout the South. Twelve years ago, W. O. Bradley, then Governor, controlled the organization. He gave the State a good administration, but declined to take orders from Washington, and in consequence lost his seat to Senator W. O. Bradley. In 1890, Taylor, the Attorney-General under his administration. The party under the new leadership became profligate. Debow and Taylor only held control through the distribution of Federal patronage. With the death of Taylor for Governor, and his flight into Indiana, and the retirement of Senator Debow, the leadership was bestowed upon John W. Yerkes, an able lawyer and cultured gentleman, but a poor politician. He was named for Governor, but defeated at the polls. This did not affect his control, however, and four years later he defeated the nomination of Morris K. Bicknap, a substantial Louisville business man, and was also defeated. In the mean time Yerkes was appointed Commissioner of Internal Revenue, and held the post until last summer, when he resigned to practice law in Washington. It is said he has permanently retired from politics and will not be a candidate to succeed himself as member of the National Committee.

The influence of Mr. Roosevelt upon his party throughout the South has been great. There can be no denial that his popularity among Democrats in the various States has been a tower of strength to the Republican organization and a great factor in making part of the South both doubtful and debatable. But without attempting to rob the President of any credit for this, it should be recalled that William McKinley had already begun with much success to make his party regular in the Southern States, and Mr. Roosevelt very slowly took up the work where the late President left off. There is no doubt, though, that the present occupant of the White House has failed to exert all the influence for good which he might have, and in consequence the solid South is not so near being broken as it should be. During the last Congressional campaign the writer was discussing the general subject of this article with a prominent Southern leader of the Republican party. The latter urged that if the Federal administration would cease treating the South like a step-child, appoint some of its leading Republicans to higher Federal offices, and especially give the section representation in the cabinet, the last vestige of sectional feeling would vanish, and the Democrats would have a hard time retaining their control. This leader was probably right so far as representation in the cabinet is concerned, but he was wrong in assuming more patronage as a motive in building up the party there, he seems to aggravate the disease from which Republicanism of that section now suffers and has suffered. Instead of mitigating the evil, Mr. Roosevelt has pursued the mistaken policy of allowing the Federal patronage to be the subject of factional quarrels, and in introducing those who have thrived on it to his generation, and have been more aggressive in capturing delegates to the national convention than fighting the Democrats at the polls. This is the discouraging side to many Republicans of the situation in the South.

The President has done nothing to leave up his party in Virginia. He has recognized the same set of men who have controlled the Federal patronage under past administrations and follows their suggestions in every appointment. Any apparent strengthening of the Republicans which may manifest itself in the coming election would simply be due to the personality of Mr. Roosevelt. The President is also popular with many Democrats in the States. But dislike and distrust of the men at the head of the Republican organization might prevent many Democrats from voting for Mr. Roosevelt or Secretary Taft or whoever the party may name for the Presidency. The President has favored both factions at different times. Southern Democrats are not up to the standard of his representative. Both have carried on a spirited contest to win his favor by shouting loudly for him. There is nothing, however, on which an opinion may be based as to whether Mr. Roosevelt has been a factor in the present condition of his party in that State. There is no doubt, though, that if the President had been inclined to lend more of his influence to those Republicans already mentioned who are members of the party for the sake of principle, not office, the condition of it would be more favorable than at the present day. The President must also bear his share of responsibility for being a cause of the continued feud in Tennessee. If he would have kept out of the quarrel between the Evans and Brownlow factions, and especially refrained from strengthening one side as against the other with Federal patronage, his influence might have been powerful enough to unite the party in the end. He is personally very strong in the State. There is no doubt that were he to reconsider his refusal and be the nominee, he would not alone get the Republican and colored vote, but also that of many Democrats. Much of this support would be due to his misalliance. Whether Mr. Taft will be as strong in a contest, the President is almost strong among Democrats in Missouri. He has admitted that he has strengthened his party there. The same may be said with reference to Kentucky.

The Republican party of the doubtful South has become a white man's party. The negro is no longer a factor in the election of a leader from Tennessee, said that his organization had allowed the negroes to get their own way long ago, and charged the Democrats with trying to get their votes. This change may account for the rise of the Republican party in the Southern States.

The negro is prominent in politics in Virginia. The Constitution of 1902 has practically eliminated them from the electorate. Under its provisions there is required a payment of poll tax six months prior to election; further, that applicants to register must do so in their own handwriting, in the presence of the Registrar, in other words, from the close of the war to the early eighties, the negro wielded a powerful influence in the politics of the State, causing it to go Republican several times. It was through the aid of the negroes that General William Mahone was elected to the Senate. The negro domination ended with the second Reconstruction. At Louisville about 1870 the white and colored men in the State said that the practical disfranchisement of the negro was the best thing which ever happened to the Republicans. The fact that the negro votes the Republican ticket as sure as he goes to the polls has hurt the party in the whites, and caused the color line to be drawn with a tightness entirely incomprehensible to the people of other States. The negro is not a great factor in Republican circles of North Carolina, though his vote is accepted on election day whenever he can qualify. The colored vote in the western counties is hardly large enough to count. The only elections carried for the Republicans in recent years have been entirely through the white vote. There was a strong effort for years on part of the better element of the party to break away from the negro, and when the constitutional convention was called, mainly for the purpose of disfranchising him, the white Republicans in the western part of the State declared their acquiescence on the ground that they wished to build up a white party in the State. The negro has never been a great factor in Tennessee, either. There are some who may be placed in the category of leaders. Both factions have negro support, the Evans faction having the larger. The party is ruled from East Tennessee, which was Whig before the war, loyal during the war, and Republican since. No class of people hate the negro more than the Republicans of East Tennessee. Even the slight influence which the negro exerted in middle and western Tennessee has been disappearing. The Republican organization in Nashville some time back practically repudiated all negro politicians. The negro is only a minor factor in the party in Missouri. He is not prominent in party affairs, though he is recognized in State committees and conventions. There is no particular evidence in Missouri to break away from him. The negro as a leader has no influence in Republican circles in Kentucky.

The tariff is said not to be a factor in the strength of the Republican organization of the doubtful South, though the Southern States have turned to manufacturing to a greater degree than ever before. No doubt, however, if the tariff becomes an issue the situation will change.

Virginia is the only State where it plays a strong part, and its influence is confined to the mountainous section. A great deal of capital has been invested there from Pennsylvania, and other Northern States in coal and timber properties, and the investors are Republicans with great influence. There is little sentiment for and no special sentiment against a protective tariff in North Carolina. In Tennessee there is some inclination among Democrats to favor a protective tariff, but this sentiment is said not to be strong enough to influence any political result. It is said that the Republicans of Kentucky would rather avoid the tariff as an issue, because it would open a way for a union of the Democratic forces.

GENTLEMEN OF LEISURE

DRAWN BY GEORGE WRIGHT

A New European Question

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

THE title of this article is perhaps a little misleading. The European Question to which it refers is the question of the Baltic and the North Sea, and of the relations of the Powers that have interests therein. It is not really a new question. There was a time when it was the chief preoccupation of European diplomacy. Many international treaties, compacts, and conventions have been framed to deal with it. But to the present generation it seems new. Not many readers, I suspect, realize the meaning of "The Northern Question" which is now making its reappearance as one of the standing headlines in the daily press, which is at this moment the subject of momentous negotiations between the leading Powers, and which in a very short while will regain most of the diplomatic prominence it enjoyed from fifty to seventy years ago.

I propose very briefly to sketch as interesting and complex as any that new confronts the statesmanship of Europe.

The event that first directed attention to the newer aspects of the Northern Question was the rupture between Norway and Sweden. The integrity of the united kingdom was guaranteed some fifty years ago by a treaty between France and England as a preemption against Russian aggression. When the union was dissolved in 1905 the treaty naturally became imperative. The question then arose as to the international status of Norway and of Sweden, and the best means of maintaining it. So far as Norway was concerned the solution was found a few months ago in a treaty guaranteeing the integrity of the new kingdom and signed by Great Britain, Russia, Germany, and France. This left Sweden still unprotected, for, more than a little aggrieved by the special position her late partner was occupying. Negotiations have, therefore, been begun between Sweden, Germany, and Russia which, if all goes well, are expected to result in a declaration affirming the status quo in the Baltic. Such a declaration does nothing to offend Sweden's pride, while it does as much as any diplomatic instrument can to guarantee her security. It is compared to the agreement of a few months ago by which Great Britain, France, and Spain regulated their interests in the Mediterranean and the Atlantic.

The object, then, of the present negotiations between the governments of Stockholm, Berlin, and St. Petersburg is to assure to Sweden a standing and a security equal to that which the treaty of last November bestowed upon Norway; and the means by which that object is to be attained is a declaration on the part of these three Powers that they intend to respect the status quo in the Baltic. So far as it goes, all this is quite satisfactory, but it does not go very far. Germany, Russia, and Sweden are by no means the only Powers with definite political and commercial interests in the Baltic. Denmark, for example, is emphatically a Baltic Power. A glance at the map shows that the entrance to the Baltic is here to open or close at will. Great Britain, again, has always made it a cardinal point of her policy to maintain the freedom of the Baltic. Less than three years ago the Channel Fleet was sent to Skawenish as a warning to all whom it might concern that any attempt to declare the Baltic a closed sea would be regarded as an act hostile to British policy. France, too, is equally concerned in preserving the Baltic as a *mare liberum*. Moreover, in any comprehensive discussion of the Baltic question as a whole, the problem of the Aland Islands is bound to arise. They lie, it will be seen, off the western coast of Finland and command the approaches to Stockholm. By the Treaty of Paris, to which Great Britain and France were signatories, Russia, in a loan the Aland Islands belong, agreed neither to fortify them nor to use them as a naval or military base. Different opinions may be held as to whether, in the conditions of to-day, it would be better to reaffirm that agreement or to abrogate it or to modify it. But obviously the matter is one in which Great Britain and France have a claim to be heard that cannot be ignored or denied.

For these reasons it is felt that the projected Russo-German-Swedish declaration touches no more than the fringe of the Baltic question, that it is altogether incomplete and without any real validity, and that to make it satisfactory it should be extended to include Denmark, Great Britain, and France and should settle

The Baltic and its Gateway

firming the status quo in the North Sea. But, quite apart from the inadequacy of any agreement that is confined merely to Stockholm, St. Petersburg, and Berlin to settle the Baltic question as a whole, it is very doubtful whether the problem of the Baltic and of the North Sea can thus be separated. In the opinion of England they ought to be treated together. The mere fact that Denmark is washed by the waters of both seas is enough, it is held, to show the impracticability of taking the two problems one by one. The two are essentially indivisible, and the Baltic question, though a wide one in itself, is only part of a far wider one.

This greater question is comprehensively known as the Northern Question. Its essence is the growing pressure of two mighty and imperious empires upon a series of small and ill-defended states that cut them off from the full freedom of the sea. The empires in question are of course Russia and Germany; and the states upon which they impinge are Norway, Sweden, Denmark, Holland, and Belgium. It is a compromise that the key to all Russia's expansion is to be found in her desire to reach the warm waters. Japan has turned her out of Port Arthur, the British navy forbid her access to the Persian Gulf, and Turkey controls the Bosphorus. In one quarter only is there the chance that Russia may yet win her way to an ice-free port on one of the great oceans. Very few people realize that the course of her expansion has lain westwards as well as eastwards, and that to-day only a narrow strip of Norwegian territory separates her from the freedom of the northeastern Atlantic. The possibility that that narrow strip may one day be eroded and that another Port Arthur may arise on the northeastern Atlantic within a thousand miles of Great Britain, forms one and by no means the least ominous of the many aspects of the Northern Question.

Another aspect is presented by the political needs and the geographical position of Germany. Germany, also, is to some extent an imprisoned empire. Denmark and Sweden between them hold the keys of the Baltic. Unless through the Kiel Canal, the shipping of Germany's Baltic provinces cannot reach the North Sea without threading the narrow passages of the Sound or the Great Belt, both of which the Danes can command at will; and it is an open secret that the Kiel Canal has proved a great disappointment, cannot accommodate the new ships of the *Deutsch-Gründungs* type, and will have to be rebuilt from end to end—assuredly that will consume nearly ten years and over \$30,000,000. Holland, moreover, besides controlling the mouth of the Rhine, excludes Germany from the easiest access to the North Sea; and a little to the west, Belgium interposes a similar barrier. The short and difficult coastline between Denmark and Holland forms virtually the sole effective channel through which the commerce of this great and aspiring nation is at liberty to force itself with ease and security. The impregnable to break down the barriers presented by these small and weak states is constant and inevitable; and the Pan-Germans of any race have made little effort to resist it. The economic and political absorption of Holland stands high on their programme. That Germany, then, may sooner or later have her way through Holland to the North Sea, or by conquering or otherwise dominating Denmark may acquire effective control of the entrances to the Baltic, is also a possibility of the Northern Question.

Wanted: An Unfenced Refuge for Big Game

By HENRY JAY CASE

To make thousand-acre sections of the National Forest Reserve a refuge for big game is the object this winter of a wide-spread movement among sportsmen and naturalists. Twice before have they succeeded in getting a measure through the United States Senate, and each time it has been blocked in the House by a Representative from Wyoming. To-day they are again before Congress with a still more urgent appeal. Big game on the Western ranges is rapidly disappearing. No appropriation is asked for. The measure merely gives power to the President to designate here and there mountain plots in which the game laws will never be suspended. No restrictions are placed upon these timber lands against further settlement, grazing, mining or camping. The

that the Smithsonian Institute recently offered \$300 for a single specimen. Probably the most startling instance of disappearing game nowadays is the American elk. His antlers, head, hide, and horns rarely marked him a prize for pot-hunters; but if his slaughter in the past was rapid, the cash value to-day set upon his teeth as the emblem of high office in a social order has branded him for extermination.

Such have been the strides of commerce and the industries that to-day only a comparatively few million acres of mountain and timber land across this great domain are now left to thrive in their natural surroundings. Congress, by its reserve act, set them aside for public parks, recreation grounds, and settlement, holding it to be the nation's duty to check their further waste by fire and reckless cutting. Pursued by trappers, tradesmen, and

The Establishment of this Herd of Bison on the Wichita Range for breeding purposes cost the Government \$30,000. Congress, by establishing Refuges in the National Forest Reserve, can save the last of the big Game without the Expenditure of a Penny

woodsmen, rattlemen, and naturalists of the West, declare that in a few years more, unless more adequate protection is offered, the only big horn sheep to be seen in America will be confined in the cages of our zoological parks or shown under canvas by travelling shows.

The last year that the Sioux Indians obtained permission to leave their reservation and go on a hunt for meat they slaughtered five thousand head of buffalo. The next year the American bison had practically disappeared from the plains. Not so many years ago, during the migratory period of birds, the sky was darkened with the flight of wood pigeons. To-day these birds are so scarce

pot-hunters, the last of the big game and wild fowl have fled to these isles of safety, there to breed and rear their young. But even in these rocky fastnesses only the strongest and hardiest survive the winter storms and the pursuit of hunters.

There is no national law to-day to cover this animal life, and the statutes of the various States through which the big game belt extends differ so widely that little or no protection is afforded. Only in the Yellowstone National Park is big game absolutely protected, and the portions from this great government reserve already furnished much of the big game now running in the West. Outside the boundaries of the Wyoming park, in circles radiating to the coast and Canada, the game laws, despite the efforts of conscientious wardens and rangers, are openly violated. A local hunter is often caught red-handed with his kill, tried by a jury of his peers and promptly acquitted, it being difficult to make these roving men of the mountains and ranges see fairness and justice in restricted shooting.

On the day before Christmas two game wardens in Flathead County, Montana, stumbled upon an underground line on a railway line which had shamelessly been the means of furnishing the hotels of Seattle and Tacoma with a constant supply of fresh game for years. At a station named Whitefish the game protectors saw a new agent putting enough boxes and mail sacks on the train to supply reading matter for a transcontinental run. The train was a Seattle local. After it was under way they went into the baggage-car to examine the magazines, and found instead fresh venison dressed and carefully packed in ice. The news agent was taken off the train and held before a magistrate, who let him off with a fine of \$25. Afterwards the ruffian admitted that he and his partners by this trade earned up a large sum through the closed season each year.

The big game which sportsmen and naturalists are eagerly seeking to protect is not of predatory character. Even the grizzly bear will not raid the ranchers' stockyard or sheep pens. Wolves, coyotes, crows, and lark cats are not big game, but are regarded as pests, and cordially hated by sportsmen, ranchers, hunters, and trappers; in fact, such is the desire to rid the ranges of these animals that the forest rangers are given power to lure jackal-hunters to assist in their trapping and hunting.

TON STEVENS

An Oriel in Eden

By JEANNETTE MARKS

DRAWINGS BY ANNA WHELEN BETTS

MR. JENKINS looked over at Mr. Jenkins the shop-merchant and bard, and there was love and wonderment in her eyes. He was reclining in an armchair, his long legs stretched before him, his head at rest against the chair, his hands folded over his stomach, his eyes light closed, his mouth wide open, his lips moving, and every once in a while his tongue quickly lapsing his upper lip. Junny looked away and out of the windows to the meadows that rolled up into the mist like big gray waves; this was the act of composition, she knew, and too sacred even for her, his humbler half, to behold. But the misty uplands suggested overmuch of that unnamable something which when she looked at her husband made her wish to shut her eyes, for might she not, Junny reasoned, see more than she ought to see of the divine spirit that moved behind those hills and behind the lips of Ariel Jenkins. So her thoughts slipped back into the living room of Ty Mawr while her eyes avoided the inspired contents of the armchair. She had been a bride and the envied mistress of Ty Mawr just two weeks;

however, she was forty and matrimony was late for her, and Ariel Jenkins being forty-five, it was even too early for him. Junny felt her responsibilities keenly. Was she living up to them? She was at the mercantile centre of the village, her better half was not only a merchant, but also a crowned poet, her house the most important in Glaflyn. And Glaflyn expected changes; Mrs. Parry Wynn the laird said so. Mrs. Thomas Roberts the tinsmith had prophesied, and Mrs. Jeezer Morris the minister had whispered tolette Griffiths, who had told Junny of these expectations, that she supposed—my, she hoped—Ariel Jenkins's home with a woman in it would soon look like a bird-faring place and receive some improvements. Junny's glance roved through the sitting-room. She had made a few alterations, but somehow in the half light of dusk they seemed as nothing. What was the missing or replenishing of a taper-holder, a fresh case for Ariel's harp, a new cover for the table, or the addition of a few pleasant-faced china cuts to a regimental mantelpiece,—indeed, she sadly asked herself what were these changes in comparison with the unappointed something she was expected to accomplish as Mrs. Ariel Jenkins the shop?

She was a stranger in Glaflyn, an intruder from a great outside world, and now she felt bewildered, lonely. Her eyes flitted to Ariel's face for comfort.

"Dearest!"

"There was no answer."

"Is it comin', Ariel dear?"

"Aye," he snapped.

Junny winced; she had never lived with gentleness, and somehow she thought it would be different. Her deep-blue eyes had a still look in them that suggested not only a long habit of self-repression, but also perplexity, and sadness, too; there was appeal in every feature of her face—an appeal made the more pathetic, perhaps, by the childlike lines of pale-gold curling hair about her forehead and tired eyes, and the delicate hollow beneath her cheek bones and the fragile sweetness of her mouth. It was a face in its soft bloom and delicacy forever young and yet undeniably weary. She straightened out her kittle and again her glance roved the room. There must be a clean hearth brush, new muslin curtains for the eastward; the stairway landing, where it turned by the front windows, looked even in the twilight shabby with the wear and tear of heavily booted feet and chaps; the light from the oriel window above the landing shining through with bald brightness upon the stairs. As she looked at the light Junny's eyes dimmed, her face flushed, and she leaned forward, gazing intently at the window. For the minute she had forgotten Ariel, but he, puff, puff, puff, with many sighs and yawns, was coming out of his inspired room. His awakening look fell upon Junny there where she sat, her hands clasped in her lap, her shoulders tipped forward, her chin tilted upward, a circle of quiet light about her hair, her eyes intent upon the stairway window.

"Junny dear, what is it? What are you lookin' at?"

"Oh! no—aye, lad, I—I—"

"Well, well, Junny!"

"Ariel, I was thinkin'."

"Aye, an' ye were pleasin', too."

He was thoroughly aroused now from his inspiration, and studying that object, woman, which through some twenty-five years he had sung and praised. Ariel's eyes searched her; stanzas, metres, rhyme, these, were all forgotten, for he saw that Junny possessed a thought she had no intention of parting with to him. He glanced from her to the window upon which she had been looking so rapturously when he surprised her gaze. So far as he

So Junny watched Ariel's thin fingers work skillfully, swiftly, with the pencil

could see it was like any other stairway light in Glaslyn, except that it was oval instead of rectangular, and perhaps a little deeper than some, but otherwise precisely like scores he had seen. Then he called imagination to his aid—that imagination which had been the means of beguiling shillings over the counters of his shop, which had won for him a comfortable income, commercial success, as well as made him the foremost bard in his county. He peered through the window; what he beheld was a bit of dusky sky with a shadowy star seemingly behind it. He dismissed long meditation and returned to the study of his lute. It was a whim probably; perhaps one of those unshaped thoughts, elemental, unspoken, to which women listen in their idle moments; indeed, it might even be some dreaming about him of which Janny in the shydom of their relation, still new, was too sensitive to speak. Gradually Ariel forgot the problem in his consciousness of the charm of Janny with her deep-blue eyes, her child-like pale-gold hair, the delicate lines of her fragile face, so different from the Welsh women of their village. Under his scrutiny Janny sat serenely with a more than wonted air of self-possession. She interrupted him.

"Ariel, ye've been to sea, dear?"
"Aye, when I was a lad."
"Was it for long?"
"Not long, two years sailin' with cargoes between our coast and Ireland in the company."

"Did ye learn much of the ways of sailor folk?"
"Aye, much."
"Bumins up an' down the ropes?"
"Aye, that, an' much too."
"Did ye learn tattooin', dear?"
"Aye; the marks ye've seen on my arms an' old salt taught me to do. The sailors were clever with the needle, sketchin' as well as sewin'."

"Do ye think ye could sketch a star now, Ariel, or have ye forgotten?"
Ariel laughed, partly with pleasure at this talk by the fire, partly from joy in the companionship.

"Aye, I'm thinkin' I could, little lamb."
He drew his chair closer to hers and saw her face brighten; it rested her as to have him near her, and her thoughts sped back all the years of loneliness and hunger for the things she could not have; she had a new consciousness of life and of being useful; it was not merely Ariel, it was the house, too, and what she could do to make it—well, the word escaped her: anyway it was the home as well as Ariel, and it was lovely to think of what she could do for it while he made poetry and sold things in the shop.

"An', Ariel, could ye sketch me an anchor an' a bit of rope?"
"Aye, dearie, I could; ye know I could anyway, for I had drawn at the school in Carnarvon while I was an apprentice there."

"Drawin'?"
"It was man's idea."
Janny's eyes grew large.
"Ariel, do ye—do ye—think ye could draw me a—cat?"
Ariel took one look at Janny and burst into laughter; shop, poetry, everything was forgotten in his amusement at her child-like eagerness. Suddenly he stopped, for Janny's face was quivering. Aye, he had forgotten, too, that this was no peasant woman; his laughter seemed brutal.

"Janny, little lamb," he said, softly, drawing her head to him.

"I could, dear; I'll sketch all the cats ye want."
Janny sighed comfortably, her head still against his shoulder, the words coming away from her heart. She could do it now; it would make the greatest difference; Hetta Thriftless and others should see that she was something more than a bit of porcelain in Ariel's home, that she could do something more than merely oversee house cleaning. Besides, it really was something more—it was having an idea of her own, and that, until Ariel showed her, she had never been allowed to have. She reached up and patted his face; even her gestures were incomprehensibly childlike. What she lacked in the passion of a woman she seemed to make up in the perfect trust of a child. Ariel, with all the selfishness of a man who has lived by himself and who has lived much in his own mind, thought now with a pang how lonely Janny must have been even since she came to him: the appeal of her confidence touched the best that was in him, the protection that was his to give her, and some potential sense of fatherhood. Aye, he knew how tired she was after the life that lay behind her, and he gathered her into his arms, holding her there quietly while he talked.

"What shall it be, Janny? A star, an anchor, a bit of rope, an' a cat, did ye say, dear?"

"Aye, a star, Ariel, please. I don't think I want the anchor. The bit rope would be nice, dear. An' I'd like the cat."
"An' what are ye goin' to do with these drawin's, Janny? Are ye goin' to hang them on the walls?"

"No, I'm no goin' to do that."

"Well, it's just as well, dearie, for Hetta Griffiths an' Mrs.

She imagined Ariel was looking down

had lost much in that sorry life before Ariel took her and brought her to live among strangers, whose names and feelings she had no means of postulating. But the tenderness, the innocence, the expectancy of childhood, had remained with her as if making amends for her loss or availing the easiness of untroubled inquiries. She set a candle beside the settle, lifted the cover, took out two long rolls of paper, closed the settle and laid her pencils to the table. Then she sat down with trembling fingers, rolling out several feet of green and crimson paper and a small sheet of yellow. She placed weights on the corners of the lengths, pausing to run her fingers into her hair as she gazed with rapt eyes upon the colored surfaces, commonplace enough to all appearances. She took the cat, laid it carefully on the crimson, pinned it down, and pencilled around the edges. In the same fashion she drew the outlines of four yellow stars and some lengths of yellow rope. Finally with a pair of shears she cut out all the outlined figures. She lifted the cat, freed now from the matrix of surrounding paper and colored with the lifelessness of a new liberty, and held it to the foot and a half of length against the candle light. The light shone through the crimson paper but dimly. Janny smiled, took a small cake of pumice, melted it, and with a bit of cloth sponged the cat as it lay upon the table. This she did also to the four yellow stars, to the lengths of rope, and a large piece of green paper upon which the original cat pattern had been copied. Once more she lifted the crimson animal to the light,—the candle flame shone through clearly with a beautiful crimson hood of after light. After this Janny broke a half dozen eggs, separating the whites from the yolks. Her fingers worked feverishly now and her eyes kept measuring distances; in her nervous haste there were moments when she seemed hardly able to accomplish the next step forward in the task she saw already complete in her mind's eye. She stopped to listen for sounds and steps as she worked, and again and again she imagined Ariel was looking down from the head of the staircase. But she finished the work with a hurried, interrupted, and with a sigh, half sob of weariness, half contentment, and with many a glance of admiration as she went, she tipped up the stairway. Ariel was sleeping, and as she crept into bed she put out a hand to touch his thick black hair, and then, cutting into the cool white of the pillow, fell asleep as children sleep, one hand resting feebly on his arm.

Ariel awoke at the waking time of all Glaslyn—the dawn; Janny lay beside him, still sleeping, her face heavily shadowed in her abundant hair. She seemed so wistfully childlike and her closed eyes so unforgettably weary. Perhaps it was merely the shadow of the curfew down and her hand, but the eyelids had a kind of veined transparency and her face a transparent pallor, and the mouth drooped. Ariel's emotions under him consciously; he thought with a pang of Janny, and he made

Gomer Roberts the chimney an' Mrs. Parry Wynn the baker would be hauntin' Ty Mawr. But what are ye goin' to do with them, dearie?"

"Ariel, I couldn't say now"—Janny stirred uneasily—"I might be hangin' them in our bedroom an'—an'—an' I might be puttin'—puttin' them in the—Bible to press. They'd be useful."

"Aye, that's so. An' how large shall I draw them?"

Janny thought again.

"The cat, dear, I'd like about a foot long—that is, from his tail to his whiskers,—no, I'm thinkin' that's too narrow for the cat; from the tail to the whiskers I'd like him one foot an' a half, Ariel."

Janny's glance took a flight over Ariel's shoulder.

"An' the star?"

Janny thought again.

"Six inches from point to point, an' four stars—no—one star will do—I can cut—oh!"

"Ariel, our star, please."

"An' the rope?"

"It's the twisted kind I want, an' it must go all around the—oh dear! Ariel, about an inch with, please."

"Good. One cat, one star, one inch rope. Anything more, little lamb?"

"No-o-o; could ye do it now?"

"Aye, dearie; fetch me the ruler, the paper, an' a pencil."

So Janny watched Ariel's thin fingers work skilfully, swiftly, with the pencil, the ruler measuring off star-points and a cat's length as carefully as if the paper were Welsh flannel worth one and six pence. And the next night, after a day of seasonal elation of feeling, Janny, when sleep had come to Ariel, stole noiselessly from the marital side, crept to the whitewashed wall of their bedroom, pulled in moonshine, felt for the white paper cat and star and length of rope hanging there indistinguishable, caught the edge of the paper with her fingers as she felt about, unpinning the pieces, and tipped out of the room and down the stairway.

As she moved about the sitting room in her nightgown she looked pathetically little, the dusk in her cheeks marking her eager helplessness. Much had slipped by her, and she had lost much in that sorry life before Ariel took her and brought her to live among strangers, whose names and feelings she had no means of postulating. But the tenderness, the innocence, the expectancy of childhood, had remained with her as if making amends for her loss or availing the easiness of untroubled inquiries. She set a candle beside the settle, lifted the cover, took out two long rolls of paper, closed the settle and laid her pencils to the table. Then she sat down with trembling fingers, rolling out several feet of green and crimson paper and a small sheet of yellow. She placed weights on the corners of the lengths, pausing to run her fingers into her hair as she gazed with rapt eyes upon the colored surfaces, commonplace enough to all appearances. She took the cat, laid it carefully on the crimson, pinned it down, and pencilled around the edges. In the same fashion she drew the outlines of four yellow stars and some lengths of yellow rope. Finally with a pair of shears she cut out all the outlined figures. She lifted the cat, freed now from the matrix of surrounding paper and colored with the lifelessness of a new liberty, and held it to the foot and a half of length against the candle light. The light shone through the crimson paper but dimly. Janny smiled, took a small cake of pumice, melted it, and with a bit of cloth sponged the cat as it lay upon the table. This she did also to the four yellow stars, to the lengths of rope, and a large piece of green paper upon which the original cat pattern had been copied. Once more she lifted the crimson animal to the light,—the candle flame shone through clearly with a beautiful crimson hood of after light. After this Janny broke a half dozen eggs, separating the whites from the yolks. Her fingers worked feverishly now and her eyes kept measuring distances; in her nervous haste there were moments when she seemed hardly able to accomplish the next step forward in the task she saw already complete in her mind's eye. She stopped to listen for sounds and steps as she worked, and again and again she imagined Ariel was looking down from the head of the staircase. But she finished the work with a hurried, interrupted, and with a sigh, half sob of weariness, half contentment, and with many a glance of admiration as she went, she tipped up the stairway. Ariel was sleeping, and as she crept into bed she put out a hand to touch his thick black hair, and then, cutting into the cool white of the pillow, fell asleep as children sleep, one hand resting feebly on his arm.

Ariel awoke at the waking time of all Glaslyn—the dawn; Janny lay beside him, still sleeping, her face heavily shadowed in her abundant hair. She seemed so wistfully childlike and her closed eyes so unforgettably weary. Perhaps it was merely the shadow of the curfew down and her hand, but the eyelids had a kind of veined transparency and her face a transparent pallor, and the mouth drooped. Ariel's emotions under him consciously; he thought with a pang of Janny, and he made

resolutions. With this awakening he transferred a little of his poetry from the bard to the man. Aye, he acknowledged to himself, this might well be called the education of Ariel Jenkins, bard and merchant. And for the first time a thought that gripped his heart brought him no desire to turn it into rhyme. He recalled compassionately all her efforts to make improvements in the house, her evident inability to understand and cope with the absurd Welsh women of their village, and he remembered with fear the prying curiosity and overt enmity these women had shown towards Janny. Then he wondered in a desultory way what she was planning to do with the stars and the cat and the bits of rope. And after she awakened and they were talking at breakfast he reflected how easily his resolution won success, for Janny since he brought her to Glaslyn had not been as buoyant, almost animated, as she was this morning. Ariel thought, too, that he had not soiled before the way Janny had of looking at him, as if she expected him to discover some extraordinary joy; maybe she was merely looking to him for happiness, but certainly there was an air of anticipation about her to-day.

Upon finishing breakfast Ariel passed with a sense of secure well-being into his shop; so many problems were solving themselves, and, on the whole, the man made him happier than the bard. Even the flag sidewalk outside the shop seemed more than ordinarily lively and merry to-day. He saw neighbors passing and heard them chatting, and once in a while there was a loud outburst of laughter. Across the street, looking towards his shop, he beheld a little knot of men—Ivor Jones and Wil Penmorris and Parry Wyn—men who did not usually have time for mirth so early in the morning. They were talking and laughing, and Ariel saw one of them point towards Ty Mawr. Just then Mrs. Gomer Roberts the freewoman came in. She wanted some flannel for a blouse like the

material she was wearing, and Mrs. Roberts threw back her long cloak to display the red striped flannel. How was Mrs. Jenkins? Ariel thanked her; Janny was well.

"I'm comin' soon to have a good long visit with her," said Mrs. Roberts.

"Aye! Ye'll be welcome."

"Ye're makin' improvements, I see."

"Aye, a few," replied Ariel, using his yardstick deftly and wondering what improvements Mrs. Gomer Roberts could have had any opportunity to see.

"Glaslyn's no worse anything like it," continued Mrs. Roberts, straightening her beaver hat over the crisp white of her cap.

"No, I'm thinkin' not," answered Ariel, vaguely, rolling up the bundle of flannel with precise neatness.

He was still wondering why women talked in riddles when in came Mrs. Deezee Morris the seamstress. She had torn her blue kittle and wanted a new breadth. Ariel took down the cloth. Then were showered upon him in a compact form and one of greater authority practically the same remarks as those made by Mrs. Gomer Roberts: how was Mrs. Jenkins, she was coming to visit her, weren't improvements she saw, the like of which Glaslyn had not seen before. Mrs. Morris the washer had scarcely finished her purchases when in came Mrs. Parry Wynn the baker; they had evidently met that morning, and their greetings were purely conventional—a smile, a look of inquiry, a nod of assent. Mrs. Parry Wynn wanted some new cotton cloth, but apparently she also wished to make the same remarks as those made by Mrs. Gomer Roberts and Mrs. Deezee Morris.

Then Ariel Jenkins's thoughts began the converging process, began to gather in towards some definite centre, to fix themselves upon some one thing which all the valuable women must have in mind. And when Mrs. Parry Wynn left the shop, Ariel went to the door. Betto Griffiths walked by briskly, joining the women who had just made purchases and who were gathered in a little group opposite Ty Mawr. They were looking eagerly at the house and gesticulating. Betto Griffiths laughed as she pointed to Ty Mawr and shrugged her shoulders in the direction of the shop. Ariel's heart sank. What had Janny done to make the house such an object of attraction? He stepped out to the little group of customers and looked up.

Except for the quick flexing of the muscles in his forehead and the dilation of his eyes Ariel betrayed no emotion. The oriel window jutting over the street had been transformed; he saw no longer the clear glass of the stairway light common to Ty Mawr and the other houses of Glaslyn, but a crimson cat, forefist in air, blazoned on a green background, each quarter of the oriel brilliant with a yellow star, and the whole device bound dexterously together with a chaplet of rope.

"It does make a pretty light!" he exclaimed, thoughtfully; "pettler," he added, with pride, "than I had any idea it would."

The women stared at him.

"Aye, an' it's prettier within," he continued; "it sheds such a bright color on dark days."

"Is it so?" ejaculated Mrs. Parry Wynn.

"Aye, it is so," replied Ariel. "Out of Glaslyn ye see many colored windows like this in private houses—smart houses, of course."

"Just fancy!" responded Mrs. Deezee Morris. "We've seen them in churches, the non-conformists as well as the established, but we've never heard of colored windows before in a village house, especially not with such a cat—"

"Aye, the cat!" interrupted Ariel, in a cursing voice, the far-away, much-reverenced look of the poet in his eyes. "That cat is a copy from a medal taken from—the sar-coph-a-gus of Tiglath Pileser II. Aye," he added, dreamily, "the cat, the sacred symbol of Egypt, holy to the Muses, beloved of—"

"Mr. Jenkins, ye don't say so?" they all exclaimed, looking with curious glances at the oriel window.

"I will say," nodded Mrs. Gomer Roberts, "that it has an uncommonly intelligent look, whatever."

"Aye, so it has," agreed Mrs. Parry Wynn. "Intelligent an'—an'—lively."

Betto Griffiths glanced about the little group shrewdly.

"Aye, an' the stars, Mr. Jenkins?" she said.

"Na, the star! Betto Griffiths, ye don't say ye don't know the mesais of the five-point star, sacred in history, to sacred history, guide in the—"

"Oh, aye!" interrupted Betto, "if that's the star ye mean, I certainly do."

The little gathering took a fresh look at the window; their eyes lingered reverently now on the emblazoned group of cat and stars bound together with yellow rope.

"Aye, it's a wonderful idea!" asserted Mrs. Deezee Morris, from her superior position and knowledge.

"Aye, wonderful!" solemnly affirmed the rest.

"I'm thinkin'," said Betto Griffiths, an undisciplined look still in her eyes, "Mrs. Jenkins smile it?"

"Fut, Mrs. Jenkins! Oh no!" exclaimed Ariel, thrusting his hands into his trousers pockets. "I did it."

"Ye did!" they all exclaimed, admiringly.

"Na, Mr. Jenkins," continued Mrs. Parry Wynn, whose husband, the baker, had been standing across the street, not more than half an hour ago, laughing over the crimson cat rampant blazoned on the green field—"Mr. Jenkins, if Mr. Wynn thinks he could afford something like it, would ye be willin'—"

"Aye, gladly," returned Ariel; "but it's expensive, Mrs. Wynn."

"Oh!" chorused the women, in deferential voices.

"But I'm thinkin'," continued Ariel, "through any connection

Betto Griffiths laughed as she pointed to Ty Mawr

There was the furtive aspect of a trapped animal about her

"It came," replied Janny, glancing appealingly at Ariel—"it came from Liverpool."
 "Janny dear," corrected Ariel, with a look straight into her eyes, "ye mean the material did."

as a merchant I might be able to obtain the material at less expense an—"

"If ye could!" clamored the little group.

"Mr. Jenkins, if Mr. Roberts—" broke in Mrs. Roberts.

"Mr. Jenkins, if Mr. Morris—" interrupted Mrs. Morris.

"Won't ye come in?" asked Ariel, flood-gates burst and Janny threw herself sobbing into Ariel's arms.

"There, there, dear, little lamb!" he comforted his own eyes wet with tears.

"I thought—thought it would—be so—pretty—an' people let's—expectin' me—to—to—to make changes—an'—an'—"

Betto Griffiths said improvements, an' Ariel—I—I—"

Janny's voice caught and she sobbed afresh.

"Na, na, little lamb, dearie, don't Janny, Janny, don't cry."

"Ariel, I saw—the—men—laughin' an'—an' clappin' their knees—an'—an' pointin' at the window—"

an' even—little Sil van runnin' by—"

laughed, an' then when Betto Griffiths—Jenny faltered, gulping.

"Tut, little lamb, Betto Griffiths!" exclaimed Ariel, derisively.

"Betto Griffiths is an ignorant woman. An', dearie, didn't ye hear them all askin' me to help them to get windows like this?"

"But, Ariel, didn't ye laugh at all?"

"I laugh, Janny! Why, dear?" answered Ariel, slowly, "I think—the—window—so beautiful!"

"Oh, Ariel!" said Janny, happily.

"Aye, I do, only if ye should have another idea, just tell me about it, dearie, beforehand, for it might—perhaps it wouldn't."

he added, gently, "make it awkward."

"But, Ariel, I saw—"

"Na, dear, that's enough—ye don't understand these people quite yet. The window is beautiful, aye," he continued, "I like it so we'll be sendin' it to Liverpool to get a real stained-glass window something the same—aye, dearie, I can well afford it."

"Aye, Ariel," answered Janny, with a mixture of childlike obedience and confusion: "aye, just the material."

Ariel talked a great deal; the window was admired, commented upon; there were demands for future assistance, various exclamations of delight to Mrs. Jenkins, who was given no chance to say a word, and the little group departed.

"Well, Janny!" exclaimed Ariel.

"Ariel dear, I—I saw them—the men—laughin' an'—an' then—"

Even little Susan laughed

THE SMITH-JONES AFFAIR

By THOMAS L. MASSON

According to Smith:

"Oh, say! I met Jones. You know Jones, of course. Well, I found that he had called me a liar the other day in conversation with another man, and so I was just laying for him. I have an idea he suspected something was up, as he began to act sheepish right away. But, of course, I didn't let on at first. I just looked him calmly and coolly in the eye. Then I said, 'Jones, old man, I heard something about you the other day that I couldn't believe.' I said this in a calm, even voice, but Jones must have known something was up, as I could see him begin to tremble. 'I hope it was something good,' said Jones, with a quaver in his voice. As for me, I was just beginning to enjoy myself. 'Oh, well,' I replied, with a pleasant off-hand smile, 'that depends entirely on the point of view. Now, I may not be good for it, but I may be good.' I smiled pleasantly this time, while Jones turned pale; I could distinctly see him growing pale. 'That, of course, is a matter of opinion, but I wish, Jones—here I looked him fairly and squarely in the eye—'if you have anything of an intimate and personal nature—' By this time Jones was shaking all over. I just lingered on those words while I faced him down. Oh, it was too rich!—Why, Jones, old man, just say it to me face, will you?' and with this, in my coolest and most careless manner, I left him. You see, it wasn't necessary to do anything to Jones. It was the withering sarcasm of what I said that felled him. I can tell you it was great fun—simply great! And he won't forget it either. He'll know better next time."

According to Jones:

"Did you know Smith? Well, I was very much amused at him the other day. I had called him a liar, and some one must have told him about it. Of course, I only said it in the heat of an argument with another man. I didn't really mean it. But some one must have told him. I suppose he was told. He came up to me and started to say something, but he was so nervous I suspected at once that he had heard what I said. Finally he smiled quite a sheepish smile, and said, 'I heard something about you the other day that I couldn't believe.' He kind of gulped the words, and was so embarrassed that actually I felt sorry for him. I felt as if I'd like to help him out. 'Well,' said I, in my most encouraging way, 'I hope it was something good.' As I said this I looked him fairly and squarely in the eye. You caught to have seen him weaken. He shifted from one foot to the other, and murmured, with a faint smile, 'I suppose it depends upon the point of view. I hope I'm good.' Then he went on timidly, 'We've always been good friends, Jones,' said he, 'and I hope our intimate and personal relations will continue,' said he. He was going to call me down, but he just didn't have the nerve. 'Sure,' I said, and with that he walks away perfectly satisfied. Now what do you think of that? I was just hoping he would come right out and say, 'Jones, you called me a liar.' But he wasn't up to it. Of course, I would have enjoyed—just as I said, I meant him no harm. But that's the way—some folks are built. They drop their nerve at the critical moment."

How Soldiers Built a Bridge

By ERNEST GRAVES

First Lieutenant, Corps of Engineers, U. S. A.

VERY seldom knows the infantry, artillery, and cavalry of the United States army, at least by sight. The public has seen them at their work. There is no mystery about what they do. The popular fancy easily associates them with the roar of battle or the martial parade.

But of the engineering branch the average civilian has little information. The officer of the engineer corps is accustomed to the question, "What do you do, anyway?"

An answer is found in an achievement of the Third Battalion, under Major Thomas H. Rees, within the last eighteen months. At a cost of one-half the lowest bid by contractors, the battalion has built, from start to finish, an eight-span bridge across the Kansas River at Fort Riley. It was a novel undertaking for soldiers, to whom the government had never before entrusted such a task, but the bridge has passed the test of a rigid inspection. According to conservative estimates, the piers, formed of steel-shelled cylinders, will endure for a century, and the superstructure is strong enough to bear the weight of a heavy siege battery, which is the most ponderous battery in the United States service.

Only one accident, a broken collar-bone, resulted from the work, in the course of which the troopers spent several months in a winter camp, snowbound, sheltering from dawn to dark with the water freezing on their uniforms, driving down the pier foundations while showers of ice spray drenched them at each rise and fall of the dredge. That they kept their health is a tribute to the physical conditions engendered by army discipline. That they

Sinking a Pier Cylinder

A Company of Engineers putting up Trusses

did the work effectively and cheerfully was due both to their training and esprit de corps and to the personality of Major Rees.

It was the major who originated the whole plan. While in a practice camp at Fort Riley with his men, he set himself to find the best way of giving them instruction. He determined to get from Washington, if possible, the authorization to build a bridge which the quartermaster's department had been anxious to have constructed, but which had been postponed for lack of available funds.

Every estimate by a contractor had exceeded \$50,000. Major Rees submitted his proposition to do the work for \$25,000, and the Third Battalion was authorized to attack the task.

Major Rees's design was simplicity itself. It provided for a structure of the sort known as the Pratt truss bridge, constructed of wood and wire cable, having eight spans, each thirty feet long, and earthen embankments 150 feet in length for supplementary approaches, making the total length of the bridge 1030.5 feet. The specifications ordered that each supporting pier should consist of two steel cylinders measuring five feet in diameter, filled with concrete, every cylinder to be sunk about twenty feet below the bottom of the river. The floor level was five feet above the highest water mark on record.

No much time was consumed in getting the governmental authority and obtaining materials that the camping season was nearly gone before the construction was begun, in September, 1906. The work was systematized from the start by dividing it among

the battalion's four companies. The most difficult feature was the sinking of the pier cylinders. Two companies worked on these. The third filled them with concrete. The fourth made and erected the trusses.

The men had their troubles before they finished. Winter had set in when the work was barely begun. Being soldiers, the bridge-builders did not stop for cold or snow or ice. From their camp on the frozen plain they went to their posts at dawn, and only when dark came did they return to the tents to shed their wet clothing and find comfort between blankets.

It is no exaggeration to say that the men were soaked all the time. Those who labored under the dredge ducked their heads to ward off a few drops of the water that came down upon them in showers as the bucket rose. Those at work on the trusses faced a bitter wind, from which there was no shelter.

Without complaining at the long hours and unusual hardships, these soldiers were earning their \$13 a month by doing the kind of

Mounted Troops from Fort Riley crossing the Bridge

labor that brings high wages to skilled mechanics. And all the while they were willing and cheerful. When that spirit exists in a body of soldiers, nothing more is needed to get out the best that is in them.

Music and the Opera

GIORDANO'S "SIBERIA"

By LAWRENCE GILMAN

R. HAMMERSTEIN continues to make good his promises. He assumed early in the season that he would produce at the Manhattan certain operatic novelties, among them Massenet's "Thaïs," Charpentier's "Louise," Offenbach's "Les Contes d'Hoffmann," Giordano's "Siberia," and Debussy's "Pelléas et Mélisande." Of these he has now given the first four; the fifth, "Pelléas et Mélisande," is promised at the moment of writing, for the immediate future. The latest of the series, Giordano's "Siberia," was brought forward at the Manhattan on February 5.

Mr. Bassi as "Wassili"
IN GIORDANO'S OPERA, "SIBERIA,"
RECENTLY PRODUCED AT THE MAN-
HATTAN

frame-work (alleged to be original) contrived by the prolific Italian librettist Luigi illica, who has of late brought himself to mind by reason of his responsibility for the text of Mascagni's "Iris." The story of "Siberia" is that of a beautiful and adored creature who has the misfortune to awaken the love of an impetuous young soldier who is unfamiliar with her habit of life. Camille-like, she responds to his devotion; and when he is sentenced to Siberia for killing his superior officer, the lady's "protector," she accompanies him into exile. In a convict settlement in the Trans-Baikal mining district the regenerated Stephano, who is living with Wassili as his wife, is exposed to the contempt of the other convicts by one Olchy, who betrayed her in her youth, and who now openly insults her. Stephano and Wassili attempt to make their escape by killing, but they are betrayed by Olchy, and Stephano is shot. She dies in Wassili's arms. The scene of the first act is laid in St. Petersburg; of the second, on the Siberian frontier; of the third, in a Trans-Baikal mining prison. The time is the first half of the last century. The cry-lead of the scene carries this inscription: "Love and grief have no nationality," words written by a convict

on the way to Siberia, on the square column surmounted by the Imperial Russian eagle which marks the boundary line between Russia and Siberia."

Giordano stands among these modern Italian opera-makers who have been conveniently classed as the "veristic" school—a formidable title, which means little more than that these composers devote themselves to as forceful an expression of the dramatic substance of their operas (usually brutal in theme) as their powers permit. Puccini is their leader—both by reputation and by right of artistry; Mascagni, Leoncavallo, Giordano, Cilea, are of the lower men. Giordano shares the qualities of his kind. He knows how to enforce and accentuate the appeal of a dramatic action with a good deal of vividness, though with results which are, as a rule, musically crude. He has command of a kind of melody which is extremely fervid and full-blown, though seldom poignant or beautiful in the deeper sense; harmonically, he has at his fingers ends the conventional modern vocabulary,—for there are warlike conventions in the harmonic speech of to-day, as there are in the speech of the classicalists, which persist until some inventor like Strauss or Debussy, or, in a minor degree, like Puccini, enlarges its capacity by the creation of new materials. Giordano does not appear to be an inventor of either harmonic or melodic ideas; but he is an ingenious and resourceful manipulator of those which he finds ready to his hand. He is not an individual in style as Puccini, nor so fine and expert in his musicianship; his scores lack the kind of felicitous that are present in Mascagni's "Iris"; and at no time does he display the exuberant potent lastness for melodic expression exhibited by Leoncavallo in his "Fragliacci." In "Andrea Chénier" there was much that was interesting, not a little that was admirable; whereas "Fedora," on the other hand, is one of the emptiest and most tedious works in the operatic repertoire.

Mrs. Geraldine Farrar as "Mignon,"
A ROLE IN WHICH SHE HAS
NOT BEEN HEARD IN AMERICA

"Siberia" is the best and the most promising demonstration of Giordano's talent with which we have been made familiar. In its lyric portions it is invariably banal, without beauty of line, without character, without pitch—when the modern Italian music-maker dons his singing robes he becomes clothed with commonness and vulgarity; thus in its scenes of pathetic exaltation the music of "Siberia" is weak and abortive. Its strength lies in the truly impressive manner in which it intensifies and underscores the more dramatic moments in the action. At such times it possesses an uncommon sureness, swift-ness, and incisiveness; especially in passages of tragic foreboding, of mounting excitement, it is gripping and intense in a quite irresistible degree. Often, at such moments, it has an electric quality of vigor, a curious nervous strength, which is not precisely paralleled in the works of any of Giordano's confreres. This music has, too, a certain imaginative force which should be applauded—as evidenced, for instance, in the brief time picture which opens the second act, a picture of bleak and savage desolation whose point and power are indisputable.

Mr. Hammerstein has imposed a just claim upon the gratitude of the opera-going public by his production of "Siberia." It is an interesting and an engaging work. It would not, in fact, be excessive to say that it ranks among the best of the operas of the contemporary Italian school which are known here—with "Tosca," "Nadine Butterfly," "Iris," "Roberto," and "Fragliacci." And it is excellently done at the Manhattan.

THE ROADSTEAD OF PUNTA ARENAS, WHERE ADMIRAL EVANS'S FLEET ANCHORED

The Map indicates the lonely Site of the Town, and the Course of the Fleet through the Strait of Magellan

THE SURVIVAL OF THE FITTEST

ILLIE was first in the ring. Jen followed several minutes later, not by chance, as it might have seemed to the unthinking, but in pursuance of a well-defined plan for weakening the enemy, a plan followed with unquestioning faith by the men of the old school. They believed that if you kept your foe anxiously waiting under the stars of thousands of critical eyes on the very brink of battle the ordeal would sap his strength and shaken his spirit.

Willie, already past his prime, although still in his early twenties, was an excellent type of the fighting man of to-day—intense, swift, keen of eye, and quick to take advantage of the enemy's heedlessness with an explosion of terrific strength; yet with his natural advantage dulled and dissipated by unwise firing on the spoils of his precocious victories. Even his gentle little name was typical of the cynical antithesis in ruggedness that modern gladiators affect, an antithesis that has reached its climax in a very savage youth who is known to his myriads of admirers as *Irony*.

Jen wore his appellation as a fierce figurehead to frighten the foe. Its blunt brevity carried suggestions of bare brown knuckles hardened by pickling in brine, of a diet of raw beef, of all the mysterious paraphernalia of the arena.

Nowhere else in this country could one find the old school and the new thrown into such sharp contrast as in the meeting of Willie and Jen, for although the Willie type is common, the Jens are rare, and will soon be as extinct as the great auk. Chance had decreed that Jen while a mere lad should go from his native Ireland to England, where he acquired a beautiful accent and the art of fighting exactly as it was practiced by Finn, who lived it years ago. In England a thousand years are as yesterday. They use a glove contest of to-day the same tactics that their great-grandfathers employed in battle with bare fists—as if one should attempt to run a modern express train in the manner of an ancient coach and four.

Though his style was antique, Jen's physical condition was perfect. A few years older than Willie, he looked and he really was a much younger and harder man. For, like good old Adam, he had not applied hot and rebellious liquors in his blood, nor with unashamed forward mood the delights of the Fiery White Way. In contrast with Jen's ruggedness it was pathetic to observe the prehistoric paraphernalia in his corner—the big water bottle, the flagon of brandy, the cambric sponge, and—shades of Tom Cribb and Gentleman Jackson!—an orange to be slipped between rounds. Willie had only a water supply and a little squat green bottle of smelling salts.

A hidden gong clangd, and the two athletes leaped from their

chairs at its harsh summons and advanced to the centre of the ring. The silence was so intense that a flake of rosin trodden under foot splunked loud and sharp as the grinding of snow on a winter morning. Under the glare of a score of electric lamps Jen peaced menacingly, tooting his head gallantly, as that the muscles of his proud neck flexed and writhed beneath the smooth, dark skin, while his black brows drew together in a fierce frown that plainly said, "Alas! my bold lad, I'm going to smash you now!" Meanwhile Willie presented an ashy blood countenance, a trifle puffy, and as devoid of expression as the mask of the Sphinx. His arms, half doubled, hung loosely before him, not wasting strength in feints and experimental thrills, but ready at the first movement of an attacking fist to harden into impenetrable armor.

It was also a shod of eyes. Every glance from Jen's dark eyes darted out as a stab that would pierce the enemy, only to encounter an impenetrable wall in the cold gaze of the *Old Buta* amid the *thrones of Kamakura*.

Suddenly Jen's long body flew forward in a tigerish leap, while his left fist stabbed straight as a swordpoint toward the mortal spot on the side of the chin—only to waste its impact against the stolid right arm that Willie instantly flung up on guard. Like candle-flies the two grappled for an instant; then in obedience to the Rules of the time released their grips, floated rather than stepped apart.

For the second time the gong summoned the men from their corners. Jen's scowl now gave place to a triumphant grin, as of him who should say: "They told me this man is difficult. I find him easy. Watch me." Willie's aspect had not changed one tittle. His eyes were still inscrutable. Back of that sleepy stare was the gleam of a destroying intelligence, feroceous, and wordless patient.

Jen saw none of these things. He was aware only of a very dull antagonism, vaguely inconstant of the finer elements of the art of boxing for one who claimed the welterweight championship. Jen wasted but little time now in ficking with the left. He gathered his fine body for the spring, and shot in the left like a cannon ball. It was baffled again. Jen grinned and leaped in once more. This time Willie crouched so that his head dodged below the foe's fist, and at the same instant he sprang forward with the speed of a charging bull, and drove his low right fist full against Jen's body upon the soft spot just beneath the floating ribs.

Willie snatched mechanically back to his corner, added casually in response to the cheering, held out his hands to have the gloves removed, and expressed in life seconds this just and accurate opinion: "He'd 'a' been all right if he'd only been learnt in this country."

FROM NEW YORK TO PARIS—PERHAPS

DRAWN BY A. R. WALKER

THE MONSTROUS REGIMENT OF WHISKERS

A REPLY TO HENRY UNDERWOOD, D.W.

By ARTHUR PIGOTT

THE championship by Dr. Underwood of that effete, fast-rumaging anarchism, the whisker school, deserves some answer on behalf of the enormous majority of the American populace who regard the whisker as a curse and a mockery, ruinous to the soil (by reason of its free absorption of nitrogen), and unwanted to the intensive cultivation which modern methods of horticulture demand. I shall oppose the cultivation of whiskage on agricultural, moral, medical, and aesthetic grounds.

The first thing needful is to look the facts squarely in the face; and this is singularly appropriate in the discussion of whiskage. The eyes of many a maternal heart have wept over the colored sacrifice of the first whisker crop. The old whisker plantation has won our hearts in song and story. Grandfather's whiskers!—how many memories they bring back to us! But are these sentiments for the serious consideration of practical men?

I allude to whiskage as a weed, and what else is it? It sprigs spontaneously from the soil, exhausting virgin land and choking crops. It differs in not one single essential detail from charlock, couch grass, Canada thistle, oxeye daisy, and pigweed. None in the fall, winter whiskage requires endless attention. Moreover, like bearded barley, it is essentially a crop for sub-arctic climates, such as the steppes of Russia, its natural home. In our own latitudes it flourishes only in virgin soil. Who ever saw a fine head of whiskage outside the Maine backwoods or the wilds of Flushing? And may we not attribute the migration from the worn-out soil of New England to its exhaustion through long periods of whisker cultivation?

No touch from the agricultural standpoint. Morally, I intend to leave Dr. Underwood not a whisk to stand on.

I have yet to learn what faculty endowed him with what I do not hesitate to term his self-donated degree D.W.; but if "Dr." Underwood's general education were on a par with his whiskeromical pretensions he certainly would have obtained from the famous outcrop of Pope (himself a bald-faced man):

"Lo! the poor Indian, whose untutored mind
Tosses an untutored whisk upon the wind."

a most pathetic and direct vindication of innocent, untutored culture.

I venture to state that there is no example in sacred or profane literature of any degraded and contemptible character who did not cultivate whiskers. To paraphrase an old proverb, while every whisker may not be a horse thief, every horse thief is undoubtedly a whisker.

Let us consult together.

"I caught him by his beard (whiskers) and smote him and slew him" (1. Samuel, xvii. 35). Result of wearing whiskers.

"And Jacob took Amasa by the beard (whiskers) to kiss him . . . and smote him in the fifth rib" (11. Samuel, xx. 9). Here again we see the result of wearing whiskers. If Amasa had not worn whiskers, Jacob would not have taken him by the whiskers to kiss him; and if Jacob had not perceived Amasa's whiskers he might not have been goaded into smiting him in the fifth rib.

Austrian Living Expenses

UNITED STATES Consul John S. Trevis, of Carlsbad, furnishes the following information concerning the increased cost of living in his district:

During the last five years there have been strikes in Austria among many classes of laborers and workmen, which must be chiefly attributed to the constantly advancing prices of food, clothing, and rent. At Carlsbad these have advanced from ten to fifty per cent. during that time.

Not only the working classes, but the shopkeepers, school officials, post, and municipal authorities, the various law officers, and all grades of officials whose incomes do not exceed \$1000 a year, complain that the present prices of food and clothing are exorbitant, owing to the high price of meat, efforts have been made to introduce into this market fish from the German and Baltic seas, and as the ports from which they were shipped are only sixteen to twenty hours' distant, they arrived here in good condition, but the attempt seems to have failed. The people are accustomed to animal and farinaceous foods, and with the exception of fresh water fish, taken from the rivers and lakes of Austria-Hungary, principally zander, carp, whill, trout, and a few salmon, no fish has a permanent sale in this country.

It seems probable that America salted or pickled pork and corned beef, if cheap enough and well prepared, might find a ready and profitable sale here, but it will be necessary to establish wholesale warehouses to supply the trade, and even private restaurants, direct. The price of meats in the Carlsbad market is as follows, per pound: beef, veal, and mutton, 20 cents; pork, 25 cents.

That portion of North Bohemia embraced by the Carlsbad consular district contains a population of 1,167,415, employed chiefly in manufacturing, mining, agriculture, etc. Besides the annual influx of visitors to the springs—viz., Carlsbad, 100,000; Marienbad, 100,000; and Franzensbad, 60,000. More than one-half the population belongs to the laboring classes.

"No, thank you; I would much rather be present at the operation."

Then They Dust

MISTRESS. "Bridget, how do you get rid of traps so successfully? Do you ask them to save soul for you?"

MAY. "No, ma'am, I just say the same word 'except' as 'they beat it.'"

The Age Index

ELLA. "You shouldn't look a gift horse in the mouth."

STELLA. "But how are you going to tell whether the present is new or not?"

Wished to Be There

LOAN AVERLEY, better known even yet as Sir John Lubbock, who has just been elected Lord Rector of St. Andrews University, has a sense of humor which will doubtless be appreciated by Scotland. On one occasion he was elected to deliver a successful oration. His friends tried to persuade him to take chloroform, but Lord Averley would not consent to this, merely saying in reply,

Assiduous

FERRY CROFT'S LADY. "There's a man out there in an orchestra seat who has not missed a performance since the show opened."

FERRY CROFT'S LADY. "No! Just one of the musicians."

THE LAST TRAIN

As it looks to one who has just missed it

How Kind of the Animals

Now that the New York Police Department has dogs to prevent the friendly barker from prying open our windows with a cheese-knife and making us shake the pearl buttons from our pajamas with fear, we must not be surprised to read items like the following from our sister cities:

CHICAGO, ILLINOIS.—The Fire Department of this city has added several giraffes to its force particularly trained for fighting the flames. The giraffes can be distinguished from the regular firemen by the large brown spots on their hide. These quadrupeds follow in the wake of the engine. Upon reaching a conflagration, they stick their heads through the windows, grab the inmates by the back of the neck, and gently lay them down onto terra firma or somewhere near by. Frequently people slide down the necks of these animals to safety.

LANSING, MICHIGAN.—The Street and Water Department has purchased twelve elephants from the G. O. P., and has trained them to sprinkle the streets by blowing the water from their trunks. They are also used to stamp down cobblestones evenly when new streets are being laid. On asphalt streets they take the place of the steam rollers.

MILWAUKEE, WISCONSIN.—Nowadays when our local water pipes become clogged, it

is not necessary to put a lot of overpaid men on the job to locate the obstruction. The officials have trained snakes that wriggle their way through the pipes and push aside anything that tends to arrest the free flow of water. By this method the city saves annually \$456,782.043 11.

BOSTON, MASSACHUSETTS.—It is a pleasing sight to witness the trained squirrels connected with the Street Cleaning Department going through the streets every morning brushing away the dust with their bushy tails.

JERSEY CITY, NEW JERSEY.—The Health Board has trained mosquitoes that come to headquarters every morning, absorb quinine through their cockle-ribbles, then fly about the city visiting poor people stricken with malaria and inject the quinine free of charge.

Good Bye, Cuchullin!

Who can set bounds to the soaring imagination of the Celt? An enthusiastic New Yorker recently watching a game of hurling—which resembles lacrosse—between staidest teams, was moved to ask President Conway, of the Irish Athletic Association, how far a good man could drive the ball. "Well, I'll tell you," responded Mr. Conway, with a twinkle in his eye that con-

dicted his serious speech. "In the good old days when Cuchullin was Champion of Ireland, the King and all the nobility were assembled at the great games of Tailtiu. Cuchullin struck up a hurley ball into the sky, and then walked off to his pavilion and took a drink of potheen, and strolled back to the spot in good time to catch the ball on his hurley."

A Notable Performance

A MEMBER of the School Board of Philadelphia describes a unique schoolhouse in northern Pennsylvania, where the schoolmaster keeps his boys gridding steadily at their desks, but sometimes permits them to nibble from their lunch boxes as they work.

One day the pedagogue was instructing a class in arithmetic, when he noticed that one pupil was devoting more attention to a piece of pie than to his lesson.

"William," commanded the stern mentor, "will you pay attention to the lesson?"

"I'm listening, sir," said the boy.

"Listening, are you?" exclaimed the master. "Then you're listening with one ear and eating pie with the other!"

IT MAKES THE BABY STRONG.

Good milk contains in the most easily digested form all the elements necessary to the building of bone, flesh and muscle. Borden's Eagle Brand Condensed Milk has raised three generations of strong and healthy babies. Has no equal as a baby food. * *

ADVERTISEMENTS.

BRAIN POWER

Increased by Proper Feeding.

A lady writer who not only has done good literary work, but reared a family, found in Grape-Nuts the ideal food for brain work and to develop healthy children. She wrote—

"I am an enthusiastic proponent of Grape-Nuts as a regular diet. Formerly had no appetite in the morning, and for 8 years, while nursing my four children, had insufficient nourishment for them.

"Unable to eat breakfast, I felt faint later, and would go to the pantry and eat cold chops, sausage, cookies, doughnuts, or anything I happened to find. Being a writer, at times my head felt heavy and my brain asleep.

"When I read of Grape-Nuts I began eating it every morning, also gave it to the children, including my 16-month-old baby, who soon grew as fat as a little pig, good-natured and contented. "Within a week I had plenty of breast milk, and felt stronger within two weeks. I wrote evenings, and, feeling the need of sustained brain power, began eating a small saucer of Grape-Nuts with milk instead of my usual indigestible hot pudding, pie, or cake for dessert at night.

"Grape-Nuts are a stimulant for me, and I learned to like it. I did not mind my housework or mother's cares, for I felt strong and full of 'go.' I grew plump, nervous strong, and when I wrote my brain was active and clear; indeed, the dull head pain never returned."

"There's a flower in it."

Name given by Puetz Co., Battle Creek, Mich. Read "The Road to Wellville," in pages.

HOW TO SHIP AN AUTOMOBILE ABROAD

NOTHING could make a trip to Europe more attractive to the motorist than the pleasure of taking his own motor-car with him. Most men regret before the unknown possibilities of entanglements that would result from the efforts to carry an automobile across the Atlantic, through foreign lands and home. Enthusiasts will be glad to know that all the difficulties are ended.

An enterprising New York firm of steamship agents has prepared a pamphlet giving very simple directions for the various steps to be taken, and whoever follows the advice they give will find it as easy to take an automobile abroad and back as it is to make the trip across the Indian. Some of the transatlantic steamship lines carry automobiles uncrated, therefore the first step taken by the shipping agents to facilitate the forwarding of automobiles was to arrange for the necessary crating at the pier. Craters especially skilled in this sort of work build the boxes for the automobiles on the steamship pier, and tourists are thereby enabled to run their cars directly to the piers under their own motor power, thereby avoiding the jolting that a car receives while being crated across New York, besides saving the cost of such drayage, varying from \$15 to \$25.

Another convenience offered by this arrangement is the fact that the passenger may thereby use his automobile up to the day before sailing, as the car can be delivered in the morning to the carpenter, and is then immediately loaded and placed on the ship. The crates or boxes are built in such a manner that they may be taken apart on arrival abroad and used again for the return shipment of the automobile, saving thereby the cost of a new box that is otherwise required. This arrangement applies primarily to those passengers whose cars are returned from the same port where they were landed, as, when the automobile is returned from a different port, it may prove necessary to build a new crate rather than to ship the lumber of the old box from the port at which it is landed to the port where the automobile is to be returned.

The motorist has to pay these charges:
 Booking at the pier, custom-house service in New York, charge for lifting automobile into the steamer, ocean freight, charge for lifting automobile out of the steamer, unloading of car, custom-house formalities at port of destination, storage of lumber (empty car), insurance of lumber (empty car), reshipping of lumber to another port if necessary, refund of duties paid, rebonding of car, ocean freight to New York, United States customs entry at New York.

The United States Treasury Department holds that, upon non-rotation, a car previously exported is, under the rule, liable to duty at its full value if repairs amounting to more than ten per cent. of its original value have been made while the car was abroad. Under this ruling it is in no manner material whether the repairs were necessitated by accident or otherwise.

It is advisable, though not essential, to procure a passport. This is issued by the State Department at Washington, D. C., upon the payment of a fee of \$1.

The roads in France are kept in splendid repair by a large force of caretakers. The Touring Club of France has a fund for the benefit of disabled road-makers, and it would be a graceful action to make a contribution to this fund.

If driving in a country where the rule is to keep in the right, remember to place the tail lamp on the left side, and vice-versa. It is essential to give complete information on the following

items to procure licenses and triplicates (frontier pass) in France, and which is useful for like purposes in Italy and Germany:

1. Kind of vehicle; automobile, motorcycle.
2. Maker.
3. Mark.
4. Model and date.
5. Style: touring-car, runabout (with top or hood); limousine, landau, landulet.
6. Number of car.
7. Colors: body, chassis.
8. Number of wheels.
9. Make of tires.
10. Number of springs carrying body.
11. Number of seats.
12. Weight lbs. kilograms.
13. Value: \$
14. Mark of motor.
15. Number of motor.
16. Motive power: gasoline, alcohol, electricity.
17. Number of cylinders.
18. Horse-power.
19. Speed in mph.

The Automobile Club of America, Fifty-fourth Street, west of Broadway, New York, has affiliations with the foreign touring clubs of Europe, with whom they also have reciprocal arrangements; such as the use of their clubhouse, the securing of triplicates (frontier pass). The Secretary, Bureau of Tours, Mr. A. L. Weisgard, will give information in reference to the above. The dues of the Automobile Club are \$50 per year, initiation for \$100 for members residing within a radius of fifty miles of New York; \$25 per year, initiation fee \$50 for members residing outside of a radius of fifty miles of New York.

In shipping an automobile it is essential to give the following information:

- Passenger's Name, Per S. S. _____ sailing, _____
 Ship car to _____
 Consignor's name, _____
 Make bills of lading in name of _____
 Consign car to _____
 Value of the car for U. S. custom-house clearance \$ _____
 Insure automobile against marine risk for \$ _____
 The make of my car is _____
 The motor number is _____
 The chassis number is _____
 The measurements of my car are, length: width: height, _____
 The weight of my car is _____ lbs.
 If a foreign car, please fill in the following too:
 The car was imported on S. S. _____
 Custom-house entry was effected by _____
 Entry No. _____
 All charges are to be paid at _____
 Please state if car is to be returned to the United States.
 In shipping automobiles that are bonded from inland points of the United States cargo should be consigned _____
 Passenger's name, _____
 Port of shipment, _____
 It is imperative that a consular invoice be procured from the United States Consul at the port from which the automobile is returned to the United States.

The Natural Way

A SOUTHERN gentleman recently at a banquet in Washington related the following story about a certain philanthropist he knows at home. He said:

"My friend heard of a negro family that was reported in destitute circumstances, and, calling at their home, he found the report true. The family consisted of mother, a son about fifteen years old, and three young children. After hearing the mother's story, he gave the oldest son a bright silver dollar, saying:

"Here, my lad, take this dollar and get a turkey for the Christmas dinner."

"No sooner was he gone when the mother said in a stern voice to her son:

"Hear, Jackson, you done gib me dat dollar, and go git dat turkey in de mornal uny."

know, we are to write the answers on our slates. Before I thought I made four marks and counted 'em up—ten, eleven, twelve, thirteen." Then, of course, I remembered that was mental, so I wrote twelve for the answer to be fair."

Probably, in Maryland

"What does become of all the piast?" cried Mrs. X, as she vainly sought for one on her dressing table.

"I know, mamma," cried her little son, who had just begun to study Latin. "They fall to the earth and become terrapins."

An Evasive Answer

A YOUTHTFUL resident in Washington not long ago sought the criticism of a well-known publisher who chanced to be at the national capital on business with the copyright division of the Library of Congress.

"Sir," said the near poet, indignantly, when the publisher had brusquely advised him to "burn the stuff"—"sir, poets are born, not made."

Whereupon the publisher smiled broadly. "Young man," said he, "it won't help your case in the least to try to shift the blame on your parents."

Breaking It Gently

"FARMER ME, SIR," began the poorly person in the railroad train to the man who sat next to him, "but what would you say if I sat on your hat?"

"Suppose you sit on it and then ask me," suggested the other.

"I did," admitted the poorly person, calmly.

Resourceful Captain Wynne

"WHAT would you do," asked Colonel Penn, addressing Captain Wynne.

"If I've a steamer you matched your men, and all of them fell he?"

"A thing like that," said Captain Wynne.

"Would never cause a rout, for if my men should all fall in,

"I'd stately cry 'Fall out!'"

—EARLE HOOKER EATON.

Parental Care

"Why do you abuse your father? He fed you, educated you, and clothed you."

"Maybe he did. If he hadn't fed me he'd have been hung. If he hadn't educated me the public school authorities would have been down on him, and if he hadn't clothed me the police would have interfered."

Just to be Fair

THE little daughter of a Boston man came home from school one day very "low in her mind" by reason of her failure that day in "mental arithmetic."

"Upon being asked what problem had proved her undoing, the youngster sorrowfully admitted that it concerned the addition of 'nine and four.'"

"Didn't you know the answer, dear?" asked the father.

"Yes, sir," said the child. "But, you

The Diet of Royalty

THE Emperor of Austria makes the plainness of his fare something of a hobby, attributing to it his long life and good health. Milk provides for breakfast, a little cold poultry and cheese for luncheon, and an equally simple menu for dinner satisfy the Emperor of Austria and King of Hungary. Scotch broth is the only soup for which he cares.

The Kaiser is somewhat uncertain in his demands, although, as a rule, his wants are simple. The German royal kitchen is one of the best equipped and up to date in the world, so that unexpected demands are easily met. His Majesty's healthy appetite is usually satisfied with two or three plain dishes, a small quantity of wine, and a glass of beer. The national food—sauerkraut—has a firm friend in the Emperor. One of his favorite breakfast foods is macaroni with tomato sauce. The Emperor prefers English cooking, roast beef being her favorite dish.

A favorite dish of the King and Queen of Italy was invented by their cook, and consists of artichoke fried and supplemented by the crests and liver of cocks.

Roast sucking-pig is extremely popular on the Russian imperial table, as well as chickens and veal cutlets. The Czar is especially pleased when his cook prepares a dish known as vassarki, which is composed of small pastries drenched and stuffed with either forcemeat, cabbage, or plum jam, the whole being covered with rich cream.

In Vaudeville

FLIPP. "I've got a smoking jacket that's just like a banana peel."

FLIPP. "How's that?"

FLIPP. "It's easy to slip on."

Why Not?

A NUMBER of Congressmen were one day informally discussing the work of the experts attached to the Department of Agriculture, when the question of economy of production was touched upon.

One of the Representatives was inclined to poke fun at the new methods advocated by said experts in certain directions. "These chaps," said he, "reminded me of a crank farmer in Kansas, who proposed to plant onions with his potatoes, the idea being that the tear-making qualities of his onions might set on the eyes of the potatoes, and thus render the latter crop self-irrigating."

Wait

GRAMERCY. "If their rich uncle has acquired a mania for fast motor cars and flying machines, why don't they try to have him placed under restraint?"

FATHER. They talk they'll get a quicker decision if they bide their time and await developments."

Periodicals

A WELL-KNOWN actor says that while his company was touring the South not long ago, he went into one of the "clubs" in a South-Carolina town, where the dispensary system is in vogue.

"What have you in the shape of periodicals?" the player asked of the dusky attendant.

"Cora liquor, sah," promptly answered the attendant, "beer, and wine, but mostly corn liquor, sah."

A Slip

JACK (studying geography). "Father, what is a strait?"

FATHER (reading the paper). "Five cards of a—what is, a narrow strip of water connecting two larger bodies."

Appalling

THE proprietor of a large clothing house
in New York tells of a letter received at his
establishment from a correspondent in the
Southwest to this effect:

"What is the proper dress for a groom?"

The clerk who opened the mail referred
the inquiry to the library department, the
head of which in due course returned the
following reply:

"Bottle-green coat, fawn-colored trousers
with top boots, silk hat with cockade. We
quote prices as follows, etc."

In a week the correspondent responded in
this plaintive wail:

"I always realized it was mighty ex-
pensive to get married, but can't you sug-
gest something a little less elaborate?"

Platonic Love

When youthful hearts burn hot in spring,
And young men become tyrants,
True passion is a vital thing;
Love is, indeed, a real tonic.

But when a man and woman love
in languid fashion, half trouble,
Promiscuous as a well-worn glove

Such passion may be called platonic love,
NATHAN HANNAH DOLL.

condiment in its own right, or as retained to other
after meals affords relief and aids digestion.

Important to see that it is Abbott's.

SIDE-LIGHTS ON FRENCH JUSTICE

By M. L. GIRAULT

PARIS, FRANCE.

JUSTICE in France is on the point of being subverted, if that is possible for such an impenetrable institution.

Alphonse Aristide Briand, the principal agent in the separation of the Church from the State, and formerly Minister of Public Instruction and Public Worship, is now Minister of Justice, Keeper of the Seal, in the place of the late Guyot-Dessaigne, who was buried on January 4.

During the two years that Briand served as *Ministre de l'Instruction Publique et des Cultes*, he distinguished himself by doing nothing for public instruction save to direct all of his energy and remarkable intelligence towards settling the difficulties between the *clerics* and the government. In this endeavor he displayed tact, leniency, and strength. The situation he had to face was particularly hard. He had to give our priests a chance of learning how to return to independence after a century of servitude. Mr. Briand did all that was in his power (and he has secured a good deal of it for himself) to make matters easy. The clergy had been given a year in which to organize themselves. Mr. Briand, finding them unfit for freedom at the end of the appointed time, granted them an additional year. This extra year is over. As the clergy has taken no stand yet, there must be a liquidation of the church estates. This no longer depends upon the Ministry of Public Worship, but upon the Ministry of Justice, where the liquidation has been brought before the courts. In this matter the government expects trouble. Mr. Briand, as a Minister of Public Worship, has had his usefulness, but as Minister of Justice, having to deal with such a question, he can render more service to his government than anybody else; he knows the question better than any man in France, and the vacancy left by the death of Mr. Guyot-Dessaigne is quite opportune.

The government expects trouble, for the reason that the Magistrature is powerful and independent (there is practically no possibility for red tape to the organization), and most Magistrates are Catholics and Ultramontanes.

They have proved to be in the little squabbles brought before them when the disturbances over the congregations and church incomes first began. Many judges willingly departed from the legal track when they were in favor of the religious orders. The state realizes the danger of this attitude, but can do nothing to check it because of the special position held by the Magistrates.

It is very hard to enter the Magistrature. It requires long study and patient waiting. The number of charges is limited, only twenty-six "Courts of Appeal," and the charges are "inamovable," that is to say, given for life. A man who wishes to enter the list must first of all have means of support. He cannot expect to reach any kind of a position before he is thirty-five, or even forty years of age. The lowest ranks, "judge suppléant" and "attaché au parquet," are "non rétribués," or unremunerated; and the period of free services, which no one can escape, is illimited, extending over a period of five or of twenty-five years!

Therefore, an entrance upon such a career presupposes special conditions. Usually he comes from a good stock and his ancestors have all been lights of the bar. They have bequeathed him other things: their taste for studying law, their strong religion and political beliefs, a large fortune, high standards, and a reputation for great integrity.

As a *notre citoyen* he is a social power, but when the unremunerated "judge suppléant" becomes a paid "président of the court of appeal" he is a potentate. Not only is he appointed for life, but wherever he is appointed he remains for life also. This is the main cause of his continence. In the *magistrature* world he knows perfect stability! When his neighbor wonders and frets, dreams of a new trade or of a new country, he plans for his family with certitude, builds a home, buys lands, proclaims his opinion for or against the present regime. Whatever he does, whatever happens, he is safe! For a nation to have a staff of such men at its service is invaluable, but to bring such men to decide between a government they do not like and a religion they love is rather unfair to the government, for the judge's convictions are in danger of overweighing one side of the scale, as they have already done. In such, the fight threatens to be bitter. The law of retaliation is to be applied, "a tooth for a tooth, an eye for an eye." Has not the bishop of Clermont-Montluçon denied to the widow of Guyot-Dessaigne the consolations of Holy Mass at the funeral of her husband. Although he was not in any way concerned with separating the Church from the state, Mr. Guyot-Dessaigne was excommunicated! Under the circumstances, responsible or irresponsible, of the French Republic. His body was refused admission to the church, and all that the bishops could do to honor him was to deliver a few prayers by the side of the spread grave.

Determined to bring the matter to an end, the Minister of Justice means to compel his Magistrates to apply the law. Remembering that after most of our political crises in 1815, in 1830, 1848, and 1852, the "inamovibilité" had to be suspended, Mr. Briand now thinks that the time is opportune for the "inamovibilité" to be definitely abolished. Under this can be varied out, the first reform Mr. Briand means to introduce is a change of residence. The Minister will be able to call at will a judge comfortably and really settled in the south and order him to the north with no other explanation than "necessity of service." This he is taking the rebels by surprise, and it is a sure way of reducing them. No man can, without suffering grave losses, be moved unexpectedly from a home where he has felt severely anchored to all his interests. Such change of residence will be entirely controlled by the Minister. There will be no way of protesting or appealing; it will be Mr. Briand's decision alone, and Mr. Briand knows a man's making use of his powers.

This new Minister of Justice who proposes to inaugurate such a vital reform is a well-made man and one of the most extraordinary products of Republican France. He whom Parisian ladies court so much and call affectionately "Aristide" was only three years ago the poorly clad "avocat" of the Socialist party.

Increase in American Commerce

The Gulf, Mexican, and Canadian border ports are making a much more rapid growth in their export trade than those of the Atlantic coast. In imports the relative loss on the part of the Atlantic ports is not so great as in exports. Figures of imports and exports by ports during the calendar year 1907 have just been completed by the Bureau of Statistics of the Department of Commerce and Labor. They show that exports from the Atlantic coast ports which in 1907 formed 70 per cent. of the exports formed in 1907 have 60 per cent. of the total, while all other parts of the United States increased their share from 30 per cent. in 1907 to 40 per cent. in 1907. The chief gain is, as already indicated, to exports through the Gulf, Mexican border, and Canadian border ports. The value of exports through the Gulf ports was, in 1907, 151 million dollars, and in 1907, 413 millions, a gain of practically 440 per cent. Through the northern border ports the exports of 1907 were 70 millions, and in 1907, 200 millions, an increase of 185 per cent. Through the Mexican border ports the exports of 1907 were 125 million dollars, and in 1907, 413 millions, an increase of 230 per cent.

In the case of commerce through the Pacific coast ports the figures are somewhat misleading on their face when compared with 1907, by reason of the fact that the Hawaiian Islands, which were classed as foreign territory in 1907, are now classed as a customs district of the United States, and that the value of the merchandise sent to or re-

ceived from those islands is no longer included in the statements of foreign commerce. The figures showing the trade with foreign countries by ports give as the value of merchandise passing through the Pacific coast ports 64 million dollars in 1907 and 94 millions in 1907, an apparent increase of but 47 per cent.; but the fact that the bulk of the 15 million dollars' worth of shipments from the United States to Hawaii in 1907 passed through the Pacific coast ports, but was not included in the statement of exports to foreign countries, indicates that the actual value of the merchandise sent through these ports to territory which a decade ago was considered as foreign countries is above 100 million dollars, and that the actual increase in the decade is therefore approximately 50 per cent.

Meanwhile the value of merchandise exported through the Atlantic coast ports increased but 20 per cent., or less than that of any other of the five great divisions under which the Bureau of Statistics classifies the ports, namely, Gulf, Mexican, Northern Border, Pacific, and Atlantic. The actual gain in the value of merchandise exported through Atlantic ports is, however, greater than that of all the other great sections, the increase during the decade being, in the case of the Atlantic ports, 284 millions; Gulf ports, 251 millions; Northern Border, 110 millions; Mexican border, 28 millions; and Pacific ports, 30 millions, to which, for purposes of comparison with 1907, should be added about 13 of the 15 million dollars' worth of merchandise sent to the Hawaiian Islands, but not included in the figures of foreign trade.

Lèse-Majesty in England

THAT the divinity which hedges royalty in England has lost a chip from its halo is shown by the following amusing telegram sent from Northampton to Queen Alexandra, by a body of the unemployed upon the occasion of the last opening of Parliament. The message is reprinted in England with humor and amusement.

"The Queen, London.—Very kindly secure this poster to today King's Speech:

"We learn by telegraph that seventy-five faithful hopes bearing on foot from Manchester, Bingley, and other towns, have petitioned to us for restoration of ancient right to work, lie to your order in pig-trucks at Northampton Station.

"God's will be these men are given the indignity to thrifty independence provided for their forefathers under 20 George III., cap. 12, section 13."

"Facts as stated. Some men sick, many listless, women and children shrank on journey or arrived and arriving, along with 2,000 left behind. Awaiting his Majesty's instructions.—Alexander Stewart Gray."

No answer was received, but such was the consternation evoked by this despatch that the senders, who had been marching from Manchester to London in look for work, were paid 12 by the chief constable of Northampton to leave the city.

GENUINE. "It joined the navy."

THE WEAVERS

By
GILBERT PARKER

Author of "The Right of Way"

NOVEL which can be called truly great. In its sweep and immensity—a tale of rural England and the glittering Orient;—in its novelty and heroism—a sturdy Quaker youth in the toils of Mohammedan Egypt;—in its web of cross-purposes and contrasted types strangely linked together, "The Weavers" presents a story intensely human, a story of love, high resolve, and wonderful achievement.

A hero of peaceful Quaker blood, swaying the destinies of turbulent Egypt, and his heart far away in England—an English woman hedged in by high social position whose thoughts go out to the distant desert land and its great uncertainties—strange crossings and recrossings of the strands of Fate weaving mysteriously to a glorious ultimate triumph—this is but to hint at what the book holds—a rare combination of elements that defy description.

For mere surge of interest and excitement it outranks its great predecessor, "The Right of Way."

COMMENT

The Press and the Constitution

From an address by Charles A. Dean to the students of
 Cornell University

"THERE is, however, another function of the press which is connected with this that I have now been speaking of, and which is perhaps even more momentous. In this free country our Constitution puts into the hands of the executive officers of the government a tremendous authority. There is no king, no emperor, no autocrat in the world who wields such authority, such power, as the President of the United States. We will suppose the time should come—God forbid that it ever should come!—that there should be in the post of the President a man who has gained such influence over the hearts of the whole people that they become deaf to the suggestions of wisdom, and give to his ambition a free way and an open field. Suppose that he sets aside, little by little, the restraints of the Constitution. Suppose that he tramples upon that great principle of personal liberty which is the noblest inheritance that our fathers have left us, because it is the very life of the republic; suppose that he tramples down that principle; the executive power is in his hands, even the courts incline to subservience, the army follows and obeys him. Where, then, is the safeguard of the public liberty against his ambition? It is in the press. It is in the free press. When every other bulwark is gone, the free press will remain to preserve the liberties that we mean shall be handed down to our children, and to maintain, let us hope, the republic in all its majesty and glory for ever and ever."

The Aldrich Bill in Debate

Debate has not weakened the ALDRICH bill in the estimation of reasonable people. Speeches have been made in opposition to the measure, amendments have been offered to it, and newspaper criticisms have been made upon it. It is evident, however, that the bill, in its essential features, is unshaken. A reference to some of the antagonistic arguments illustrates the futility of the opposition, and will suggest, perhaps, the necessity for moving slowly in attempting to reform our banking law. The very admirable speech made by Senator ALDRICH in opening the debate is worthy of special commendation. It was on a very high level of practical statesmanship. The Senator took the ground that the panic had demonstrated the necessity of providing for an emergency currency, and he showed plainly that under the bill such provision would be made. One critic objects that the banks will not avail

themselves of the provision because they will not be able to make money on the emergency currency. In view of recent occurrences this contention is worse than foolish. The banks and, indeed, all the financial forces have shown themselves ready to make many pecuniary sacrifices to prevent disaster. Many important commercial houses can testify that these powers have recently saved the country from a widespread disaster at a great expense to themselves. It is unnecessary to attribute these sacrifices to an altruistic or a philanthropic spirit. It pays the banks and the bankers to preserve property and prevent disaster, and they can afford to pay for it; indeed, they cannot afford to refuse to pay for it. They are much wiser than the critic who says that they will not pay a six per cent. tax for an emergency currency and loan it at four per cent. On the whole, the assumption of such a condition in the money market is not reasonable, but if it did prevail the banks would pay the necessary price to avoid disaster.

Some Further Criticisms

One critic observes, with an appearance of calmness of wisdom, that the conditions of October will not soon be repeated, and therefore there is no need for a bill until we can have one that will completely reform our banking system. Those who know history and who are familiar with Congress and its aptitudes and ineptitudes know better. This would have been just as wise in 1893 as it is in 1908, and if we have no legislation by this Congress, the subject will once more escape the attention of our lawmakers until they are again awakened by the distressful cries of the victims of the present system. Another says that the measure provides for inflation. It is only necessary to add that this is the same critic who asserts that the banks will not take out the emergency currency because it will be too expensive. Another refuses to support the bill because it does not prohibit speculation; in other words, the business community must remain liable to currency famine until the spirit of gambling is eliminated from human nature. Senator TILMAN desires the adoption of an amendment providing that "not to exceed \$10,000,000 of the emergency circulation authorized by the bill should be retired in any one twelvemonth." This, he said, was in order to prevent the banks from contracting the currency.

The Need of the Bill at Once

So we have a pretty bunch of objections and criticisms. If history did not teach the lesson, this debate shows us clearly the incapacity of Congress, at this season at least, to agree upon any measure that will depart from the essential and basic principle of our currency system. An elementary lesson in banking must first be learned, and there is not time for this in a few months of a Presidential year. Meanwhile the mere passage of the ALDRICH bill will do much to save the country from the need of issuing any emergency currency at all.

Burking the Army Pay-Bill

The action of the House authorities in respect of the increase pay of the army will be a great surprise to the country. It has been confidently proclaimed that this simple act of justice was to be done for officers and men, but now it turns out that some one has given the word that only as much is to be done as is essential in the opinion of shortsighted people, and this little is to be marked by gross injustice as well as by folly. An amendment has been prepared for the army bill increasing the pay of the enlisted men, the officers being omitted. It is just and wise to increase the pay of the enlisted men, but why are the officers omitted? The two rates of pay—for men and officers—were fixed at the same time and under the same conditions. The changed conditions—the increased cost of living, for one thing—have made the pay of the officers much more inadequate than the pay of the men, for such an increase in cost affects most seriously the man with the larger demands upon his income. It is clear that those who are responsible for this particular bit of injustice are not only guilty of willingness to commit the wrong, but that they are also guilty of folly. They are apparently moved by the fear that if they do not increase the pay of the soldier the army cannot be recruited. They know this, indeed, and it is also known that the temptations of larger emolument held out by civil life, now suspended temporarily,

are likely still farther to deter enlistments. Therefore they bid for enlisted men. This is very well, but the temptations of civil employment to officers are as great, if not greater than those to the men. The War Department has tried to induce the graduates of colleges and military schools and other civilians to take commissions, but without success. The army does not pay enough. The Military Academy does not furnish sufficient officers. There is not, for instance, a single second lieutenant in the coast artillery. At the recent graduation of the class at West Point, Secretary TAFT spoke an unusual word. He intimated that no resignations of graduates would be accepted, and resignations have always been accepted heretofore. The reason is that there are not enough officers. Officers cannot be obtained from civil life, and now Congress proposes not only an act of gross injustice, but one that will prevent the offering of sufficient pay to tempt men to take commissions. It is to be hoped that the House or the Senate will see that the wrong and the folly are not perpetuated.

Cannon's Strength

Some people in the State of New York seem to have discovered a political phenomenon to which the WEEKLY ventured to call attention some time ago. This was in effect that Speaker CANNON is a very strong candidate for the Republican nomination. The Speaker represents a good many policies. He is not opposed to those rational things on which the President insists with a violence that makes them look red. He is opposed to the extreme nationalism and paternalism to which the President and BRYAN are committed. He is the logical candidate of the stand-patter; he is the enemy of ship subsidies; he is the most eminent economist of our time. Besides, the politicians like him and think that they can handle him; perhaps they can. The President and Mr. TAFT are now said to fear CANNON. They fear that New York will go to CANNON after a short term of loyalty to HUGHES. They do not believe that the BLACKETT-ORRILL-BLACK-WOODRUFF combination really want HUGHES, but that they mean CANNON. A good many people who do want HUGHES—who want him sincerely on his merits—are also afraid of the combination. In other words, it is natural to suspect them. But this alliance is probably not thinking much of CANNON, whose real strength comes from another quarter. The gentlemen would not help themselves much with the people of the State of New York by too quickly deserting HUGHES for CANNON. Would it greatly astonish the leaders of the HUGHES League if it should be said that it has more than once been thought that FRANK BLUCK's sudden nomination for Governor might be followed by a similar experiment in Chicago?

Taft's Sentiments

Secretary TAFT at Kansas City lauded the President's recent message. Being the President's candidate, it is impossible to see how he could have done otherwise. Like others, however, we do not believe that he would have written any such message himself, or that he could bring himself to employ the disingenuous language that seems to be native to the pen of ROOSEVELT. On the other hand, TAFT said, in a later speech, that enough power had been concentrated at Washington; that any more power granted to the President over States or individuals would endanger the republic. In a word, Secretary TAFT announces a position as his own which is hostile to the policies of ROOSEVELT and BRYAN, or their logical consequences. He may approve of the truisms of the President's message; he cannot endorse its violence or its threats, and he does not believe, as the President does, in an increase of Federal power. The ROOSEVELT men's own view of the relative character of the men is indicated in the reported threat that if the convention refuses to nominate TAFT it will be stampeded to ROOSEVELT. It may be that they do not see the significance of their threat.

Bryan Wants Instructions

BRYAN's demand for instructed delegations to Denver is impressive. Is he afraid of an uninstructed convention? Does he dread deliberation? He knows, no one better, that the delegates to the Denver convention, or a large majority of them, instructed or uninstructed, will know that to nominate him will be to throw all chances away; if they nominate him, they will do so in obedience to forced

instructions, or to what they conceive to be party sentiment, or because they apathetically accept what they regard as inevitable. Left to themselves to discuss, to compare, to unite, to mutually enthrone one another, they would be likely to nominate WOODROW WILSON or Governor JOHNSON or JIMMIE HAMMON or Judge GRAY or one of several others, any one of whom could poll more votes and carry more States than BRYAN can. BRYAN wants instructions because he fears a free convention.

On What Does Bryan Base His Hopes?

BRYAN asserts that if he is nominated at Denver he will be elected. There are undoubtedly some who agree with him. On what do they base their hopes? On pure conjecture—conjecture for which there is no foundation in fact. In 1896 he and his advocates thought that the distress of the country would enable him to defeat MCKINLEY. He sought the Presidency by the votes of the discontented. It is probably true that if ever the discontented could have carried the country, the year 1896, with MCKINLEY, as he was then considered, presented them their opportunity. The discontented and their leader failed, as such a cause and such a leader are likely always to fail in this country. BRYAN now bases his hopes partly on discontent with conditions that have been remedied, partly on the votes of the unemployed, and partly on the votes of ROOSEVELT Republicans. Those who a short time ago were expressing their discontent have learned wisdom; they have discovered that conditions have never been as they have been represented by overexaggerated people; they have also learned the evils that spring from extravagant wholesale abuse of the business of the country; so far as the unemployed are concerned—and unfortunately their number is large and increasing—BRYAN will have of them only those few who believe that he can remedy their condition, and most of these have always voted for him; if he should, indeed, receive ROOSEVELT Republican votes in any considerable number he would carry only those insufficient Republican-Populist States which he had in 1896, but those he cannot carry against any Republican whom that party is likely to nominate.

Bryan Not a Democrat

BRYAN does not announce that he will seek to carry the country on any Democratic principle, or on any definite and sound policy. He has never advocated such a principle, nor has he ever advanced such a policy. Every leading policy which he has put forth has been rejected by the country. He thought that he could win by advocating the free coinage of silver at the ratio of 16 to 1, but he and his policy were buried under an adverse majority so huge as to be peculiar. He then sought victory by anti-imperialism as the "paramount issue," and a larger majority still overwhelmed him; he was too late, and, besides, he was himself responsible for what imperialism the country had adopted. When he returned from Europe he thought to awaken Democratic and popular enthusiasm by urging the referendum and the initiative and government ownership of railroads. His budding hopes were chilled by the wintry blast of his reception. Now he proposes to appeal to the people as the heir of ROOSEVELT at a time when ROOSEVELT has designated his own heir, and when it is a question whether the inheritance is of much value. BRYAN's hopes are political ephemera, as they have always been.

Judge Gray in Pennsylvania

Is it not noteworthy that leading Pennsylvania Republicans are saying that GEORGE GRAY can carry their State against TAFT or ROOSEVELT or HUGHES?

Union Labor and Railroad Discipline

Two articles by Mr. J. O. FAGAN in recent issues of the *Atlantic Monthly* have an interesting bearing on the employer's liability law which the President has urged Congress to pass in such form as will comply with the Constitution and still apply to railroads doing interstate business. Mr. FAGAN writes "The Confessions of a Railroad Signalman," telling in a temperate and dispassionate fashion something about the operation of railroads from the standpoint of the operatives, on whose watchfulness, intelligence, and fidelity the safety of traffic finally depends. He considers the rules of the roads, and the degree of obedience that they receive from the employees whose service they are designed

to regulate. He finds that many of them are carelessly regarded, that trains are run at full speed past cautionary signals, and that operatives habitually use their own judgment in taking risks that the rules prohibit. The important reason for the lax discipline which permits recklessness of this sort he finds in the power of the unions, which have so nearly the upper hand of the railroads in the matter of controlling men that railroad officials cannot without great difficulty discharge a man for a violation of rules which has not actually resulted in disaster. To make the railroads responsible for accidents to employees when they cannot constrain to respect rules promulgated to secure their own safety as well as the safety of the travelling public seems not to proceed with equity. Mr. FOCUS finds that the propensity of the unions to protect their members from disciplinary penalties justly incurred is a mischievous practice which has grown up in the course of the long fight of the unions for recognition and power. He considers that the unions are strong enough, and should be wise enough now, to make their activities and demands more perfectly compatible with the maintenance of such discipline among employees as is indispensable to the safe operation of the roads.

Russia

For the time being the revolutionary movement in Russia seems to be dead. It has accomplished something. There is a Duma, no longer representing the Russian people, but representing some of the landholders. It is not much, but the mere existence of a parliamentary body in Russia representing anything but autocracy is something. The newspapers are absolutely under control of the police, but their presses are very active, and the censors permit them to print a vast deal of matter such as they could not have printed five years ago. It is as though the government considered that, having had in full severity the disease that is bred of priests' ink, it is immune for a while to another attack, and can afford to be careless about exposure. Having control of the army, it is willing to give the press more rope. Education has advanced, in spite of all obstacles. We read, however, of the profound exhaustion of the intellectual forces of the country and of the complete apathy of the progressive elements. The revolution has failed because the mass of the people were too stupid and ignorant to understand what they could reasonably demand, and to bear the discipline necessary to attain it. So Russia for a while must sleep again, but that she will again awaken is of course as sure as that the sun will rise. The modification of her government, the gradual lifting up of the masses of her people, are items definitely set down on the programme of civilization. There is an enormous job to be done, but there are enormous forces to do it. For the matter of that, there seem an unconscionable lot to be done in the world generally in the next decade or two. The bit of road ahead looks so rough, the hills so steep, as to induce the timorous to get out and wait. Hills ahead look steeper than they are, however, and people are apt to go on living and to head the means to do it, unless there are preceptory and conclusive reasons to the contrary.

Perforations Accomplished

The work of this issue of the WEEKLY sees the opening to the public of the first of the MANSION tunnels under the North River, from Morton Street in New York to Hoboken. The first tunnel to Brooklyn has already been some weeks in operation, and divers other tunnels under both rivers are nearing completion. Trains will soon be running in the BELMONT tunnel to Long Island City, and next year will see in use the four tubes of the Pennsylvania Railroad from New Jersey under New York and both its rivers to Long Island. These are wonderful works, that in due time should greatly increase the chances of profitable human existence in connection with daily labors in the island of Manhattan.

Savings Banks Industrial Insurance

One of the results of the late solemn experiences of the life insurance companies of New York was the election of Governor HUNTER. Another was the development in various minds of the idea that the several States in some way might provide cheaper safe insurance for their citizens than it has been possible to secure from existing companies. So far as we know, the only mind in which this idea bore actual fruit

was that of LOUIS D. BRANNAN, a Boston lawyer. He framed a law, which has been adopted, empowering savings banks in Massachusetts to establish insurance departments which should issue policies, to citizens of Massachusetts, for amounts not to exceed \$500, and make annuity contracts with them for amounts not exceeding \$200 a year. The first bank to use this privilege is the People Bank of Brockton, of which ex-Governor BURMAN is president. It has applied under the new law for a license to do business as "a savings and insurance bank," and will be the first to sell insurance over its counter to applicants who come and ask for it. The details of the cost of this insurance, and of provision for the legal reserve, and for all the matters which provide that the insured shall pay for what he gets and get all that he pays for, are being worked out by Mr. R. G. HUNTER, the State Attorney, appointed under the new law by the seven trustees of the General Insurance Guaranty Fund. The trustees were appointed by the Governor. The saving in premiums of insurance under this Massachusetts law is expected to reach, and probably exceed, twenty-five per cent. as compared with the rates of the industrial insurance companies. The industrial companies pay their solicitors, pay for their office buildings and expenses of administration, and pay their collectors who gather in the small weekly or monthly premiums of their customers. Under the Massachusetts law premiums are to be paid at the office of the bank or other prescribed place monthly. There will be no collectors or solicitors to pay, the offices of the banks will be used, and the profits of the business, after deducting modest costs of administration, will go to the policyholders.

An Important Experiment

Of course the new law is an experiment. It ought to work. Folks who want life insurance, even on a small scale, ought to be sure enough of their own needs to ask for it, and to make their own payments at an appointed place when due. Whether they are as wise and forthright as that remains to be seen. Undoubtedly a large proportion of the policyholders of life insurance companies are policyholders because some one persuaded them to become so. Nevertheless, men don't continue to pay premiums unless they really want insurance, and a large part of the labors of solicitors has been directed not so much to induce men to insure, as to induce them to insure in this company rather than in that one. Mr. BRANNAN's hopes for the usefulness of the law he has drawn and got adopted are both high and broad. In Germany, he says, the government looks after the workmen's welfare by compulsory accident, sickness, and old-age insurance, to which employer and employed have to contribute. In this country compulsory insurance suits neither our traditions nor our institutions. Our workman must himself take thought for his own future, and to help him to do so Mr. BRANNAN has aimed to make the State supply institutions which combine "the best possible conditions of management by private citizens with adequate State supervision." One new policy that Mr. BRANNAN has included especially to fit the workman's needs gives him insurance up to the age of sixty-five, and from that time until the end of the holder's life pays him an annuity. The policies taken out under this Massachusetts law cannot be forfeited after six months' premiums have been paid, each having a paid-up insurance, or cash surrender, value, at the option of the bank. Great interest throughout the country is reported in this experiment, and the Brockton bank gets many letters of inquiry from bankers and political economists who want to know what is doing.

Brand-new Crimes

A special message to Congress on February 13 urged legislation to prevent interference with government wireless telegraphy. A boy in Washington, it seems, had put up a staff for wireless experiment, and had prevented the sending of a wireless message to the President when he was on a warship bound for Panama. A Brooklyn lad had caught a wireless hound for the Navy Yard, and in other cases boys and amateurs had got in the government's way. Behold in sight a new class of rights and easements unknown to BLACKSTONE, KEYE, or PARSONS, invisible, intangible, inaudible, and yet existent and, we suppose, important. Let us see now if Congress can legislate that boys must not be boys in this matter of playing with magnetic currents.

Proposed Electoral Reforms in England and France

RECENT incidents have called into being, not only in the United Kingdom, but in the French Republic, vigorous movements organized for the purpose of effecting important changes in the electoral methods of those countries. Beginning with Great Britain, we observe that the apprehension caused by the growing strength of Socialism there, and the feeling that political parties opposed to Socialist theories should be encouraged in certain circumstances to co-operate, have given rise to an agitation in favor of such reforms in the British system of conducting Parliamentary elections as shall enable the House of Commons to mirror more faithfully the drift of public sentiment. It is well known that at present in the United Kingdom it is not possible that a candidate, in order to be successful in a given electoral district, shall obtain a majority of all the votes cast therein. Where there are several candidates, the successful one may have only a plurality. In France, Germany, and other Continental countries, on the other hand, if no candidate on the first ballot obtains a majority of the votes cast there must be a second balloting, at which only the two candidates who stood highest on the returns may be voted for. The result is that the French Chamber of Deputies as the Reichstag reflects, with a relatively close approach to correctness, the prevailing popular ideas and wishes. A majority in either of those representative bodies knows itself to be backed for the time being by a majority of the electors.

The effect of the existing British system is very different. In a speech delivered the other day before the National Liberal Club Mr. K. T. EVANS, M.P., pointed out that at the general election of 1886, which turned on the issue of Home Rule, the Unionist party secured in the House of Commons a majority of 164, whereas in the United Kingdom that party was in a minority of more than 69,000 among the voters. In the election of 1902 the Liberal party, although it had a majority of more than 100,000 among the electors, was only able to obtain a majority of 44 in the House of Commons, a majority so small that the House of Lords felt justified in throwing out the second Home Rule bill on the plea that Mr. GLADSTONE had received no popular mandate for it. Again, in 1903, when the Unionists gained a majority of 159 in the House of Commons, their majority in the country was only 117,000. In the present Parliament the Conservatives are not represented by a single member from Wales, although they have from 80,000 to 100,000 voters in the principality. Mr. EVANS pointed out circumstances which make this state of things particularly mischievous. He referred not only to the rapid rise of Socialism, which, temporarily at least, has conquered the Labor party, but also to the tendency to subdivision of the anti-Socialist parties. He recalled that in seven out of the twenty-seven by-elections, which had taken place since the beginning of 1906, there had been three-cornered fights, and the number returned did not in a single instance have a majority of the votes cast; in some instances he obtained only about a third of the votes, and in one case, where there were four candidates, even less.

What should be done to remedy the manifest failure of a House of Commons thus constituted to represent truly the predominant sentiment of the constituencies? The second ballot would, as we have seen, make the legislature more truly representative, but Mr. EVANS thought that there were some objections to that expedient. Unquestionably a second ballot causes the voters extra trouble and imposes additional expense. Mr. EVANS also feared that in Great Britain the electors, not being habituated to the practice, would not take the trouble to go to the polls on a second day in such numbers as to make the second balloting useful. Is there, then, a practicable alternative? Mr. EVANS believes that he has found one. He would have a voter at a Parliamentary election place the figure 1 opposite his first favorite on the list of candidates, the figure 2 opposite the second favorite, and so on, for as many names, *but one*, as there are candidates. In the event of no absolute majority being cast for any name on the list, the returning officer should strike out the candidate polling the smallest number of votes, and the electors who had voted for him should have their votes recorded on the second examination for their second favorites. If the second examination of the votes should in turn disclose no absolute majority for any one candidate the process of elimination could be repeated on a third inspection, and so on, till an absolute majority of the votes cast could be secured. It appears that this plan has actually been carried out successfully in the Australian colony of Queensland for some fifteen years.

We turn to the proposed changes in the electoral methods of France. The membership of the so-called "Electoral Reform Group" has more than doubled within a month, and now numbers 253 out of the 201 Deputies in the popular branch of the French Parliament. The changes demanded are twofold. First, the substitution of the *scrutin de liste* for the *scrutin d'arrondissement* in the election of Deputies. The difference between these elec-

toral systems is, of course, precisely the same as that which exists between our method of choosing Representatives in Congress, each in a separate district, and the method generally, though not always, followed in the United States of choosing Presidential electors on a collective ticket for a whole State. The *scrutin d'arrondissement*, or single-district system, prevailed in France from 1876 (when the present constitution, which was finished in 1875, became operative) to 1885, when the *scrutin de liste*, which had been earnestly urged by GAMBETTA, was adopted, partly in order to escape the reactionary minority, and partly in the hope of relieving Deputies from the pressure of petty local interests. The experiment was short-lived, because it proved disappointing in its advocates. The power of local politicians was increased, for they forthwith took advantage of the new electoral system to unite in forming nominating and electoral committees for a whole department. It turned out, also, at the general election of 1893 that the reactionists gained rather than lost seats under the *scrutin de liste*, and somewhat later General BOUTANIER made use of this electoral method to obtain piecemeal a plebiscite in his favor by putting himself forward as a candidate whenever a seat became vacant in a given department. His success at the by-elections frightened the Republicans, who accordingly hastened to restore the *scrutin d'arrondissement*, or single-district system.

The second change proposed in France is the conversion in each political party of a fraction of the seats belonging to a given department, a fraction corresponding to the proportion of the whole votes which shall have been polled therein by the party. There is no precedent for such a conversion in France, although, as JOHN STEWART MILL and other students of political philosophy have often pointed out, the wishes of a people cannot be retrofitted faithfully so long as a minority of the people is deprived of a voice in the legislature proportioned to its voting strength. It is an interesting fact that not only does the *scrutin de liste*, or general ticket system, exist to-day in Denmark, Belgium, Sweden, and Argentina, but the four countries named have also accepted proportional representation, the effect of which, as we have said, is to give each political party a number of spokesmen in the legislature corresponding to the relative strength exhibited by it at the ballot box. If the same system should now be adopted in France there would obviously be no need of a second balloting, the numerical importance of each party being determined by the first contest at the polls. Whether these changes, if adopted, would lean to the advantage of the Radical party, now preponderant in the French Chamber of Deputies, is, as experience has shown, very doubtful.

The Wind

It is an enemy when as little children we listen, cowering under the bedclothes, to his ghastly night orgies. Then all the ghastly, awful things we have heard of that people this unfamiliar world where we are not yet at home or at all seem to be up and busy. The shutters begin to creak, the air is full of strange scoldings and wisperings, weird fingers are tapping at the window panes, and pitched a note or two above the whistle of the wind an unearthly voice wails and laments an unearthly horror.

But as we grow older and heavier there comes an element of adventuring and romance in the wind's voice. We hear its hoarse galloping past us in the darkness, making for strange lands where only doughty heroes penetrate, and what is there to prevent our mounting them and galloping away from all the earth and clutch of circumstance? So fiery rides out on the cry of the winds into lonely mountain fastnesses, to the fair land that lies the further side of the moon, across snow-capped plains where far, far below we see a long, thin, bar of black wolves running, and the yelp they send up to the skies reaches us as an exultant to the wind's shrill song as we swing through space a hundred miles an hour.

Then there comes a time when, if we are good children and are well brought up, we become acquainted with a little boy named Diamond, who is the intimate of the North Wind, and who, because he knew not fear, went on a whole host of gay adventures with her, always trusting her under her varying aspects of grave and gay, cold and gentle; although he saw her at times when her whole face turned black with blowing, or when she spread out great dark blue wings that covered the whole sky; he heard her rage worse than the blacksmith's wife, and saw her turn at will into a serpent or a tiger by way of variety, and occasionally on her slightly vulgar side would leave Diamond on the top ledge of a great gray cathedral, and let him peer down into it as it yawned below him, a silent gulf hollowed out of stone.

As acquaintance that grows up from such a basis as this does away with fear, and as we grow older we learn to listen eagerly for the wind, typifying as it does to us all the scope and freedom that fills the spaces between the earth and the stars.

When the burdens and cares of this world press too heavily on frail mortality, doubtless sleeplessness is an evil thing, and a man may well have recourse to the sage medicine men to get rid

of himself and the trailing, insistent sense of his fleshly and social state. But let a man be, as by every moral right he should be, of a clear conscience, sane nerve, and becalmed ambitions, and, above all, let him be free of all debts, and he cannot but lament the loss of so much good life in sleeping. How much joy there is in lying healthily and attentively alert through the night's still vigils! Then chiefly do we hear the strange discourses of the wind. We know nothing of whence it comes or whither it goes, but it flaps past us, singing unearthly melodies, clean, unsexed, vivifying, and elemental, the infinite breath whirling from eternal spaces to eternal spaces.

Such a wind it was that SHELLEY sang to, begging to be its lyre, or just a leaf, a wave, a cloud, to be lifted and sped on the way above the thorns of life.

But the wind is not only a night friend. It is a fine companion for the striding heart: for him who, in early autumn or before the birth of spring wanders abroad, just for the joy of seeing the clouds rest a-dancing, or hurried in rough haste across the sky from east to west, for some knows what dire or gracious purposes. And have you ever, late in March or early in April, wandered out on a slash of land carpeted with brown pine needles, and sat down on the suggy ground to see the sap like a purple mist rising to the bare twigs, and heard the wind play a droll on the reeds that line the edges of the slash and the pine tops above them? Low in the reeds and high in the pines, fan pipes, the careless, mirthful goat-footed Pan, glad that his kingdom is waking to life again; and his song is only a little wistful, a few shivering minor intervals replacing the screechings and wailings of his winter alights.

Not in the song wholly silenced even in the most wineloss of moonlit summer evenings: if in the hush we strain our ears, we hear a long, deep, alternately indrawn and outgoing breath; is it Pan in silent ecstasy, or just the slow, sleep-breathing of the planet as it wings? Who has not felt his indolent dreams rise on such gentle summer breezes to go a-wandering among the vales of vanity?

DICKENS has a charming essay on the jovial winter wind, in the chapter wherein Martin Chuzzlewit and Tom Pinch leave Mr. Pecksnuff's house. What an agreeable and praiseworthy habit it was of those early Victorians (would that their like should be born again!) to sow little essays all over their novels, and what a creditable thing it would be if the living novelist would go and do likewise! But perhaps the mind of man is so narrowed by specialization that it no longer holds innumerable little essays as well as its definitely conceived plot.

There are as many winds as there are moods of man, but it is the jovial, bodacious winter wind that DICKENS painted, a wind sweeping across heavy down, "tracking its fight in darkening ripples on the grass and smooth shadows on the hills." It nipped the face and blinded the wayfarer and stopped his breath as though he had been seized in cold water.

That was another wind that blew strong and steady and cold through ROSETTE'S lines that depict more exquisitely than any others the omniscience of perfect grief:

"The wind flapped loose, the wind was still
Shaken out dead on tree and bill;
I had walked in at the wind's will,
I sat now for the wind was still."

What a universal experience that is! Who is there who hasn't taken up the burden of a sorrow too great to bear within closed doors and walked with it where the wind's wailing and screeching was a human utterance, where headlong floods and pounding waves beat upon earth too, in impatient agony?

"Still ailing, wind? Will be appeased or no?
Which needs the other's office, thou or I?"

Dost think men would go mad without a moon,
If they knew any way to borrow
A pathos like thine own?"

There is one more bit of prose in which the wind is captured and set to words almost as perfectly as in BURNING'S verse. In the last chapters of *Prisoner of Love*, where the romance rests in abeyance while the night falls and the dawn wakes, over the listless, fleeing princess "the sound of the wind in the forest swelled and sank and drew near with a rushing rush and died away in the distance into fainting whispers."

It is the very voice of life, this wind, this messenger of eternity singing from out the void into the void, beating the seas into life as it passes, cleaving the ocean into channels, bearing the petrel, the seagull, the gull on its great wings, sweeping clean the floors of the forests, brushing brighter the very stars set in the arcades of night. As the human breath utters the relief in the throat so the wind plays through all the innumerable throats of nature, waking each whistle, whir, wail, and song to a great chorus chant.

There is one other office we think of the wind as fulfilling. Who

is not at moments mindful of the last hour when the body shall have played its game to the finish and stretched itself stark and dumb for its eternal rest? And who can help hoping that as the soul unfurls its wings for the new and strange adventure, it shall be upborne, like the gull and the petrel, on the great wind's wings, coming even as its child, the soul, no man knows when, going no man knows whither, yet surely, surely passing from time to time, in the great void spaces of night, some little lighted islands of life.

Personal and Pertinent

HENRY PETTAM is doing very well with the Library of Congress, and he never did a better thing for it than when he secured WORTHINGTON C. FORD as the head of the manuscript department. He used to be head of the Bureau of Statistics when CLEVELAND was in power, but HANNA heard that his figures had a Democratic taint, and he moved him out. Ford went on to the Public Library of Boston and came back to the Library of Congress in Washington. He sits somewhere among the stacks and lives somewhere out of town—hey Chase, perhaps, for the literature of the name would attract him. There among the stacks he keeps his eye out for manuscripts. His father during his long association with GREELEY in the *Tribune* accumulated a lot of pamphlets and some manuscripts, but WORTHINGTON buys something worth while for the government. He has enriched the library, and he himself is so rich in his learning that Congressmen have to take him on faith; they go up to his desk, and in the presence of a constituent they timidly pretend to a friendship with him that they know is hollow, and they hurry away lest he should find them out, that of his presence they tell their constituent what a great man Ford is, just as if they knew all about it. MALCOLM FORD, PAUL LEBERTON FORD, and WORTHINGTON C. FORD! Three brothers, all admirable in their way; and now WORTHINGTON is working on alone, and is doing his useful job very well up in the Library of Congress.

Correspondence

THE OVERDOING OF INTERCOLLEGIATE CONTESTS, AND THE DEFECTS OF FOOTBALL.

New York, February 9, 1902.

To the Editor of Harper's Weekly:

Inter-collegiate contests have lately been discussed in the *Weekly* in a spirit that encourages me to communicate to you some convictions born of near to observation and personal and vicarious experience, of which it would be a satisfaction to me to relieve my mind. My knowledge is chiefly about football, because I have played it myself in school and on a class team in college, and because I have read a good deal of the literature of the game. And I think it is a fortunate chance inasmuch as football is the most conspicuous, the most influential, and the most completely restricted to college of our athletic sports. When I say that I think it immoral, of course I mean the way it is carried on to-day and has been in the past. My chief thesis is that, if differently, though perhaps in many cases unconsciously, teaches young men to be lawbreakers; it puts a premium on disobeying the rules for a profit. I need not rehearse specific instances of players breaking rules, for it is common knowledge that the rules are broken; and, indeed, it is a futile task to name instances, as by far the larger proportion never come to light. I am firmly convinced, however, that if an omniscient umpire could be found who would enforce every rule, or in default of that every penalty, so game of football could be finished or anywhere near finished by two present-day teams. If it is sufficient to examine the history of the game in this country, particularly as recorded by Walter Camp, to see that the development of the game has been a forced process; each change has been a new rule to take the place of an old one which players would not obey. Instead of looking for obedience to the rules, when infractions become notoriously frequent or even fairly permitted, new ones were formulated to make the old habits legal. Unfortunately the infractions always keep far ahead of the legislation in the race. (Incidentally, our American legislation is often produced in the same way.) To return for a moment, was there ever a game with so many and such complicated and ever-changing rules? And was there ever a game which required so many penalties for their infraction? Some improvement has been made recently in the ability of the more numerous officials to detect infractions; but the same spirit is there, the product of generations, to get the profit from infractions as long as you can. Isn't that immoral? Isn't it peculiarly cynical in this country, where what we send into all in our public spirit is a respect for law as law? And I don't think there's any question that those who are taught that infringing football rules is permissible for the sake of success will undoubtedly take a similarly perverted standard in business and politics. If that's what you learn at our noble universities, who is there to teach you better?

It is also unnecessary to go over the old story of the perfectly obvious evils of this tremendous pressure for winning. The darkest days were those when professional players were bought in one way

Touching Hands With Eternity

By CHARLES JOHNSTON

SIR OLIVER LODGE, who has frequently proclaimed his belief in spiritualistic phenomena, has just announced that he and his colleagues have scientifically proved the possibility of communication with the dead. He tells us that he has talked with the late Richard Hodgson, with F. W. H. Myers, with Edmund Gurney, and others, who "passed over to the other side" in recent years, and that they have furnished repeated and conclusive proof of their identity. This announcement is the more vital, because these men gave the best part of their lives to the investigation of the question of the soul's survival after death, and believed that they had proved its continuance; and if Sir Oliver Lodge is right, they are now continuing their efforts to furnish this proof on "the other side."

Investigations on "this side" have been carried on for a number of years—in London, by the Society for Psychical Research, which has numbered among its presidents Mr. Balfour and other distinguished men; and, in America, by a closely affiliated society, in which Professor Hyslop is a leading figure. The exact course which led Sir Oliver Lodge to make his recent announcement has not yet been revealed, but it is an open secret. The late F. W. H. Myers, a distinguished English critic, poet, and psychologist, and author of *Human Personality*, the classical

affirmative contribution to spiritualistic literature, left a sealed package in the hands of friends before he died. It was known that his object was to attempt, after his death, to communicate its contents through Mrs. Piper or some other well-known "medium" of unimpeachable honesty. The opening of the envelope would prove whether the communications were genuine or not.

But it is now declared that, in order to eliminate all chance of fraud or telepathy, this message was to be transmitted in two parts, through two "mediums." In such manner that, singly, they would not make an intelligent communication, but, when put together, would be at once interpretable and proved identical with the original writing. This, it is alleged, has now been done.

As long ago as 1876 Sir William Crookes published a remarkable series of articles in which he alleged that he had effected, in his own house, under test conditions, the "materialization" of the spirits of the dead. Recently Professor Richet claimed to have done the same thing in Algeria. But the interviews with Myers, Hodgson, and others do not take place directly. Sir Oliver has not seen his friends face to face. The messages have come in a different way; rather in two or three different ways, but always through a third person, one of these abnormally organized persons whom we have been accustomed to call "mediums," but whom Sir Oliver Lodge prefers to call "automatists."

There are two chief ways in which the "dead" communicate: either by "automatic speaking," or by "automatic writing." In the first case, the "medium," comfortably seated in an easy chair, falls into a trance, which is attended by

rigidity, partial or total loss of feeling, and other cataleptic conditions, and presently begins to speak, not as herself—for most of the successful mediums are women—but as the personality on "the other side," who is communicating. Where automatic writing is the method used, the medium sits in the posture of a person writing, leaning slightly forward, and the face is buried in a small pillow supported on an iron rest, which makes it wholly impossible for the medium to see what she is writing, or rather what her hand is writing, impelled by the superphysical nature of some one "on the other side."

Among the mediums who have taken part in the special researches described by Sir Oliver Lodge, Mrs. Piper of Boston, Mrs. Verrill, and others have been mentioned; but there have been many more, perhaps a dozen in all, through whom communications, whether by speech or writing, have been obtained; and this constant change of the channel of communication is the chief test of genuineness. On one occasion Dr. Richard Hodgson spoke. It is believed, through three different mediums on the same day, each time ascribing to what had taken place at the earlier sittings, quite unknown to the other mediums.

Sir Oliver Lodge, who has announced that he has scientifically established the possibility of communicating with the dead.

To mention a specific case: Professor Hyslop, who made this particular investigation, received a communication from Dr. Hodgson through a lady whom he calls "Mrs. Quentin." Three or four hours later to another medium, he received a further communication from Dr. Hodgson, alluding to this first to the medium, and saying that "the place where the sitting had taken place was now water." This turned out to be true, as the home was on a bay, though Professor Hyslop did not know this, as he had always gone there after dark. Dr. Hodgson went on to say that, later in the day, he would try to communicate again with Professor Hyslop through a third medium, "Mrs. Smith,"—the names are withheld for obvious reasons,—and would try to give a message about certain books. Professor Hyslop went to "Mrs. Smith" that evening, and Hodgson tried to communicate, with an great success, though he did manage to give something about "books."

Previously to this Professor Hyslop had quite convinced himself of the identity of the intelligence which was communicating with him through three different mediums. Indeed, he reached conviction on this point very soon after Richard Hodgson's death, which took place at the close of 1905. Dr. Hodgson had, apparently, been in perfectly good health, but had been warned by the "controls"—the intelligences spraking through Mrs. Piper especially—that he should avoid violent exercise. He disregarded this warning, indulged in a handball tournament, and fell dead in the Boston Boat Club. He and Professor Hyslop had been

A "spirit" message received by automatic writing, through "Mrs. Smith," and claiming to be from the late F. W. H. Myers. It reads: "How curiously I have had to write for my mind has been so much on the subject matter, but it is impossible how it looks so long as you have it. Be not discouraged all. with much affection your friend F. W. H. Myers." This message was received on December 10, 1907.

working together, in a close alliance, at this very problem of communication with the dead, and Hodgson had agreed that, if it was in any way possible, he would communicate with Professor Hyslop as soon after his death as he could. The communications began almost immediately after the fatal accident at the hotel club; and Professor Hyslop had within a few weeks obtained what he believed to be conclusive evidence of the identity between the communicating intelligence and his late friend, the noted Psychic Researcher. On one striking occasion Dr. Hodgson was communicating with Professor Hyslop by automatic writing through the hand of Mrs. Piper. He asked:

"Do you remember a man we heard of in —, no, in Washington, and what I said about trying to see him? . . . I heard of him just before I came over. Perhaps I did not write you about this."

In point of fact, Dr. Hodgson had not written to Professor Hyslop, who could make nothing of this statement. A few weeks after, Professor Hyslop had business in Washington, and accidentally met a gentleman in charge of a department in a large business house, who mentioned that he had written to Dr. Hodgson a short time before his death about a man there who showed signs of mediumistic powers.

It is the cumulative weight of hundreds of incidents like this that has brought to Sir Oliver Lodge, Professor Hyslop, and their colleagues the certainty that they are really communicating with their dead friends. It was in a large degree owing to the success of these early experiments with Dr. Hodgson that the London Psychic Researchers turned to this field of inquiry, having Mr. Piper go over to England to submit to the most stringent tests, and at the same time checking her communications by those received through other mediums.

There is a great difference in the power of mediums, or "automatics," as Sir Oliver Lodge would have us call them, to "get a message through" without confusing or diluting it. And even under the best conditions a good deal of the medium's mind seems to adhere in the message. In the case of automatic writing, there will be a difference of handwriting with each new communicating intelligence; yet at the same time there will be a general resemblance, more or less marked, to the writing of the "automatic" throughout. And the vocabulary of the medium will also have its influence. In one case Mr. Hodgson is reported to have said: "I have to use the medium's word; I can't get my own word through!"

Mrs. Piper, after many experiments with Dr. Hodgson, followed by experiments with Professor Hyslop after Dr. Hodgson's death, succeeded in opening the channel of communication with Dr. Hodgson so wide that there was much of the effect of carrying on daily communications with a close neighbor. But Dr. Hodgson was by no means the first "control" in establishing his identity to the satisfaction of the Psychic Researchers. He had been preceded, in the use of Mrs. Piper as a channel, by several others, suitably retain "George Pelton"—the name is slightly altered—who had met with a sudden and violent death a few years before. He is generally spoken of as "G.P." in these records. It seems that G.P. had attained such proficiency in the art of bridging the two worlds, that he was able to initiate Dr. Hodgson in its mysteries, with such success that abundant and conclusive evidence was soon forthcoming. For, if there is a difference in the power and clearness of "automatics," there is just as much difference between the powers and mastery of "communicators." It is said by those who have been carrying on this investigation that, while they have had abundant communications from the late F. W. H. Myers, they have found it singularly difficult to get proof of his identity which, besides satisfying themselves, will have palpable evidential value. They have obtained many statements which seem to be free and easy fiction rather than simple matter of fact and many other communications have been elusive in the highest degree.

This suggests a very interesting question. If we are, in this case, really communicating with the late Mr. Myers, with what part of him are we communicating? And in what condition is that part? Professor Hyslop declares his belief that, just as the medium has to fall into a trance in order to receive communications from "the other side," so the "communicator," the personality "on the other side," has to fall into a trance, in order to come into rapport with the medium; and until this process is thoroughly mastered, the "communicator" is quite likely to have lapses of memory, periods of muttering and incoherent speech, and periods of free invention, such as characterize the trance condition. This would account for the irrelevancy, the inanity even, of large quantities of communications purporting to come from the other

The figure illustrates the position assumed by the medium or "automatic" during the reception of a "spiritistic" message. In this position, and with the force so weak, it is impossible for the medium to see the words which his hand is writing

world. We are not communicating open-eyed with a soul wide awake; we are communicating, through the psychic nature of an entranced medium, with a soul which may be said to be in a trance, or dreaming, or even delirious, according to the degree of its new psychic state.

It seems that the trance state of the medium is not voluntary and self-induced, nor is it induced hypnotically, by the experimenter. It is seemingly induced by the "communicator" on the other side, who, as it were, hypnotizes the "automatic" from the other side, and draws the personality of the "automatic" out of his or her body, so to speak, temporarily taking possession of that body, and using it to speak, or, as in the majority of these experiments, to write messages. Sometimes two messages are received at one time, the right hand writing from left to right—in the ordinary way—while the left hand writes from right to left. And in certain experiments with Mrs. Piper, there was, at the same time, automatic speaking, as though three "controls" were using her body at the same time.

One of the group which has been carrying on this series of experiments tells a rather gruesome tale, illustrating this obsession of the medium, this taking possession of the medium's body by a control. The control in this case was a man of science, recently dead. He was new to the work, and was being taught to communicate by "G. P." and others. The experimenter, who told me the story, was called to the door shortly after the sitting began, and passed behind the medium, a woman, faintly all communications ceased, and the medium remained rigid, in a terrible condition, for twenty minutes or a half hour. (She or twice she muttered: "You won't let me die! I don't want to die!") The experimenter reassured and

A later message, received December 31, 1907, by automatic writing through "Mrs. Smith," and claiming to be from the late Dr. Richard Hodgson ("R.H."). It reads: ". . . will answer my message. The second night is all right. . . All right I'll put on my thinking cap . . . I think so . . . Yes . . . Good night, Yes, R. H." The questions which Dr. Hodgson was answering are omitted; they were recorded at the time

calmed her, telling her there was no danger. Finally she returned to her normal self. At a later sitting, another control, "G. P.," explained what had happened, telling the experimenter:

"It did not look as well from this side as it did from that! X— (the recently deceased scientist) had just taken possession of the medium's body, when you walked behind her, and cut off the current. Then X— realized that he was in a woman's body, and felt the small hands, and the shirt, and couldn't realize what had taken place. He began to ease like a running lion, and H. H. (Richard Hodgson) roared laughing at him. Finally we got him out, and even then he had to go through all the processes of dying. This is probably the meaning of the medium's plaintive muttering: 'You won't let me die? I don't want to die!'"

This will give a general idea of the method of investigation of Sir Oliver Lodge. Sir William Crookes, also employed, and the similarity of the same controls' communications through different mediums, which has already been illustrated, is a strong argument for identity, for the existence of some communicating intelligence, quite independent of the medium.

We have to deal in a few words with a very important question: the possibility that the communications received through the medium may come, whether consciously or unconsciously, from the mind of the living person. Dr. T. J. Hindson, author of *The Law of Psychic Phenomena*, wrote much in support of this view, denouncing the spiritistic hypothesis, and asserted that telepathy from the subconscious mind of the experimenter, or of some other person, was the real source of these extraordinary communications. The discovery of the "subconscious mind" is

the most remarkable contribution which the study of psychology has given us; many have considered that, in searching for the processes of thought, investigators have discovered nothing less than the soul itself. In the simile of Myers, just as the iceberg floats with nine-tenths of its bulk submerged, so the immeasurably greater portion of human consciousness lies below the level of normal knowledge. There seems to be a sort of mental lumber room, to which is relegated all the acquired knowledge which is not needed in the daily use of the human subject. Such, for example, is the mechanical action, at first painfully acquired, but after a while used unconsciously, in riding a bicycle; such are the liminary muscular processes of the heart and stomach. Memories of past occurrences, which are never totally forgotten, are relegated to this domain, often in the dragged up into the realm of consciousness by some event, some unexpected key-word, or by laborious efforts for some name or number which has escaped us. In this unexplored wilderness the capacities greater than can be imagined; and in a state of hypnosis sleep all this heap of treasures and rubbish can be probed by the conscious or "superficial" mind of the subject, at the direction of the operator. Dr. Hyslop, himself a bitter opponent of spiritualism, believed the subconscious mind to be the true seat of the personality. He claimed that genius was nothing but an uprush of the subliminal faculties into the normal mind; that the "lightning calculations" were able to solve in a moment any mathematical problem, do so by the use of this function; in effect, that the submerged consciousness possesses supernormal powers of an almost incredible nature, and only over the subject's own memory, but over the memories of others. But the present experimenters would seem to have eliminated all possibility of telepathy, and have accumulated a mass of testimony, each part of which has some value, and all of which taken together appears to be conclusive, that these messages do really come from "the other side"; and that, in many cases, they do come from the deceased persons in whose names they are given: in fact, that Sir Oliver Lodge and Professor

At the beginning, this message, received by automatic writing through "Mrs. Smith," was said to come from Myers, but its transmission was not completely successful, only the letters "My . . ." being legible. Then "G. P." (George Pelham) came to the rescue, writing: "either show work, you understand so we can work out I think I will try and get the conditions established and go on You know I am G. P. and so glad to help again. When R. H. (Richard Hodgson) is a little weak I can almost always bring strength (for I am more accustomed to the subliming of a higher rate of vibrations which always obtains after an energetic career of any kind). This message was received on January 27, 1898."

blasted by those of the age. The idea of spirit communication is, of itself, in no wise opposed to reasonable belief, but is a matter to be decided by rigid examination alone. And yet in every age belief has swayed from pole to pole, according to the prevalent habit of thought. Three hundred years ago this belief was solemnly upheld by the chief justice of England at a time when devilry was considered evidence of demonic possession. Fifty years ago, when Darwin and Huxley imagined that they had pushed back the barriers of the unknowable to the furthest point attainable, the still, small voice of Wallace appeared, crying in a wilderness of words and jargon. To-day, even within the last few years, the pendulum has swung drastically back toward the spiritual point again. And all the while science maintains her unalterable laws, and it is the minds of the scientists which alone are vacillating.

It is an ironic commentary upon the processes of thought that, after emerging from the materialistic superstitions of all savages, and building our elaborate cosmologies and theologies, eventually unalterable, we should appear to have completed the circle, and to be driven back again upon the old traditions. There is a tradition that there is also a divine way of communicating with departed spirits, through a calling of the three-fold of man's own consciousness till it includes the spiritual realm; but there is a world of difference between this and the possession of an entranced body by some personality which has recently passed through death.

The rigid investigation made by prominent scientists in America and Europe have directly proved the existence of a series of phenomena not to be explained under the known laws of physics. The contrast is now between the champions of the telepathic and the spiritistic theories. The latter theory has by no means yet been proved, although it seems to present the easier solution. It has recently obtained the support of Professor Oscar Reiss, because, for thirteen years an ordered opponent, the dismissal of the whole subject as "hunching" is impossible to the unprejudiced mind.—EDITH.

Hyslop have really opened up communications with the departed personalities of Richard Hodgson, F. W. H. Myers, Edmond Gurney, and others.

There remains one astonishing thing—the fact that Sir Oliver Lodge speaks of this communication as the fruit of a "new" faculty. To take only two instances which prove the contrary, the *Shikong*, the oldest Chinese book, and the *Chandogya* (published, one of the oldest books of India, both contain descriptions of communications through mediums; while the Bible and the tales of the East, from Japan to Arabia (not to mention the Delphic oracle), are full of "automatic speaking"—the possession of a body by the superphysical part of a dead person, who uses the medium's lips to speak. Ancestor-worship is the faith of a majority of the human race, and ancestor-worship is everywhere full of communications with the dead. At the same time, the more spiritual and mystical teachers have universally disavowed this necromancy, declaring that, where the control is really the soul of a dead person, the communication is uniformly harmful for that soul; and, furthermore, that mediumism is a morbid and harmful condition, fraught with many perils. The Catholic Church recognizes the possibility of communication with the dead. Many people will remember the ferment which arose a few years ago over the celebration of the "black mass," or devil worship, which was supposed to be participated in by leaders of European Freemasons. More recently a woman who had sent in a petition from some small Italian village for permission to continue to hold services with her dead child was informed by the ecclesiastical authorities at Rome that such meetings were forbidden by the regulations of the Church.

It is an unfortunate tribute to the irresponsiveness of our minds to their surroundings that our beliefs are so largely

FROM MAINE TO FLORIDA BY INLAND WATERWAY

THE PROTECTED PASSAGE ALONG THE COAST PROPOSED BY THE ATLANTIC DEEPER WATERWAYS COMMISSION

DRAWN BY VERNON HOWE BAILEY

(See article on opposite page)

By Still Waters from Maine to Florida

(See illustration on opposite page)

TO establish a protected waterway, inland for the greater part, along the Atlantic coast from Maine to Florida, and possibly beyond to the mouth of the Mississippi, is the ambitious and useful purpose of the Atlantic Deepwater Waterways Association. Its plan is comprehensive and of vast importance to the proper development of the most populous region of the United States.

Three benefits that will be immediately gained by the establishment of the inland waterway are of such equal value that none can be preferred above the others—namely, the better defense of the Atlantic coast in time of war, the saving of life and property from the dangers of ocean travel, and the cheapening and expediting of freight traffic along the lines of the canal.

Some of the principal links in the desired chain are already available or have been provided in part. A private corporation is constructing a ship canal across Cape Cod, and another canal is projected which will serve the same purpose of providing safe inland transportation from Maine to New York. The link between New York and Philadelphia now consists of the Delaware and Raritan canal, and its conversion into a ship canal would be one of the most costly of the proposed undertakings, but also the most valuable and important.

The next link, connecting Delaware Bay with the Chesapeake, could be provided at relatively small cost and in a few years. It is one of prime importance, and if constructed at once, would furnish an excellent object lesson on the value of the seafaring scheme. It would carry the direct waterway south to Norfolk. From that point to Beaufort an existing canal is being deepened by the Government and can soon be made available for coastwise vessels and the smaller vessels of war. North of Beaufort the plans are less definite, but the inland waterways can be carried to Florida and across that peninsula to the Gulf of Mexico.

One of the most convincing arguments advanced by the Atlantic Deepwater Waterways Association in support of its plan that the national government should add in deepening the canals already existing along the route and in digging others where needed, is the safety provided by the canals and the great shortening of distances covered by coastwise traffic. At the conference recently held in Philadelphia the Association made public this table of distances saved:

LENGTH OF CANALS

Cape Cod Canal risk Buzzards Bay.....	7.5 miles long saves 148 miles outside	
Delaware & Raritan Canal 31.4	" " " "	184
Chesapeake & Delaware Canal.....	13.5 " " " "	318 " "
Altamaha & Chesapeake Canal.....	13.2 " " " "	50 " "
	68.6 " " " "	700 " "

Avoidance of the dangers to life and property incident to voyaging around Cape Cod and Cape Hatteras would alone show ample justification for the establishment of the proposed inland water routes. The advantages to be gained by the Cape Cod Canal were clearly

set forth in a paper by William Barclay Parsons, an engineer of wide repute. He said:

"Fog, storm, and adverse currents frequently keep vessels stern-bound either at Provincetown or in Vineyard Sound for days at a time, so that no certain time of arrival can be predicated even for vessels in tow, still less for vessels under sail, while the terrible list of wrecks on the shores of the cape attests the futility of attempting to make the journey in bad weather."

"During the year 1905, the last for which statistics are available, fourteen vessels were lost on the shoals on the short stretch of thirty-five miles of Cape Cod coast. The tonnage of these wrecks comprised 24.1 per cent., or say one-quarter of the total tonnage of wrecks reported on the whole coast line of Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, and Long Island. So measurable is the danger of Cape Cod transit, as compared with the quiet navigation of Buzzards Bay and the canal, that inquiries addressed to the Marine Underwriters in New York elicited the response that insurance rates on the ranges of sailing vessels and heavy cargoes would be reduced from ten to twenty-five per cent. to vessels using the canal."

The dangers of Cape Hatteras and the treacherous sands of Diamond Shoals have been the scourge of coast navigation since men first began to sail through this part of the Atlantic. To enable ships to proceed in safety behind Hatteras will require an extensive and improved system of the Norfolk, Virginia, and Beaufort, North Carolina, which will involve so very great expense. The saving in lives and property will be very great.

"More shipping has been lost," said Congressman John H. Small, of North Carolina, "and more weird rumors have been going upon storm blasts over departed lives upon that sandy and treacherous coast than anywhere else in the known world."

Between Baltimore and Jacksonville shore, Mr. Small declared, \$5,000,000 a year would be saved to commerce by the installation of the inland waterway behind Hatteras.

"We have a project," he added, "which has been adopted by the engineers for the Norfolk Beaufort route. We had a line surveyed in 1904 for a waterway 16 feet in depth, and the route selected. The cost of it was estimated at \$10,000,000. We thought that that scheme ought to have been adopted; but the engineers said that a lesser depth would be sufficient, and in 1908 there was another survey based upon a depth of ten to twelve feet. The engineers recommended twelve feet. The route was to extend from Elizabeth River, upon which Norfolk is situated, southward by the Albemarle and Chesapeake Canal route, a distance of sixty-eight miles; thence through the inland sounds of North Carolina, by way of the Albemarle, the Croatan and the Pamlico, a distance of sixty-eight miles; thence by the Neuse River and Adams Creek, Core Creek, Newport River, and Beaufort Inlet, a distance of fifty miles. The cost of the canal for twelve feet depth was estimated at \$5,700,000, and for ten feet at \$2,700,000."

"Congress, at its last session, adopted the project of ten feet, and made an appropriation of \$500,000 for constructing the southern section of the route, extending from Beaufort to Pamlico Sound, a distance of fifty miles, so that we have this distinction, that in all these links of waterways from Maine to Florida the Norfolk-Beaufort route has the honor of having received the first recognition and the first appropriation at the hands of Congress. The detail surveys are about completed, and construction will soon begin."

CANADA'S FERTILE NORTHLAND

THERE is a stretch of country, vaster immeasurably than any remaining portion of the world which is available for white settlers, soon to be exploited. Towns will spring up, industries will arise, metals of fabulous wealth will be mined from the ground. A new dominion will be added to the British Empire in the north of Canada.

This must not be confused with the Northwest, with Saskatchewan and Alberta provinces, into which immigrants are now pouring annually by the hundred thousand. In Labrador, and west of Hudson Bay clear up to the Arctic Circle, is a great unknown country, where for a whole century isolated settlers have had their homes, wholly cut off from civilization.

With the purpose of developing this gigantic domain, hitherto given over to the Hudson Bay Company and its Indian trappers, a British commission has recently been held in Ottawa. A surprising feature has been the evidence of residents of the extreme north who came down to testify. Many of these had started first the Klondyke during the first rush of prospectors, and taken up their abodes instead somewhere along the basin of the Mackenzie.

In these regions the ground thaws to a depth of three feet during the summer months, under a perpetual snow which seals up the temperature toward the nineties. Beneath this is a layer of perpetual ice. North of the Great Slave Lake, in a latitude parallel with that of the Bering Sea, a temperature of 100° in the shade

was registered on several successive days. Wheat, peas, potatoes, and all garden fruits and vegetables have been grown during the summer months over the stratum of perpetual ice under the soil. From May until October, frosts in some sections are wholly unknown.

Mr. W. F. Bredin, a member of the Alberta legislature, gave evidence of the mineral wealth of the country. For miles he encountered wells of natural gas, which could be ignited to a height of twenty-five or thirty feet. All along the Athabasca river, bordered continually from the banks, which, for a hundred miles, consisted of asphalt. Asphalt lakes of enormous dimensions were constantly encountered by another witness. Tar sands exist all along the Coppermine River up to the Arctic Sea. Boring for petroleum was stopped by a tremendous flow of natural gas, which still continued when the spot was revisited several years later.

Among metals and minerals found were gypsum, salt, copper, coal, gold, mercury, and silver. A sulphur crater was discovered near the Great Slave Lake. East of Lake Athabasca, in latitude 60, "a fine hay country" was found. Tobacco was grown in the same district. Wheat from Vermilion was a prize at an exhibit in Chicago. Herds of reindeer and buffalo, with moose, musk oxen, and all the fur-bearing animals were constantly encountered.

The building of railways to reach these isolated regions will open to Canada a fertile territory larger than the Louisiana Purchase.

Leaves from the Log

By CAPTAIN HENRY C. DAVIS, U.S.M.C.

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY" WITH THE BATTLESHIP "OHIO" OF ADMIRAL EVANS'S FLEET

NEW Year's eve, as midnight approached, there were signs about the *Ohio* that the men were not all so sound asleep as they are wont to be at that hour, and, sure enough, when the time orderly repeated twelve midnight to Jones, who had the watch, bedlam broke loose. The bell struck sixteen times, eight for the old year and eight for the new, while the crew, equipped with all the band instruments, with tin cans, dishes, pans, bells, tinles, rattles, in fact with everything that would make a noise, paraded around the deck and welcomed the new year. On the quarterdeck, Dr. Meyers, with a big horn, led a squiggle band of the officers. Sterling played the pibro, Oernas had a snare drum, Smith a bass drum, Cole a trombone, Cross a cornet, and Davis an E-flat clarinet. Their repertoire consisted of "Hawanila," "Honey Boy," and "The Merry Widow Waltz," but if any one could have told which was which he would have merited a prize. I suppose the officer of the deck on the *Missouri*, who, by the way, came up as close as he could to hear the sweet melody, must have thought a mailhouse band was performing. Taps and reveille were sounded in succession, and as the Captain's orderly rushed down to the quarterdeck and told Mr. Edgar that the captain wanted the noise stopped, we had launched into an other year.

To-day is New Year's day, and we are off the coast of Dutch Guiana. It is a holiday on board ship, but what a different holiday it would be in New York!

The trip from Trinidad to Rio is the hardest part of the cruise. There is a westerly current along the north coast of South America, and it gives us a big set to the west every day. We are making only about nine knots, and that is not getting on very rapidly. We are due in Rio on the 10th, but I think it will be nearer to the 12th when we let the mud-hooks drop.

The lantern left Trinidad two or three days ahead of the rest of the fleet in order not to delay any of the ships, and she is evidently making good time, as we have not seen anything of her yet. The crew are having a rehearsal of their ship song this afternoon. They sing very well together, and the swing of "Honey Boy" lends itself very well to a chorus of men. Here is the song:

"U. S. S. 'OHIO.'"

(AIR. "HONEY BOY.")

There's a ship which sails upon the ocean blue,

Ohio? Ohio?

And there's nothing which the good ship cannot do

As she sails along the bounding main,

When it comes to target practice or to drills,

Ohio? Ohio?

She is always O. T. J. every month and week and day,

And we'll sing this song as we go.

CHORUS.

Ohio! you certainly are a daisy,

Ohio! you drive the rest all crazy.

They are not in your class—no not at all—

Ohio? Ohio?

Oh, she is a regular howling beauty,

And when it comes to doing duty,

You will hear, never fear, that they do it, do it,

Do it on the Ohio.

All the Eye sees for Days—Sixteen Ships and the Horizon

One effect which this cruise will probably have, if no other, will be to brace up the recruiting. The men have been allowed to go ashore and see what there is to be seen, and consequently the trip will not be one of seeing the world through a portfolio, as too many of such world-sewing cruises are. The consequence of allowing them to go ashore has been to make them feel the trust their officers have in them, and the cases in which the trust has been abused are very few. They have pitched into the nasty work of routing after their shore leave has expired with a spirit which shows the wisdom of the Admiral in allowing as many men as possible to go ashore as often as is feasible. Of course the men

The "Rhode Island's" forward Turret as an Easy Chair

who overstayed their leave before we left home are now suffering for it, as they are not allowed to leave the ship.

On the night of the 9th of January, the only real excitement of the trip occurred. It was five bells in the mid watch and everything was quiet, when suddenly the boom of a gun broke the stillness, and the *Missouri*, from which the shot was fired, turned on the letter Z of the night signals; this means, "Man overboard." Instantly the engines of the entire fleet were stopped and search-lights from all the second squadrons were turned on the lights of the lifebuoy which the sentinel on the *Missouri* had dropped. For nearly an hour the fireboats of the *Neine* and *Hittica* searched the vicinity, and the lights roamed over the sea, but no man was seen, and finally the search was abandoned and the fleet proceeded on its way. When the commanding officer of the *Missouri* investigated the case it was found that a man whose hammock swung near an open hatch on the upper deck had had a nightmare and dreamed that he was falling overboard. He screamed "Man overboard!" in his sleep, and was heard by the officer of the deck and the marine on duty at the lifebuoy; consequently the alarm was sounded and the fleet stopped. It delayed us a bit, but every one is glad that it was only a dream.

Tonight, the 10th, we increased the speed to eleven knots, and we should be at anchor in Rio harbor by Sunday noon if everything goes well. Three men in an open boat very sighted the other day, and the fleet was about twenty-five miles from land at the time; so the Admiral sent the *Glacier* to pick them up. When the *Glacier* got alongside close enough to hail them they found the supposed coastguards to be fishermen from Pernambuco, who neither wanted nor needed assistance. I should imagine the fishing around Pernambuco to be rather poor if they have to go twenty-five miles in an open boat to get to it.

The Admiral has fleet signal drill nearly every day now, and it is remarkable to see the speed with which the signal boys can bend on and hoist the flags. Of course, there is the greatest rivalry in the fleet over this sort of thing, and to beat all the rest is quite a feather in the cap of a ship. The hoists are repeated—that is,

Photograph by Robert Dunn

The "Rhode Island's" Mascot, "Billy," is in a supplicating mood

each ship hoists the same flag as the flagship, and all the bridges are filled with the signalmen and signal quartermasters with their long glasses pointed at the flagship. As fast as the flags appear over the rail of the bridge a mile away, they are called out and hoisted on to the mast. When all is ready they are shot in the yardarm by a youngster jumping from the bridge running to the deck below. By the time we reach San Francisco we will have a corps of signalmen hard at work.

At last we have had a real tropical rain. For the benefit of those who have never been in one let me say that when the rain came down it was necessary to sound fog whistles, as the ships could not be seen from each other. That may properly be considered something for a rain.

A trip of two weeks on a man-of-war does not offer much in the way of gaiety, and the ocean gets monotonous, but the drills and the ship's work keep all hands busy, so that the time does pass quickly. If only some arrangement might be made by which we could occasionally see and talk to some of the fair sex, life would not be so stupid. It's a shame that all these lovely moonlight nights are going to waste. A transport with the sweethearts and wives on board would be a great addition to the fleet, but I should hate to have command of such a ship.

Today is the 11th of January, and, according to schedule, we should have been in port; but it will probably be four in the afternoon tomorrow before anchors are dropped.

The *Kearny* hoisted the broken-down flag today, as something had gone amiss with one of her engines, but the trouble was soon repaired and she retied her station in the column.

Several steamers have been sighted today, and it seems like being out more in the land of the living. The path of the cruise from Trinidad is not much frequented, and one sailing vessel is all that was sighted in the past two weeks. St. Thomas light will be about on the beam at midnight, and we will head a little more to the westward then.

We are all looking forward to the mail coming on board when we arrive; that is, we are hoping we will not have until after the mail has arrived. By the present schedule we are due to leave the day before the mail steamer comes, but we are a day late, so we may wait a day longer in port and get our letters before we start for Porto Armon. We are making nearly twelve knots now, and we have just changed course a little more to the westward. There are two steamers in sight, and I would like to know what they think is around them. The signal lights have been going at full tilt, and the changing of the course makes a change of the cruising formation necessary, so I imagine they must know some fleet of warships is about. It is a beautiful sight to look

down the long lines and see the signal lights flashing and the hulls shining in the moonlight.

I think the *Blower* gave the Admiral a little worry when we started from Trinidad because she burns so much coal, but she has got on beautifully, and some of the *decatur* class will arrive with very much less coal than the *Blower*. The ships which will have the least of all are the *Hobson*, *Hilms*, *New Jersey*, and the *Throton*.

We had more or less expected to salute Admiral Krane as a Vice-Admiral when we ran in with the *Fushton*, but as yet, though we have met the *Yankee*, and Lieutenant Libardi is on the *Conqueror*, no word has come, and I suppose Libardi has no message for the Admiral about it.

We have just anchored, and the bay is alive with Brazilians in every kind and condition of craft imaginable. They seem very glad to see us, and the fleet under an imposing sight steaming past the forts at the entrance. No leave has been granted yet, but tomorrow we will probably be allowed to go ashore. His has changed quite a bit, judging from the appearance of the water front. Meantime everybody is bent upon securing all the sleep that he possibly can to-night, so that he may be in the best possible condition to withstand the effects of the unbounded hospitality that the Brazilians will presently extend to us. Some wise philosopher has observed that the tropics are the variable home of hospitality, and I am sure no one in the army will gainsay him. Of course, in the tropics north, the Equinox will welcome you into his sunny igloo and regale you with real blubber and choice bits of whale treacherhood, but that is mere life-saving drill. In little old New York the lights of the Great White Way irradiate the earth in a thousand facets that are simply overpowering in their beauty and generosity. But it is only in the tropics that people have the time no less than the inclination to dangle and overindulge their fortunate guests with entertainment whose beauty and lavish scale no Oriental potentate could hope to equal.

One no longer feels that the cruise to San Francisco is a long leap into the unknown, now that we have completed more than one-third of it. Not that any man in the service ever seriously regarded the Pacific venture as a mysterious journey, but somehow the popular feeling that we were dashing away into space could not fail to be relieved in certain minds. Now that we are at Rio with so long a divisa of the cruise accomplished even the most imaginative mind recognizes the fact that the cruise is simply a long drawn test of the officers, men, and ships in the duties to which it has pleased God to call them. Our word will describe the daily and hourly routine since anchors were weighed at Fortress Monroe, and that word is—WORK!

There has been mingled with the work, from the start, a fair proportion of amusement. By this time we have consumed all the candy given to us by kind friends before we left home. For some occult reason it seems to be the fate of them that go down into the sea in ships to have huge quantities of candy bestowed upon them. No matter. We're devoted ours. Moreover, we have read every book that was sent on board; we have talked about all the people we know at home; we have discussed every conceivable topic, and some of us have had the ghastly misfortune to tell some of our stories twice over. Oh, the silence of the ward-room! Oh, the snickers of the juniors!

Moreover, we have walked the deck at all hours, especially the darkest ones before dawn, and have seen in some particular star the glowing lineaments of one who never mind; we shall go ashore tomorrow and endeavor for a few moments to forget.

Everything has gone slowly thus far, and as soon as we are all coiled we will once more be on our way to the broad Pacific. The longest single trip is over, and every one is glad. As I write, the engines have stopped and are secured—the first time in two weeks. The cool weather of the amit will be very acceptable when we get there, and until we do we are in for a good hot time. We are a long way from God's country now, and it certainly will be good to see it once more in San Francisco.

The Liqueur Trust in England

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

THE first measure mentioned in the King's Speech when Parliament met on January 29 was a new Licensing Bill. Around this Bill will be fought one of the stiffest battles of the year. In England, it is sometimes said, has no trusts. But she certainly has something that is a very colorful imitation of a trust. Being a free-trade country she is spared the last consequences of the unshaky alliance between business and politics. The State in England is not regarded as a machine which, worked one way, will put money into the pockets of the manufacturers, and, worked another way, will take it out again. As a rule a big industrial concern in this country has very little cause or temptation to interest itself in politics, and a joint-stock company would never think of using the money of its shareholders to make contributions to the campaign funds of political parties. A year ago it was discovered that one of the great railway companies had contributed to one of the parties engaged in the London County Council elections. There was a sharp expression of public and Parliamentary feeling on the subject; a Bill which the company was promoting in the House of Commons was all but wrecked in consequence; the directors, under the pressure of their stockholders and of popular opinion, were obliged to discontinue their own political activities; they had thus subsided; and the moral of their discomfiture was not thrown away on the other companies that might have been tempted to follow their example. As a general statement it is safe to say that in England corporations and politics either keep apart or that the connection between them is incidental and fairly wholesome. Great industries are, of course, represented, as they should be, in the House of Commons. The shipping industries and the railways are particularly strong. But on the whole the only business that is organized as a political force and that plays politics as a matter of course is the liquor business. At the present moment it would almost seem to have given up brewing and distilling for the sake of conducting a vast political campaign.

\$800,000,000 Worth of Drinks a Year

The part played by the drink traffic in the social and political life of England is enormous. The people spend over \$800,000,000 a year on drink. The revenue derived from it more than floats the British navy, and amounts to twenty-eight per cent. of the total revenue of the kingdom. The old just that the Perage should change its name to the Beverage gives the measure of the social influence of a trade which in America, I believe, is not classed among the most reputable industries. There is another point of contrast between the English and the American attitude towards the drink traffic that is not without interest. In America it is the saloon-keeper who is the prominent figure in England it is the big brewer or distiller. The political influence of the trade is represented in America by the man who sells the liquor, and in England by the man who makes it. That is the only point I am aware of at which America is frankly more democratic than England. About \$1,000,000,000 has been invested in the trade in the United Kingdom; over 110,000 premises are licensed for the sale of alcohol; and the number of people who hold shares in brewery companies must run into many hundreds of thousands. Moreover, most of the saloons in this country are what is called "tied" houses. That is to say, they are owned by the brewing or distilling companies, whose influence thus finds a local rallying-point in nearly every town and village in the land.

Why England is Sobering Up

I think there is no doubt that England is gradually becoming a more sober society. Local complaints to this effect are heard from hotels and restaurants, the managers of restaurants, the stewards of clubs, the directors and shareholders of brewing companies, and almost all from the Chancellor of the Exchequer. In the last six years the amount spent on drink has decreased by over \$100,000,000. The excise receipts, in spite of increased duties, has fallen off by over \$12,000,000. The consumption of wine has declined by more than five million gallons, of rum and brandy by nearly three million gallons, of whiskey and gin by six millions, and of beer by three millions. Six years, it is true, is too short a period in which to determine whether there has been or is likely to be any permanent change in the habits of the people. Heavy drinking and good trade are apt to go together, and a wave of sobriety is often only another way of saying a wave of commercial depression. If the figures of the last fifty years can be held to demonstrate anything it is that poverty does not lead to nearly so much drinking as prosperity. Had times and severity of employment meant that the wage-earner, who is the real mainstay of the trade, has less to spend at the saloon. In the real sense,

it is not poverty that takes him there, but affluence; poverty drives him out. To improve his condition, therefore, in the hope of thereby winning him over to temperance seems a policy that is shorting up for itself some bitter disappointments. On the other hand, there is the unshaken fact that England is drinking less today than in the twenties, that while her expenditure on tobacco, sugar and tea has increased from a third and a half, her expenditure on spirits, wine and beer has decreased, and that if she were spending on alcoholic liquors as much today in proportion to her population as she spent thirty years ago, her drink bill would be some \$100,000,000 more than it is. Still, it reaches, in all conscience, a sufficient total.

The Government and the Liquor Trade

The attitude of the State towards a business so huge, so pervasive, so militant, so intensely related to the social life of the people, and so productive of revenue must always be a matter of supreme importance. In England, as everywhere else, there is no free trade in the sale of intoxicants. Sale is only permitted by license, the number of licenses is limited, their duration is confined to twelve months, and at the end of the year they must all be renewed. No holder of a license possesses a legal right to have it renewed. Renewal may be refused at the discretion of the local licensing authority, and the applicant is entitled to a hearing for various reasons—e.g., if the saloon has been improperly conducted or if there are too many of them in the district. I think there is no question that the legislature intended licenses to be the property of the State, liable to termination at the end of any twelve months, and that in point of law the license-holder has no vested interest in his license beyond the period of one year. On the other hand, he has the reasonable expectation that it will be renewed unless on grounds of gross misconduct. And this "reasonable expectation" has actually developed a monetary value. The licensing justices have hesitated to cancel licenses, they have been indignantly reluctant to take away a man's livelihood. The result is that a well-conducted saloon has had little or nothing to fear from the annual formality of renewing its license. The State by levying death duties on licensed premises on the basis of the license being a continuing possession; the local authorities by proceeding on the same assumption in the matter of assessments; and the Courts of law by protecting the rights of those interested in the reversion or remainder of a license—have all shown that the expectation of renewal is all but a certainty. And in this expectation, which is all but a certainty, many millions of pounds have been invested. The brewers, as I have said, have acquired control of the licensed premises, often at extravagant prices, and they figure of course among the assets of the brewery companies. Thus the situation has become immensely complicated by the fact that a vast army of shareholders have become interested in renewing licenses, not as annual privileges, but as permanent grants. Thus, too, the feeling has grown up that compensation should be provided for every license that is extinguished. Thus, finally, it has come about that the State has practically parted with its control of the liquor traffic. It has created a vast property, largely unimpeachable in character, and has handed it over without receiving in return any adequate consideration.

Who will Win—State or Brewery?

The Licensing Bill of 1904, the work, of course, of the Unionist Government, adopted the principle that compensation ought to be paid in the event of a license being withdrawn for any other cause than that of misconduct, and it provided the necessary funds by imposing a graduated tax on all saloons in the district—a tax locally raised and administered. Thus the license-holder found a new security given to his property, its value immensely increased, and compensation provided if his license were refused renewal, without the State being a penny the better. The Bill was vigorously opposed by the Liberals who made no attempt either at the time of its passage or during the general election to general their determination to amend it when they again found themselves in power. They are now addressing themselves to the task, and the liquor trade is preparing to fight their advance foot by foot. The whole country will soon be ringing with the din of the combat. Every holder of brewery shares is already in a panic. What provisions the forthcoming Bill will contain I do not know, but it may, I think, be taken for granted that it will impose a time-limit of ten years or so, at the end of which all payment of compensation on the non-renewal of a license shall cease. Licensees will then revert to the State, and such of them as are re-licensed will be subjected to far higher duties than hitherto—duties based on the full monopoly value of the premises and the license taken together. These two amendments—a time-limit to the period of compensation and heavy licensing duties on the future—will thus in effect put the State in control of the liquor trade. Whether the State is equal to the task is the fundamental issue that is about to be settled.

Judge Jim Hargis, Killed
in a Fight with His Son

The Human Side of Jim Hargis

By EDWARD S. LINNER

TO the seeker of the picturesque, there is bound to be fascination in the human side of Jim Hargis, the one-time King of Breathitt County, who met the fate of his victims at the hands of his son. Now that he is dead, they are telling stories about him which bring out traits of character

the Judge. He was a man of some education, and in this respect he differed from many of the mountaineers who followed him blindly. He knew the part which several of the influential Kentucky papers were already playing in a warfare against him. During the

Beauchamp Hargis,
the Parricide

hitherto misled by the writers of many articles on the Breathitt feud.

Jim Hargis was, first of all, a vain man. He knew the extent of his power in the region, where law did not count until Floyd Hargis became prosecuting attorney, and it satisfied him. But his vanity had its limits. Hargis detested photographs and photographers. His enemies say that the reason was not a lack of vanity, but that the Breathitt King did not want his features too well known to the people of other sections of Kentucky. For years he had decreed at intervals that no one should ever take a photograph of him. During the feuds, several daring photographers who went to Jackson for the purpose of snapping the King were glad to escape with their lives. They did not return until the eve of the first trial of Jim Hargis for the Callahan murder. The Judge knew of their presence and vowed that his rule would not be broken. Of course all the leading papers of Kentucky had photographers at Jackson, especially to get a picture of Jim Hargis. The Louisville Courier-Journal had sent a young man named Robert Hise.

When the day came for the opening of the trial, the photographers were lined up along the main street from the store of Hargis to the court house. The accused waited in the rear of his store until the hour arrived for court to open, then covered his features with a quilt and made his way in that manner to the trial.

Several of the newspaper men thought that Hargis had won out and gave up the attempt for the time being. Hise, however, went around to the rear of the court house and concealed himself near the entrance. His idea was that while Hargis was bound to be covered with his quilt if he left by the front entrance, he might discard it in leaving by the rear. This proved to be the case. When recess came Hargis, accompanied by some of his men, left by the rear way. The Courier-Journal man thereupon came out from his concealment and snapped the Judge before he could hide behind one of his friends.

Hargis, in a rage, shook his fist and swore at the photographer. Several of his friends, knowing the rule of the Judge, seized the Courier-Journal man and were about to smash his camera, when the Judge intervened. "Don't, boys. His paper expects it of him, and I suppose he's got to make a living." The ice was broken. Hargis posed for several pictures and was never reluctant to be photographed afterward.

No one realized the power of the press more thoroughly than

the Judge. He was a man of some education, and in this respect he differed from many of the mountaineers who followed him blindly. He knew the part which several of the influential Kentucky papers were already playing in a warfare against him. During the period when the feud was at its height, the Louisville Evening Post sent Denny B. Goode, a reporter, to Jackson. Goode began to send in vivid accounts of the situation and spared no one. Breathitt was aroused. One evening Goode received word that Judge Hargis wanted to see him and give him a statement for the Post. Goode went at once to the store of the Judge. The lights there were burning dimly as he entered. He was suddenly seized by several men and dragged to the rear. One of the men then asked:

"What do you think of a man who would come among us, learn our ways, then write against us in the newspapers?"

"I think he would show he has plenty of grit," Goode replied.

"You do? Well, you have written your last story. You are never to leave this place alive."

Just then Hargis entered, and when he learned what was happening, thrust the men aside.

"No, boys, none of that," he said. "As long as this newspaper man is in Breathitt County I shall protect him."

The reporter was then allowed to go.

The Judge, however, was not so friendly disposed toward playwrights. One of them, Leon F. Ellis, of Lexington, thought the Breathitt feud would make fine material for a melodrama of a lurid type. He accordingly went to Jackson and began to jot down notes of the people and the atmosphere. For a time all went well. Ellis was allowed to go about and gather his material without molestation. When the playwright began to study his characters he expressed a wish to meet Jim Hargis. The Judge sent word he was agreeable, and Ellis went to see him.

"I hear you are writing a play about us," the Judge began. "Let me see it."

Ellis refused. Hargis repeated the request and was met with the same refusal.

"I never ask a third time for anything," the Judge remarked.

The playwright thereupon concluded it would be wise to grant the request and handed Hargis the manuscript.

The Judge read part, then handed it back.

"Young man," he said, "there is a train that leaves here for Lexington in ten hours. You and I will board it. Your baggage at the hotel will be sent to you."

There was nothing for Ellis to do but submit, and Hargis escorted him to Lexington, returning to Jackson on the next train, but not until he had reached an agreement with the playwright that his melodrama should never be produced.

With all the Honors of War

By ZOE HARTMAN

DRAWINGS BY ROSE O'NEILL

"First she had cried as though her heart would break; yes, had even howled, until the din had brought mamma flying down from the sewing-room with a breathless, 'Merry, Petronel, what has happened?'"

Long afterward she could shut her eyes and feel with a shudder the small gristly, wriggly body crunch beneath her heel, and live over that dark, inquisitorial moment when she had bent over the wee, soft thing peeping so pitifully in the hollow of mamma's hand, and had witnessed its death struggle through her blur of tears.

And when mamma had said with such a look, "Why, Petronel, how could you be so careless? Now you'll have to tell Auntie," it seemed to her intensely visual mind that prison walls stretched out before her, that she heard the click of manacles and stood a tried and convicted criminal before the jailer man and the hanger man who epitomized to her the majesty of the law. She felt herself already in its grasp. From now on she must think of herself as an assassin.

"I didn't mean to!" she whispered, in tones staccato with horror, as mamma laid the poor little collapsed feather ball in her aproned lap. "I was just raxsin' round with the hose turnin' the water on the old hen to keep her out of the 'sturnum bed. This chicken was in a puddle, an' I didn't see it, an' I s-s-stepped on it!"

Mamma gathered her first born into a consoling, if not restraining, embrace.

"Well, well, little woman, don't cry! It's too bad to kill the poor chicken, but I expect Auntie'll forgive you. She'll take them all home in a few days; then you'll have your playground free. Now dry your tears and go tell her about it. Then you can bury the chicken out there on the common where Sambo can't get at it."

Petronel trailed dejectedly away to confessionals, the corpse weighing down a fold of her gingham apron, which gaped open just enough to allow divers abominable peeps at the grass-crimping christ. The mission was solemnly accomplished when prolonged clamors of "Pete, Pete!" floated up from the quarter of the garden, and the twins and Hazel bore down upon her at full sail with a mighty clatter of express wagon and "Fast Mail." With all due respect, and not the slightest loss of prestige, she was always "Pete" to them.

"Where you goin', Pete? What you got there?"

"Wha'-chu--got, Pe-tey?" echoed fluster, the fat twin, who on state occasions answered to the baptismal name of Robert. Puffing, he shuffled up on a pair of exceedingly short, chubby legs, jerking his express wagon along behind him. He stood so straight that his killed pink frock hung short to front over his scold little paunch and sagged slightly behind, while even his black curls dragged lower upon his dimpled neck, forming a fit frame for the singular sweetness of his dark eyes.

"I've killed a chicken," announced Petronel, ingenuously, as the trio crowded around, and Miriam, the thin twin, poked her inquisitive amber curls straight into the aperture of the apron.

"Poor sticky!" she cooed, lifting big, solemn, violet eyes. Petronel's instantly brimmed over.

"I s-stepped on him!" she gulped. "I didn't mean t-to!"

Mamma gave a maw' bury him."

Hazel sidled a step nearer, gazing this afflicted Niobe with wistful wonderment, her fawn braid in her mouth.

"Way down deep in the ground like Harry Todd's ill beaner!" she demanded.

Petronel suddenly looked up.

"U-h-h-h," she acquiesced, vaguely, a light leaping into her tear-dimmed eyes, a flame of inspiration newly born. "S-s-say, I've got it! Why couldn't we all bury him?"

"Right now!" Her little, oval, freckled face reflected the glow of the fresh July morning, and enthusiasm swept her to her feet, regardless of the chicken, which slid from her apron, and rolled away in the grass. "We'll have a funeral like big folks!"

"A funeral! Oh, goody!" Joyously Hazel spun about on one leg.

"A fun-a-ler!" gurgled the

twins, whose vocabulary was all too inadequate for the measure of their understanding. "An' horse, Pe-tey!"

Petronel wrinkled her brows.

"We'll have to make believe the horse. We'll ask Charlotte an' Aleck to come over an' be in it. Aleck can be a horse an' pull the hearse!"

"Where's the hearse?" Hazel's wife worked but slowly even under the spur of Petronel's nimble executive genius.

"Why, there it is, you goony!" giving the express wagon a shove that sent its chubby proprietor head over heels, landing him on his feet again somewhat dazed and disheveled. Petronel, brimming over with her idea, scarcely saw the mishap. Her elastic spirits were soaring aloft by leaps and bounds into the ethereal regions of a limitless imagination. Scaffolds and dungeons had vanished from her horizon. Tears were as far away as the autumn storms.

"I've a show-box, just the thing for a coffin. An', Hazel, you go ask mamma for a pair of her black dress for a shroud. Oh, goody, there comes Charlotte and Aleck! Hi there, kids, hurry up!"

Over the back fence crawled the two cousins, Aleck first, with a scatters and despatch due to the prehistoric skill of his hands and feet and the monkeylike agility of his small wiry body, Charlotte, with much labored scrambling and a sudden barrel-like descent from the topmost paling.

"Where's Sambo?" called the boy, catering across the lawn, his sister jogging factotumly along behind over the mat of turf and dandelions, at a health-saving pace calculated to last all day. She was a cheerful, substantial infant adulated rather to sound sleep than to dreams, who beamed on all the world alike and vegetated contentedly very close to earth. Petronel, who had run to meet her and was dragging her rapturously along, stopped short at Aleck's question and considered.

"Oh, mamma shut him up in the barn for chasing one of Auntie's chickens," she said, adding wistfully, "She ought to have shut me up, too. Look what I've done!"

With her thin little shoulders writing perceptibly and all the elation dying out of her eyes, she stooped and slowly fished the dead chicken out of the grass.

"Huh! Only a chicken!" Aleck's downright masculine mind was incapable of making tragedy out of such small fry. Following the trend of his thoughts, he made a dive for the stable, soon to return triumphantly with a powerful, high-bred setter, a real Irish thoroughbred, a veritable canine Samson with a lamb-like face, who ambled along at Aleck's heels after the peculiar adoring fashion of his breed, his whole body wriggling friendly greeting.

"I found him on his stomach by a mouse-hole," explained

"I was just turnin' the water on the old hen!"

Next came the hearse drawn by Hazel

Aleck, "just as excited, waitin' for th' mice. He'd forgot what he'd been shut up for!"

In the midst of an admiring circle, the setter held court, politely offering his paw to his favorites, while dispensing hospitality to all impartially with his velvet pink tongue.

"Darlin' doggie, we duss forget you!" blushed Hazel, ecstatically straining him till he growled. "I duss wish Auntie'd take her old chickens away, I do! Then Saggy could have some fun."

Petronel's mercurial spirits suddenly leaped skyward. "He shall march in the funeral procession!" she cried, with a skip that set every brown curl dancing. "Come on, kids, we mus' all dress for the funeral. No, no, Saggy, you can't come—go 'way." For "Saggy," with the unerring instincts of the hunter, had already availed the contents of her apron.

"Where y' goin' t' bury it, Pet?" queried Aleck, "rough-bonning" the setter in blisful abandon.

"Out there," waving vaguely toward the broad stretch of common back of the yard, where ash-colored sage, hardy wild grasses and great patches of phlox riveted together in the light midsummer breeze. "An', Aleck, you can dig the graves an' be the preacher."

"Huh!" came somewhere from a méele of sturdy boyish legs and waving red paws as the "rustling" match waxed hotter and hotter.

"Jus'—a' leave—dig—grave,—but can't—be—no preacher!"

"Yes, you can," contradicted Miss Autocracy. "I'll lead the singin' an' tell you what to say. All you have to do is to wear your nightie an' call us 'Dearly loved brethern.' Come on, girls, we're goin' to dress up!" And away she bustled, followed by her minions.

An hour later, mamma, attracted by an unusual commotion below, looked from her upstairs window and burst out laughing.

"Come here and look!" she summoned Auntie.

Around the house, from the regions of the back porch, came an imposing cortege as ever set forth to bury the dead. First of all came the preacher in the "Fast Mail," which his feet propelled at a devious snail's pace, while at irregular intervals he rattled a decrepit cowbell, though he occasionally forgot the solemnity of the occasion and jingled it long and merrily as though for an auction, or some such profane function.

Next came the bearers, drawn by Hazel for Petronel, upon brood thoughts, had decided that it would never do to link the high sailing of a preacher with the comparatively humble one of a horse. Here expediency and conventionality had joined forces and scored a distinct triumph: in the express wagon sat the twins, back to back, with dandling legs, Miriam in the front, Buster behind, while the corpse, in a white sheet-box laden with dandelions and "sturdium," reposed securely between them. Vulgarly speaking, it was a tight fit, but if it had the advantage of anchoring the coffin firmly against the pitching and tossing of the wagon over bumps.

Lastly came the crowning glory of the pageant—Charlotte, crimson, panting, and very much impeded by her long skirt, trundling the big wheelbarrow in which were gathered the Sorrowing Friends, otherwise Auntie's hen and entire brood of little chickens; while Sankey trotted alongside as bodyguard, his quivering nostrils glued to the sheet-covered box in which his feathered friends cackled and popped their panic-stricken indignation. It was Petronel's *chef d'œuvre*. The idea had come to her in a flash of revelation, as most of Petronel's ideas were wont to come. At first, Charlotte could not be made to see its orthodoxy, much less its propriety. But Petronel, as usual, overruled her.

"How'd you feel if you were dead and your folks didn't come

to your funeral?" she demanded. "Don't you s'pose the hen an' chickens are sorry same as us? Of course all the relatives mus' come!"

And that had settled it. So Aleck had been ejected into nailing staks on a cast-off soap-box and the whole brood had at last been lured into it by a lavish supply of oats and bread crumbs, much to the edification of Saggy, who, watching at a respectful distance, with his head cocked on one side, had scarcely been able to contain his excitement.

Petronel was especially proud of this feature of her procession, though it had developed bellumine qualities rivaling those of the cowbell. Like a good field-marshal, she hovered on the outskirts, giving a push here and a pull there, exhorting, admonishing, and getting the trail of mamma's blue serotian petticoat most gloriously tangled up in the wheel of the barge.

Every cast-off ribbon, plume and artificial flower in the house had been utilized for the adornment of the ladies, on a scale of reckless magnificence. Yes, Solomon in all his glory was not arrayed like one of these.

Carls and pigtails were piled high upon young heads, mamma's last season's loquacious at varying angles on Miriam's small coquette, top-heavy from a "pompadour" of twice its size, and a picture-hat that had seen better days arose in appalling proportions above Charlotte's heated little face. Hazel blomed out in the gay alphan slumber-robe purloined from the library couch and draped about her in princess in such a fashion as to make mere walking impossible and toddling a necessity. Even Buster's cherubic innocence was crowned with papa's old campaign plug, and a sack of scarlet mosquito netting, knotted around his waistless middle added much to the impressiveness of his appearance.

In short, all were bravely attired with the exception of Aleck, who had balked outright at the "nightie" and vowed instant desertion if the matter of rector's habiliments was not dropped. He had no objection to being a tool if the ladies would just please not spell it with an "f." He would be preacher, but he would not wear a "shirt." A man must look out for his reputation, you know. And Petronel, whose diplomatic gifts were not to be despised, let it go at that.

Blowly the procession trailed around the front of the house and came to a standstill in the park. Naturally, all functions took place in the park, for here the turf was thickest and greenest, thanks to the tiny brook that trickled through it, the knee of young cottonwoods about it furnished admirable shade, and, best of all, there were rustic seats, of home manufacture—wobbly, it is true, but still one could sit on them for quite a long time before they broke down.

The ministers of ceremonies marshalled in her force, waiting there in a semicircle facing the preacher, while the coffin was placed upon an inverted water-bucket midway between pulpit and congregation. Twice it was swept off by the friendly wag of Saggy's tail before that inquisitive canine could be prevailed upon to stop sniffing at the box where the Sorrowing Friends still clung to their grief, and to sit quietly at Hazel's side throughout the service, with his destructive tail curled under him.

The preacher looked around serenely and cleared his throat.

"Dearly loved brethern," he stammered, in obedience to Petronel's imperative nod, "we-we-we'll sing 'Jesu's Little A'sh'!"

That young lady promptly seated herself on the top bar, which made a capital keyboard, she struck up that true and tried classic of virtuous infamy, giving it a cheerful, spirited swing with which all funeral dirges are not best. Severely, ecstatically, she sang, like good, her vivid little face slightly by upraised, her brown eyes aglow, her birdlike treble soaring high above the others, warbling sweet and true.

The congregation supported her, with a will, but as they were somewhat shaky on the words, their performance, on the whole, lacked conviction, not to say reverence, until they reached the immortal refrain.

"You in your small cor-nur-r-r!
An'-die-is—mine!"

When out it came with a confident roar which amply atoned for the vague mouthings of the verses and restored confidence among the singers.

The ensuing pause passed into an awkward blank. The preacher appeared to be hopelessly stranded. In a convulse of his own sex, where one indulged in such gross earthy pastimes as "rustling" or "hapdug," he would have positively shone, but here was a situation that called for imagination and the gift of "gub."

She sang like one inspired

Charlotte was trundling the wheelbarrow in which were gathered the Sorrowing Friends

Nothing saved him but a sudden collapse of the bench upon which the twins were perched—a calamity attended by much agitation and bumping of heads among the congregation, in their scramble to rescue the indignant pair and to keep the pudgy bluster from sliding by sheer force of gravity into the brook.

Petronal wriggled uneasily under those distractions. It irked her artistic sense to see the game played with so little regard for the rules. Skilled players at "make believe" could bridge over little breaks like these with equanimity and grace.

"Sing again! Sing 'Jodels'!" she tactfully prompted the preacher, who, much relieved, launched the congregation forth into a lusty chant of,

"When he cometh, when he cometh,
To us—up his joo-walls!"

and so on, until the lung power of the assembly was used up and all but the chickens were completely blown.

"Now we'll all march round and see him," announced the preacher, anxious to hurry the proceedings and relieve the pressure upon himself.

"Oh, no! You men! preach the sermon first!" chorused the ladies, much scandalized at this flagrant breach of the conventions.

"Now, I can't preach no sermon!" blurted the badgered ecclesiastic. "Dunn what 't say. You do it, Petet!"

"Petet" was much disturbed. Playing everybody else's part was also against the rules, and coaching a delinquent player in public seriously offended her nice sense of the divine fitness of things.

"I told you what to say, but I reck 'n you've forgot," she said, resignedly, adding, as a compromise: "Well, then, s'pose we all say little verses. Charlotte, you begin; and look at the coffin while you're sayin' 'em, so 't'll seem more like a funeral sermon."

As a co-operative sermon it was a marked success, for it included such familiar old friends as "Suffer l'il children 't come unt' me" and "Jessa wept," which were resurrected from the elusive memories of the twins only after a heroic struggle. True it is, the preacher got the sacred and the profane badly telescoped in his not wholly inappropriate contribution. "A rolling stone gathers no moss," but nobody noticed the slip except Petronal and she had greater things to do.

"Now we will open the coffin and see him," she announced, nasally assuming the morose, wooden expression of the professional undertaker, as she uncoiled the sheet-box. Then the mourners marched around three times with much craning of necks, treading on toes, and tripping over trunks that trailed with regal glory both fore and aft. To them, this viewing of the dead was the most important rite in the whole ceremony; in all their observations of "revel, truly grown-up funerals," they had not failed to note its dramatic possibilities.

These, however, had no opportunity to develop, on account of the irrepressible daggery curiosity of Saggy, who had lost no time in transferring his kind attentions from the bereaved hen family to the sheet-box. So indignant did he become that his bulky red body completely blocked the line of march and had to be dragged forcibly away, until the coffin could be closed and loaded hurriedly into the hearse, sans dignity, sans ceremony, out of his reach.

Once more the procession formed as before and wended its way around the house, across the back yard, and through the alley gate to the burial ground, attended by a continuous rattling far-far from the corbillion, while Petronal eventually suppressed in the interests of peace and unity, on the grounds that it lacked artistic value.

"I don't believe you ever saw a funeral before!" she wittingly rebuked the preacher.

The concluding rite was to the last degree impressive. With

Nothing saved him but a collapse of the bench

unerring dramatic instinct, she grouped her subjects about the little trench and set them to singing. "Bringing in the Sheaves," which Hazel and the twins always interpreted "Bringing in the Sheaves," by a process of analogy peculiar to infancy. Meansville, the preacher, denied the consolation of the corbillion, worked off his superfluous steam by scooping the grave deeper with a firm shovel. Saggy, too, burning to be useful, threw himself heart and soul into the fray, making the dirt fly under the swift powerful strokes of his paws.

At last all was ready and the coffin was lowered, to the piping of brave little voices as they chanted their refrain of hope and rejoicing. Thereafter, the official tension was relaxed, by mutual consent, and the six dropped on their knees to pat and heap and smooth the ground into shape and to pile it with "sturdiness" and dandelions. The preacher, who was beginning to be tremendously tired, soon retired with a whoop and a hand-spring to finish his "rattle" with Saggy.

The ladies, however, lingered over the last choiciness.

"He must have a unyusant and fresh flowers every day," decreed Petronal as Charlotte stuck in two clothes-pins, one at the head and one at the foot of the mound. "If we bury him right," she appended, impressively, "he'll rise!"

"Rise!" Charlotte stopped short, open-mouthed. Here was a passive nature that seldom challenged discussion, but here was heresy, paganism, atheism!

"Yes, rise, 'course. Isn't you ever got to Sunday-school?"

"'Course I do—but—but—children can't rise!"

"Rise!" Charlotte stopped short, open-mouthed. Here was a young theologian. "You want the resurrection all to yourself, I s'pose. If you don't care whether this shifty fies or not. Well, neither nobody cares whether you rise either, but you will, just the same!"

Charlotte sat down on her feet in one of the soft beds of phlox that sprinkled the common like silver-droplets, and stared at her cousin. In polemics, as in other things, she was no match for Petronal.

"Well, you said the spotted pig would rise too," she pursued, doggedly, "but I've been watching his grave—oh, the longest time, an' he hasn't come up yet!"

"'Course not!" This time the triumph was final—decisive. "No one can rise till the judgment day, an' if folks have to wait, why, of course, they would. Now let's pick a lot of phlox!"

"Hi, kids! Hi, hi—ade!" bawled a jubilant voice from the back porch. "You're missin' 'il Cookies! Cook—here! Fresh! Hot! Xena's got barrels of 'em."

It was like a little call to battle. With one rapturous howl the "funeral" party was over the fence in a twinkling, its members shedding their livery as they ran, in proportion as they found it an impediment to their progress.

Not long after, above the careless cluck and bubble on the back porch, a high, childlike soprano of plaintive sweetness floated up through the windows of the sewing room. Mamma looked out, and a smile of peculiar tenderness crept into her eyes—a smile that the eternal mother instinctively reserves for her first born.

On the topmost rail of the back fence, just above the new made grave, perched the little maid in all her funeral regalia, the noon-day sun streaming down upon her high piled curls, drawing red gleams from them, and making a wonderful shimmering aureole about her hairless little face. Her hands were full of cookies, her feet swung aimlessly to and fro, kicking out the folk of the blue sateen petticoat; and her eyes, lifted upward, rapt and absorbed, dreamed and belied on their way through the fields of infinite space. Sordid things were put behind, troubles slunk off hergeton, the clouds had rolled away from her soul. The fragmentary thoughts and lately awakened feelings that had been struggling to her for expression now bled in one dazzling, harmonious vision before her eyes as she blithely warbled her exaltation:

"We shall come rejoicing,
Bringing in th' sheaves."

The co-operative sermon

Where Does all the Gold Go?

By A. C. SIMKINS

THE need of gold is the topic of the hour, and yet there is little less than a million dollars' worth of the precious metal produced daily throughout the world. In Australia and South Africa, and in our own Alaska, Nevada, California, and Cripple Creek, great mines, equipped with the finest machinery known to science, are working night and day, producing a continuous golden stream. And still there is a shortage, and our financiers have had to send abroad to London to borrow enough to save the country from a financial crash. And London finds itself short. It is torn between France, and then there is no more gold to be had. Where is it all? What has become of the stock, the great reserves which should be somewhere, receding from the spring which broke loose in the days of '49 and has since been pouring forth in ever increasing volume? One would be justified in the belief that in the financial centre of every country there are accumulations by now so colossal as to make the idea of a shortage for the ordinary purposes of trade a thing to be counted as absurd.

Where does it go? Some of it, a small proportion, indeed, into the arts and jewelry. The balance is supposed to be coined or held in bars ready for coinage. But where are the coins and the bars? Only a matter of fifty or sixty million dollars were needed recently to save the country from a panic, and that amount was obtained with difficulty, after a prodigious effort, by securing the whole of Europe. Think of it; fifty or sixty million dollars—the output of American mines alone for a short half year. Surely there must be something wrong somewhere. Where does all the gold go as asked again; and there is no satisfactory answer.

Does the stream run on through the ordinary channels of trade and finally disappear, as some streams do, in the desert beneath the ground, never to reappear? It would seem so.

Lord Cromer, in a speech recently delivered at a banquet at the Guildhall in London, sounded a note of alarm when he drew the attention of his hearers to the hoarding privileges of the Egyptians. He told how the hydraulic engineers had made a new Egypt—an Egypt freed from the erratic favors of the Nile, needing every year a hundred and fifty million dollars in gold to finance the cotton crop. Engineering skill has worked wonders in this old land of the Pharaohs, but we must doubt, after reading his remarks, whether the world at large has been benefited thereby, for but little of the large amounts of money expended ever leaves the country again. Year after year England exports to Egypt the hundred and fifty million dollars gold needed to pay for the cotton, which, thanks to irrigation, can be counted on with absolute certainty. A hundred and fifty million dollars is one-half of the world's yearly gold output.

Hoarding among the Egyptians and the Orientals is an old, old story. Some would treat the matter lightly, though, and laugh at what they are pleased to call an Asian myth. But it is no Asian myth. The gold we should have in our marts of commerce—to-day lies underground in India, in Egypt, and in China. It is buried. There the product of hundreds of gold mines, won by so much skill and effort, is returned once more to mother earth, to lie unproductive in the eternal quiet of the tomb.

Lord Cromer gave several instances, one of a cotton planter not supposed to be rich, who died not long ago. In his cellar there came to light a hoard of 50,000 British sovereigns, almost \$2,000,000. Another bought a piece of property for \$125,000, and said for it in coins taken from a hoard buried in his garden. This sum of money was brought to the place of transfer on the backs of slinkys. Instances such as these could be quoted without number, but there is no need to do here. Hoarding in Egypt is such a well recognized institution as to be beyond the sphere of argument.

Then there is India, that land of a never changing conservatism, where caste and hoarding are customs as unbreakable as the laws of the Medes and Persians. The practice of hoarding has been the custom for ages; and by ages is meant not merely a few centuries, but time running back a thousand years and more; during all of which, except for the past century, India has been the ramping ground of warlike princes.

During the past twenty years one great hoard of silver, that of sixty million pounds sterling in rupees has been quietly exchanged for gold. The true extent of this hoard was first brought to light some years ago in evidence before the Currency Commission which sat at the time of the closing of the Indian mints in the coinage of silver. It is a true old story. There is nothing original about it. A thoroughbred tall gave his evidence to the commission, and it was widely printed.

"You know," he said, "how anxious the late Maharajah Scindia was to get back the fortress of Gwalior, his very few knew the real cause which prompted him. That cause was a concealed hoard of sixty crores of thirty million sterling of rupees in silver which he hid within the fortress, over which red-coated British sentinels had been walking for about thirty years, never for one moment suspecting the wealth concealed beneath their feet. Long before the British government gave back the fortress every one who knew the entrance into the concealed hoard was dead, except one man, and he was exceedingly old and, although in good health, might

be expected to die at any moment of sheer old age. If that had happened the treasure might have been lost to the owner forever, and to the world for ages, because there was only one entrance to the hoard, and that was most cunningly concealed.

"So the Maharajah was in such a fix that he must either get back his fortress or divulge the secret to the government and run the risk of losing the treasure for all time. When after long negotiations he was given back the fortress by the Maharajah, even before the British troops had left Gwalior territory, masons were brought from Benares, where they had been sworn to secrecy in the Temple of the Holy Cow; and when they reached the Gwalior railroad station they were put into carriages, blindfolded, and taken to the spot where they were to work. There they were kept till they had opened out the entrance into the secret vault; and when this great concealed hoard had been verified by the Maharajah the masons were once more blindfolded, put into carriages, and taken back to the railroad station and returned to Benares. The masons, who had stood guard over the masonry during the progress of the work were taken out to a courtyard and shot to death, so that the secret of the location of the great Gwalior hoard was safe once more."

For the benefit of those who doubted the truth of the extent of this hoard, it was pointed out that several smaller ones, each amounting to from ten to thirty million dollars, had been brought to the attention of the government, which had obliged the owners to invest them in India bonds. These smaller hoards had been accumulated by princes who had never had a tithe of the power and importance in the land ours belonging to the Maharajah who held his court in the city of Gwalior.

But Indian princes do not take kindly to government paper. Quickly and in the course of only a few years these bonds were turned into gold, and the gold sealed up in some secret vaults, to be lost to the use of the world. And as it is with the princes, so it is with the merchants. Take a merchant with an income of five thousand rupees a month. At the very outside five hundred rupees would replace all the furniture in his house. Beyond a few curtains and rugs, furniture, as we understand the word, simply does not exist. Even the very wealthy, who possess horses and carriages and a retinue of servants, and no furniture worthy of the name. No expensive cut glass and china were adorn their tables at times of feasting. Money thus saved the merchant hoards. Occasionally he places a little in some bank to meet a foreign draft or for some temporary convenience, but such a sum in comparison with his hoarded wealth is trivial; and in the same way the amounts on deposit in the Indian banks in comparison with that vast volume of underground treasure is a mere drop in the bucket.

At the Currency Commission the English members sought to ascertain how much gold would be needed to give value to our gold coinage. It was thought that fifty million pounds sterling would cover the demand. They were astonished to learn that that amount would be swallowed up by one province alone. Rupees by the scores of millions and ever would be brought forth from the hidden hoards of princes and merchants to be exchanged for the precious metal, and the exchange would go on until the hoards, which at that time were about equally divided between gold and silver, should be entirely gold. The commission realized later on in its deliberations that before a gold currency had been in force twelve months five hundred million sterling would be absorbed.

The hoards of the princes were largely gathered when the Mahatma armies systematically swept the plains of India, and were the accretions of hundreds of plundered cities in the good old days before the British came to introduce a new order of things. The great masses of the Indian people are native princes and merchants, they are surpassed in the aggregate by the thousands of smaller hoards, the property of the middle and lower classes.

Eliminating the millions of poor, half starved wretches who merely exist in India, laboring for the wealth of a pitance as small as barely to keep body and soul together. It must be remembered that there are yet a hundred million able to accumulate something; and even if this be only a few rupees, these are hidden until the time comes when they can be conveniently exchanged for gold and hoarded.

Full financiers can determine the amounts buried in these secret hoards of India and Egypt and China, with its four hundred millions, and can discover some means to hold the gold above ground, the miners will continue mining, and the streams of the precious metal will everly pass to by.

It will not be a while before the banks and treasury vaults, and some of it even will be made into jewelry and plate; but the great bulk of it will be carried silently along the stream of the world's trade to the Orient. Once in the Orient, the work of smelters, of mills and cyanide plants, the skill and labor of hundreds of thousands of men, will have all gone for naught. In these money graveyards of the East side by side lie the billions of the Incas, the wealth of the Moctezumas, Callimachian and Australian millions, and the output of the hundreds of gold mines in South Africa and elsewhere. All is lost to the world, consigned to the oblivion of the sea, as treasure ships wrecked and forgotten in the sands under the sea.

HOW TO KEEP WARM IN WINTER

The Members of the Brookline (Mass.) Swimming Club have a cheerful Disregard for Seasons, and are as content in Snow as in Water

Famine in India

THE third periodical famine in India, which have from time to time horrified the civilized world, now seem to have become endemic. Millions of the native population have died from this cause during the past few years, and no sign of improvement exists. The viceroy of India, in a telegram sent to London during the third week of January, stated that the total number of persons in receipt of state relief in British India considerably exceeds 223,000, that the number is steadily increasing, that prices are rising, that the rise in prices is trifling severely upon the poorer population, especially in the towns, and that, although the worst signs of acute distress are not yet manifest, still the suffering is great.

The third Harrower government forecast of the rice crop is singularly appropriate in this connection. The report, which deals with a territory containing about 9.8 per cent. of the total area under rice in British India and Burma, gives as the area under cultivation 7,200,000 acres, an increase of 322,271 acres. Prospects are good, the surplus available for export being estimated at 2,510,000 tons of cargo rice, equivalent to 22,010,000 cwt. of cleaned rice.

This is a striking commentary upon modern civilization in India.

Brazil's Black Diamonds

THE scarcity of black diamonds, and their demand for rock drilling, have greatly enhanced their value during the past few years. From a comparatively small area in the central portion of the state of Bahia are taken almost if not quite all of the world's supply of the black diamond of commerce, used for the purposes of what is known as the diamond drill. This area lies along the upper waters of the river Verde, a tributary of the great river San Francisco, mostly in a range of mountains known as the "Cupidos Diamantina." The American geologist, J. C. Branner, in surveying the greater part of the northern half of the

state of Bahia, included this diamond district in his surveys, and in connection therewith made a most important discovery. It had not been supposed that the diamond district extended at all to the west and north of the river Verde, but Dr. Branner's explorations reveal the fact that the same diamond-bearing strata extend almost as far as the river San Francisco, covering an area of from 3000 to 5000 square miles.

The diamonds are found in gravel and conglomerate formations. The area in question may be approached by rail from either Bahia or Pernambuco. From the terminus of the railways a journey of many days, either by water or by muleback, would be necessary to reach the objective point.

Double-tracking the Siberian Railroad

AFTER many years' consideration the plans of the Russian ministry of communication for double tracking the Trans-Siberian route have recently been approved by the St. Petersburg government.

It is proposed to lay a double track from the station of Omsk to Baikal Station, and from Tanchai to Karymskaja; to rebuild the mountainous section of the route between Atchinsk and Irkutsk; to increase facilities both for crossing and rounding Lake Baikal; and to raise the general efficiency of the whole line.

The cost of double tracking the line from Omsk to Atchinsk is estimated, exclusive of transportation of goods which necessitates so much expense, at 25,010,000 rubles, or about \$13,000,000. This means a cost of 27,700 rubles per verst over the distance of 1132 versts (a verst is 3280 feet). The cost of the second track on the Trans-Baikal sections will be heavier: from Irkutsk to Lake Baikal and from Tanchai to Manchuria 48,140,000 rubles are needed for the 1251 versts, or an average of 39,000 rubles per verst.

The same rate per verst is also given for the section of the line to Karymskaja. The

expense of installing an additional track on the Atchinsk-Irkutsk section, together with reconstruction of the mountain section, will cost, exclusive of transportation of material, 57,148,000 rubles. This sum brings the cost of the southern line to 31,180 rubles, and of the rebuilt line to 33,000 rubles per verst. Aside from all this, some 3,000,000 rubles are wanted to better the ferry system across Lake Baikal.

The Ceylon Pearl Fisheries

NOT only the pearl, but the shell of the pearl oyster is largely used in commerce for the manufacture of penknives, opera glasses, etc. For an unlimited period the best pearl shells have come from Ceylon.

The price of pearl shells in recent years has varied from \$26 to \$35 per ton at Continental ports. While supply and demand have been the chief factors in determining the price, the quality of the shell and the mode of packing employed have also had their influence. It is expected that the price in 1908 will be higher, as it is stated that there will not be a pearl fishery season, owing to unfavorable conditions on the oyster banks. Even when a large fishery is made, it is sometimes impossible to secure large quantities of shells because of irregularities of shape, and the prevalence of worms which eat the shells. The fisheries were conducted by the Ceylon government up to two years ago, when they were leased to a company organized for the purpose.

Fishing can only be done between October and April, as the monsoon prevents the approach of sailing craft toward the banks, which lie about three days' sail from Colombo. Besides the ordinary shell, there is a variety known as "window pane." This is the product of a government fishery, and the annual yield ranges below 300 tons. The size are between five and seven inches, and the price varies between \$70 and \$80 per ton at Continental ports.

There is a good opportunity for the establishment in Ceylon of a factory for the manufacture of pearl shell goods, and American capital might well be invested.

Heroes All

THE STORY OF A RESCUE AT SEA

By DAVID B. MACGOWAN

HE determination with which men, in one circumstance, will fight to keep his life and, in another, will, with equal determination, risk it without a thought, has rarely found better exemplification than in the recent tragedy of the British steamship *St. Cuthbert*, in which both her men and the men of the *White Star liner Cyrenia*, who went to the rescue, played fast and loose with death.

The *St. Cuthbert* was a Phoenix liner out of Antwerp, with a cargo capable of turning a crew gray—matches, rags, kerosene, asphaltum, and willow-ware. On the fifteenth day out her cargo shifted and this was the beginning of the end. On Sunday, February 2, something below decks caught fire—perhaps a case of matches pounded open in the scumway—and while Second Officer Tudy was giving the alarm an explosion shook the ship and hurled the cover of the fore hatch into the sea.

The fire flashed through the cargo, and, roaring up forward, soon had the bridge ablaze. Captain John Lewis, the *St. Cuthbert's* skipper, and a sailor named Joubert got out the hose and had a stream playing on the fire, but a drum of kerosene exploded in their faces, temporarily blinding them and burning them frightfully. Quartermaster Charles Johnson clung to his post at the wheel until the poisonous fumes and the fire drove him away.

With the first alarm of fire the crew had tumbled on deck barefoot and half clad, many of the men just out of their bunks. When they realized the full peril of the fire they rushed in a panic for the boats. In order to save the boats, Captain Lewis ordered them manned by small crews and lowered. Third Officer White, with firemen, cooks, and stewards, manned the first. While it was being swung out on the davits the ship lurched, and White was flung into the water. The carpenter then took command, but the sea was too high for his awkward hands, and the lifeboat was smashed to pieces before it reached the water. Lewis was flung to those struggling in the sea, but only one man succeeded in holding on until he could be hauled aboard to the doubtful safety of the *St. Cuthbert's* deck.

Another boat was lowered empty, and this also was crushed against the vessel's side. There remained one other boat untouched by fire. Into this Second Officer Tudy, Apprentice Officer Bowman, and eight men embarked safely, although the boat was badly stove and water poured in incessantly. Young Bowman

bailed as well as he could with his cap while the water arose in the boat to his wrist. Three of the rowers soon succumbed to the cold, and their oars were swept from their hands. When Tudy ordered them to help bail they refused, and clung to the boat's air tank, which none was keeping her afloat. They did not respond to either kicks or commands and apathetically resigned themselves to death.

Daylight found the lifeboat seven miles from the burning ship. The mast was raised, but snapped like a pipe stem. All but two of the oars had been carried aboard, and two hours hard work were required to head the boat about. A jury jib carried the crazy craft back toward the ship, while the storm still raged. At four o'clock the crew, almost frozen, decided that, perhaps, the ship offered more hope of life than the gale-swept sea, so an effort was made to get alongside. As the small boat approached the burning ship a wave dashed her against the heaving steel side and every man was flung into the water. Two of the three launched sailors sank without a struggle. Bowman dragged the third man and a burned sailor up on the copper tank and passed lines around their waists, but the arms of the third man went over his head and he slid into the waves like a bag of flour. Bowman then put the line under his own arms, made the injured sailor's arm fast to it, seized his wrist, and was drawn safely to the *St. Cuthbert's* rail.

Chief Officer S. H. Hobbs and the remaining crew fought the flames half a night, a day, and another night. Standing knee-deep in water they defended the 600 barrels of asphaltum in the stern in momentary fear that the whole ship would be blown into the air. Without sleep or pause, eating only cold boiled potatoes—for nobody had time to prepare a meal of the 600 pheasants, partridges, and pigeons which were aboard—they fought the fire while the hours passed. Their one great hope was that the flames would be seen, for they were on the great Atlantic highway off Halifax, but a veil of mist screened them most of the time.

Six stowaways and three sailors had been penned in the fore-cabin. Guy Sides, of Webster City, Missouri, and James Collins, of San Francisco, homesick sailor stowaways, climbed a wire stay hand over hand to the foremast. Sides passed from the rigging to the funnel and heaved to safety. Collins was following, when the steel mast, adrift at the base, crashed over the port rail, and flung him into a hatch from which flames were rising twenty-five feet into the air. His horrified companions crouched at the bow until the flames scorched them; then crept outside. They caught the flumes of the scurber and swung their dripping and half frozen for seven hours until the fire abated, then they crawled aboard again, and crept to the stern along the blistering scuppers as the deck plates were red hot.

Early on Monday morning, February 3, the lookout on the bridge of the *White Star liner Cyrenia*, bound from Liverpool to Boston, picked up a speck on the horizon which, after half an

hour's scanning he made out to be a steamer at distress. Captain Finch ordered the *Cyprie's* engine chafed, and at half-past nine o'clock an answer came as he could to the wreck, which proved to be the *St. Cathbert*. Her cattle decks were smashed, the rigging of her foremast trailed in the water, and thick, poisonous smoke and fumes were pouring from all her forward hatches. The *St. Cathbert's* crew, baddily in the damaged cattle pens, anxiously watched our four boats' maneuvering of the *Cyprie* and the *Chaucerian*, which had come up about 11:30 o'clock, before the *Cyprie* signalled that she would rescue the crew.

As soon as we had come up to the wreck and before it was decided that any attempt to take the *St. Cathbert* in tow would be useless, making the actual rescue of the crew the only alternative, Chief Officer John Steivley of the *Cyprie* had offered to man a boat and go alongside the distressed vessel. But Captain Finch refused to permit the risk. Although sailors are always unflinching in the face of the weather it is too much for them, the fact that the waves were covering our saloon portholes and lapping even upon our promenade deck was not to prompt a thought of the dangers involved. Toward 2 o'clock in the afternoon some of the crew decreased, and Captain Finch, who had intended to stand by until the wind and sea subsided, gave orders to man a boat. As it was swung out from the side, Steivley, Boswara, Robert Jones and six sturdy volunteers took their places in it.

No sooner was it outside than the sea caught it up for a new plaything and dashed it against the *Cyprie's* side, snapping the headbeams and two crew. Quartermaster Matthews was disabled by a blow in the chest, but there was no time to replace him until the next trip. Bounding from the side, the lifeboat was lifted on a wavecrest twenty feet in the air, the sea refusing to be calmed by the barrels of oil which we were pouring upon it. When the tackle broke we were cast off from the boat they were using as a buoy, the wind used to swing around the head of the boat, and the waves in coming down from one of them Steivley had to drop the tiller and instantly a wave jumped the rudder and the tiller was jammed seaward.

"Never mind! Shore off!" cried Steivley, as he took the rudder in his bare hands while perched upon the air tanks to make room for the rowers.

Feeling with their oars and guided by a line from above, the crew urged their boat around the *Cyprie's* bow and gained the open sea, their oars bending like whalebone. The boat rose on the swell of an approaching mountain of water whose foaming top threatened to swamp it. Steivley stood the danger squarely, the boat poised on the summit and was swayed from one side. From wave to wave it reeled, until it came up under the dismantled mast of the *St. Cathbert*, a mile away. A rope was cast, and she was made fast.

The emotions of the forty-one men aboard the sinking ship can be comprehended. They had lost not only all their provisions, but all their lights and signals as well, and a signal of distress had been made by relighting a torch-tick oak fender to the center of a red blanket.

Bravely the madness of Sunday morning, Chief Officer Hobbs drew a revolver, and firmly announced that he would shoot any man trying to desert without his order. Captain Lewis and Joubert were swung down in slings while the sea heaved the ship from side to side, and spray and smoke half-blinded rescuers and rescued alike. Fifteen others, not so severely injured, were slung down the rope ladders with lines under their arms, and the lifeboat started on its perilous return journey.

It reached the *Cyprie* in safety and the seawater men were drawn up. Lewis and Joubert, half crazed, waving their hands against the ship's side. And we never once thought of cheering as we watched the rescue, the plight of the men was too pitiful for that.

As we had been drifting all this time, which trebled the distance between the wreck and the *Cyprie*, Captain Finch ordered the boat hoisted in order to steam to a better position. When it came time

for the second trip and Steivley asked whether the men would go back with him or make way for other volunteers, they replied: "We got their cure and we can do it again." So the lifeboat started out once more. Snow was now falling fast, so we arranged electric reflectors and flashlights, and gave the lifeboat crew devilish lights for the *St. Cathbert*. We passed two anxious hours while the second and third trips were being made, for neither flashlights nor ship lanterns could pierce the gloom. The fog here blew steadily, of course, for the lifeboat could make no use of the compass.

The crew of forty-one were brought off without mishap, Hobbs being the last to leave the derelict. One man had burned to death and thirteen had been drowned before our arrival. At 6:30 the task was finished, and the lifeboat crew was got aboard. The boat was out adrift, as it had suffered severely on the last trip and it came back half full of water, making the pull desperately hard. The sufferers received the most careful attention from all: boots, clothing, food and drink, as well as surgical care from the Yeung.

Steivley finished the day by going on watch as usual at 8 o'clock.

HEWITT: "I understand that that millionaire Mennen left his entire estate to his wives, share and share alike."

JEWETT: "Yes; they got about a dollar and a quarter apiece."

The Jewel Cave in South Dakota

THE President has just signed a proclamation creating the Jewel Cave National Monument within the Black Hills National Forest, South Dakota. This remarkable cave, which is located thirteen miles west and south of the town of Spearhead, in Custer County, in a limestone formation, is believed by geologists to be an extinct geyser channel. The National Monument will embrace an area of 1280 acres.

This cave, which was explored as late as 1904, has been found to consist of a series of chambers connected by narrow passages with numerous galleries, the walls of which are encrusted with a magnificent layer of calcite crystals. The opening of the cave is situated in Hell Canyon, the walls of which are high and precipitous.

The surface of the country in which the cave is located consists of a high, rolling limestone plateau about 5000 feet above sea level. The area is almost entirely covered by a forest of bull pine, a considerable portion of which is merchantable, while the remainder consists of a vigorous young growth.

The Jewel Cave National Monument will also be given permanent protection by virtue of the Act of June 8, 1906, which provides that objects of scientific interest may be declared National Monuments if such action is deemed necessary for their preservation and protection.

Great Britain's Gas Supply

IN spite of the gradual adoption of electric lighting by the conservative British public, the use of gas shows no signs of diminishing. There are now 5,818,941 gas consumers in the United Kingdom, as against 5,515,790 a year ago. There are 1,599 gas undertakings in England, 258 in Scotland, and 140 in Ireland. Municipal gas supply is on a much larger scale in Scotland than in either England or Ireland. All the large towns in Scotland own the gas works. In England this is not so, for in London, Liverpool, Bristol, Newcastle, and other large towns the gas supply is in the hands of companies. In Ireland this also is the case in Dublin and Cork. Of the gas made in Scotland, 83.5 per cent. is made in

municipal gas works, while in England only 31 per cent. is so made, and in Ireland 40.2 per cent.

The population within the London postal district is supplied with gas by 11 companies, which produce 46,023,832,000 cubic feet of gas for 1,191,896 consumers. Within this area there is produced nearly 23 per cent. of the output of gas of the whole kingdom, supplying 69 per cent. of the gas consumers. Prices range from 49 to 60 cents per thousand feet.

Ruins

* On your trip abroad did you see any wonderful old ruins? he asked.

"Yes," she replied, archly, "and guess what!"

"Well?"

"One of them wanted to marry me."

Involved

BENES: "I notice that you have a thread tied round your finger. I suppose that is to remind you of something."

JONES: "Not exactly. It is to remind my wife to ask me if I forgot something she told me to remember."

He Could Tell That

HEWITT: "Is your hump of locality well developed?"

JEWETT: "Well enough for me to know where anybody hits me."

Not a Game

HARRISER FAMILY MAN: "What do you think of this? My first has the mumps, my second has the measles, my third the hamp-scurch."

THE WIFE: "Kipping, old man! What is it—animal, vegetable, or mineral?"

Music and the Opera

AN AMERICAN SUITE, AND FREMSTAD'S "ISOLDE"

By LAWRENCE GILMAN

MR. ERNEST SCHELLING did a courageous and praiseworthy thing when he used in a movement of his new "Fantastic Suite," which Mr. Demarest produced on February 9 for the first time in New York, themes suggested by "Dixie" and "Old Folks at Home." It was courageous, because it was the kind of procedure that musicians and music-lovers of a certain type are apt to snarl at; and it was admirable because the tunes in question are in themselves salient and viable, and they constitute excellent material for the kind of treatment which Mr. Schelling bestows upon them.

The suite (composed in 1905-6) is for full modern orchestra, and comprises four movements: (1) an *Allegro marcato*, (2) a *Scherzando molto leggiero*, (3) an *Intermezzo*, and (4) a "Virginia Reel." It is the last movement, the "Virginia Reel," that "Dixie" and a portion of Stephen Foster's famous song are exploited as thematic material.—exploited with an ingenuity, a restraint, a delicacy of fancy and a mastery of orchestral idioms which are delightful and inspiring. It is not easy, of course, to imagine what the effect of these themes would be if it were possible to hear them divorced from their extramusical associations—if one could listen to them, as it were, with perfectly fresh ears. But as Mr. Schelling sees them, with a genuinely transforming dexterity, they are full of vitality and character.

In the other movements of the suite Mr. Schelling is less happy. It is not invidious to say that this is so because the themes that are of his own invention are less gripping in quality than are those derived from the two famous melodies which serve him elsewhere. His own ideas are never banal or cheap, or inflated in sentiment; but they do not seem to be the product of a particularly intense kind of meditation: perhaps it will suffice to say that they lack profile. Mr. Schelling's manner of speech is of today, though he is not a member of the extreme left wing. At times he remembers too well his *Dixie*, and again the pungent wind of Debussy's inspiration passes over his orchestra; but on the whole his style is delicately and fastidiously personal. His skill, it has been said, is marked; he writes with ease, freedom, elasticity, and with fertile invention in the matter of detail.

On the whole, it may be said that there are fresh and charming pages in this suite, pages that betray musicianship, a buoyant quality of imagination, flare and scintillations of taste. It is a noteworthy addition to the new too evident body of orchestral writing by Americans.

The title of *Isolde* has long been regarded by those who appreciate its demands,

Opera House

Miss Berta Moreno, the German
Dramatic Soprano, who has just
come to America

as the supreme test of a singing-actress, and it has come to stand as a linchpin by means of which a dramatic soprano may reveal the measure of her capacities. It is quite natural, therefore, that the recent debut of Miss Olive Fremstad in the character of Wagner's tormented princess should command wide and sincere interest. Miss Fremstad has appeared in the part during the current season at the Metropolitan Opera House, and there have been repeated opportunities to observe her conception of it under the considerable yet stimulating conductorship of Mr. Gustav Mahler, whose remarkable reading of the score was discussed in this place some weeks ago.

Miss Fremstad has built up for herself within the last five years an enviable reputation. In respect of a certain curious point point of qualities, she is unequalled to-day among Wagner singers known to the public of this country. Her voice is of intricate and pulsant beauty, she is an actress of skill and authority, and she exerts a personality of an insupportably magnetic kind; and she has both beauty and youth. She is one of the best of *Kundrys*, while as *Truus* and as *Aeschylus* she is unsurpassed. Outside of the Wagnerian repertoire she is an excellent *Carmen*, and her *Salsone*, in the music-drama of Strauss, is superlatively brilliant and engrossing.

It may as well be said at once that her *Isolde* is not so completely successful as are her other Wagner impersonations. The reasons for this are fairly obvious. In the first place, of course, the character of *Isolde* reaches heights and sounds depths of emotion that are peculiar to itself; and no singer, gifted in whatever degree, can hope to conquer its immediacies without infinite toil, patience, fervor, and meditation. In the second place, *Isolde* is an excessively difficult character to "compose," to make logical and consistent. She is both heroically grandiose and sensuously feminine; she is by turns a raging and infuriated goddess and a voluptuously tender woman.—That is, of course, a rude and summary analysis, but it will serve to make clear the point one has in view in affirming that Miss Fremstad seems to want to leave a desire to emphasize one or the other of these phases of the character.

When so much has been said, however, it remains to pay grateful tribute to a *Isolde* splendidly eloquent in action and in voice. The greatest later preters of Wagner's woman characters have, as a rule, been transcendental in the rôle of *Isolde*. The incomparable Lehmann was never more superb, even in her autumnal days, than as *Isolde*; it is said to have been Lehmann's most triumphant part; certainly it was Nipper's, Klafsky's, Termini's. Among this eminent company Miss Fremstad has demonstrated her right to be included. We have heard louder, more overblowing, and more subtle *Isoldes*; but none possessing quite the quality of magic with which she is able to imbue the part.

In the course of a recent review on this page of Vincent d'Indy's symphonic poem, "*Les églés à la montagne*," its performance by the New York Symphony Orchestra on January 18 was inadvertently characterized as the first in America. The honor of introducing d'Indy's remarkable score in this country rightfully belongs to the Theodore Thomas Orchestra, which played the work in Chicago, under the direction of Mr. Stock, on October 19, 1897.

Miss Lina Cavalieri

The Marvels of Indian Magicians

By Thomas Seltzer

THE American fakir is probably unaware that he can trace his ancestry to a more ancient source than any royal family of Europe or the Orient. Though the dictionaries derive our word "fakir" from the Arabic *fakir* and mean a "poor man," actually independent of the ancient Avesta institution, Dr. Richard Schmidt considers the European and American fakir as merely a degenerate product of the Indian fakir.

In a volume entitled "Fakirs and Fakirdom in Ancient and Modern India," Dr. Schmidt, an eminent German authority on Hindu Indian subjects, makes an exhaustive scientific study of the marvellous feats of the various religious orders and ascetics and mendicants in that country. For the fakir has for many centuries played a prominent role in the Indian religion. Dr. Schmidt has carefully collected his data from the ancient, reliable native and European sources. His book is based chiefly upon the researches of Professor Ernst Kuhn, of Munich, and Professor Richard Garbe, of Tübingen. By adding to these his own investigations, he has succeeded in giving a trustworthy account of the wonderful practices of these "holy men" of the Indian religion, or "yogins," as they are called.

The natives of India regard the fakirs as possessed of supernatural powers, in that it is the general opinion held there as the result of a life of long-continued abstinence and cruel self-torture. Nevertheless, the religious system of the Hindus has never collected them in their practices, nor persecuted them as the Christians have persecuted magicians and witches. On the contrary, they have been invested with a religious character, and are held in awe by the believers. As a result, they have developed their peculiar art to an astounding degree of skill that some of their authenticated performances, recorded in Dr. Schmidt's book, seem almost short of miraculous.

In former French Chief Justice in Chandernagor, Jaccollet, gives an account of several curious performances that were displayed for his benefit by a yogi named Gunda-Swami on the terrace of his own house. Being by an acute credulous, disbeliever, took every precaution to prevent deception. Fine sand was strewn on the ground in order to make as even a surface as possible. Jaccollet was asked to seat himself at a table upon which were a pencil and paper. The fakir carefully laid a piece of wood upon the sand, and announced that whatever figures Jaccollet might draw on the paper the piece of wood would transfer precisely upon the sand. The yogi stretched out his hand, and the wooden piece immediately copied upon the sand the most complicated and twisted figures that Jaccollet drew. When the Frenchman stopped writing, the piece of wood also came to a standstill. The fakir sat down, and, against a wall, while Jaccollet held the paper and pencil in such a way that the Indian could not possibly see what he was inscribing.

Finally Gunda-Swami asked Jaccollet to think of some words in Sanskrit, whereupon the piece of wood instantly traced in the sand: *Adicete Vritounam Marie* (Victory shines on the Eleventh Mountain), which, Jaccollet declares, were the exact words in his mind.

The fakir next stretched out his hand toward a huge leuzee vase filled with water and weighing several hundred pounds. In five minutes the vase began to move, apparently as if by the fakir with a slight motion. When the distance between the vase and the fakir had been considerably diminished, the vase began to emit loud metallic sounds, as if struck with an iron rod. Occasionally the noise resembled the roar of a fire. At Jaccollet's request the fakir made the vase stop, move, and stop again. Then Jaccollet demanded that the metal tones should sound again at the end of ten seconds, and the vase again repeated at the exact moment, which he noted by his own watch. Then he asked that the sounds should keep time to the tune of a music box which he wound up for the purpose. This requirement, too, was

GREAT PROGRESS OF "THE PRUDENTIAL"

Enormous Figures Deal in by this National Life Insurance Company.

The annual statement of The Prudential of Newark, N. J., which is published as another page, shows the Company to be stronger in public confidence than ever before. The year 1907 is reported to have been one of unusual gains in every department of the Company's business. The Company issued and paid for in new insurance during the year over \$27,000,000. The number of policies in force has been increased by over 400,000, bringing the total number of policies in force up to over 7,250,000. The total amount of insurance at risk is over \$1,337,000,000. In payments to policyholders, The Prudential has maintained and surpassed its record for 1907. During the year The Prudential paid to policyholders over \$18,000,000, while since the organization of the Company the total payments to its policyholders has been over \$181,000,000. A further profitable investment in a life insurance company consists of loans to its own policyholders, on the security of their policies. The statement shows over \$7,000,000 loaned in this way.

The Prudential shows a reduction in its expenses in 1907 (on a basis of equal premium incomes in 1906 and 1907) of nearly \$1,000,000. The tax payments by the Company in 1907 also reached the enormous sum of \$1,250,000. The net gain in insurance in force over \$1,000,000, and this, the Company's officials state, was a greater gain than the Company made in 1906, one of its banner years.

The Prudential states that through its splendid equipment, experience, and organization, it has given, since the introduction of its New Industrial Policy and New Low Cost Ordinary Policy, more life insurance for less money than ever before, and to this, no doubt, is due the great success that the Company made last year and is making this year. The New Low Cost Policy is described by The Prudential Company as the greatest success in Life Insurance, and this is due to the fact that it is sold at as low a rate as is consistent with the guaranteed benefits and the absolute Life Insurance protection which it affords.

Send to The Prudential, Newark, N. J., for rates on New Low Cost Policy at your age, and The Prudential officials state that you will be surprised at the large amount of Life Insurance you can secure from that Company at such low cost.

met. "In short," adds Jaccollet, "I left nothing undone to persuade myself that Gunda-Swami was perfect master of the manifestations of this strange power. The enormous case was thus solved, and the fakirs from the ground and dropped back miserably. Though the vessel shook, the water always remained steady. This experiment was carried on in broad daylight.

Yet this third feat of the fakir, of only secondary rank, and marvellous as were the performances of his described by Jaccollet, even more astounding feats are exhibited by those fakirs who have reached the very pinnacle of fakirdom. The European investigator the most remarkable of their powers is their ability to stop their respiration and bury themselves alive for a period of time, after which they emerge unharmed. The most striking instance of the many such cases recorded in Dr. Schmidt's book is that of a fakir at Amritsar, who had himself buried for forty days. The feat was accomplished in the presence of the minister in Delhi, an English physician, and a number of witnesses. The Indian fakir, a man of about forty years of age, had prepared himself by restricting his diet for a few days beforehand to milk only, and by thoroughly cleaning his system with a purgative. He then immediately began burying himself. He had his ears, nose, mouth, and every other opening of his body stopped up with wax, and then moved his muscles as in inspiration. After doing this several times he fell over upon the ground and lay motionless, with his eyes closed. He showed all the symptoms of death, except that the middle region of his head was burning hot and his pulsebeat violent.

After other parts of his body were sealed, the fakir was placed in a coffin, the lid sealed, and the coffin laid in a grave dug in a house prepared for the purpose. Boards were placed on the coffin, the grave covered with earth, and when the river rose over it, the house was locked with two locks. One key was placed in the custody of the English General Ventura, the other with the treasurer. A strong guard was constantly kept about the house, and at intervals the grave was examined for signs of disturbance.

On the fortieth day the grave was opened, and the coffin and the fakir were found in the same condition as when first placed there, save that the man's body had grown somewhat heavier. The fakir's attendance now began treatment for restoring his power to life. He applied a burning hot piece of dough to the back of his head, which was of the same degree of heat as when the fakir entered the grave. Then he began to rub his body vigorously, and removed the wax from the orifices. Presently the fakir opened his eyes, though in all other respects he appeared still to be unconscious. He was then given a hot bath, during which he recovered his consciousness to such a degree that he was able to stand on his feet.

Naturally, in a country where practices of this order are not uncommon, it is not difficult to account for the existence of myths telling of fakirs who have slept for a hundred years; though to the Occidental it is by no means as easy to account for an actual phenomenon which many have witnessed—suspension of life during a period of many days. Dr. Schmidt confesses he is at a loss for an explanation, while various other authorities point to the liberation of animals as a possible parallel. The Indian masses, of course, believe that the fakirs are in communion with supernatural forces, though the fakirs themselves, especially when performing for Europeans, do not seem to claim any supernatural power. In fact, a regular system of physical training has been elaborated for physical training in the art of feigning death. The rules are given in Dr. Schmidt's book as follows: the long retention of the breath, the swallowing of a narrow strip of cotton which will wipe the stomach clean, and the introduction of large quantities of water into the system for the purging of the intestines.

Beginners, it is said, hold their hands tightly pressed against the orbits of the eyes, ears, and nose, because the natural heat of the body forces out the air pent up in the head and frequently bursts the parts not yet accustomed to the expansion, especially the eyes and tympanum.

The Season's Plays

PROBLEMS FROM FRANCE AND INDIANA

By "I"

HERE is distinct but unfortunate appropriateness in the title of the Paul Hervieu play with which Miss Olga Nethersole began her three weeks' engagement in New York. The title is "The Awakening," and the manner in which Miss Nethersole acted her share of the play unquestionably opened New York's eyes. Only once during the three acts of the drama did she give the slightest indication of the skill which, when she was last seen in America, won for her an unqualified admiration. Instead of proving forceful, sincere, and appealing in a role which demanded these qualities, Miss Nethersole slipped through her lines, struck attitudes, clutched at her bosom or the furniture and all save ruined the play. All this was a great pity, because when Miss Nethersole was in this country two years ago she demonstrated her abilities in no uncertain fashion, and there was much plausible anticipation over her return this season. But in "The Awakening" at least—and this, fortunately, was only played during the first week of her engagement—she was a grievous disappointment. And her leading man—but of him later.

Hervieu's play in the original French must be remarkable. It is amazingly swift in action and strikes any number of emotional keys. It is frank, savannah and, at times, powerful. Its characters are distinctly dramatic, and in capable hands, or, perhaps, let us say, in hands which would permit themselves to be capable, shaking off the stagey shackles, it is really to be seen that it would have proven one of the marked successes of the season. Its story is direct and—Continental. *Prince Jean*, the romantic son of *Prince Gregoire*, the exiled ruler of the principality of Sylvania, falls in love with *Thérèse de Meyer*, a married woman. She loves him and consequently neglects her husband and daughter *Rose*. When *Prince Gregoire*, who has arranged a revolution in his principality, tells his son that it is his intention to place him, *Prince Jean*, on the throne, the latter refuses point blank to give up the

woman he loves, theme or no theme. This so infuriates the stern, belligerent old man that he and his republic determined son come almost to blows. *Prince Jean* has arranged a rendezvous with *Thérèse* at a villa near Paris, she agreeing at last to leave home and everything there for the *Prince's* sake. *Prince Gregoire* goes to the villa by himself, learns of his son's plans, and determines to gain his point by foul means now that fair ones have not availed. *Thérèse* arrives and meets *Prince Jean*. Believing the villa to be a secure retreat, he is startled by footsteps in an adjoining room, and, upon his exit to investigate, the door is instantly closed and locked and there is the noise of combat, cries, and a fall. *Thérèse* beats upon the door, and when it is opened a stranger, a spy of *Prince Gregoire's*, announces that at last it has been possible to strike down *Prince Jean*, and that he is dead. Then, with studied coarseness, he drives *Thérèse* from the villa.

A moment later *Prince Gregoire* enters, followed by his stunned and disheveled son. Again the father demands that his son return to Sylvania to occupy the throne which awaits him, and again the son refuses. *Prince Gregoire* admits the trick which his son has played, there is another storm scene and *Prince Jean* is sent from the house reviled and disowned. Of course he goes out to *Thérèse*, who has staggered home distraught. Then she awakes to a realization of what she had been about to do. It is her daughter *Rose* rather than her husband who brings about the awakening, through a letter which the young girl receives from a youth who loves her. Then when *Prince Jean* comes in and faces *Thérèse* he learns at once that she is lost to him. *Prince Gregoire* arrives, talks again with his son, and as *Thérèse* sweeps from the room, wins him for the throne of Sylvania and loves and kisses the young man's hand.

This somewhat elaborate description of the play will adequately demonstrate its power and the swiftness of its action. That it should have been so marred by Miss Nethersole is indeed to be regretted. There were only three persons in the cast who interpreted their roles with reason and skill. As *Prince Gregoire*, Mr. Charles A. Stevenson was poised, dignified, and masterful, the king first, then the father determined, at all cost, to bend his son to his iron will for the sake of his realm. Mr. Frank Mills, who played *Prince Jean*, was a figure of words and nervously fluttering hands. Never for one moment was he part of the picture, and yet it may be truly said that his physical struggles to get into it were at all times evident. In short, his acting was unapologetically bad. Miss Nellie Pearson, as *Rose*, was an attractive little girl who understood her part admirably and so acted it, particularly in the scene with her mother in which, by the letter of her youthful sweet heart, she brings to *Thérèse* a realization of the peril of her undisciplined love for *Prince Jean*. And this brings us to the one moment in which Miss Nethersole relinquished her "great actress" efforts of nearly three acts and became human and compelling. For a brief space she was a woman, a mother, one who had awakened, and one saw how speech an actress she might be if she desired. She roused the entire audience with this scene on the opening night when it had sat in subdued disappointment for a long time. The other member of Miss Nethersole's company who made her role real was Miss Katharine Stewart as the *Comtesse de Meyer*, the mother-in-law of *Thérèse*. Her dignity and finish in a not very important part were only equalled by that of Mr. Stevenson.

"Father, two months ago this man and I became husband and wife in the sight of God," says *Princess Astride* (*Katherine Gray*) in "The Worth of a Woman" (*Act III*). Whereupon, if you happen to be gifted with critical discernment, you smile in tolerant good humor, extract your knees from the hard wood back of the seat, which the Madison Square Theatre authorities have placed in front of you, press out the drama which your feet and legs have made in your hat, and leave; otherwise you stay and see it out.

But people of less discernment seem to like this play. Its basic problem is the incidental one propounded by Bernard Shaw in "Man and Superman." If a lady has been "served," does marriage with the author of the deed improve the situation?

Mr. D. G. Phillips's play shows promise; but he does not present his characters as the showman's puppets, leaving them to explain themselves through their actions; instead, he labels them. Each one is some phase of Mr. Phillips, and each one explains Mr. Phillips's theories in a little sermon. Every good American may be a democrat, but it isn't necessary to introduce a special scene in order to enforce the fact. The characters, too, seem to possess an element of unsafety. Are there such people, and do they act that way even in Indiana? The play from the Madison Square Theatre was with her company in the city, and she told me that she seemed to feel at home. She said that *Robert Morier* reminded her of her uncle. How fearfully and wonderfully man-kind is made!

The Chemistry of Commerce

By ROBERT KENNEDY DUNCAN
Author of "The New Knowledge"

The Chemistry of Commerce is a graphic narrative of the wonderful work of applied chemistry in the industrial world to-day. It affords an engrossing story of the invention and manufacture of commodities that are close to the business or home interests of each one of us. It is packed with information upon such topics as the making of artificial rubies and diamonds, of non-breakable Welsbach mantles, of the distillation of perfumes in quantities sufficient to float a frigate, of the coloring of glass, of the engineering feats accomplished by high temperatures, the preparation of drugs like camphor and quinine, the extraordinary future of industrial alcohol. Professor Duncan—himself a student of science and a practical chemist—spent a long time of study abroad and secured his material personally from famous chemists at work in their laboratories.

A NEW NOVEL BY Justin Huntly McCarthy SERAPHICA

This is a dainty, sparkling comedy, as swift as a play and as vivid. The stage-setting is in France in the days when Louis XV. was but a boy, with a regent on the throne. Seraphica is a duchess and she is young. She is gay and saucy, too. Masquerading as a man and fighting like a man, she is tender as a woman all the while. The painter Watteau is a charming and whimsical figure in the story. He is one of the train of devoted lovers of Seraphica—and she is none too kind.

There are two neighboring duchies in Artois, with rival heads, a very young woman's and a very young man's. Both are attractive—also obstinate. The story begins with a rush. Seraphica, the duchess, and Renaud, heads of the adjoining estates, are ready for a marriage arranged by the state councillors, but — Renaud is obstinate. Besides, he is in love with some one else—rashly in love with the court favorite whom he had seen in Paris. Furthermore, he has never seen Seraphica.

SERAPHICA

THE LONDON CHRONICLE has this to say about *Seraphica*:

"The story is gay and entertaining, as befits a tale of Versailles in the early days of Louis XV. The heroine, a giddy young Duchess of Artois, thoroughly acts up to her soubriquet of 'a merry devil in petticoats,' afterwards 'in breeches.' The hero cuts rather a poor figure beside her. It is a bad lookout for a young buck whose wife is the better man of the two with the sword as well as with the tongue. She is far more at her ease 'wearin' the breeks' than either Rosalind or Portia."

THE QUEEN in its review of *Seraphica* says:

"Mr. McCarthy has achieved the masterpiece which all who have read his recent books must have been expecting. . . . The book abounds in brilliant passages, half witty, half pathetic. . . . It is so pretty, and so witty, and so tender right through."

THE ATHENÆUM in praising *Seraphica* prints the following:

"Seraphica is a great duchess who runs away to Paris in disguise. She does this because the prince to whom they want to marry her has refused to have anything to do with her, even to look at her picture, and has gone off to Paris to fall at the feet of the lady he adores. Seraphica does not care twopence for the prince, but, like a woman, is annoyed that he does not care twopence for her. Hence she follows him with the intention of making him fall in love with her. As the lady he adores is the mistress of the regent, and as Seraphica and the wayward prince become members of a theatrical company, it is easy to guess what romantic stuff Mr. McCarthy finds for his tale. It is brisk and light of foot, and careless and gay."

Your verdict will be the same when you have read *Seraphica*.

STORIES OF SYMPHONIC MUSIC

A Guide to Modern Orchestral Programme-Music

By LAWRENCE GILMAN

Music Critic of "Harper's Weekly"

This book fills a genuine need of the music-lover, for it offers in compact, accessible, and easily intelligible form information which will help him to listen understandingly to the music of an orchestral concert. It presents clearly and without technical analysis the poetic or pictorial or dramatic basis of every important example of programme-music in the symphonic repertoire, putting the reader in possession of information which will enable him to listen comprehendingly, for example, to a symphony by Berlioz, an overture by Mendelssohn, a symphonic poem by Liszt, or a tone-poem by Strauss or Debussy.

"The best thing for every concert-goer to do is to get a copy of Mr. Gilman's book and prepare himself beforehand."—*N. Y. Evening Post.*

"From Berlioz and Liszt and Tchaikovsky and Wagner down to the latest works of Strauss, D'Alfy, Debussy, Sibelius, Rimsky-Korsakoff, Elgar, Chabrier, and Copland, with many others that will occur to concert-goers, Mr. Gilman has left nothing that has any claim to the attention of music-lovers. . . . It is a useful and interesting book."—*The New Music Review.*

"A valuable contribution to the music-lover's library."—*Chicago Post.*

THE PRINCIPLES OF MONEY AND BANKING

By CHARLES A. CONANT

In the demand for literature on financial subjects, this work deserves special consideration. A chapter of the second volume is specially devoted to "The Origins of Crises," in which much is set forth that anticipates present conditions. Another chapter, on "The Management of Crises," anticipates the recent steps taken by the banks and the Treasury to afford relief to the money market.

This book was among the first to point out the danger of making large loans on securities pushed upward by speculation to inflated values.

COMMENT

A Ten-Month-Old Cartoon

DATING his letter "Amherst, Massachusetts, February 13, 1908," DAVID TOSQ writes to us to say:

You months ago to-day I remember you publishing in the WEEKLY a preliminary cartoon. Pretty near come true, hasn't it? This is the cartoon referred to:

MCKINLEY FILLED IT—WILL ROOSEVELT EMPTY IT?

The Aldrich Bill

THE ALDRICH bill was prepared by men whose sole desire was to render a great public service to the country. The mere existence of such a measure on the statute books would make the remedy which it sought to apply unnecessary. It has been violently opposed by those who insist that there shall be nothing

but a perfect measure. Now a measure approaching perfection might be made by expert bankers, but never by such a legislative body as Congress, nor, perhaps, by any modern legislative body. Delicate work requiring knowledge and experience cannot be done by such bodies. At the best we can only hope for the gradual improvement of banking legislation, but there must first be a beginning, and from the very first it has been evident that the ALDRICH bill was the only banking or currency bill that this Congress would adopt, and it is fatuous not to put some law on the statute book which will recognize the weakness of the system as it is to-day. THE LA FOLLETTE-BRYAN-ROOSEVELT effort to force upon the bill a general scheme for the physical valuation of railroads furnishes abundant direct evidence of the incapacity of the projectors to deal with any question apart from their fads, and indirectly it shows their ineptitude as serious legislators. The plan thus to value railroads is absolutely impracticable, and could never, if it were accomplished, be the basis of either taxation or rates. Besides, the day might be gone by when legislation on one subject can be effected by a trick forced into a bill on another subject.

Presidents and Judges

There are only two men in the country, possibly three, of great political prominence, so far as we know, who would appoint judges on the acknowledged ROOSEVELT principle. One of these is ROOSEVELT himself, and one is BRYAN. It is the sworn duty of a judge to determine cases coming before him in accordance with the law, no matter what may be his partisan or economic or his general political views. If he believes that ROOSEVELT's and BRYAN's theory is fatal to our democracy; that if the national government should seek to control all commerce and all instrumentalities of production that became the subject of commerce, our free government would soon be succeeded by a paternal system, arbitrary, foolish, usually unfair, and generally whimsical—it is nevertheless his duty to maintain the laws which would bring upon the country such disasters and such ruin as have attended paternalism the world over. On the other hand, if the political power exceeds the authority which has been bestowed upon it by the organizing—the creating—law of the government, it is the bounden duty of the judge to declare the act invalid, whether it be the act of the power which made him a judge or not. It is well known that this is not ROOSEVELT's or BRYAN's view; it is well known that either of these would expect any judge appointed by him to uphold any political or economic policy of his, whatever might be the judge's view of the law. ROOSEVELT has already made judges feel the weight of his displeasure when their view of the law has prevented the carrying out of his purposes. Sometimes when we are told of certain conduct of the President's, we wonder if he is familiar with the history of JAMES LYNN attempt to compel from judges advance opinions on pending cases. CUCKER's refusal to permit the King to interfere or to interfere with him as a judge making him one of the great champions of the law and of liberty for all time. It seems to be absolutely essential to the preservation of the independence of the Supreme Court, four of whose justices will probably retire during the coming Presidential term, that neither ROOSEVELT nor BRYAN should possess the power to fill their vacancies. Not one of their rivals of either party, except LA FOLLETTE, would treat the court, as they would, a political power.

Reduction of Railroad Wages

SOME railroads having been brought under the necessity of reducing wages, the President has publicly intervened in behalf of the wage earners. Perhaps this seems a bold statement of Mr. ROOSEVELT's attitude; nevertheless it is substantially true. We do not care to adopt—at least not to expend—the natural response to the President's letter. It is possible that he did not intend to bid for the labor vote for Mr. TAYLOR, nor should he be charged with the intention—it would be too wicked—to instigate the men to strike if the railroads undertake to reduce their wages. The principal lesson of the episode is that it demonstrates that government paternalism would inevitably bring about intolerable conditions. Mr. ROOSEVELT, as is natural to political guardians, gives the benefit of the doubt to one side without any examination whatever, and he then demands an

examination. In this instance, for example, he has put the railroads in so false and undeserved a position before the public that they are practically forbidden to conduct their affairs on business principles so far as their wage earners are concerned. As a matter of fact, considering the present conditions of the railroad business, no one can be astonished to hear that railroads contemplate a reduction of wages. With their business so fallen off that 400,000 freight cars are idle; with a reduction of gross and net income, why should not a reduction of wages as well as of dividends be expected? However, this is not the immediate question.

No Square Deal for the Railroads

The President has at least encouraged the assumption, if he has not made it, that the railroads are reducing wages to discredit recent legislation, or the administration of the law, or his talk. They would be economically foolish to do so, but that does not occur to Mr. ROOSEVELT, nor is the question worth while discussing with him. He has sufficiently demonstrated that government control will almost inevitably be one-sided control; that the moment a suggestion to cut wages is made, those who are responsible for the management of the roads must expect the interference of the politicians who from ignorance, unreasoning sympathy, lack of forethought, failure to appreciate the mutual dependence of all the elements of ownership and operation, or from a selfish desire for votes, will bring the government to the aid of the wage earner, whether the proposed cut is or is not warranted by business conditions. In a word, under such government paternalism as Mr. ROOSEVELT is now exercising, the politicians will not follow Governor HUGHES's principle, laid down in his 22d of February speech, that the owners and managers of the roads ought to be treated justly. They cannot expect a "square deal," although its denial to them must in the end tell most seriously against the interests of labor. If the government deals fairly with the roads, it will consider equitably the interests of the travelling and shipping public, of the bond and share holders, and of the officers and other employees of the corporations, to the end that justice may be rendered to all. Any preference for one class or element must eventually inure to the injury of all.

Labor and the Law

Mr. HEARST, in his letter to his papers correcting his editors for their remarks on some recent decisions of the United States Supreme Court, unconsciously reveals the animus of such criticism of the courts as that in which BRYAN indulges himself. HEARST admits that boycotting is illegal, that black-listing is also illegal, and that both are in restraint of trade; in other words, that the courts are right in their interpretation of the law. This is sound. No mind that is not disabled by passion, or whose working is not disturbed by self-interest or by ambition, can fail to agree with HEARST and the judges. The animus is shown in the further declaration that those who, like the critics of the courts, resent their recent labor decisions are angry because of the unequal administration of the law; that the law which forbids the restraint of trade is administered against the "small" and not against the "big." This is not proper criticism, but the fact would be deplorable if it were the fact. It is not true, however, that the law has been administered against labor and not against capital, against the "little men" and not the "big men."

Some Frequent Instances

The memory of men is very sadly afflicted by their eagerness to forget, as is shown in this instance. Not to include the illegal and harmful interference in behalf of the miners' union by the President in the Pennsylvania coal strike, there are few recent instances of intervention in which the executive power has not used its influence in behalf of strikers and boycotters, often to the doing of injustice to others. In the Pennsylvania strike the Governor of the State refused to perform his duty and protect the lives and property of non-union men and employers, and the community as well, from the violence and crime of the strikers. Almost for the first time in our recent history has the law now been invoked against organized labor. Heretofore the Attorney General of the United States and the Attorneys General of some States have succeeded in securing judgments against great corporations. They have been so busy at this that they have

had no time to attend to the complaint against unions. Even now the cases which have been decided against the extravagant and lawless policy of the unions were brought by private persons, and while in New Orleans the opportunity for Federal prosecution and injunction for boycotting has been offered, the Attorney General has not seen his way to avail himself of it. Indeed, he professedly ignores it. The basis of BRYAN's assertions on this subject, as of most subjects, is an active imagination. It is fantastically untrue that the vote of the so-called big men seems to politicians of more importance than that of labor. Attorney General BONAPARTE renders no service to labor by his attitude. He does not think that he can prosecute labor union men for offences against the SHERMAN law; he says that the government must be requested to act by private persons. The administration did not think so when the Northern Pacific and Great Western railroads were the alleged offenders. Previous administrations did not wait for private initiation in the Trans-Missouri, the Addicks Pipe, and the Keweenaw cases. In the enforcement of similar laws against corporations Mr. BONAPARTE himself has taken the initiative. Why not in the labor union cases? Is there one policy for the rich and another for the poor; one for the few votes and another for the many votes? If Mr. BONAPARTE were the jurist that he ought to be, he would know that the interests of labor itself would be greatly benefited by the equal administration of the law, and in the end would be greatly injured by the granting to it of unjust favors.

Bryan, the Raider

BRYAN still objects to uninstructed delegates, and says that they would be "hushwhackers." If the delegates to Denver should really engage in the work of whisking the bushes for the enemies of Democracy, they would, sure enough, discover no enemies so dangerous as BRYAN and his raiders.

Taxing Business and Enterprise

The Massachusetts Commission on Taxation has recently made its report, and it is a report worth reading. The commission is composed of two Senators, four Representatives, and three members who were appointed by Governor GRUBB. At the head of the last group is Professor CHARLES J. BULLOCK, of Harvard, who isn't likely, on general principles, to permit any citizen who owns anything to escape taxation. Unlike many economists of the modern kind, however, he is reasonable. The report provides a scheme by which the commission thinks that personal or intangible property can be made to bear some share of the public burdens. Perhaps the scheme will work. If it does, the commission will have accomplished what tax gatherers generally have long given up as impossible. Two of its other conclusions are worthy of note. In the first place, the greedy towns, big and little, that have been seeking to tax property given to colleges for educational purposes are severely smacked. In the second place, the report speaks some wise words concerning the tax on transfers of stock as imposed by the State of New York. It recommends Massachusetts not to follow the example of New York, saying that such a tax is an impost upon the business of the entire country, therefore unjust and unfortunate. It takes the ground that it is unwise to tax commercial financial transactions; that it is a "tradition of American finance that stamp taxes should be reserved for use in time of war or other fiscal emergencies." It adds, what will evidently be news to a good many politicians, that "speculation on the stock exchange undoubtedly has its undesirable features; but it has also the legitimate and extremely important function of establishing a broad and comparatively stable market for securities, without which modern industry would be brought to a standstill. In performing this function the exchanges should not be hampered by a form of taxation inconvertible in its operation, unequal in its incidence, and opposed to American traditions of commercial freedom." When it is considered that this is signed by a professor of economics who is not a conservative, but who fortunately possesses an open and a just mind, the brick shotters against stock sales might well pause and wonder, at least for a moment, whether it might not be well for them to pause and think before speaking again.

Mr. Hearst Bows to the Judiciary

In spite of all the lessons of past experience we cannot help being temperately interested in the current proceedings of

MR. WILLIAM HEARST. The teaching of experience has been that it didn't pay, but just now Mr. HEARST is unusually histrionic. A month or two ago he made a speech or wrote a letter somewhere in which he talked as sagaciously and moderately about the predicament of business and the need of nursing it as any old banker. That was unusual. Still more so was the letter he printed in his papers here on February 18, in which he gently chided his working editors for reviling the Supreme Court because of three decisions that the editors felt to be prejudicial to the cause of labor. Mr. HEARST said the judges were deserving men, and that their decisions were proper; that boycotting was clearly illegal under the SHERMAN act (and blacklisting too), though it would not have been if his draft of the SHERMAN act exempting labor organizations from its provisions had been passed. Carefully and distinctly he picked himself out of the position of being a scornful critic of the high courts, wherein his wicked partners had deposited him, and selected for himself a handsome new stand as a patron of judicial justice and approver of its interpretations of the law. This is a respectable and very timely attitude for any one, and Mr. HEARST looks nice in it. We bestow the widest and most respectful attention to his course in this particular, and hope to see it flattered by plenty of imitation.

And Issues a Call for a Convention

Proceeding, we find him in conference on WASHINGTON'S birthday in Chicago with three hundred summoned emissaries from thirty-three States representing the Independence League, and agreeing with them to rename the League the "National Party," and issue on March 1 a call for a national convention of that party to be held after the other Presidential conventions have adjourned, and nominate Presidential candidates. The task of the new party, he said, would be to correct some of the evils of high finance, and frame constructive legislation which will encourage all legitimate business enterprises. He wanted it to be "a permanent party, wholly and harmoniously committed to the principles of WASHINGTON, JEFFERSON, JACKSON, and LINCOLN." It will be seen that he is drawing his plans large, since a fold that will wholly and harmoniously include the four worthies specified must be equal to a considerable spread of hospitality even though it is not specifically architected to illustrate the principles of Brothers ROOSEVELT and BRYAN. Among other measures to which Mr. HEARST in his preliminary declaration commits the four selected Fathers are an income tax, public ownership some time of all public utilities, the immediate purchase of the telegraph lines, the referendum, the eight-hour day, tariff revision, postal savings banks, ship subsidies, national incorporation laws, a strong navy, a ship canal from the Gulf to the Lakes, and other goods and bads, including popular election of United States Senators and judges. It would add considerably to the interest of the returns next November if Mr. HEARST could induce his party to stand up by themselves and be counted. Some of his proposed measures would considerably surprise the Fathers whom he counts into his new party, but it is a mighty wise Father in these days that knows his own posthumous children.

Overzealous for Restraint

CONGRESSMAN ELMER ACHESON, of Pennsylvania, has introduced in the House a resolution for an amendment to the Constitution prohibiting all dalliance (manufacture, sale, and importation) with intoxicating beverages and narcotics in this country. He is the parent also of a bill prohibiting every kind of betting in the District of Columbia. There ought to be classes for enthusiasts of Mr. ACHESON'S kind in which they could learn that the primary purpose of the Constitution was not to make men do what other men think is good for them, but to secure for them the greatest amount of free will in the regulation of their own conduct that is compatible with the reasonable enjoyment of the same great privilege by their fellows. Of course such propositions as Mr. ACHESON'S are not likely to find favor, and do not need discussion, but the principle of the objection to them may be worth stating. They are mischievous, not because intoxicants are apt to be good for men, or that betting is an improving exercise, but because freedom is good for men, and should not be taken away by wholesale from those who are fit to use it because of the follies or excesses of those who are not. Freedom is strong

medicine; dangerous stuff undeniably; yet not so dangerous as excessive or ill devised restriction. If you undertake to legislate on the theory that mankind is irresponsible and needs to be shackled, where can you stop? Constitutions have never been made on that theory. They assume that men are responsible, and undertake to conserve freedom, permitting laws to be made for the restriction of those with whom it has been demonstrated that freedom does not agree.

Master of Arts, Wits, and Signals

The papers say that Yale intends to confer the degree of M.A. on WALTER CAMP. Mr. CAMP is the parents and devoted nurse of American football. He knows more about football, its habits, discuses, diet, rules, faults, crimes, and possibilities than any one else on the earth. He has won more football games for Yale than any other hundred men alive. In other respects he is a desirable citizen without traits or eccentricities of deportment that should disqualify him for academic honors. Nevertheless we would like it if, when the proposed measure of academic canonization is about to be conferred on Mr. CAMP, there might be a competent Devil's Advocate to challenge the proceedings on the ground that the candidate's services to football had been, not a merit, but a mischief; that by so much as he had done to promote that game and the current status of intercollegiate athletics of which it is the leading feature, he had done harm and not good. There might be a fine intellectual, impersonal discussion over Mr. CAMP, in which the moral, physical, and intellectual values of football would be thoroughly canvassed and considered. The question is really worth as much trouble as a Thaw trial. We have small hope, though, of seeing any such combat. It would take weeks at least and more expenditure of mental energy than there is to spare for the job. Football will doubtless have to run along until the railroad rates law has been tried out and the tariff respected, and meanwhile Mr. CAMP will doubtless get his Master's degree unopposed.

More Than Skin Deep

Rejoicing in the overwhelming vote of the House of Representatives against the proposal to compel the District of Columbia street railways to run Jim Crow cars for negroes, the *Evening Post* says:

With what grace could we face the world as a republic in which all men are pronounced free and equal, if in our very capital men and women were banned merely because of their color?

Our neighbor's sentiments are right, and we too are glad the House expressed itself as it did and with emphasis, but the *Post's* phyllophory is out of date. Where negroes are "banned" they are not banned merely because of their color. Color is a minor element in the sum of the prejudice against them. It has taken us fifty years to learn that a dark skin is only one detail, and far from the most important, of the difference between the negro and the Caucasian.

Curious

This news paragraph from a daily paper sheds a murky light on a phase of civilization in which the American public has come to be incurably interested:

PITTSBURG, February 11.—Without exception the police have ordered all clubs closed in Greater Pittsburg at midnight in the future. Where clubhouses are used as hotels, guests will be allowed to enter and leave when they choose, but the selling of liquor will not be permitted after that hour. The order is the result of many complaints from parents and wives.

Clubs! Parents! Wives! Are there clubs for children in that urgent city, that drinks must be denied after twelve to please the members' parents? Why are the children not ailed hours before twelve? And wives! Do married men hang around the Pittsburg clubs at night? How curious are the phenomena of that remarkable civilization!

Duparity of Perception

The country is morally sound. Its standards of business were never higher. The men of business inevitably represent the intelligence and moral sentiment of the people.—*Garrison Hughes on Washington's Birthday.*

In very interesting contrast this to the theory, illustrated by policies, that the country is morally rotten, and that the men of business inevitably represent graft.

Sixteen Better Candidates than Bryan

SOME weeks ago the New York World recalled, as singularly pertinent to the existing political situation, so far as Democrats are concerned, certain memorable words of SAMUEL J. TILDEN: "Neither the Democratic party, nor the Republic for whose future that party is the best guarantor, is now or ever can be dependent upon one man for its successful progress in the path of a noble destiny." That newspaper went on to say that it would undertake to name no fewer than sixteen men, each of whom, on the score of proved statesmanlike qualifications or of electoral availability, has a much stronger claim on the Democratic nomination for the Presidency than has W. J. BRYAN. The task thus assumed it has now completed. The sixteen men whom it has designated and described are—we follow the order in which they were commended to the Democratic party—Governor JOHNSON, of Minnesota; President WOODROW WILSON, of Princeton University; Judge GRAY, of Delaware; former Governor DODGAS, of Massachusetts; Senator CALLEMAN, of Texas; Governor FOLEX, of Missouri; Senator BAYNE, of Georgia; Chief Judge CULLEN, of New York; JOHN SHARP WILLIAMS, of Mississippi; JESSE HARMON, of Ohio; Chief Justice FULLER, Justice PECKHAM, and Justice WHITE, of the United States Supreme Court; Senator DANIEL, of Virginia; Mayor TOM L. JOHNSON, of Cleveland; and, finally, Governor HOPE SMITH, of Georgia. Let us glance very briefly at each of these proposed alternatives for Mr. BRYAN from the viewpoint, first, of experience and achievement in statecraft, and then from that of ability to win access to the ballot box.

We begin with four names usually associated with that wing of the Democratic party which may be defined as the radical element, and to which Mr. BRYAN belongs, and, to fact, is the extreme embodiment. Governor JOHNSON, of Minnesota, is a representative of those whom LINCOLN called "the plain people," and cannot be accused of being allied with corporate interests. He is a political reformer, but the reforms which he has striven to carry through in his own State have not been tainted with class-rancor or personal antipathy; compared with Mr. BRYAN's notions of State ownership of railways, the reformism and the initiatives, they have been reasonable, sober, cautious, non-discriminative, and non-destructive. As for his comparative value, considered as a vote-getter, it should be enough to say that since 1898 Mr. BRYAN has never been able to carry his own State for himself or for any other Democrat, whereas, in 1904, JOHN A. JOHNSON was chosen Governor, although as a nominee for President Mr. ROOSEVELT swept Minnesota with a plurality exceeding 101,000. Two years later, when renominated, Governor JOHNSON lifted the Democratic plurality to nearly 77,000. We may lay it down as an axiom that the Democratic party wants for its nominee no man who cannot carry his own State. That is a test which Governor FOLEX, of Missouri, need not dread. Not only is he a genuine reformer, but he may be said to have accomplished for the administration and legislation of his State the purifying and regenerating work which SAMUEL J. TILDEN wrought for New York. But his strength at the ballot box, like JOHNSON'S, was demonstrated in 1904 when, although Mr. ROOSEVELT, probably much to his surprise, carried Missouri by about 25,000 votes, JOSEPH W. FOLEX, the Democratic nominee for Governor, obtained a plurality of more than 30,000. As for THOMAS L. JOHNSON, Mayor of Cleveland, it cannot be denied that he is one of the most radical politicians in the Democratic party; but it is as certain that he is less visionary, less flighty, and less reckless than is Mr. BRYAN; and it must also be admitted that he has proved himself able to carry his own city, which the Nebraska cannot do. Neither can it be disputed that Governor HOPE SMITH, of Georgia, is a leader of the radical, rather than of the conservative, section of the Democratic party. This he proved in 1896, when he resigned his place in President CLEVELAND'S cabinet, because he felt it his duty to support the nomination of the Democratic national convention. Touching his availability, it at least can be said for him that he can carry his own State, for he has just been chosen Governor in the teeth of formidable opposition within the ranks of his own party. We have now named four radicals, with every one of whom the country would feel safer than it would with Mr. BRYAN. Nor is there one of these who has not shown himself a more efficient vote-getter than the Nebraskaan.

We pass more rapidly over the alternative candidates for the Democratic nomination for the Presidency whom the World has brought forward from the Federal or State bench. No well informed person would desire for a moment the thorough qualifications of Chief Justice FULLER, Justice PECKHAM, and Justice WHITE, of the United States Supreme Court, or those of Chief Judge CULLEN, of the New York Court of Appeals, to inquire or review legislation, to interpret rightly and execute faithfully the laws of the land. Cauder, however, compels us to say that there is not an atom of evidence that any one of the four would be able to poll a large popular vote, except in his native State. We have but little doubt that either Justice PECKHAM or Chief Judge CULLEN could get the electoral votes of New York. The case of

Judge GRAY, of Delaware, is in certain respects unique, for he has been not only a jurist, but a Federal legislator and a diplomatist, and, moreover, by the work which he did as chairman of the Anthracite Coal Strike Commission he made himself far better known and far better liked by the hard-working masses of his countrymen than any other member of the Federal or State judiciary. Of JESSE HARMON, of Ohio, who was Attorney-General in Mr. CLEVELAND'S second administration, it must be acknowledged that he is widely respected and widely trusted among his fellow Democrats, and that he would be satisfactory to both wings of his party. It is also possible that, owing to the bitter hostility of the friends of Secretary FORAN and to those of Secretary TART, he might, next November, succeed in carrying Ohio, which would open the calculations of political prophets. We say it is possible, because for a similar reason, in 1903, only a year after Mr. ROOSEVELT had a plurality of 253,000 in Ohio, a Democrat was chosen Governor by a plurality of nearly 43,000. A Democratic victory in Ohio is, therefore, not so impracticable a thing as it may look. On the score of merit there is no room for any objection to Senator CALLEMAN, of Texas, who is the present leader of the Democratic minority in the Senate, or to JOHN SHARP WILLIAMS, of Mississippi, who has long been the leader of the Democratic minority in the House of Representatives, and who lately has been chosen a spokesman of his State in the Upper Chamber, or to Senator DANIEL, of Virginia, and Senator BAYNE, of Georgia, both of whom have long been recognized as among the ablest debaters and constitutional lawyers in Congress. Any one of the four would make an admirable President; but not one of them is available, because he could not be counted on to carry any of the doubtful Northern States. This cannot be said of former Governor DODGAS, of Massachusetts, for he held his State in a vice versa in the Presidential year of 1904, when Mr. ROOSEVELT got a plurality of 92,000. If DODGAS could do that when previously running against ROOSEVELT, what might he not be expected to do if he were running against TART or any other man identified with Mr. ROOSEVELT'S much-disputed policies?

We come, lastly, to President WOODROW WILSON, of Princeton University. We need not dwell on the proofs of his capacity to play the part of a great Chief Magistrate. No man who has read his *History of the American Republic* can doubt his qualifications for that post. What is much more apt to be overlooked is his political availability. As a man who was born and reared in Virginia, and who for years practised at the Georgia Bar, he could not fail to win every one of the former slave States, including ground so debatable as that which is covered by Delaware, Maryland, West Virginia, Kentucky, and Missouri. Then, again, he is the only Southerner who would be absolutely certain to get New Jersey's electoral votes. He is an adopted, a trusted, a beloved, and an illustrious son of that State. Astonishing is the record afforded by Presidential elections of the State pride of New Jersey. In 1820, when JAMES MONROE got for President every electoral vote but one, New Jersey gave her eight electoral votes for Vice-President to EDWARD STOCKTON, a native of her soil, although DANIEL D. TOMPKINS, of New York, got all other electoral votes but six. In 1844 New Jersey gave her electoral votes to the CLAY ticket, because the nominee for Vice-President was FREELINGHOUDT, a Jerseyman. In 1856 JOHN C. FREMONT obtained her electoral votes for no other reason than because his running mate was another Jerseyman, WILLIAM L. DAYTON. In 1880 the selection of a Jerseyman, SAMUEL A. HANCOCK, secured New Jersey's electoral votes to the McKINLEY ticket, although the State was really Democratic, having elected the Democratic nominee in eight out of the nine preceding Presidential years. It was by a very narrow majority that the Republican nominee for Governor carried the State last November. It is not, however, a Vice-President, but a President, that New Jersey passionately craves, and it would be utterly impossible in that State to beat WOODROW WILSON if a Democratic convention should name him for the office of Chief Magistrate. That he would carry New York and Connecticut may also be affirmed with certainty.

The Bane of Travel

It is not the dust and rind, nor is it the customary overhauling of the ears and lack of ventilation, nor is it that persistent, insistent, and resistless nuisance, the train boy with the nasal twang, who annoys us only as to the merits of peppin chewing gum, and who lays the garish-colored paper-covered north and sticky candies over us as if we were shelves for his convenience. Though all these things tend to weigh down the spirit of the traveller, one does not look for paradise when one buys one's railway ticket; and life learns one to accept the inevitable in this best of all possible worlds where most things are necessary evils. Such things as these could be borne by the staid spirit if he were but able to lean up close to the window and watch the world flit backward. The sight of the speeding trees and vanishing meadows would console us for many evils; the swelling farms and grazing

cattle, the startled colts and straggling hordes, and led us up to forget heat and dust if we might but see them. But what is it that meets our eyes as we gaze from the car windows? Proclamations of the virtues of pills—proclamations hideous enough to cause the disorders they claim to cure; merits of monstrous merchandise shrieked at us from signs so noisy that the tract boy's voice is gentle music in comparison; the back, hawking meadows disfigured with incongruous signs; fields where crows and buzzards grow, scarred with boards that shout, as we pass intrusive statements about goods. So we speed along through our land; among trees and flowers, meadows and hedges, nestling farms and cozy homes? No; but through lanes of glaring letters peering at us. Only here and there glimpses in between of the dogwood, pear, and cherry trees, the Judas-trees, and the little homes cuddled among clustering elms.

And we wonder why art is at low ebb in our land! Why is our building more hideous than that of other lands? Why do our people throw their whole energies into the making of money which they can't buy joy with after they've gotten it? Why can a Frenchman or a German have twenty times as many ways of making life beautiful and joyous with a thousand dollars as an American can have with ten thousand?

It happened not long since in the fitting room of an obscure German tailor that during the fitting his customer addressed him in German upon the beauties of the Annalsh in Thüringen, and straightway his face was illumined; he described with fervor, he recited songs, he sped to the piano, and to an exquisite accompaniment he trilled them forth; he brought a canon he was in the midst of writing, and he recited Goethe and Heine lyrics. He lived in four rooms, with a wife and three children. He was ten paces to take an order for a suit, unless the customer advanced the money to buy the goods, but his life was worth living. His mind and his heart were full to overflowing with beautiful matters. His memory was crowded with scenery undecayed by signs, with poetry, and with music. His life was a good thing upon the earth, but will the life of his children be as good? Will they elude the life of the spirit rather than a life of worldly greed and anxious gain when they have taken round journeys through lanes of advertisements? A seventeenth-century poet but recently discovered wrote thus in his book of meditations:

"When I came into the country, and, being seated among silent woods and trees and hills, had all my time in my own hands, I resolved to spend it all, whatever it cost me, in the search of happiness, and to satisfy the burning thirst which nature had kindled in me from my youth; in which I was so resolute that I chose rather to live upon ten pence a year, and to go in brother clothes, and to keep upon bread and water, so that I might have all my time clearly to myself, than to keep many thousands per annum in an estate of life where my time would be devoured in care and labor. And God was so pleased to accept of this desire that from that time to this I have had all things plentifully provided for me without care at all, my very study of Philosophy making me more to prosper than all the care in the whole world. So that through His blessing I live a free and kindly life, as if the world were turned into an Eden."

"A free and kindly life, as if the world were turned into an Eden;" this is the ambition which would save the world if we could ever more implant it in the hearts of men. Money cannot buy so fair a desire, and rampant ugliness for the sake of money must eventually dry up and kill even the conception of it.

Meanwhile is there so possible legislation that can be applied to the rampant hideousness of life? At least our railroad in England is taking steps to beautify the way through which it runs. Are there not enough people in our own land offended by hideousness to form a society for protesting against making the country through which our trains run an offense in fact? If we could not do this, could we not at least make it the habit of unconsciously seeing ugliness prevail about us. Who does not remember BUNYON'S horror at the American girls who travelled in the same coach with him through the country about Verona. They had not the faintest conception that they were travelling through the most beautiful and romantic country in the world. They sneaked home with lumps of sugar inserted in their, pulled down all the shades, and sprawled hopelessly over the seats, complaining of heat. Not a memory, not a perception lightened the gloom of their heightened little lives. But perhaps they had grown up on advertisements of liver pills in the place of scenery, and the human mind cannot acquire a new taste by so simple a means as a trip to Europe.

As things stand, we still have the sky and the horizon line left for those who can overlook the sign boards; but who can tell when the awful nightmare may come here of the man who dreamed that a new invention had apperceived the sky off into bits, let out for electric advertising of goods, so that above as about us the haze of hideousness and vulgarity might still meet the eye. Perhaps those of us who are nearer the end than the beginning of our time have more to be thankful for than we yet know, and the time may come when the clouds themselves shall be turned into the messengers of mercantile enterprise.

Personal and Pertinent

THERE are 7000 naturalized foreigners to the acre who are asking for a chance to vote in ROOSEVELT. His attacks against the money powers have worked them into a frenzy of approval.—From a published interview with Mrs. Betty Green.

A very interesting faculty for political comment seems to have been all but lost to mankind by the concentration of Mrs. GAZER'S talents upon France.

At the recent meeting of the New England college presidents, one of the most important of them all remarked that mental arithmetic did not train a child's mind, and that a mathematician *per se* was incapable of moral reasoning. Mathematicians might take notice. It reminds one of STELLAS—STELLAS, the greatest of the Yale mathematicians of his time. He, indeed, had virtues as well as mathematics, and was the graceful and learned editor of *Garden and Forest*, horticultural editor of the *New York Tribune*, and president of the New York Park Commission. Once he was ill for a long time—a very long time—and he used to say that when he became convalescent he discovered that the mathematical was the lowest order of mind. He wanted to read; he tried poetry, and that would not do; nor would fiction or philosophy or history—but when at last he tried mathematics he found that his enfeebled mind could master that.

Some appreciative people gave a dinner in Philadelphia to Colonel McCLELLAN the other day because he was eighty years old. He deserved the tribute, for he is not only eighty years old, but he has long been active in the service of the city, and the State, and the nation, and has made hosts of friends. He must have abundant pleasure in thinking over the great ghosts that he has known—Presidents from long before HAYDEN'S time down as far back as the elder HARRISON—and the migrants of Pennsylvania. He has been the familiar and potent friend of them all. TOM SCOTT, FORESTER, SIMON CAMERON, GALATHEA GIBBS, NAM RANDALL, JUDGE KELLEY. The roll of his friends is as long as the list of Pennsylvania's worthies of sixty years. He has managed politics and he has led rebellions against rings and bosses. He was an influential country editor in Chambersburg, and in partnership with FRANK McLAUGHLIN, the tasteful printer, he was the editor of the *Philadelphia Times*. That was an influential organ of the right way of thinking in McCLELLAN'S earlier day, and it was a pleasant paper to serve. It had one of the habits of the *Paris Pigeon*. When MAPLESON carried his singing birds to Philadelphia, where they were always opaquely welcomed, the *Times* used to give them all a breakfast in its pleasant library. The handsome Colonel used to preside, and LANGRISH, LANGRISH, JANVIER (who once wrote paragraphs before he fell into literary ways), and the irrepressible KENNES, used to be asked in to make a pleasant hour for MAJOR BLOOM and GRANTLEY and CAMPANELLA. These actors were breakfasted, too, and there was a gay council on the afternoon of the feast days. The Colonel did stern work as well as hospitality. He did most to clean up the city back in the late sixties and in 1880, and he is largely accountable for ROBERT PATTERSON. He partially brought up MOSES HANBY, and is, therefore, indirectly responsible for the Sassy Chevy Club. Now he is a patriarch, and his brilliant days are behind him—but they were brilliant, as brilliant as the Colonel is and has always been beautiful.

Correspondence

VEHEMENTLY FOR ROOSEVELT

East Loos, Utah, February 22, 1901

To the Editor of Harper's Weekly:

Sir,—I happened to notice yesterday, under the title of "A Mind Completely Believed," a letter to HARPER'S from Alfred R. J. Dolme, and I am hastening to second the motion in regard to his attitude.

Like him, I can claim perfect competence to talk, for I belong to the great class who in seeking a career thought more of the mental pleasures and attachments to the work than its remunerations. Meanwhile, as if stranded on a low tide island, the financial waters have risen around until I have been forced to turn my attention from this work to the regular business of the economic fight for trade advantage, and the right to live. School-teachers, musicians, artists, clerks—the great mass of people merely have been trained to devotion for their callings, and not to fight neighbors for the right to live. Yet salt trusts forming on one side, plus sugar trusts, plus paper trusts, and all of them seeking not to take out a living for their membership, and a life for the industry, but much more than this; and information forming on the other side to take out not a fair day's pay, but the last cent they can force, have combined to throw this great unorganized class into helplessness, discontent, and warfare. We demand Roosevelt. He is great because we demand him. Throw him down, reject him, and we will build another—or more powerful man. What you derisively call his policies will go on, for they are the effort of this great class to win back a right to live by their various chosen callings, without daily attention to problems which they are not equipped to fight. I can take you into an

ordinary labor-union meeting and find \$4 wages and happiness, and a card-game for four pending the call to order. I ran take you right across the street to a meeting, say, of the Press Club, and find you there more earnest talk of socialism and more boasting for Roosevelt than in all the other strange youth meetings. One will tell you that the printer who sets the type on the stories his heart and brain creates receives more money for working on them than he does. Another will tell you his sugar bills and salt tolls have gone up so steadily in the past three years that something has got to drop. He is at the head of his credit. He has got to spend hours figuring out how to right out of his economic helplessness that he longs to spend at his desk with brush or pen.

This discontent takes shape against the man who drove him out of his profession through raising the expense of his livelihood outside of his possibilities to meet them. Government regulations, government control, only mean that I refuse longer to pay eleven cents or fifteen cents for electric light, after I have spent a year of investigation to find out that electric light doesn't cost to produce above three cents, and could be sold at five cents or six cents at a decent profit. I refuse to pay more than a decent profit on the things I have to have. To find a way to send some strong hand into that robber electric company is no more of a problem than my brotherhood had to meet when they sent their men out on to the king's highway to meet the robber baron, and clear the road. The government's hand will go into these corporations controlling necessities we all must use. Do not fear for that. They are in the saddle to ride to a fall or to dismount. If government regulation is not the solution, then the loss of the people's faith is the solution. Will some governmental ownership, and if this proves not to be the solution, the best you can hope for it to mean will be socialism, and if socialism fails, then you have absolutely no alternative but to calmly look forward for the blood of revolution and settlement through this costly and exterminating final argument.

If corporations, needlessly battering their lives on attacking Roosevelt, would send forth their best brains and their most generous representatives, and would remove those situations, they would stop the "great pressure from below" which Standard Oil mentions with a sneer.

I tell you when I say I am for Roosevelt, I say I am tired of paying \$1.75 freight on one ton of coal for a haul of one hundred miles, when in the same train, hauled by the same engines, lime rock comes along at forty cents the ton; and I am tired of my helplessness to prevent myself from paying this same railroad company \$3.50 per ton for coal from mines a hundred miles from my home, when by a little investigation I find that it once charged hands on a coal contract by which it alone was made attractive to the Goolds, this coal contract railing for the delivery of 4000 tons of coal a day to the Southern Pacific for not \$3.50, mind you, but \$4.50, but \$5.50 per ton, and even at this rate it was an item amounting to five per cent of the company's total income.

It did not seem very of the colossal fortunes, then, that strikes me to a discontent, but the fact, that, hopefully, at the end of my credit, I must turn to fight to realize I have no weapon, and no chance, except through the appeal which means to end Roosevelt, to-morrow—who am I tell!

In this fight you are on the side lines. From Roosevelt I take the best means I know of to classify you—the words he used at the beginning of his troubles over objections from the Panama job—"in every fight there are men in the rear who are glad they are not at the front."

From my own poultry yard I take the best comparison I know of to explain my feeling in regard to your position.

In this poultry yard there is a big Wyandotte rooster. Two months ago I bought a young Leghorn. The Wyandotte promptly ran him away from the feed. But hungry, he kept ranging for his meals, till one day he found a hole in the roof of the feed house, and thence went well till last Wednesday.

Then the Wyandotte came to run the Leghorn away as usual. Do you think he could write or speak or think or realize beyond the horizons of his class? With all his proud neck feathers out he made the typical move of his kind, and for his the Leghorn sank deep and long and laid his knees apart into the Wyandotte's breast.

"Ma'am!" I ran hear the latter scutter as he came to me. "I want in on this feed," I ran hear the Leghorn reply. To-day there is a constitutional amendment in the supreme law of the flock. There is some talk of brotherhood of poultry. The Leghorn frods with the flock, and is given a real good time. Lessens the lesson of the Wyandotte. Mr. Dictionary, and look to the masses, to see their power and their discontent. It means a fight for his play in the division of life's duties.

I am, sir.

IRVING RUSSELL.

We judge that if our correspondent will devote somewhat less time in estimating the exact price that the electric company ought to charge for light, and the railroad for hauling coal, and will devote somewhat more of his time to earning a living his comfort will be increased. We do not think his enjoyment of a "career of mental pro-sperity" is likely to be promoted by the total collapse of order and business which, with so much fortitude, he seems to invite.—Editor.

FOR HENRY OF KENTUCKY

Lan Carver, N. M., February 3, 1901

To the Editor of Harper's Weekly:

Ris—it is rather strange, that in the decision of Presidential possibilities Henry the Second has had as yet so serious consideration; perhaps it is the other thing for which Kentucky stands

and fills our mind, its social distinction, its faithfulness as to honor and fealty,—seriously overdone at times, because of all the plans they seem the farthest from conjuring their spirits; or perhaps, as cordially to this last, a disinterestedness of political enthusiasm which has never placed in the hands of any of its leaders financial influence. However it may be, with all the brain and power and charm of Kentucky statesmen, they are rarely considered as Presidents; and when they are, even as when the first Henry led the charge, it is not to victory.

But may not the time be ripe for a second effort? In Henry Watterson, I believe we have a figure of national prominence, only second to Mark Twain; one of whom any American, anywhere and under any circumstances, might be proud. There is not a leader who stands more clearly defined as to his policies; better posted—by reason of constant discussion and skilful handling of all the recent emergencies—as to the necessities, the delicacies, one might say, of the situation.

And, after all, from what calling could we more satisfactorily expect a man, capable in all the intricacies of our governmental administration than one who, from the high vantage of distinguished journalism, has had for years daily to study, discuss, decide on every development in our social, commercial, financial body politic?

Does he not deserve of us serious consideration? Though his pen and his tongue, doubtless wielded, have been indeed a sword, because of the very intensity of his conviction, I know of no public character who would have against him less personal opposition, he is a particularly lovable man, and since no one in public life has more vigorously and successfully and purified every cause and measure of the Bryan faction, since the Bryan possibility is at last ready to go, who more reasonably could lead, with some show of winning, than the man who, in his own party lines, has, against such continuous and unceasing attempts, fought and conquered?

Can the Democratic party find a finer gentleman, a wiser statesman, a better informed politician, and a better loved standard-bearer than Henry W. Watterson?

I am, sir,

(Mrs.) KATHARINE A. MOORE.

GREENBACKS AND CIRCULATION

COLUMBUS, GA., February 13, 1901

To the Editor of Harper's Weekly:

"Comment" in your WEEKLY of February 15 entitled "Another Fundamental Principle" against Mr. Bryan for suggesting that greenbacks should be used for the proposed emergency currency under the Aldrich bill, why did you say, "Even now he [Bryan] wants 'more money,' after it has been demonstrated that the largest per capita circulation known to civilization has not been possible to stop a panic?" (Our circulation per capita is \$21.41, and that of France is \$37.12.)

France is supposed to have more stable prosperity than any country in Europe, and though shocked by the immense war indemnity paid to Germany, and those tremendous losses in her attempt to build the Panama Canal, her people did not succumb. A great many of us think that a country whose industries are expanding and population growing as fast as ours needs a circulating medium per capita space with its rapidly increasing commercial requirements.

At the time Mr. Bryan was first nominated our circulation per capita was about \$18 or \$20, and the only way then to increase it was to restore silver. The ways that it became enlarged after this were not known, and were entirely subsequent to the campaign of 1896. Down to this last period and for years before, cotton was five or six cents per pound, and it was very difficult to keep it at any better price. Cotton is now ten or twelve cents per pound, and it's confidently believed that this price will maintain our circulation per capita in not reduced, and better if increased. It would give some of your readers in the pursuit of knowledge satisfaction to know your reasons, your logic, and philosophy for your aversion to greenbacks for an emergency currency. In this way we could either see your reasons for attacking Mr. Bryan were invalid ones, or that they are better than we are at this time applaud.

I am, sir,

CHARLES J. SWIFT.

Our correspondent is right in saying that France has a larger per capita circulation than the United States. But no other country has so much. Germany has \$22.46 and the United Kingdom \$11.58. Of the \$37.12 per capita circulation of France \$23.75 is gold, and only \$13.44 paper. Of our circulation (\$21.41) \$10.55 is gold and only \$10.86 paper. If we need more circulation let us do it as France has done by increasing our per capita of gold.—Editor.

A QUESTION OF GRAMMAR

TERRAHOMA, TEX., January 12, 1901.

To the Editor of Harper's Weekly:

Sir,—I was puzzled to find in your issue of JANUARY 11, under the heading "Good Sense About Immigration" the following sentence:

"So far as the Japanese are concerned, their government have decided to do their own prevention." Is this strictly grammatical?

I do not presume to criticize, but ask the question solely for information.

I am, sir,

Mrs. TOWN.

We think it is defensible, at least, to use "government" in the collective sense.—Editor.

The Business of Lawbreaking in New York

By THEODORE A. BINGHAM

Police Commissioner, New York City

THAT the statement in the last report of the Police Commissioner that lawbreaking is the easiest business and the most lucrative for the work involved of any now being conducted in New York should excite surprise in a surprising circumstance in itself. If all that the daily newspapers assert can be believed, or is based on fact, it would appear that easy, lucrative lawbreaking is not confined to those classes of society with which the police come in daily contact.

The citizen who daily hears the most powerful and influential business and professional men in New York circumstantially and openly denounced in the market place as criminals—in public prints and by the living voice—ought not to be surprised to learn that in the intermediate ranks between the big culprits and the bungling malfactors who get into the prisons there are all grades of lawbreakers preying upon the community.

The police are, however, most frequently called upon to deal with the lesser rogues, and with them is the business of lawbreaking (as with the bigger criminals) associated politicians, legislators, and lawyers, sometimes men of standing, and sometimes men of no standing. It is due to these knowers that the minor lawbreakers, like the others, have retrograded themselves behind a rampart of legislation, owing to which the forces of law and order are frequently placed in the embarrassing position of being actually on the defensive as against the lawbreaker. Indeed, the courts are sometimes aided into giving the criminal protection against the police on the ground of illegal interference or oppression. For instance, injunctions have been obtained restraining the police from entering places where gambling was known to be in progress, on the ground that a legitimate business was being conducted in another part of the building.

As an illustration of the manner in which the lawbreaker is enabled, with the assistance of his technically law-abiding supporters, to safeguard himself, take the legal protection that is afforded the pickpockets who are liberally scattered throughout the city. For years the same men have almost daily been arrested, taken to court, and then discharged for lack of sufficient proof of the crimes with which they were charged. These men were all known in life by theft, and were always to be found in crowds where pickpocketing was going on, but it was almost impossible to capture the guilty men in most instances, since it is almost impossible to identify a thief in a crowd; but it is easy for the latter to dispose of stolen property by passing it to a confederate or throwing it away.

To enable the police to deal with these malfactors as vagrants a bill was introduced in the State Legislature in 1906 to define a vagrant as a person who had previously been convicted of a crime and could not show that he was then earning an honest living. This was known as the Vagrancy bill. Because of the opposition of certain legislators the bill never got out of committee. A similar bill was introduced in 1907, and it might be remarked here that the Vagrancy bill desired in the same that Massachusetts has as its statute-book.

The friends of the lawbreakers were enabled to fix bludge to the Legislature in 1907 by changing their words, so that the law as passed required two previous convictions. To complicate the situation further some magistrates require different proof as to the two previous convictions, some of them demanding the sworn testimony of a witness actually present on both occasions, aside from the records. The law thus circumscribed and thus administered has been of little assistance to the Police Department in controlling pickpockets.

There will be a bill before the present Legislature which, if enacted into law, will be of immense service to the police in the running down of all classes of thieves. Its object is to bring the pawnbrokers, junk dealers, and dealers in second-hand goods, into whose hands all kinds of stolen property come, under stricter control. Under its provisions every pawnbroker is compelled, before he closes every morning after a business day, to sign and deliver to the commanding officer of the Detective Bureau or one of its branches an accurate report, on forms furnished by the Police Department, containing a detailed description of each article received by him (the pawnbroker) the previous day, and showing the exact time when it was pawned, the amount loaned on it, the number of the ticket and the name and address, with an accurate description of the person who pawned it. The bill also permits the police to inspect a pawnbroker's books at any time, junk dealers and dealers in second-hand goods are subjected to similar regulations under the provisions of this bill.

It is apparent at once how valuable such a law will be to the police, not only in recovering stolen property and tracing the thieves, but in that it will make the risk greater for the criminal in disposing of stolen property. A thief will hesitate a long

time before pawning a stolen article, when he realizes that his description and that of the article itself will be given to the police the next day; and, of course, the greater the difficulty of disposing of stolen property, the less the inducement to steal. No pawnbroker, junk dealer, or dealer in second-hand goods who is ready to do his part in upholding law and order can object to the passage of this bill, and none but a thief, or a friend of thieves, can have any interest in preventing its passage. Yet it is by no means certain that the measure will be enacted. It is against the interests of the lawbreakers, and with assistance they will make a desperate fight against it.

As a practical illustration of the results which can be obtained by rigid police surveillance of the pawnbrokers: in one case, in the fall of 1907, a pawnbroker had been found to be reviving stolen goods. His premises were placed under close surveillance by the police. It took a large force of men, as the place had to be watched night and day. Success, however, was striking, since the proceeds of six separate burglaries were found. This is not only an illustration of easy and lucrative lawbreaking under present conditions, but also of the rich results rendered easily possible if the forces of law and order can be provided with proper tools.

Similar police regulations with regard to pawnbrokers are in operation in nearly every large city in the world. In Paris and other European cities where the pawnshops are run by the government, it is essential for a person to show a certificate of identification, issued by the police, before an article will be received.

As a concrete demonstration of the proposition that lawbreaking is a lucrative business for the work involved, it is only necessary to point to the overworked, overpaid, and overfed gamblers, who are to be seen daily and nightly in the resorts about town with their overworked, overpaid, and overfed wives and mistresses. No one in fifty of these fellows could pass the primary examination to admit him to probation on the police force, and not one in a hundred would be allowed by a respectable householder to call upon his cook, but in spite of ignorance and because of depravity they are making great fortunes. The police will not be able to stop gambling entirely. They might be able to regulate it if it were licensed. It never had been entirely stopped to say great evils of civilization, and probably never will be—at least, not until human nature has undergone fundamental changes. The problem is as acute in London, where there is supposed to be no vice graft, as it is here.

The gamblers in New York are fairly well in hand to-day, perhaps more so than in several years past; but the big gambler does not need to keep his place open every day or every night. Perhaps he will open only one night in the week or even less frequently, and his profits for a few hours' business may amount to thousands or tens of thousands. The police may have watched a gaming house for weeks, and the day the watch is removed the owner will get word to his patrons—who are as anxious to play as he is to have them—that the place will be open at a certain hour.

No big city has yet been able to suppress the social vice. In countries where disorderly houses are differently handled the evil probably is reduced to a minimum. That there are promises of protection from some source is indicated by the fact that only this week a double house that had been opened only a few days, in one of the up-town streets where rents are highest, was discovered to be illegally conducted and was raided. Some one had given the person, or persons, who paid the rent for that house and furnished it assurance that it would not be interfered with by the police or it would never have been opened. Whether or not that some one was connected with the Police Department, an effort is being made to ascertain.

Inevitable as it may seem to the decent citizen who is not informed in the matter, the women who conduct these disorderly houses have formed a regular organization, and are able to exert considerable influence in minor politics through the lawyers and politicians who are retained to assist them in their vice trade. Copies of their rules and regulations, and schedules of their rates of payment for protection, that had fallen into the hands of respectable persons, have been sent to the Police Department more than once during the last year. These women have not been able to realize that, under the new order of things, no man be of the police force, no matter how high his rank, not any politicians nor their agents, can guarantee to protect them from police interference; and hence they continue to be victimized by the second-rate lower than themselves who have hitherto been able to give them a return for their money.

It is not to be understood, however, that the Police Department is helpless to meet the situation. It is quite within the last report of the Commissioner: "The police force as coping with the situation, and is able to carry on its work, short-handed though it is." The police force must, however, be increased at once. New York requires one policeman for every 425 to 400 of population.

The Tribulations of the Suffragettes

AT HOME

THE suffragettes have reached New York, but have not yet attained to martyrdom. The public will not have eyes at them, and the police refuse to arrest them. When they hold open-air meetings, police spectators hear without hearkening and pass along. When Mrs. Borman Wells and Miss Maud Malone organize a Sunday parade in defiance of police regulations, the police close their official eyes, and beg them not to hold up the street cars.

Mrs. Charles Sanderson, who came here to arouse our downtrodden feminine population, has gone home in disgust. Mrs. Borman Wells, who came on a similar errand, fervid with determination, is still here but forlorn.

In our land, where woman terrorizes the State Legislatures, and man lies abjectly beneath her heel, this importation of foreign-made agitation would have aroused resentment save for its elements of humor.

The Suffragettes being "moved on" from Union Square by the Police. At the Head of the Procession are Mrs. Borman Wells, the English Leader, in a white Hat, and, at her Left, Miss Maud Malone, the American Propagandist

ABROAD

THE "Votes for Women" movement in England continues to make good headway. Since the series of sensational raids upon the House of Commons last year, cabinet ministers have lived under a reign of terror, their public addresses interrupted, and their houses besieged. The King has been waylaid and the law courts invaded. Meanwhile the sympathetic Premier, Sir H. Campbell-Bannerman, tells the women to "keep on agitating."

The women claim that since two-thirds of the country's representatives have announced their belief in women's suffrage, and their refusal to pass a measure for that purpose, agitation has become necessary to awaken public interest.

In the intervals of raiding Parliament and the houses of cabinet ministers, bands of women are engaged in chalking up advertisements of their cause and making street collections.

As soon as one of the Suffragettes started speaking, the Police broke up the Meeting

The Wandering Suffragettes going through Twenty-third Street, with "Here Man" following

By EDWARD HUNGERFORD

ILLUSTRATED BY EDWIN F. DAYHA

A SALES-MANAGER and general executive in the central offices of one of the most successful corporations of America says that he cannot define, in so many words, why, in hunting for a good man, he picks Jones instead of Smith, and turns down Robinson in place of Brown. The nearest he can come to justifying his decisions is that out of a mass of candidates there will be one or two who seem from the first to be capable of making strong friendships. They will not be the big talkers, nor the fluent talkers. Generally, they are not even the most prepossessing in appearance. But somewhere, underneath, there is this human quality in them that promises to expand and cause them to "make good."

This sales-manager is very modest about the matter. He does not pretend to be an expert selector of men. But he has places to fill, and he fills them as a part of his routine, when finding that a man whom he has picked by this system does not prove capable and worthy of steady promotion.

If you will notice the men who are getting the jobs that are worth while, you will see that there are very few "smart Alecks" among them. The man whom the big business man picks out of the rack does not, nowadays, even have to be a good talker. "The 'good talkers' are apt to tire me," says a manager who is also a big buyer. "I have frequently bought from a man who has simply said, after presenting his line, 'I want that order.' But he has said it so quietly and convincingly that I have hurried toward him."

It does very little good simply to ask for a job today. If the job is at all valuable the candidates are unlimited. The man who wins is the man who has an ingenious way of putting himself forward, of showing that he can meet emergencies. That is the one quality today that people are looking for.

There is a loud expert in New York to-day who owns his standing by a neat phrase. He had been troubling a noted head-bruise for a chance on its staff, and had been continuously turned down. The day he marched in, only to have the manager send out a curt message that there was no position open.

"Position?" said this especial youngster in tones as curt as the manager had used to his clerk. "Position? Who said anything about a position? Go back to Mr. Havens and tell him that when I want a position I'll ask for it. What I want is a job to sell some bonds this afternoon, and I want it quick."

He got it, and jobs for a good many mornings and afternoons thereafter.

It is thus to be seen that it is the man who is smart and quick, who knows enough to test a situation and make himself stand out above every other applicant, that is wanted. Even the routine-work men may happen to be needed in an emergency for other duties. Others are "plugs." You can shut your eyes and choose any one of a given number of "plugs." Any one will be as good as any other. But nobody wants a "plug" for any job, if he can pick out some one with possibilities.

A big employer the other day placed advertisements in the daily papers asking for a private secretary. "I ought to pick up a nice clever boy who could think for me and be worth a whole lot more than the good salary I am going to pay him," he told his junior partner. "I want some one who is more than a machine. I want something in trousers that is capable of things. Take my messenger out here at the gate, for instance. If it wasn't for the color of his skin I could push him about like a \$50 a week job."

"That boy is invaluable to me. Jones comes in to see me on Friday. The boy stands in the background, but he happens to hear me tell Jones that I cannot do business with him before Wednesday, but if he will come in on that day at twelve o'clock I will be glad to see him. In the same time I forget testfully about that engage-

ment, and Wednesday morning Smith drops in. "Come over to lunch with me, Smith," I say, but my messenger comes up and speaks to me. "Don't forget, sir," he says, "that you have an appointment at noon with Mr. Jones." Perhaps that boy isn't worth his salary to me! I want something of his ability in white skin, and I'm willing to pay the price."

The advertisements appeared simultaneously in all the papers, and the concern's mail was doubled on the following morning. The wheat was affixed out of a great grid of letters, and twenty of their authors were told to call. One by one these were rejected until the most likely applicant was saved for the senior partner—whose time is a very valuable thing—to inspect. The boy had an attractive personality, and the senior partner liked him from the outset.

"Where are you working?" he asked.

"In the T. & N. R. R. passenger office. I get \$20 a month, and the concern's mail was doubled on the following morning. The wheat was affixed out of a great grid of letters, and twenty of their authors were told to call. One by one these were rejected until the most likely applicant was saved for the senior partner—whose time is a very valuable thing—to inspect. The boy had an attractive personality, and the senior partner liked him from the outset."

"Want bigger money?"

"I've got to have it, sir. I've a mother and sister dependent on me, and we're not breaking even on our living."

Dependent women are regarded as pretty good credentials on men, and the boy advanced another step in the old man's favor. He gave the right answers to all the questions for a long time, and then he asked a question himself.

"What are your other hours here?"

The boss swung fiercely around in his swivel-chair and glared out from under his heavy eyebrows at the boy.

"Twenty-four hours a day, seven days a week, perhaps, if we need you," he asserted. "We don't run jobs in this inner office on the office-hour plan. We don't have time-locks."

But he was decent enough finally to overlook the office-hour question. There was so much about the boy that he liked that he was still anxious to employ him. Still, he was a man that never decided an important question without sleeping on it, and so he told the young man to return for his answer on some day early in the following week.

The applicant seemed loath to leave the inner office.

"How do I know," he queried, "that you're not putting me off for a week so you can measure up some other fellows against me?" Then it was that the volcano went into eruption. The old man was out of his chair in a moment and standing close to the boy.

"I'm done with you," he said. "You haven't half enough sense in your head, after all. Why, I'd all but fully made up my mind to put you in here as my confidential man, Monday week, at \$25 a week for a starter, and now you've kicked the bucket clean over, tie out."

That proved a good way to get a job. There is no use in deceasing on that boy's foolishness. Time and again chances have been spelled in some such way. There are any number of youths who seem only to have some up to a certain point.

Several years ago a young fellow, who had since become a sort of some importance, made up his mind that he wanted to get into the dry-goods business. He picked out the concern he wanted, and after some little trouble got to the junior partner. He learned that there was no immediate chance.

"I'll wait for it," he said. He was a pleasant-looking lad, and the junior partner's impression of him had been agreeable. This special job was not a necessity to this boy. He had another in a little city near New York, and, as a side issue, a church choir position. This brought him into New York each Saturday. Every Monday morning he would show up at the dry-goods house and ask if that job was ready yet.

Another youth might have been annoying and persistent. This young man was not. He simply made himself a familiar figure. The junior partner after a while got accustomed to waiting for him on Monday morning. He—the junior partner—would have been

That proved a good way not to get a job

disappointed if the fish had failed to appear. That he never did. It was not many months before it occurred to the junior partner that he wanted a young fellow that could hang on like that; and the position was finally forthcoming.

Pled out what you want, and then hang on: it is seldom that this fails to be a good rule. A good many men have learned the lesson. Here is an incident of commercial life that is an excellent proof of it. It is the case of a young man who was a specialist in his profession, and who, after running off on a tangent to inevitable defeat, was obliged to come back to the beginning and seek a position. This man measured the situation carefully. When he had left New York to embark in business for himself he had expressed a feeling of regret at parting from his old employers, and had permitted sentiment to carry him so far as to say voluntarily that if he came back to New York he would never work for a rival house—which was saying a good deal, when he knew that it was an established rule of his old employers never to take back a man who left their service, voluntarily or involuntarily.

"I couldn't bear to think of having to be not fighting the old house," he told his friends when they heard of his resolve.

So when he was driven back to first principles and drifted into New York he kept to the letter of his word and sought employment in his old line. There was but a single concern in that city with which he cared to ally himself, and he sought its manager within an hour after he had stepped from his train.

You must understand that this was a man with more than an ordinary measure of ability in his work. He was young and he was enthusiastic, and his failure in his effort to branch out for himself was not necessarily to be counted against him.

The manager listened quietly as the man asked him for a job.

"Cannot place you," was the reply. "They're asking me to cut down expenses and not increase my payroll. It's quite impossible."

Now that was not the answer that the jobless man had wanted to hear. This was virtually the only house that was open to him, and there were a thousand reasons why he did not wish to leave the vicinage of Greater New York: he was, therefore, much disappointed at this rather curt dismissal of his case. He determined to fight it out, then and there. Nothing worse, he concluded, was likely to happen to him than to be kicked out of the manager's office.

"I don't think you realize the training I have had," he began, "with an assurance which strengthened itself each minute, he told of his resources, of the way he had studied the business and specialized along some of its most interesting sidelines; and when he finished he felt satisfied with his effort. He did not really see how any manager could refuse to hire a man who had so many attainments. But—"

"I am very sorry. I haven't a position for you," Imagine how that would sound after you had been talking against an employer for twenty minutes—talking with the earnestness that a desperate and jobless man rises to at such a moment! The manager bowed himself with the papers on his desk and imagined that his caller had seen the point and departed. He imagined wrong. After

he had been immersed in some reports for thirty minutes, he heard a cough from the corner of his office and looked up.

"Oh, you're here still!" he said. "How long are you going to stay here?"

"Till I get a job."

A smile swept over the manager's face. He swung about in his chair.

"I rather like you," he said, bluntly, "and if I had a job I think that I'd give you a try in it. But they're chasing me down pretty sharply on expenditures, and I've got to cut my force, not increase it."

Perhaps that was not a victory. Somehow the manager had not said much, but that little brought some faint aroma of hope to a jobless man, and he said:

"I'm not going yet. You don't mind my standing here and looking out of the window do you? I'm going to stick it out."

The manager laughed aloud.

"You can stand there as long as you please," he said, "but that doesn't alter the situation or get a job for you from me."

"I'll stand," came the reply from the window.

Somehow the manager could not get his mind back on his reports again, and he was half sorry that he had given the stranger permission to stay in his office. He fussed and fumbled mentally for twenty minutes, then gave it up and began talking to the building's phone.

"I'm sending a man down to you that you've got to put on. Charge it to special expense or anything else you please, and we'll tuck him on the payroll at the first crack. No. I say he's got to go on. He simply won't take 'no' for an answer, and that's the sort of chap we need, I think. I'll send him right down to you."

And when that man walked out of the building that now for a month he was again employed, and employed at a more than decent wage at that.

A cub reporter in a small city in the western part of New York State coveted a position on a certain New York paper. Somehow the chances of getting on that paper's exclusive staff seemed mighty few. But one day his city editor told him to go down to the railroad station, see Lord Charles Beresford, who was to wait there a little time between trains, and get an interview from him. The boy was country-bred, and Beresford was little more than a name to him. But he had an hour to spare before he would have to be at the depot, and that hour was spent in a library reading of the fight before Alexandria and of revolving guns in the Sudan.

When he reached Beresford at the railroad depot he found the rear-admiral very gracious and obliging, and ready to fill him with much praise of the country in whole and that part of the country in particular. The boy took copious notes, then closed his book with a bang and a smile.

"That's all good stuff, Lord Beresford," said he, "but it's what every single one of you Englishmen tell us when you get over here. I want some real news."

"Real news?" was the response.

"If you would answer a single real question for me it might put me on my feet and make a big journalist of me."

The big man smiled at the boy.

"Ask me the one question. Let me see what it is!" he said.

It was at the time of the earliest troubles in the Far East.

"Why did you change your plans and not go to Port Arthur?" he was asked.

"But that's a diplomatic question, and not to be answered," he replied.

"The very reason why it is real news," pressed the boy.

"The Foreign Office at London requested me not to go there," said Beresford, as he hurried back into his train. The boy kept his secret to himself, wrote his conventional interview with Beresford for the paper that employed him, then wired Beresford's answer to his real question as an exclusive feature for the New York paper. That paper put it in its cable service and sent Beresford's answer to the country reporter's question swinging around the civilized world. Then it sent for the boy himself and put him on his feet. To-day he sits close to its managing editor's desk and draws a salary of more than \$5000 a year.

What is it that makes a good impression? Over six-

are one night a young business man recalled an incident of his boyhood.

"It's not so many years ago," he began: "I remember it as well as if it were yesterday. I was hunting my first job. I selected Wall Street because I had heard so much about it. I walked

Reading of the fight before Alexandria

down that street, going into every office on both sides of the way, asking simply this one question: "Do you want a boy?"

"No!" "No!" every one said. I had visited fifty offices, sixty, seventy. It must have been about the seventy-fifth that I found, in an office on the street floor, an old, white-whiskered gentleman, behind a railing in front. I again put my question politely. "No!" he replied. In a way that must have been more businesslike than I realized at the moment, I went towards the door. As I put my hand on the knob he stopped. "Come back!"

"I returned to the front of the railing. "There's something I like about you," he began. "How old are you? Where do you live?"

"A string of other questions followed. Then the old man said curtly, "Come and see me to-morrow morning, and bring me a letter from some one who knows you."

"In the morning the same shortness and earnestness characterized my new acquaintance. "This way," he said, and he put on his hat and led me out into the street. "I don't want a boy," he observed, so he walked me along. "But I know somebody wants you."

"He took me into an office and brought me before another white-whiskered man. It was a big insurance office, no I remember. "Smith, I want you to take this boy," my friend said.

"The old man demurred. "There are so many ahead," he answered, fidgeting with the papers on his desk. My friend uttered what might have been "Pshaw!" but wasn't. "I tell you, you want him!" he threw back. "Now, Billy," turning to me, "you give this gentleman your name and address, and he'll write you within a few days when he wants you to start."

"The other man did write, but before that I was already fixed in a job that has developed into my present position.

"Now what was it the old gentleman liked in me? I've seen him since, and talked with him about it. It was the get-up-and-keep-moving way you had," he said, "without any martins or blunders or noise about it. You stated your business proposition in half a dozen words, but you put them just right!"

There is a man in New York, to-day, well up at the top of the heap now, who had a curious experience two years ago. He came up from Havana after a half-dozen years' experience there as a manager at a good salary. Before that he had done a few things in the West, and had held a post as an assistant purchasing agent in New York.

Let us call him John William Jones. Before he went into the Indies he had been loaded down with debt, and had just about succeeded in getting them paid when he decided to come back again to New York. He was several hundred dollars ahead then, and from his experience, and because of the number of American firms he had been doing business with for years and who knew him well by name, he was confident that a job in New York of high calibre would come to him readily.

So he wrote ahead to all the big merchants whom he had done business with, announcing that he was coming, and telling them that he was planning to establish himself in New York. The mail awaiting him on arrival at a fashionable Fifth Avenue hotel was somewhat disappointing. There were but three letters from the American merchants to whom he had written, and all of these were non-committal. They contained no offer of a position, or even a suggestion of it. But they and others that arrived later presented cordial invitations to call and lunch.

The days that followed brought nothing definite, only numerous good wishes and proffers to "set some him" on. One of the heads of the corporation that Mr. Jones had been with during his previous career in New York—a power in finance—not dim on the street one day, greeted him by name, and, on learning what Jones was up to, said he might refer to him personally. Another man who is known by insiders as the "busiest man in New York" talked with Jones half an hour one day, reviewing old acquaintances, and said that he was sure he could push something through for him. Half a dozen other powerful business men gave like assurances.

Jones was not at all discouraged. He had an idea that the old phrase must be true, that there must be "plenty of room at the top." He knew, though, that all the big places must be temporarily filled, even if, here and there, with second-class men, and that it

Chasing \$10,000-will-o'-the-wisp

would take a little time to get into close touch with the chiefs and then hatch on. That there could be the slightest question of landing a \$10,000 a year job in a few weeks did not occur to him.

John Jones would not, indeed, have been a student of the president of the biggest trust in the country had been offered to him. He was received everywhere with extreme cordiality. The New York agents of his old house at once gave him temporary office room for headquarters, clearing out a large roll-top desk for his use. They had no positions open beyond small clerkships, the partners holding everything that was worth while.

But the \$10,000 offer never came, nor did one at \$7,500, nor even at \$5,000. Nobody seemed to hear of anything, and Jones could not get actually on the track of anything even fairly good. The nearest he came to it was a chance on a \$5,000 purchasing-agency job. This looked all right, and there was more than a fighting opportunity, it appeared, until, after a month, the post was suddenly filled, and then John Jones learned, from the inside, that it had all been talk so far as he was concerned, and that he had never been seriously considered at all. The position had gone by pure favoritism.

Upon investigation John Jones found that such cases were not uncommon, that others had been deluded in just such ways before. This disheartened him at first, and then he began to look the situation squarely in the face.

"Come," he said to himself, "the ways of jobs are certainly curious. I never would have believed that I wasn't wanted. But I am wasting time. Here it's four months now that I have been chasing this will-o-the-wisp." He had seen plenty of advertisements for high-grade men, \$5,000 to \$10,000 being the figures named. Some of these must be worth while, he had argued. But his answering had brought no substantial result.

Unlimited promises, brilliant prospects, were the sum total of all. A pretty poor result of four months' labor, Jones thought. It was at this point that the raillore of the man demonstrated itself. He brought into play then the judgment that has made him the man he is to-day. "If you can't get what you want, take what you can get." John deliberated this aphorism one night. He reached a quick conclusion. In his early business days he had been a stenographer and typewriter. "Twenty five dollars a week received is better than \$200 promised." That seemed certain. Quietly, the very next day, at the employment bureau of a typewriting concern, he put in his application for a temporary job as stenographer.

There was little trouble about getting that, and it was a wonderfully short time before John Jones was helped to better things.

The Lesson of Portugal

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

HAVE been in the English papers innumerable comments on and explanations of the murder of the King and Crown Prince of Portugal. Their keynote, naturally, is one of horror at the tragedy and of unstinted sympathy with its victims. King Carlos was perhaps more of a favorite among the people of England than any other European ruler. He had the radiating and infectious good humor that often goes with men of his physique. He slipped without an effort into popularity with the crowd. King Edward was known to regard him with a peculiar fondness. He was an expert and unflinching sportsman, and there is still no surer road to the British heart than the ability to hold one's own on horseback and at the covertide. A hearty, jovial monarch who enjoys being a king as unselfishly as Mr. Roosevelt enjoys being President, and who bears on his face and manner the unmistakable signs of good fellowship, is somewhat of a rarity in these harnessed and exacting days. King Carlos, though he was only in England two or three times, succeeded in conveying to the average man a very distinct impression of bluff and lively geniality. All they saw and heard of him made the English people like him. Moreover, there are old political ties that considerably antedate the discovery of America between England and Portugal. King Carlos, too, did England an excellent turn when he refused to allow German soldiers to land at Delagoa Bay and enter the Transvaal "for the protection of German interests" after the Jagersfontein raid. Again, Queen Amélie was born in England, brought up here, and has always looked upon this country as her second home. For all these reasons the shock of the Lisbon tragedy was felt in England with a real and poignant intensity, and its personal aspects were inevitably those that most touched the thoughts and feelings of the people.

In dealing with its political aspects the English journals have been in somewhat of a quandary. They admire strength in a ruler, and nobody for a moment can question that King Carlos showed the highest courage and determination in choosing and carrying out his policy. On the other hand, a dictatorship is a thing so hateful in English ears that every English political instinct to hear that the Constitution had been suspended, that the freedom of the press had been abolished, that all the functions of local government were taken over by administrative decree, and that political opponents were being arrested, imprisoned, or deported by scores. English people feel that such proceedings could only be excused by a grave and otherwise insoluble crisis, and could only be justified by their complete success. Whether the crisis was really of a character that made any less drastic treatment ineffectual and a waste of time is a point on which in England, as throughout all Europe, there are two schools of opinion. To the one school King Carlos was the bold and prudent statesman who after years of self-restraint was forced to adopt extreme measures as the only hope of eradicating intolerable abuses and revitalizing the body politic. To the other school he was little less than a usurper trampling on regular rights in the old spirit, with the old motives, and by the old methods of unadvised tyranny.

But whether the policy pursued by King Carlos was right or wrong is, after all, a minor question. An consolation proves nothing. What, as it seems to me, is the point that really matters in the crisis that has convulsed Portugal for the last twelve months is the light it has thrown on the workings of the democratic system. But this is precisely the point that has been least discussed. It takes us very little further to be told that King Carlos's policy was the only cure for bad government. We want to know how the habit of bad government was contracted, and what were the fundamental conditions that precipitated the crisis which the King tried to solve. I do not myself see how it is possible for any one approaching the problem from this standpoint to doubt that the present state of Portugal is primarily due to the failure of democracy. Some Americans regard it as a heresy even to hint that democracy can fail. Mr. Bryan, for instance, seems to look upon it as a political error-all that can be prescribed indiscriminately for men of all races, climates, and degrees of culture and civilization. I think a calm survey of its effects upon certain European countries would help to mislead him. He has had this great disadvantage, that it has fallaciously rewarded other nations into attempting to transplant it. Europe is dotted with native imitations of the British Constitution from which the quickening spirit has gone. The system of party government is an accident

even in England, where it has hitherto worked tolerably well as much through the defects as the excellencies of the British people. Elsewhere—I except of course the United States—it is a plagiarism which has worked badly. What else, indeed, could have been expected? The secret of representative government is not to be learned from text-books. The traditions and unwritten codes, the half lights and compromises, and silent understandings that direct its workings in England are not things that can be manufactured. They are properties of the blood, elements of a national character, the product of special conditions and distinctive experiences. To formulate and define them, to incorporate them in a constitution, and to hope it will prove workable, is to mist altogether their essential quality, and to indulge in the vain dream that the slow processes of time can be eliminated and the centuries taken at a leap. I very much doubt whether even the English, with all their grunts for the happy political man, would be able to work their constitution if it were suddenly to be dumped upon them. This is what Europe has never realized. There are fashions in politics as there are in dress, and for nearly a century and a half the British system of government has been "the rage," has been everywhere accepted as the last word in progress, and copied and reproduced unthinkingly. The most diverse countries, countries widely illiterate, countries that emerged from political slavery, countries that had never known and never cared to know anything but the direct rulership of a single head, have imitated the British constitution, not because it suited their temperaments or conditions, but simply because it was the mode and was taken to represent the final proof of enlightenment. The consequence is that all over the world you find elaborate paraphernalia of legislative machinery, quite admirable and perfect to look at, but with the unhappy defect of disabling all its engines.

The classic examples of this sort of feckless democracy and unrepresentative government are to be found, of course, among the "republics" of South America. But Italy supplies another instance of a country which has adopted democracy without being fitted for its responsibilities either by tradition, instincts, or education. France, again, has proved more than once, and may yet prove again, that the barrier between the parliamentary system and the centralized bureaucratic system is not so controlling as it is. It is towards the latter that all her inclinations lean; and that the attempt to combine the two is a disastrously costly, idle, and demoralizing experiment. No one can say that democracy has yet proved a political success either in France or Italy; no one can pronounce it other than a brutal and pernicious failure in Spain and Portugal. In Portugal, especially, the intolerable condition of democracy is wanting—the people are abjectly ignorant and illiterate. But the most delicate and complex instrument of government that has yet been devised in the hands of men three-fourths, perhaps four-fifths, of whom can neither read nor write, whose history during the past three centuries has been one of political crime, absolutism, and military revolutions, and who have tried to bridge in a single day the enormous gulf between autocracy and self-government—and the result cannot be anything but catastrophic. It is really the abandonment of all national use of language to speak of constitutionalism as having ever existed in Portugal. Democracy there, as in Spain, has proved worse than a farce; it has developed into an elaborate and well-kept impenetrable conspiracy against the common weal.

That is not an exaggeration, but the literal and appalling truth. Imagine New York as it is under Boss Tweed, and apply his system of government to the army and navy, and to every detail of national and municipal administration, and you get an accurate picture of Portugal's present conditions. "Politics" that begins and ends with the question of spoils; parties that have no principles whatever, except the principle of absorbing one another; a reasonable turn in office; elections that so far from being the result of public opinion are the nullification of it, are directed by the government of the day, organized by the wire-pullers and bosses, and always end in the ruin of the majority being forthcoming; a election that is one vast and apathetic, indifferent, and too thin to take the trouble or run the risks of voting; a few thousands of professional politicians, with attendant cohorts of rattle-baggers, running the machine at Lisbon, or flooding the country with their shamblering emissaries; meanwhile, industry decaying, agriculture declining, commerce at a standstill, and the national debt augmented till its periodic repudiation has become almost a habit—such are a few of the leading elements in the Portuguese present, elements that, in my judgment, find their common source in the utter unsuitability of the constitutional, parliamentary, and democratic system to the instincts and capabilities of the people. King Carlos saw, or thought he saw, in a reforming dictatorship the one hope of escape from a regime of profligacy and corruption that threatened moral anarchy and financial bankruptcy. He tried the experiment; it has failed. Was his diagnosis wrong or his remedy mistaken? If so, what is the cause of the condition which befouled him, and the true solution of the problem?

Adding 108 New Officers to the Army

Secretary William H. Taft presenting his Diploma to Cadet George R. Goethals. Upon the Platform is Brigadier-General George Bell, Chief of Staff

The Graduating Class. The Cadet in the front Row, indicated with the Star, is Glen E. Edgerton, of Machattan, Kansas, who stood at the Head of his Class

THE annual June cluster of West Point graduates matured on June 14 this year, possibly on account of the warm political temperature in the Far East, and Secretary William H. Taft handed over the sheepskin scrolls at the Military Academy.

The Secretary was received by a troop of negro cavalry and welcomed with a salute of seventeen guns. After a luncheon at Colonel Scott's quarters the graduation exercises were held in Cullum Memorial Hall. The proceedings were entirely informal in character, and were continually interrupted by outbursts of applause. After a short speech by Secretary Taft 108 new second lieutenants were added to the regular army, and each received a hearty handshake.

At the head of the ten ranking cadets, who have their choice of the five branches of the military service, stood Cadet Glen E. Edgerton, of Kansas. Fourth in his class was Cadet George R. Goethals, the son of Colonel Goethals, chief engineer in charge of the construction of the Panama Canal. Colonel Goethals was present when his son received the diploma.

"We may not have another Panama Canal for you to build," said Secretary Taft, "but we will try to find something else that is useful."

The graduates afterwards started on a brief leave of absence, before being assigned to their posts in the army.

Mrs. Van Nostrand's Night of Triumph

By ELIZABETH JORDAN

ILLUSTRATED BY FANNY Y. COBY

abandoned this as an unnecessary addition to the severe mental strain of the experience. German, Swedish, Norwegian, Irish, French, and Alsatian maids called, surveyed approvingly her charming little apartment, listened coldly to her enthusiastic recital of the simple joys and home comforts awaiting "the right person," and then, even more apologetically, disappeared.

It was at this point in the tragedy that Mrs. Van Nostrand confided to her friend Mrs. Brown, over the telephone wire, a deep satisfaction in having kept so record of the number she had personally interviewed. "For if I knew," she explained, "only, 'I should certainly have to tell some one. And no one in this wide, wide world, except perhaps Jack, would ever believe me!'"

"Humph!" said Mrs. Brown, distinctly. "I would! So would every woman who has tried to find a general housekeeper this year. American women are now divided into two classes," she continued, warming to her subject and bracing her elbow comfortably on the top of the telephone. "Those who have servants, and those who are trying to find them. You'll know the first by their apprehension, the second by their agony. Over the first the word is hanging; over the second it is not even doing that!"

Her fat, comfortable chuckle came to Mrs. Van Nostrand's ears like a taunting flout from some modern wraith's Sabbath.

"But never mind," she added, as if she had received an encore, "there is one depth you haven't reached. You don't know yet what it is to have one of them come, stay three months, win your affection, realize all your fondest ideals, make herself absolutely indispensable, and then leave because she had suddenly decided to 'specialize' and work exclusively for 'de four hundred.' When that happens you will have touched the bottom of the deepest abyss known to the American housekeeper. Telephone me then—and we'll take a little trip to Lakewood."

Mrs. Van Nostrand hung up the receiver with a puckered frown on her pretty, serene face. It occurred to her, as it had done several times before, that dear Mrs. Brown, while an admirable woman in many ways, had a humor that allied her to Nero. She expressed this lowly appreciation to Mr. Van Nostrand in the evening, over the skimpy dinner they were eating in a restaurant, with the one merit that it was near their apartment. The lady Jack designated as the "unspitful cook" had left abruptly that morning, owing to some ruffling hair with the janitor.

"That woman loves horrors," he returned, gloomily, referring to Mrs. Brown. "If there's anything worse coming than what we're getting, I, for one, don't want to know it beforehand. But there can't be. That's dimly comforting. Besides, if we ever do get a good servant, we'll have her hypnotized first, and then we'll put her on a leash the exact length of the flat."

Heard by this reflection, he resumed his dinner. His wife smiled wistfully. Never until then had she fully realized her husband's limitations and the disillusioning possibilities of matrimony. To have Mrs. Brown just airily over one's misfor-

times was annoying. To have Jack do it was a vital crisis in life. In that supreme moment she felt herself alone and at bay against the world.

When human souls are tested beyond their strength help comes from some source, call it what we will. The next day a young Danish woman came within Mrs. Van Nostrand's field of vision. She asked several respectful and intelligent questions, she furnished admirable references, she agreed to come to the Van Nostrand, and she came. All these things were new and strange in the experience of the unhappy housewife, who did not in the least expect her and who waited, for two days after her arrival, in breathless expectation of her prompt departure. She did not go. She remained; she did her work with surprising ease, and seemed to have an unconsciousness of her pitiful worth that was unmoney. She also condescended to Mrs. Van Nostrand that she desired to be called Hedvig, instead of her real name, which was Anna, explaining that she thought it less "common"; and she asked permission to change the boys on her cap, and expressed a preference for Wednesday instead of Thursday "out." These were distinctly encouraging incidents, marking a progress never reached before, and certainly justifying some hope that she intended to remain a week or two; but her mistress guardedly refrained from taking them seriously. She also resolutely diverted Jack's gaze from the rainbow of promise on which he gazed with

astonishment. "You are not going to let this warp your nature, are you?" asked Mrs. Brown, anxiously. "Sometimes it does, you know. I've known noble women whose characters were ruined by it. Meet it as a test, draw—as a source of development and all that. Make the servants slipping stones toward higher things!"

Mrs. Van Nostrand expressed an immediate and freely willingness to make the servants slipping stones, but conceded that she was a little vague as to the higher things.

"I've had my aspirations, like other women," she sighed, "but I'm resigned now to a very matter-of-fact and practical plane. If I can persuade some servant to live with me and do my work until we give up this apartment in a little while over no nothing more."

Hedvig sought her a little later and turned on her a radiant bland face.

"I wash clean all de silver," she observed, affably. "You got nice silver an' dishes. Wen we give little dinner parties we make de table look fine. Wen you going to have fren's dine wit' you? I like to get up little dinners!"

Mrs. Van Nostrand felt her being leap, as Dana's may have when the shroud of gold began; but she was a woman of character, and it showed none. She heard herself speaking with entire calmness. "Little dinners," long dreamed of in the past, had never taken a more tangible shape than dreams since her marriage four months ago.

"We will have no one until Saturday evening," she said, placidly. "Then we will have only two guests, so you may get up a nice little dinner for less. That will not interfere with your routine work on the general sweeping and cleaning of Friday."

When she returned to her library she sat down to write her first dinner invitation, her chest swelling with a sense of the greatness of the moment. The note closed, however, the stern disciplinarian of past months. Like all Mrs. Van Nostrand's recent expressions, it was guarded:

"DEAR EDITH.—Do you and Herbert have us enough to dine with us until Saturday evening at half after seven o'clock, and let us try a new cook in you if she is still with

To write her first dinner invitation

She furnished admirable references

me and strong enough to work? If she is not, we will dine at The Imperial.

"Affectionately yours,
"HENRIETTA VAN NOSTRAND."

The next twenty-four hours brought the reassuring information that the devotion of Edith and her husband was equal to the venture. Mrs. Van Nostrand read their note at the table with a satisfied smile, and the grim reflection that possibly Edith and Herbert were fond of dining at The Imperial.

"Mr. and Mrs. Verbeck are coming to dinner Saturday, Hedwig," she then said, blithely. "and we must do our best."

Hedwig turned to her with a sudden alert interest she had never shown before.

"Verbeck?" she repeated, quickly. "Is that the millionaire what lives on Sixty-eight Street?"

"Oh no," replied Mrs. Van Nostrand, carelessly; "quite another family, I think."

The face of Hedwig fell. She walked out of the room with a flogging step, her inert hand holding the tinsy at a dangerously acute angle. Mrs. Van Nostrand looked at her husband with a puzzled frown.

"Wasn't that odd?" she remarked. "She really seemed disappointed. Perhaps she was once in service with the other Verbecks."

Saturday evening brought the Verbecks that were not "other"—but prompt, optimistic, philosopher—an ideal twain on whom to try a domestic experiment. Great was their reward. Mrs. Van Nostrand had planned a very simple dinner of five courses, and had taken the precaution to order the dessert at the exterior's. She had herself laid and decorated the table and attended to the candles; but even with these old and tried friends her nervousness, as she seated herself, was so great that her first oyster found difficulty in making its way down her contracted throat. For a few moments she could not speak. The soft light of the candles seemed to dance before her eyes, and the cheerful voices of her guests came to her from a distance. Then she became conscious that a very deft, quiet figure was moving about the room, that plates were changed without a sound, that Mr. Verbeck was uttering almost too casual commendation of the soup. What had he expected? She drank a spoonful. It was streaming hot and perfect. She sat up and began to exercise her rôle of hostess.

Looking back on that dinner, she remembers it as one of the most delightful experiences of her life. Course after course was smoothly served, and the viands were so delicately cooked and seasoned that her old friends were wonderfully enthusiastic. Nothing could have been more admirable. Like her husband and her guests, Mrs. Van Nostrand gave herself up to the happiness of the hour. The foot lingers over each dish, new stories were told, old memories were recalled. When Hedwig had served the coffee and liquors in the drawing room Mrs. Verbeck turned to her friend with a look of inquiry.

"Well, I like your affectation of modesty about your dinner," she said, "and your own insinuations about your cook. I suppose this is like sending out your visiting card with 'Dancing' in the corner, when three hundred people come at twelve and stay till four. Not that we are complaining, my dear. If Herbert and I had a pearl of such price we'd never drop out!"

Henrietta smiled with fatuous assent. She was having many new ideas this evening, all strangely stimulating. She indulged in the luxury of another.

"Yes, she does very well," she said, condescendingly, "but, like all the rest of them, she needs constant watching—and a great deal of training!"

The "little dinner" was the first of many. For Mrs. Van Nostrand promptly adapted herself to her new position as preserver of a *chef*, and gave two or three dinners for four and six guests every week. She discovered a stout and capable German woman who was willing to help on such occasions for a small compensation, and so the winter passed the time of Hedwig's cooking and the Van Nostrand dinners grew up. Jack, who was the son of a famous editor, drew into his home

Saturday evening brought the Verbecks

many distinguished artists and men of letters who had known his father; and Mrs. Van Nostrand, herself the daughter of an eminent Western bishop, presented her letters of introduction, and in time attained to herself a host of the right kind of people. Hedwig soon knew them all, remembered their names, and had special favorites among them for whom she prepared her best dishes. Occasionally she made personal comments; usually on amusing that her mistress had not the heart to check her artless peevish.

"You got nice fr'a's," she once said, approvingly; "very nice, high-toned people. As I had heard Ingwich in his house what I never heard anywhere else. Such beans dey had! De night Mrs. Carmichael was here—my! I bin in de country twice years, but dat night I couldn't—understand—von—vord!"

There was a smile of pure bliss on her round features as she wandered away.

At other times a shadow crossed her fair sky. "Don't you know Mrs. Van der Peyster?" she asked, wistfully, one morning. Mrs. Van Nostrand admitted with some indifference that she did not. She was deep in her household accounts, her leave quivered a little over the discovery that there was a financial side to her simple dinners which was larger than she had realized. Hedwig looked disappointed, but held her ground. These chats with her mistress, whom she really sincerely liked, were bright spots in the day to her, and she had no thought of permitting the exigencies of domestic bookkeeping to prevent them. Her conversational flow rippled on until Mrs. Van Nostrand suddenly became aware that the domestic affairs of various members of the "four hundred" were being revealed to her in unctuous detail. "You know my sister, she married de coachman at de Schuyler Manhattan," cooed Hedwig, blithely. "so dat's how I know about dat scandal. De butler, he told my brother-in-law."

Mrs. Van Nostrand dropped from the intricate realm of finance into Hedwig's society, a flash of annoyance darkening her face as she realized that she had apparently been listening to a maid's gossip. It must be stopped at once—but guardedly. It would never do to offend a paragon of a servant.

"I hear Mr. Hedwig," she said, with an uneasy little laugh. "I know nothing about those people. I never give their private affairs any thought. Shall we try the new fruit salad for dinner?"

But Hedwig was deep in reflection.

"It's due to work for dem—de de four hundred," she said, gloomily. "Dey got everything. I often tink I'd like to work for a nice family—in sook!"

Mrs. Van Nostrand recalled the long array of church and legal dignitaries of her line that stretched far back into the past; and her lip twitched as she realized that she and Jack were found wanting, as to social position, by their excellent servant. Her eyes were brimful of amusement as she turned them on Hedwig, but that individual did not see the glance. She was following her own train of thought.

"You got nice fr'a's," she repeated, kindly and in a way of course—"this with a heavy sigh—"dey ain't in society."

Mrs. Van Nostrand remembered the world-famous artist and the great money-maker, when, only two evenings before, had been in New York was still limited, but as a girl in her Western home she had been a beauty and a belle; and in Paris and London, where she had been educated, she had friends. In such society as Hedwig could barely picture in her dreams. It was a proof of the degradation to which the servant problem reduced woman that for a wild moment some revelation of this social glory on Henrietta Van Nostrand's lips. She experienced a strong desire to mention casually to this general housekeeper the names of some of her titled intimates. But she was a gentlewoman and the honored moment passed. She turned to her desk with decision.

"Here is the menu for dinner, Hedwig," she said, quietly. "There will be no one here except my husband and myself." And Hedwig, feeling for once the superior force of a strong personality, resented her plump finger lingeringly from the jamb of the door and sought the retirement of her kitchen.

It was at this very hour that Fate directed the footsteps of Mrs. Brown toward the Van Nostrand home. To her the young housemaker recalled this most recent chapter in her domestic experience.

"You know," she ended, despairingly, "she actually looks down on Jack and me because we're not in 'de four hundred.' It's too utterly absurd, but it's quite true."

Mrs. Brown surveyed her with deep sympathy.

"Oh course," she corroborated. "And I'm sorry for you, my dear—but it's the beginning of the end. They're all snobs, and

The revelation was too much

apparently eaten one of Hedwig's little dinners. Her acquaintance in New York was still limited, but as a girl in her Western home she had been a beauty and a belle; and in Paris and London, where she had been educated, she had friends. In such society as Hedwig could barely picture in her dreams. It was a proof of the degradation to which the servant problem reduced woman that for a wild moment some revelation of this social glory on Henrietta Van Nostrand's lips. She experienced a strong desire to mention casually to this general housekeeper the names of some of her titled intimates. But she was a gentlewoman and the honored moment passed. She turned to her desk with decision.

"Here is the menu for dinner, Hedwig," she said, quietly. "There will be no one here except my husband and myself." And Hedwig, feeling for once the superior force of a strong personality, resented her plump finger lingeringly from the jamb of the door and sought the retirement of her kitchen.

It was at this very hour that Fate directed the footsteps of Mrs. Brown toward the Van Nostrand home. To her the young housemaker recalled this most recent chapter in her domestic experience.

"You know," she ended, despairingly, "she actually looks down on Jack and me because we're not in 'de four hundred.' It's too utterly absurd, but it's quite true."

Mrs. Brown surveyed her with deep sympathy.

"Oh course," she corroborated. "And I'm sorry for you, my dear—but it's the beginning of the end. They're all snobs, and

A typical English girl

the praise you have been giving her has helped to ruin her. She feels now that she is good enough for 'society.' She wants to be a waitress or a parlor maid in some well-known family, and she will. I warned you. I told you it would be the next step. Better get ready for Lakewood. I give her a month more at the hotel."

Mrs. Brown was no Cassandra. As the days passed Hedwig grew restless and dissatisfied. She did her work apparently from force of habit, but half heartily; and she entertained numerous cousins in the kitchen, who, she afterwards proudly explained, were brothers and cousins in various families of high society.

"I can get a place in some nice family any time I want," she said one day. "My brother-in-law, he can get it for me." Then she added, kindly, "But I don't like to leave you, Mrs. Van Nostrand; you are very kind, and I like the place."

Mrs. Van Nostrand turned to her impulsively. "Then away, in Heaven's name," she said, desperately. "Try to realize when you are well off, Hedwig. Mr. Van Nostrand and I both like you and are willing to do anything we can to make you contented and happy. We have never spoken an unkind word to you. We have raised your wages twice in three months. We give you a great deal of time to yourself, as you know. We have the laundry work done for you. We will pay your wages while we are away this summer. What more, in reason, can you ask?"

Hedwig surveyed her with affectionate approval. "You bin very kind," she conceded, "but—I like to work in a nice family!"

Three days later Mrs. Van Nostrand received a cable from an English friend.

"Flossie and I sail Celtic June 15," it read. "Can you put us up?"

MARY SEYMOUR.

For the first time in many days Mrs. Van Nostrand broke into song. There was real happiness in this prospective visit of an old school-mate and another close friend, and it was especially fortunate that they were coming so soon—before Hedwig left! They would not stay long; they were "globe trotters," and probably prepared to exhaust all New York's attractions in two or three days—then, returning again to bright reflections. Mrs. Van Nostrand decided that it was very sweet to have them. She sought Hedwig at once, and explained. After two rapid glances the three agreed that the friends would arrive within a fortnight and he with her for several days.

"Of course you won't desert me until they have gone?" she asked, anxiously. With a look of deep injury at the mere suspicion, Hedwig stoutly asserted that she would not, and Mrs. Van Nostrand sent a cable as hospitably worded as her purse and cable rates permitted.

The trifle arrived, and so did "Flossie" and Mary Seymour—the former a typical English girl, tall, pink clothed, hair haired, wholesome, and athletic; the latter a matter-of-fact and middle-aged Englishwoman whose complexion had "gone off a bit," and whose hair was reluctantly twisted into the unyielding British bun. Mrs. Van Nostrand conducted them with pride to her tiny but exquisitely spare bedroom and listened with sympathy to their announcement that that very day they desired to see the Stock Exchange, the elevated train system, Mr. Vanderbilt's private gallery, "for which we're invitations, dear," the shops on Broadway, Brooklyn Bridge, and the Central Park. "And you're to lunch with us at the place they call Sherry's, my dear. Not that we doubt your cook, but we want to try his," remarked the older woman, with true British cordiality.

After the exertions of the day, however, they were glad to dine quietly at home that evening and Mrs. Van Nostrand prepared for her eight o'clock dinner with an apprehension. Hedwig was in good humor and looked very wholesome in her sunny cap and apron. It was Mr. Van Nostrand who newly precipitated a crisis during the second course.

"What did you think of the Stock Exchange, Lady Mary?"

Lady Mary Seymour.

he asked, casually; and as the Englishwoman replied Mrs. Van Nostrand, who had been observing with natural pride her guests' prompt appreciation of her husband, heard a dull click and saw one of her best pieces of old glass fall from Hedwig's nerveless hand. The maid flushed deeply as she bent to recover it, and her service during the remainder of the evening was of the faultless kind to which she had accustomed them. But when it casually developed over the dessert, due to some remark of Lady Mary's, that "Flossie" was not only the youngest, but the best beloved daughter of his Grace the Duke of Shropshire, the revelation was too much for the simple soul of the Van Nostrand's servant. She went from the room with almost a stagger that made Mrs. Van Nostrand follow her progress with anxiety.

Then suddenly grasping the explanation, Hedwig's mistress permitted herself the luxury of a swift inward chuckle. Late that evening she sought her husband with instructions concerning breakfast, and found her in the kitchen surrounded by several awe-struck servants from other apartments in the building. These words were hanging on the air as Mrs. Van Nostrand walked in on the impressed group:

"I know de minute I saw dose two," Hedwig was saying, solemnly, "and I was up against 'em—red ladies; and do kind here in America. But tilled ladies out 't best blood of Europe in dose women!"

Hedwig rose as she entered, and received with abject deference and humility the new instructions her mistress pleasantly gave her. Mrs. Van Nostrand's smile was very cordial as she returned to her guests.

"What an excellent waitress you have, Henrietta!" remarked the daughter of his Grace of Shropshire. "She seems so bright and intelligent. Don't you lost some one may steal her from you?"

"Yes," said Hedwig's mistress, "she is very satisfactory. But as to her leaving, I'm quite sure that no one can ever get her away from us now."

Two years later Mrs. Van Nostrand added a postscript to a long letter to Lady Mary Seymour. It read:

You will appreciate the strength of the chains of devotion that bind Hedwig to our home when I tell you that even the arrival of the lady has not weakened them. She adores him and is horribly jealous of his amusement. Of course he makes more work for her, the blessed darling, and the laundering of his little white dresses alone would fill any other maid's time; but Hedwig's affection stands the strain. She was in a fair way to spoil him, at first—wanted to walk about with him, and rock him to sleep, and do the other unhygienic and unmaidenly things on which science frowns so severely nowadays. But I read her an extract from one of your letters, describing the up-to-date care your brother's baby trevies, and Hedwig at once saw the error of her ways. She attaches an immense amount of importance to your views on all subjects. You seem to have won her entire confidence during your stay in our home."

The arrival of baby

THE AMAZING PROGRESS OF TEMPERANCE IN KENTUCKY OF THE 119 COUNTIES 93 ARE ENTIRELY "DRY"

THIS MAP REPRESENTS THE PRESENT CONDITIONS IN THE BLUE GRASS STATE. THE BLACK COUNTIES AND BLACK SPOTS INDICATE "WINEKEY" TERRITORY; THE WHITE ONES SHOW PROHIBITION TERRITORY

DURING a period of less than two years the liquor traffic has been almost wiped out of Kentucky. It began with the passing of the County Unit Law, a year and a half ago, whereby the people obtained the right of local option as to the existence of the saloon. Of the 119 counties in the State, fifty-eight went wholly "dry." Nearly all the remainder abolished the sale of intoxicants outside the limits of certain cities.

Breathitt County went "dry" from the beginning, as well as a batch of counties through the mountain regions; but these, as everybody knew, the native moonshine industry was merely getting in its fling against competitive manufacturers and retailers. There was a slight migration of colonists, and weeds sprang up among some of the mist fields, but most people scoffed. There were few places in the "dry" zone beyond the reach of a nearby saloon.

Then, one by one, the counties began to turn out the liquor traffic. Bourbon went partly "dry." Now, after twenty months of local option, ninety-three counties are wholly "dry," and only four—Meade, Jefferson, Kenton, and Campbell—still remain "wet" as before the passage of the law. [Here is an interesting sequel:

The members of the General Assembly of Kentucky, now in session at Frankfort, have just received copies of the following letter:

"The Association of the Jailers of the State have caused to be drafted certain acts for their relief, now before the General Assembly for their consideration. These acts are intended to relieve the acute pecuniary conditions in which the jailers have been placed by the general adoption of local option laws in the State.

"The office of Jailer in counties having a population of less than 25,000 is now worthless, the fees being totally insufficient to compensate the Jailer or feed the prisoners . . . the compensation of Jailers . . . averaging less than \$100 per annum.

"The jail doors in nearly every county in which local option prevails are wide open and the Jailers have been compelled to engage in other pursuits for the purpose of eking out a scanty support for their families."

The passage of a proposed amended County Unit Law during the present session would result in 113 "dry" counties out of 119.

The Rich Man and His Money

By CHARLES JOHNSTON

SHOULD like to write an essay on "How a rich man comes by his money." I should try to show that, in every case, without exception, he comes by it because he brings some one something which that person urgently requires, and, further, he comes, seeing to it a certain breadth of faculty, he is able not only to bring something urgently needed to a great number of people, but by a further faculty of co-ordination he is able to set a great many at the same task, showing them what to do and how to do it, in order to make themselves effective. It is by thus rendering a double service to a great number of people, bringing what they want to these, and setting them to work, that a rich man comes by his money. He may give too little and ask too much; he may charge too high for his faculty of co-ordination; both these things are quite possible, and very often take place. But the point is, that he would have no power to ask too much, unless he were bringing something urgently wanted, and would have no power to charge too much for co-ordinating the work of others, were it not that he is rendering them an indispensable service.

One bears it said that the rich compel the poor to work. To this Cincinnatus has most wisely replied: "The rich do not compel the poor to work; Nature compels them to work. Work, the search for food, is the universal law of Nature, imperatively laid on all, young and old, male and female alike; and lasting the whole lifetime. All that the rich do is to show the poor what to work at; and this they do, not because they are rich, for a rich fool cannot do it, but because they have the useful power of seeing what is needed to be done, and co-ordinating the powers of others, to get it done. The poorest man in the country, if he have these two powers, will soon become rich. It is not capital that makes power effective; it is inherent power that makes capital effective. The richest men among us to-day began with no capital but their inherent power; and what we call capital is merely the register of that power, the evidence that the power has been exerted; but the inherent power is the real thing. Whatever form the state may have, we are, and always shall be, dependent on those who have the twofold power of seeing what is to be done, and of co-ordinating workers to do it.

But let us return to the present theme: "How a rich man spends his money," leaving for another time the fuller consideration of how he comes by it. Two or three days ago I heard a passionate orator and an ardent lover of his kind inveighing against the rich, for their boundless luxury; and at it once came into my mind to ask myself wherein does this luxury consist? I suppose the first thing that would occur to most people when luxury is spoken of, is a large amount of very rich food to eat, and rich wines to drink. But let a rich man try as he will, he cannot really eat much more than a poor man, and it is certainly the experience of most people that it is not wise for him to try, or pleasant for him if he does try. I do not believe that the richest man in the world really eats much more than other people, or gets a disproportionate share of the food supply of the world. He may pay a very big price for the food of himself, his family, his guests, but that big price does not represent a larger quantity of food, or does so only to a slight degree. What does it represent?

For any one who has imagination, there is a curious and wonderful story behind a "luxurious" bill of fare. Let us begin with the wines; and let us assume that they are genuine, for one can usually have the authentic thing by paying the price for it. The wines on a richly decked table really represent the work of hundreds of French peasants, with their wives and children, who, in the midst of a lovely country, rise early and toil late, with plowing and tender care watching over the growth and ripening of the fruit of what is one of the most beautiful and decorative plants in the world. Millions of these thrifty, simple people depend for their well-being and comfort on the constant demand for wines, and for the best and purest, and therefore the most expensive wines. The rich do not compel these people to work; Nature compels them to work. What the rich do is to influence the direction in which they shall work, and to bring within their reach all kinds of commodities in exchange for their work. Whether these good Frenchmen with their wives and children would be better employed tending some other kind of plant in their gardens is a totally different question, and one which I am not going to raise. But the fact is, that the most obvious feature of the "luxury" of the rich, the use of costly wines, really represents the well-being, the comfort, the home-life, of millions of good Frenchmen, in that sunny land where the vineyards are so rich a source of beauty, and of similar thousands of families throughout the Rhineland, or Italy, or Portugal, or the Crimea.

So other things on the same table represent the well-being, the family comfort, of shepherds on the hills, perhaps, of our own West, or of Wales or Scotland; or the wealth of fishermen on the rivers of Maine, or along our New England coasts; or down South, in the Gulf, or in the cotton-beds at the mouths of our rivers; or, again, the rarefied of hunters along the fringes of the swamplands, or among the woods and hills, or on the prairies; vigorous, adven-

turous men, with a warm love of every changing aspect of natural beauty, who are thus able to lead half-wild lives under the fair dome of heaven. It is just this putting in motion of a huge army of folk, scattered over widespread regions, carrying out exacting tasks, that makes the cost of an expensive banquet; and the rich man is simply the factor determining in which of a score of directions a constant stream of resources shall flow, bringing the power to work, and response for work, in a varied army of good people all over the world. Therefore, I am not raising the question whether these people might not be better employed doing something else. It is quite enough to say that they are their employments, and that they are able to keep them, because there is a demand for just these things, a demand wholly due, or in large part due, to the possession of riches. The rich man is something like a pool in the stream, past whom flows a continual current. He can divert it, to some degree, in this side or that; but the stream flows to him and from him, and his flow is perpetual.

For the basis of the whole thing is, that the richest man in the world cannot spend a penny except by paying some one for something. Simple as that fact is, it is perpetually forgotten, and we are harangued about the "luxury" of the rich, the creators ruthlessly forgetting that that "luxury" is only possible because a vast army of people are set to work, and paid for their work. The rich man is merely the focus of redistribution, and the redistributing process must go on all the time, otherwise we get nothing at all for his money, and in as poor as the poorest.

So we get this result as regards that most obvious part of luxury which consists in having very rich things to eat and drink. Then again, we may think of the "luxury" of the rich man as represented in rich clothes for himself, his wife, and his children. Now let me say very frankly that the richest man in the world does not wear two pairs of trousers at a time, and that the poorest, if so disposed, can generally come at one pair. So where is the great disproportion? The rich man, it is true, can have a different suit for every day in the year; and a young child conceivably not so long ago declared that his gentleman could wear the same suit twice. Far better is the saying of George MacDonald, that only a gentleman can wear an old coat gracefully; for any man who can has something of the gentleman in him. The numberless suits of a rich man who comes to have them represent the wages paid to numberless tailors, to numberless wood-makers, to numberless shepherds, and to the sailors and seafaring men who bring these wares from over seas. Again, it is a question of distribution.

Or take the splendors of the rich man's wife and daughters. These represent, somewhat as the wines do, the wages of hundreds and thousands of thrifty French people, not only those who do the cutting out and sewing, but the persons of charming taste, who make the gowns, the lace, the decorative buttons, the frills, and feathers. Then there are the thousands of other thrifty persons, who weave silks and satins and velvets; and, far away behind these, you can discern millions of dinky folk on the plains of Bengal, little brown children and their mothers feeding tooth-edged milberry leaves to white, crawling silkworms. A rigorous reformer may say that these Indian folk might be better employed at something else. Quite possible, though why cotton should be more virtuous than silk I cannot quite see. But the point is, that the raising of silk worms is what they are employed at; and every silk worn represents months of home life for such as these.

So with jewels of silver and gold, diamonds, rubies, pearls, and so on. They represent not only the well-being of gem-cutters and gold-smiths in the factories of our jewelers; but also the food and clothing of pearl-divers as far away as the South Islands, or New Guinea, or the Gulf, or of ruby-miners among the Burmah hills, or sapphire-seekers in interior Brazil, or of Kaffirs in South Africa.

But it may be said, that, in the case of French dresses, most of the money goes to M. Worth, or his like. A good deal does, no doubt. But what becomes of it then? M. Worth is no exception to the rule. He can only spend his money by paying some one for something. He is only a mere centre of distribution. For we should always remember that a dollar is not so much a commodity, as a means of exchanging commodities. An industrious dollar, even if it does not work on Sundays, may easily buy a dollar's worth a day, and so, at the end of the year, have purchased three hundred dollars' worth, and be just as good as ever, and ready to start on a new career of usefulness by the New-year. A dollar is not used up by being spent. It is just as good as before, and can keep on being spent indefinitely.

But what becomes of all those suits which the rich man, if he is also a covetous, lays aside at the end of the day or the week? Some one wears them out in every case, you may be sure; and his wife's Paris gowns in like manner. They told a tale not long ago, of the daughter of a man of wealth who, at a request, met a score of her former Paris gowns on the backs of a score of her fellow guests. Was any one wronged by that? The point is, that the rich man does not in reality get more than his fair share of clothes, any more than his fair share of food; or at least not very much more; and no one has less because of what the rich man has.

(Continued on page 32.)

Music and the Opera

DEBUSSY'S "PELLÉAS ET MÉLISANDE"

By LAWRENCE GILMAN

THE most memorable event in the history of opera in America since the first performance of "Tristan and Isolde" twenty-one years ago was commemorated on February 19, when Mr. Oscar Hammerstein produced at the Manhattan Opera House, for the first time in this country, Debussy's "Pelléas et Mélisande."

The occasion was memorable—was, indeed, of the first importance—by reason of the fact that Debussy's famous lyric-drama exhibits not merely a new manner of opera-making, but literally a new kind of music—a new way of conceiving and arranging tones; it is, to say the thing briefly, as strange and novel an apparition in the musical art that is contemporary with it (the point cannot be too often reiterated) as was "Tristan" when it left the desk of Wagner.

The history of this astonishing work may be outlined in brief. Based upon the familiar drama of Maeterlinck, and arranged as a "drame lyrique" in five acts and twelve tableaux, it was first performed at the Opéra-Comique in Paris on April 30, 1902, and it has since then held a place of increasing importance in the repertoire of that theatre. Early in January of last year it was performed at the Monnaie in Brussels, and in April a much-revised version of it was displayed in Frankfurt. Its production by Mr. Hammerstein is the third outside of Paris. Debussy began work upon the score in the autumn of 1903, and he was occupied with it at intervals until the spring of 1905, when the rehearsals at the Opéra-Comique developed the fact that the interludes between the different tableaux would have to be lengthened in order to occupy the time needed for changing the scenes.

The cast of the original Paris production contained Miss Mary Garden as *Mélisande*, Mr. Jean Périer as *Pelléas*, Mr. Hector Dufrane as *Golaud*, and Miss Gertrude Heuché as *Arcturion*; and it is a singular and fortunate event that Mr. Hammerstein should have been able to secure these singers for the Manhattan performances. To complete the record, the rest of the cast may be noted here: Miss Garden, Miss Gertrude Heuché and Messrs. Périer and Dufrane of course assumed the parts which they created six years ago; as to the other characters, Mr. Armand Goussier, Miss Sigrist, Le petit Yveland, and Mr. Charles Fa' Mésien, Mr. Clouffe Campaniel conducted. The stage manager was Mr. Jacques Cohn.

It has been said that "Pelléas et Mélisande" represents a new manner of writing opera, and that, further, it exhibits a new order of music, a novel and strange way of conceiving and combining tones. The characteristics of Debussy's art in general have so frequently been remarked upon in this place that it is perhaps unnecessary to discuss them again in detail in connection with a work so completely typical of him as is "Pelléas"; a score which displays every phase and condition of his art; which manifests all of his peculiarities, and every aspect of his style. In brief, these are its features, so far as they may be considered from a non-technical standpoint: The music is built upon a system of tonal structure (deriving its chief peculiarity from a use of the old church modes instead of the modern major and minor scales) which results in totally new harmonic and melodic effects. The voice parts are written with an entire disregard of lyric design—the characters, however, what is its effect a kind of stylized and diversified chant. The leit motif system—the scheme of associating persons, objects, and events with representative and recurring tones—is used, but it is used with suggestive subtlety and restraint.

Here, then, is an opera, which diverges startlingly from even so emancipated a thing as the Wagner music-drama, *Tristan and Isolde*. In moments of exalted emotion, utter that emotion with the frankest lyricism; *Pelléas* and *Mélisande*, in moments of like fervor, still adhere to the unformed and unsymmetrical declamation in which their language is elsewhere enclosed. It is the character in which they sing, who "Pelléas" has written music that is the dramatic moment. And with what an amazing order of eloquence it expounds the play! The huge and irresistible eloquence of Wagner is not to be sought for here. Taine once spoke of the "violent sobriety" of Victor Hugo's style, and it is a phrase that comes often to the mind in thinking of the music of Richard Wagner. Debussy's style, like "Pelléas," has written music that is rich in sobriety; but it is not violent. In its strange reticence, its unprecedented harmonic and melodic style, the exquisite quality of its instrumentation, inheres a kind of enchantment that

Miss Mary Garden
as "Mélisande"

musical has not before exerted—an enchantment that invades the mind by stealth yet holds it with exclusive power. This is music which it is difficult to praise with reserve, for it is, almost throughout, a product of inspiration, of one of the most exquisite and scrupulous intelligences in the history of musical art. It is saturated and suffused with beauty of a deeply individual kind, and it has enlarged the expressional boundaries of the art in a degree which is not really to be defined. The vast and inexpressible shades of Wagner's genius insipid at times upon the score—that is not to be denied, and it is a condition that is well-nigh inevitable; but it is a fact that is mentioned here only that it may be dismissed. The voice of Debussy speaks constantly out of this score, even when it momentarily takes the timbre of another, and none other, since the superlative voice of Wagner himself was stilled, has spoken with so potent and magical a blend of tenderness and fire, emphasis and allurement; with an accent at once enchanting and unique.

It is not possible within a limited space to consider in adequate detail the many phases of this singular work which invite discussion. One carries away from a survey of it, as has been said, a conviction of its almost continuous inspiration, of its profound originality. The score overflows with ideas, ideas that possess character and nobility, and that are often of deep and ravishing beauty—a beauty that takes captive both the spirit and the sense. In a curious degree the music is both contemplative and impassioned; its prevailing accent is that of still flame, of emotional quietude—the sweetest and most convincing of such a work as "Tristan" are absent; yet the dramatic fire of the score is strong and rich; for all its delivery of texture, it is neither pallid nor wan, and it is never lachrymose. The effect in performance of the voice parts, which would seem at first glance to threaten a certain persistence of accent, is the reverse of monotonous, for a constant variety is given to them by the prismatic and ceaseless harmonic changes in the orchestral current upon which they are upborne.

A necessarily brief word remains to be said concerning the performance of Debussy's unprecedented score by the forces assembled by Mr. Hammerstein, and it may best be summed up in the declaration that it was both surprising and delightful—surprising because of the formidable and disheartening difficulty of the work, and delightful in its almost undisturbed harmony of ensemble. For Miss Garden's *Mélisande*, Mr. Périer's *Pelléas*, Mr. Dufrane's *Golaud*, there is but one word: they were consummate. Miss Garden's *Mélisande* is an imagination which, in its absolute truth of conception and the beautiful and infinitely skilful manner in which it is bodied forth, is simply beyond praise. The *Pelléas* of Mr. Périer is a figure that must have filled the heart of Debussy with joy—a figure that seems to be an actual materialization of the ardent and native dreamer who lives for the imagination in the pages of Maeterlinck and his company. Mr. Périer is an actor of flame and imagination, and he employs a voice and in itself extraordinary with delightful artistry. The *Arcturion* of Mr. Dufrane is not only an ideal *Golaud*, he is one of the most admirable and impressive artists who have ever emerged upon the operatic stage of New York. His voice is superb, as is his use of it, both in respect of musical and dramatic execution. Miss Gertrude Heuché as *Arcturion* performed well an unimportant part. The *Idyl* of Mr. Armand Goussier is less satisfactory—he seems, as is natural enough, ill at ease in it, and he lacks both emotion and dignity. Miss Sigrist does creditably in the small but significant part of the boy Yveland. Of the manner in which Mr. Campaniel, assembling in an incredibly short time a musical ideas strange and new to him, read the orchestral score, the warmest praise would scarcely be excessive. It was a sheer miracle of comprehension and a good and lovely interpretation. The orchestra, by its accomplishment of a task full of peril and difficulty, covered itself with glory.

Mr. Hammerstein has furnished a setting for the work which is in most respects excellent. Its prime defect is its excess of brightness. Certain of the scenes, as they are put upon the Manhattan stage, lack illusion—they are not enough subdued, either in color or in lighting.

Of Mr. Oscar Hammerstein, for his unexampled artistic courage in planning and effecting this remarkable presentation, let it suffice to say that he is happy for himself in the excess of brightness he rendered to him when, in responding to a certain call, he expressed the modest wish that, through his production of Debussy's work, he might perpetuate himself in our memory.

THE EYE THAT NEVER SLEEPS

WHAT THE RUSSIAN CENSOR DID TO PRINCE URUSOV'S BOOK

THE two cuts on this page illustrate in a pointed and vivid way the rigorous nature of the censorship in Russia. They are from photographs showing the obverse and reverse of a package sent from this country to Russia which failed to pass the vigilant eye of the censor. The parcel contained a copy of Prince Serge Dmitriyevich Urussov's new book, *Memoirs of a Russian Governor*, recently published in this country by Harper & Brothers. It was sent from New York by Mr. Herman Rosenthal, who translated Prince Urussov's manuscript into English, and was addressed to the author at Ruzica, in the Province of Kaluga. It was returned to Mr. Rosenthal stamped with an inscription to the effect

that it had been refused by the censor of foreign mail at Warsaw (in the reverse may be seen the wax bearing the impress of the Imperial Russian seal).

The contents of Prince Urussov's book are not of a kind to please the upholders and representatives of the Czar's rule in the empire. In it the truth about conditions under the Czar's rule is told by one of the "inside circle"—a prince of an ancient family, a member of the first Duma, and a courageous patriot. Prince Urussov reveals the methods of the governors, the machinations of the police department, and the intrigues and contraptions that are sapping the Slavonic government.

THE OLDEST CUSTOM IN THE WORLD

By BERTHA R. McDONALD

HE custom of setting aside a day for the playing of harmless pranks upon one's neighbor is almost universal and yet nothing positive seems to be known of its origin. Some authorities gravely go back with it to the time of Noah and the ark, and the *London Public Advertiser* of March 13, 1769, prints the following paragraph concerning this theory:

"The mistake of Noah sending the dove out of the ark before the water had abated, on the first day of April, and to perpetuate the memory of this delinquency it was thought proper, wherever forgot so remarkable a circumstance, to punish them by sending them upon some sleeveless errand similar to that infernal message upon which the bird was sent by the patriarch."

Another argues that at this time in the year the passion of our Saviour took place. As the Jews sent Christ back and forth to mock and torment Him—that is, from Annas to Caiaphas, from Caiaphas to Pilate, from Pilate to Herod, and from Herod back again to Pilate,—so this ridiculous and impious custom took its rise thence, by which we send from one place to another such persons as we think proper objects of our ridicule. Further confirmation is sought in the French name for an April fool—*poisson d'avril*, on the supposition that "poisson" is a corruption of "passion." This is a gruesome and wholly unpleasant hypothesis regarding an innocent pleasantness, and fortunately it cannot be credited. All *Poisson* day is both too old and too young for being coincident with the time of Christ—too old, if looked upon as a day set apart for amusement at the expense of others, and too young if the merriment be especially associated with April 1.

The most plausible theory is that which ascribes the origin of this custom to France. This notion held all Christendom in commencing the new year on January 1 instead of on March 21. Before the change was made the merry-making culminated on the octave of the feast, April 1, when visits were made and gifts bestowed. With the adoption of the new calendar in 1564, New year's day was carried back to January 1, and only pretended gifts and mock ceremonial visits were made on April 1, with a view to making fools of those who were so slow as to forget so important a change. The custom, once started, was kept up long after its origin had been forgotten, and its continuance will always be assured, for it appeals to a phase of human nature which asserts itself at all times and among all nationalities. The term "*poisson d'avril*" means just what it says, an "April fish"—that is, a young fish, and therefore easily hooked. Our American slang term "nicker" probably means much the same.

The Roman Saturnalia correspond in character to our All Fools' day, although it occurred at a different season and the same is true of the medieval Feast of Fools, when the classic wits of the pre-Renaissance period joined in all sorts of absurdities.

In Scotland a bit of foolery dating back a century or two is still practiced on April 1. It is called, "Hunting the Goshawk," pork, originally a crooked, meaning, by extension, a fool or a simperton. The trick consisted in sending a victim at some stated distance with a letter which contained a couplet such as this:

"This is the first of April,
Hunt the goshawk another mile."

The first victim then seeks a second, who he sends some distance further; the second sends a third; and so the deception is kept up until the victim suspects or is warned.

The ancient event which is most startlingly analogous to our All Fools' day from every standpoint is the *Pood* of Bhul in Hindustan. On the last day of the feast, March 31, the chief diversion is the sending of people on all sorts of wild-goose chases, which furnish merriment only to the sender and those who share his secret.

It is quite probable that the English borrowed the custom from their French cousins, as no trace of its existence in Great Britain can be found prior to the eighteenth century. What are known as "sleeveless errands" have always been special favorites on this day. Great fun is the rejecting if a rustic can be found so simple as to apply at the village bookstore for a copy of the *History of Eve's Disobedience*, at the grocer's for a pint of pigeon's milk, or at the haberdashery for strap oil. This last is a prime favorite, and the colder, usually familiar with the game, proceeds to give the applicant plenty of strap without the oil.

The old custom of leaving a valuable looking pocketbook with a string attached in a public place, and the trick of making it heavy and hard, so that he who contemptuously kicks it aside may come to grief as surely as he who trustingly tries to pick it up, still find their victims with April 1 of each succeeding year. The small boy of 1908 will probably take as keen delight in pinning an "April Fool" on the coat tails of the dullest as did his great-great-grandfather before him.

Our American youth is huddling over with ideas for April fooling. What solid comfort it is to the street urchin to place a brick under a hat on the sidewalk, and see the passer by kick at it with disconcerting effect upon the toe, or to lay a hot brick or iron carelessly where it may be picked up—and dropped! What joy in the youthful offspring who can persuade Peterkin to wipe an imaginary bit of sweat from his nose and be called "April Fool" for his pains!

Indoubtedly the passing years will still find the youths and maidens exchanging chocolate crosses filled with cotton or cinnamon drops plentifully stowed with anyone on April 1, and we would not deny them these pleasures, for hank it not been written.

"A little nonsense now and then
Is relished by the wisest men."

Making the World Go Round

By PROFESSOR SIRIUS J. ASTEROYD

A MOVING experiment was recently witnessed inside the chapel of Columbia University, where hallowed memories cluster thickly around the walls. The earth, which had suspended to the public holiday, was moved by the pleading of the Star Room, and, after a special permit had been obtained from the dancing delegates of the Union of Interstellar Star-waltzers, all went spinningly and half closing-down time at half past five.

The felt inclined to drowse inside the hot, sleepy chapel, where visitors and alumni clustered thickly on all the seats that were available. In the front row was a small but bearded deputation, which many took to be Columbus, Copernicus, & Co., but subsequently turned out to be the committee of the Rabway (New Jersey) Flat Earth Association, who had come to see fair play.

Addressing this small minority of unbalanced theorists, the Professor said that the earth went round, and nothing was easier than to prove it. With patience, perseverance, a moderate outlay, and two life insurance policies, she can be set spinning within the limits of any average flat.

The first thing needed is an oblate spheroid, such as can be obtained from any druggist or hardware store. Lift up the cover of the bleed piano, insert the hand deftly and incessantly within the movement, pull out a hundred and ninety feet of wire. Attach one end of this to the dome of the flat, and from the other end suspend your spheroid over the breakfast table, with a small tondril of hair trailing below, such as you can obtain from your wife's dressing table in the night watches. Now make a pool of ink in the centre of the tablecloth, and set the spheroid swinging. In such a way that the tondril sweeps through the ink and records a fine line across the cloth. After a lapse of time divergent lines appear, and by the end of twenty-four hours you will have a beautiful pattern of the

Japanese flag, as well as the knowledge that the world goes round.

This is how it is proved, said the Professor. When the weight is set in motion, the vibrations of its pendulum-like action moving in a plane parallel to its orbit, across the transverse line which the earth's axis in its lateral swing by calculating the diurnal relative plane of transverse oscillation has been reckoned upon the latitude which a pendulum laterally inclined over the rotatory, . . .

The Professor said that he was going to set the earth in motion and proceeded to do so.

A blushing miss now came forward to turn

the string which held the weight from oscillating. Meanwhile Professor O'Rynn took up his station behind a telescope and peered anxiously through.

"Is her string on straight?" shouted Professor Polariss.

"Yep," said Professor O'Rynn.

"Then let her go," he shouted.

He was too late, for the string had been loosed through; and with a darting motion the weight began to swing through space. Fascinated by the flight of the iron ball, the scientists regarded its long and solemn swoop with eyes that burned. None of them hardly seemed to breathe.

"Beautiful! Beautiful!" gasped Professor O'Rynn.

"Oh! Isn't it cute?" exclaimed a rapturous Bernard freshman, who by some strange chance had managed to include herself among the elect. A simultaneous and icy glare from eight wise men from the poor girl so suddenly and effectively that she has not to this day giggled the charming little giggle with which she intended to emphasize her explanation.

The iron ball now glided to and fro as smoothly as the far-famed frigate-bird over ocean's foaming crests. The scientists gazed, enraptured. And still they gazed and still the wonder grew how that great thing could flow and flow and flow.

"Stop it! Oh, stop it!" cried a pallid prof who had dashed furiously all the way across the campus. He leaped toward the iron ball and would have grabbed it in midflight if he had not been tackled and neatly thrown by a Columbia hero who had recently turned his attention from football to astronomy.

"Stop it, I tell you!" gasped the pallid prof, still struggling in the grasp of the tackler. "You don't know what you're doing—"

"Thirty cock, I call that," commented Professor Polariss, with a frosty stare.

"You're disorganizing the harmony of cosmic dispositions," growled the pallid one upon the floor. "For the last five minutes the recorder of the seismograph, which it is my function to attend in yonder tower, has been quivering and jiggling, then plunging by leaps and bounds. It's awful! You've knocked London and Paris off the map."

And still the iron ball swooped noiselessly to and fro. Presently a stout, military-looking gentleman wrapped in a huge and shaggy coat of fur marched with dignity up the aisle.

"In this company," he began somewhat testily, "I presume I need no introduction, but in order to be quite safe I will tell you that I am Major Ursa, whom you astronomers pretend to know so well. Listen to me. You are jangling the music of the spheres, filling universal space with conspicuous discord. Will you stop this infernal experiment? Will you?"

"We will," replied Professor Polariss.

They did.

The Season's Plays

OTIS SKINNER AS AN ADMIRABLE SWAGGERER

By "I"

FOR a fancied reason of relevancy the writer recalls his introduction to Mr. Otis Skinner. It was in the street in Baltimore, the day after that city's memorable fire. With his brother—and many thousand others—Mr. Skinner was wandering about the shattered highways, gazing in the compelled silence which affected every one there at the monstrous destruction. He and Miss Ada Rehan had come to town to give two Shakespearean plays, and that Monday night were to have played "The Taming of the Shrew." Incidentally, but for an obvious reason, there was no performance that night, so in the afternoon Mr. Skinner was strolling up and down the crowd-filled streets shoulder to shoulder with the population of Baltimore.

Mr. Skinner was a most decorous citizen. His hands were thrust deeply into his pockets, and as if he realized that he was an outsider, as it were, at such a time, he persistently clung to the background of the scene, moving close to the wall, and otherwise yielding way to the eager, hurrying people of the town. He was particularly quiet and inconspicuous.

The next time the writer met him, what a change had occurred! The meeting was in the small French town of Lucan, and into this seclude community he came with wide strides, outstretched, mouth filling out, and much vehement bending of an elbow came. Gone were the decorum and reserve, gone the self-effacement and modesty, and in their place a most dazzling assertiveness and arrogance accompanied by an assurance without parallel.

The curious feature of this second manifestation on Mr. Skinner's part was that it instantly won both sympathy and regard. He was a bully to be uprooted, and his noise and bluster were delightful. Every time he lunged his cane and set the atmosphere aflutter for yards around, the temptation to get up and bang too was almost irresistible.

Now in justice to Mr. Skinner that while, during the Baltimore incident, he was in *person*, in the French environment he was Colonel Philippe Brada, late of the army of Napoleon Bonaparte and an officer of the Legion of Honor. By way of further explanation it should be stated that the era of French territory which he so superbly dominated had been transplanted to the stage of the Hudson Theatre in order to afford a setting for one of the most admirable examples of character-acting New York has seen in many seasons, "The Honor of the Family."

The play is an English adaptation by Mr. Paul M. Potter from the French play, "La Rabouilleuse," which is based upon a story by Balzac entitled, "Le Moine de Clermont." This is certainly an array of cooks, but the result is satisfying to a degree. For Mr. Skinner the play provides him with a great personal success, and it is quite sufficient to say that the rôle of the rollicking Colonel fits him as admirably as do his skin-tight breeches. As for plot, it is simple enough: a rich and sensible noble, Jean Jacques Rouget, has installed in his house a housekeeper, one Flora Braster, whose chief occupation is that of swindling money out of the old man. She has a lover, Max Gilet, and, of course, much gossip centres upon them. To effect the convictions of the villagers, and, at the same time, to clear the way for her supreme stroke, Flora persuades again her childish benefactor to install Gilet in the house in order, as she expresses it, "to have a man in the house." The scheme of the immortal young woman is to get old Rouget to invest a large sum in her name and then fly with Gilet and the money. At this juncture arrives the swaggering Colonel Philippe. His mother has just been refined a son by her brother, the old skinflint, and is in despair. Philippe is not in the house five minutes before he thoroughly masters the state of affairs, the cruelty of Flora, and his uncle's ignorance of her true character. Thereupon he appoints himself rescuer, and declares war upon Flora and Gilet. As this is all made clear in the first act, the succeeding three scenes themselves with the most delightful duel of wits between Philippe and the young woman. Of course he is victorious, although this involves a real duel with Gilet, in which the

latter is killed, and the old man and his money are not parted. The entrance of Philippe upon the scene is admirably effected. Just when Flora and Gilet have announced all the things they intend to do to this hapless Colonel fellow, he strides past the wide window, stalks into the house, proclaims in a very loud voice that he has come to see his uncle and, incidentally, to intend to get him out of the house, and then stalks out again with the disconcerting statement that he will be back as soon as he has finished his cigar. The few moments he is on the stage during this first act suffice to indicate what the swaggering woman may expect of her visitor. In the subsequent acts he justifies the most extravagant expectations.

As a rule, one feels a decided disinclination to sympathize in any way with the man who bullies a woman, but the Philippe of Mr. Skinner does it so well, now with the most persuasive courtesy, now with equally polite force, that his appeal is irresistible. He is detestable enough to meet the woman's cry of "No!" and his happiest and most successful moments are those in which he has succeeded in leading her into a tangle. Old Rouget is as much opposed to the methods and intent of Philippe as is Flora, but, bless your heart, this simply delights the middle. He is determined to save his uncle and his fiancée in spite of him, so he takes the upper hand with his uncle just as firmly as with the woman who is plotting for the money. If uncle wants to do something which nephew thinks ill advised, nephew sees to it that uncle does not do it, say, does not come anywhere near doing it. And with what rare good nature does Philippe deal with the household from maid to master! However loudly he may bang with his cane he is never for a moment ruffled out of his easy, good-natured mood. All he asks is that people do as he says and do it now! (Crack! falls the cane.) It is in the scene in which Philippe makes it quite clear to Flora that it is time for her exit that Mr. Skinner demonstrates his fine grasp of the character of Philippe and is at his best. Mr. Skinner's portrayal of the part is, throughout, upon such a high plane that it is unsafe of criticism to remark on any moment as better than others, as what is here meant is that the playwright in this scene provides him with lines which permit of stronger character-drawing by the actor. It is delightful when Philippe, after telling Flora what a nice, pretty girl she is, and how readily he himself could fall in love with her, stops and kisses her on the back. Flora is far from pleased with this attention, nor does she accept as a career the astounding slap upon the bare shoulder which Philippe gives her by way of emphasis to one of his jewels of advice. With all his brusqueness, Philippe does not treat her roughly even when she attempts to strike him. He then catches her arm, slips it into his own, and with a low, cooing her from the room. Again in Mr. Skinner delightful when Flora throws herself at his head, trusting to prove as resolute to him as to his doddering uncle. Philippe accepts her homing, and when she leans upon his bosom he goes as far as to take her in his arms. And just as she is congratulating herself upon a belated conquest, Philippe holds her very tight and tells her that he is far too old to be entrapped by any such ruse. Then he lets her go.

It is this sort of audacity which wins Philippe's way for him throughout the play, and it is conducted with such restraint that one can not fail to appreciate that one false swagger would ruin the part, make it swindling and ordinary instead of dashing and convincing. The rôle of Flora is played by Miss Percy Hawfield, and while at times her interpretation lacks fire, particularly in the last act, her performance is decidedly the best thing she has done in years. Old Rouget is played by A. G. Adams, and is a most convincing and truthful characterization. The other members of the cast are good, but of course Mr. Skinner dominates the scene. His reception in New York must certainly have been most gratifying to him.

None can dispute the courage of Miss Olga Nethersole in presenting "L'Idiotisme de la Vierge," with which she opened the second week of her engagement at Daly's Theatre. To revive this grotesque, inept play of Scrible and Legance in these days when its poor old bones

Mr. Otis Skinner is that admirable Swaggerer, "Col. Philippe Brada," in "The Honor of the Family"

THE FINAL ACT OF PORTUGAL'S TRAGEDY

THE DUK OF THE INFANT KING CARLOS BRIMS PAST THE SPOT WHERE THE ASSASSINATION TOOK PLACE. BEHIND THE CATA-FALQUE WALKS THE KING'S FAVORITE CHARIOT ACCOUTRED IN FUNERAL TRappings

WHAT THE BANKS DO FOR NOTHING

By CHARLES W. STEVENSON

HE government at Washington is so relentless in running down counterfeiters, that there is little danger in taking the coin and currency of the realm. Still, there are a few counterfeiters floating around. The fascination of making money in mounds, and by means of dies and stamps, seems to be greater than the moral courage of man. It is to be believed that

as long as money is used there will be continued attempts to counterfeit it. Therefore, to have a counterfeit detector in the community in which you live is no small boon to the business man. This is one of the gratuities of the bank. It has in its employ an expert who is able to detect any counterfeit, and who will do so for a customer, indeed for any one, without pay. The bank charges nothing at all for this service. It is a distinct one, and there are few men in business who have not at some time availed themselves of the privilege and favor.

And speaking of money, the bank keeps a stock of good money of all denominations on hand all the time. It will exchange one coin or bill for another at any time it is asked to do so, and holds itself ready to furnish a customer with any denominations he may want. The advantage of large bills and of small change is too apparent to every one to require more than mention. Also the bank, knowing the desire of men to have clean new money, crisp, crinkling bills, gathers the old money and sends it into the Treasury to be replaced by new. The expense of shipment is borne by the bank. There is no charge whatever for this good work. It goes as a part of the business, and the teller does not ask whether the man is a customer or not. He performs this service with gladness, accuracy, and dispatch.

The handling of money, however, is but a small part of the business of a bank. We have been educated by the late panic to know just what part the check plays in our business affairs. Under unusual circumstances, and the scarcity of currency because of the war, customers were requested to write checks in place of using cash. They did so with remarkable unanimity and appreciation of the situation, and the result was that all domestic business was transacted without the use of money. In normal times this is going on all the time. The check is written against the depositor's credit. It calls for money, yet in but few cases is the money actually demanded, even when there is no financial disturbance. The money in use is just enough to pay for those small articles of purchase for which a man does not wish to write a check. It is the balance in the merchant's drawer after he has made his regular daily deposit. It is that which the farmer carries for his current

needs. It is the funds a traveler must have where he is not known. Even he, however, carries the bulk of his money in a draft or a letter of credit. Money, it has been found, is two to four per cent. of the volume of trade, as measured over the bank counters. The experiment was tried for the purpose of ascertaining proportions with this result. So that in normal times there is very little money in passage from hand to hand. The check, therefore, need not call for money, and does not as a rule. It is deposited as so much cash. It is charged to the account of the drawer and credited to the account of the drawee. It will be seen that, after checks have thus been in use for some time, the deposit represents not money, but credits deposited, and these credits are based on a man's ability to pay in the ordinary course of purchase and sale. They do not represent money, but rather financial ability.

A man may originally check on a credit arising from borrowed money. This is checking on his business standing and ability, and this is what the bank credit must represent. So that men pay their debts in business with the debts of other men; and the process goes on with great variation and endless continuity. The part the bank plays is to stand as the temporary custodian of this credit power. It holds the man's declared ability to pay, his financial capital, if such a term may be used, in trust. Under his instructions it pays this to another man and gives him credit on its own books. Millions of dollars are thus transferred every year. The individual bank becomes a clearing house for customers' checks. And if, as we have noted in the immediate past, there should be a part of the money or cash the checks represent called for, and the money should not be forthcoming at its own expense, based on its assets, the bank issues in small denominations what are known as cashier's checks. These take the place of money. Now when one thinks of the numberless transactions of a year's work in business, and at the items which the banker handles, he is convinced that here the bank does a great and useful work for nothing. The accommodation of the bank is shown when it is observed that the size of the balance kept with the bank has nothing to do with the size of the check. Small accounts are cared for with the same facility as large ones. Indeed, the small account is valued because it is small; a large number of small accounts being better than a few large ones. But the amount in the credit of the individual has nothing to do with the number of the checks he may write, albeit the large account avails the deposits and makes more for the volume of business. These checks are firing about like leaves in autumn. The bank handles them all. They

dealers

TEN TO SEVENTEEN
A Book of Fun

carred all the debts of the community by transferring the credits due from one to another, that is, they transfer the unexpressed capital of one to another, cancelling the indebtedness of the people. This cancellation of indebtedness by means of checks that pass each other and neutralize each other in the bank is one of the prettiest benefits of the bank to the people. No other institution performs this service. And since it does not make any more money for the bank to pay two checks than one, or twenty than one, here is a purely gratuitous service little thought of by the customer. Again, it is of inestimable advantage to the customer that this check may bear any amount to the single cent, and still be paid at the bank. We are able to make payments thus that if they had to be made in money would take time and cause error.

The writing of exchange is one of the features of banking that does not bring a proper return. The immense expense in labor, postage, and collection charges borne by some of the large city banks is one of the problems of banking. But taken as a whole, there is for the customer little charge for foreign exchange. The draft on New York, Chicago, San Francisco, or St. Louis, as the case may be, costs the customer practically nothing. Yet the bank must pay expressage on the transfer of money to these centres, and does so without charge to the customer. Here and there a nominal fee is charged for writing a draft without reference to its size. But in countless places there is no charge whatever, no matter the size. That a man should ask another business man to send him money—the customer's money, if you will—all over the world to pay bills, and charge nothing, would be considered outrageous in any other business. It is an integral part of the banker's free service. He does not expect anything else than that his customer shall ask for this accommodation. Nor does the customer hesitate to ask the favor. If one will try to think of the inconvenience of paying bills at a distance by the sending of exact amounts of money he will readily appreciate the good work of the bank in this particular, for which practically nothing is charged.

Another thing the bank does without charge, since there is no charge save the interest collected on loans, is the keeping of a stock of credit on hand. The business man waits until he needs the money, then he goes to the bank and borrows it. The individual money lender could not thus keep a stock on hand all the time. It is the margin of small amounts that enable the bank to keep on hand at all times an adequate stock of credit. This is a favor not fully appreciated because not understood.

If one were to undertake to enumerate the special individual services that are performed without charge for customers it would include most of the ordinary affairs of business. The bank holds itself in readiness to give financial advice as far as it is able to a customer. Anything in the ordinary customs of business would come under the head of knowledge one may derive from the banker. In a large institution where there are many men, it is a fact that there is scarcely any kind of financial transaction that cannot be explained to the layman or customer. And in a hundred other ways that need not be enumerated the bank is ever performing some service for the customer and the public for which it charges nothing. And it stands all the losses and never complains.

Felicitous

A NEW ENGLAND MAN, who flatters himself upon his aptness in saying the proper thing at the proper time, recently revisited his old home in Vermont, whither he has not gone in ten years or more.

Among those he met during the first day of his visit was a quizzical speaker, who, with a shrug, said:

"I'm Miss Mullins. You don't remember her, of course."

"Remember you!" exclaimed the New England gallant. "As if I could help doing so, Miss Mullins! Why, you are one of the landmarks of the town!"

**LIQUEUR
Pères Charreux**

—GREEN AND YELLOW—

This famous cordial, now made at Tarragona, Spain, was for centuries distilled by the Carthusian Monks (Pères Chartreux) at the Monastery of La Grande Chartreuse, France, and known throughout the world as Chartreuse. The above cut represents the bottle and label employed in the putting-up of the article since the monks' expulsion from France, and it is now known as Liqueur Pères Chartreux (the Monks, however, still retain the right to use the old bottle, and label as well), distilled by the same order of Monks, who have securely guarded the secret of its manufacture for hundreds of years, taking it with them at the time they left the Monastery of La Grande Chartreuse, and who, therefore, alone possess a knowledge of the elements of this delicious secret. No liqueur associated with the name of the Carthusian Monks (Pères Chartreux) and made since their expulsion from France is genuine except that made by them at Tarragona, Spain. At New York: Wm. Stearns, Green, Horst, Co., 45 Broadway, New York, N. Y., Sole Agents for United States.

Bruno, the Butcher's Boy; OR, THE SECRET OF A SOCIETY SAUSAGE

By F. P. PITZER

W

"This has nothing whatever to do with the game of Bridge. It is merely an ejaculation by Mary, the cook. She thus ejected upon hearing a rap at the cellar door.

She knew the master was out—she didn't know how much. She knew the mistress was out, or almost, as she had on her opera dress. She knew the children—but there were no children.

Then who could this intruder be?

Taking a firm grip she threw up the window. Looking out, she saw, standing by the basement door—Bruno, the Butcher's Boy.

II

Now Mary knew that her master, in a fit of jealousy, had threatened to take this young man's life. He didn't say where he would take it to.

This threat was brought about when the old man learned that his wife was infatuated with this boy.

And yet, despite this warning, here was Bruno. Mary hurried down the stairs and flung open the door.

We might add right here that our story opened on a rainy day. We know it sounds foolish to open a story so far along, but we must honestly confess that we overlooked the matter when we began, and there's no use rewriting the whole thing just on account of a little weather.

"Bruno," began the cook, "why do you come when you know if Master Gustavus ever caught you your life would not be worth six pence."

"Now, Mary, don't talk that way; you know I have come to see Mrs. Gustavus, the woman I adore, the woman I love." At the boy said this his head dropped; but he picked it up again. It was a pig's head that he had in the basket for a customer.

"But, Bruno, remember she is married."

"I know it. You see, when I was a lad my mother often called me to her and told me that when I grew up I should be sure and take unto myself a good wife; and Mrs. Gustavus is about the best wife in the neighborhood. Is she not?"

"Yes; it was too rainy for her to go to the links to-day."

"I suspected as much, so I have brought the links to her. Upon saying this, Bruno brought forth his basket a big string of sausages and handed them to Mary.

"Give them to Mrs. Gustavus with my love," he added.

Then he left.

III

Three days are supposed to have elapsed since our last chapter. It is needless to say that Mrs. Gustavus, upon receiving the gift,

pressed it to her lips. "The papers said this was ground-slag day," she whispered.

Little did she wait, however, that her husband was wise to the whole situation.

And now, on this third day, something dreadful happened—something I almost hesitate to describe.

Upon opening her parlour Mrs. Gustavus staggered back. Then she let out a terrific scream. The servants all rushed into her room to learn the cause of the disturbance.

They learned it. As she lay back in a chair their mistress gasped:

"One of the sausages has been stolen!"

IV

The scene changes to a little butcher-shop on the corner of Pennsylvania Avenue, in Washington.

Behind the counter, in a white and immaculate apron, stands our hero, Bruno.

Suddenly a tall, handsome-looking man enters. He wears a frock and a fur overcoat.

"Have you any sausages?" he asks.

"Scarcely," says Bruno, as he hops into the box and brings back a plateful of sausages that were formerly employed on the New York Police force.

"One pound, please."

Paid! What horrid associations that word has with sausages! Receiving his purchase the man flung Bruno a coin and hurried out.

Bruno smiled at making such a rapid sale.

But little did he know that the man who had just left him was the husband of the woman he admired—Mr. De Altye Gustavus.

V

The big divorce proceedings which the papers had pictured and printed about were on.

"Did you ever give this woman any presents?" the lawyer for the plaintiff asked Bruno.

"Never," hissed Bruno. He couldn't tell a lie from potato.

"It's a falsehood!" yelled Mr. Gustavus.

The Court roared for order.

"Can you prove it?" Gustavus was asked, internally, by the defendant's counsel.

"I can," he almost shrieked. "I can." And then he put his hand into his inside coat pocket, pulled forth his checkbook, and took therefrom the accusing message. The sausage was matched with those brought in the store in color, thickness, and quality. Mrs. G.—fainted. Bruno confessed.

And Mr. Gustavus lived happily ever afterwards—alone.

THE RICH MAN AND HIS MONEY

(Continued from page 24.)

Then there are fine houses. And here we do see a great advantage in favor of the rich. They can get better locations and more space, more elbow-room. But, on the other hand, if they do get more space in our towns they pay big taxes, which are spent for Board of Education lectures in the People's Free University, or in shoveling snow off the streets, or paying the salaries of policemen, sheriffs, mayors, and so forth, who are there to provide for the well-being of the poor. And the building of the houses has brought an immense redistribution: wages to expert bricklayers who get five or six dollars a day; or to skilled stone-cutters or carpenters or wood-carvers, or painters, or paper-hangers, and so forth of infinitude, to say nothing of men with more brains—architects, designers, and a host of others whom any one can fill in for himself. And even if we do admit, as we must, that the rich man has a great advantage in the matter of room-space, we should at the same time remember that even the richest man in the world cannot be in two rooms at once; just as he cannot with convenience wear two pairs of trousers at once; while even the poor man can come by one room and one pair of trousers. Things are much more on a level than our orators will admit, and the difference, where it does exist, is almost wholly mental, of the thought and feeling, rather than of fact.

And here I must say frankly, if the vast mass of poorer people do not get very much for their work, it is because they do not give very much. They can only do one thing over and over again, and that not a very difficult thing, or one that another cannot do just as well. They are monotonous repeaters of one single movement or

act, because they have never evolved their talent originally, never dared to roll on their minds to come forth and illumine their work, and set on it a seal that no other man can imprint, and so make it priceless. The remedy is more soul.

Then the rich man has increased facilities in transportation, steam-yachts, special trains or private cars, automobiles, and so on. But one can be just as secure in a yacht as in a fishing boat; and I for my part get far more pleasure out of a sailboat that I can handle myself than any multimillionaire does from a yacht with a score or two of hired people to do all the work. And we should remember, too, that if the rich man does get his private car, it is due to the creative energy of him and such as he that are less gifted folk are able to ride in the day cars and get across our towns in a few days, something we could never have come at by ourselves. So if he has his yacht, we have the ocean liners, save more the work of creative and gifted men, of whom we are the beneficiaries. And if automobiles are the plying of the few to life, something will come from that which will benefit the rest of us to-morrow. This is the universal rule of human life.

So we have run through the more obvious things of luxury. We have seen that in every case the rich man only seems to have more than the rest of us. And, finally, we have seen that riches are but the result, the register, of two things: power to see what is needed, and power to set many supplying the need. We look too much at the results. By the time the riches are visible the power has been exerted already and has passed on. We should look less to the result, and more to the power. If we did, many orations would have to be modified, and much saffron would result.

When We Take Care of the Pennies

Amount saved by the American people eating one-fourth less meat for a year, \$225,000,000.

United States gold reserve, December 1, 1907, \$173,000,000.

Amount saved by the American people drinking one-fourth less liquors for a year, \$110,000,000.

Net imports of gold, November 1 to December 31, 1907, \$106,000,000.

Amount saved by the American people smoking one-fourth less cigars for a year, \$37,000,000.

Cost of New York Subway, \$40,000,000.

Amount saved by the American people wearing clothes one-fourth longer, \$125,000,000.

Standard Oil Company fine, \$25,000,000.

Amount saved by the American people wearing hats one-fourth longer, \$12,000,000.

Largest benefaction ever made in one year by any American philanthropist, \$15,000,000.

A Prisoner

AN army officer stationed at an inaccessible island post in Narragansett Bay recently engaged a young woman of Hibernian extraction as a domestic. Three days after her arrival at the post she announced to the family her intention of leaving.

"What is the matter, Mary? Is the work too hard?" inquired Mrs. Blank.

"No, indeed, ma'am," replied the maid; "the work is easy, and you're a nice family to live with."

"Then why don't you stay?"

"Faith, and it is so hard to get away from here. When you told me this place was on an island I did not understand that it was entirely surrounded by water."

Ring Out the Old

"I'm a belle!" said a spinster of Delaware.

Which we thought was absurd (though to tell her were

impertinent and ill bred).

But her rude nephew said,

"We're of aunt's anti-bellum air well aware."

J. ADAMS STRAWSON.

A New Answer

Mrs. BENTHAM. "Why does a hen cross a road?"

BENTHAM. "Well, some old hens go around to tell the latest gossip to the neighbors."

Indian Girl Telegraphers

ACTING upon the recommendation of the telegraph committee, the Indian government has just authorized the employment of women operators.

The candidates must be between eighteen and thirty years of age, and they must be unmarried or widows. They must undergo training of twelve months in the telegraph training classes, during which time they will receive \$6 a month, the same allowance that is drawn by male operators. Selected candidates on leaving the training classes will be on probation for one year. Upon appointment, they will receive salaries varying from \$10 to \$20 65, which are very large upon the scale of living expenses in India. There will be pensions, with no liability to transfer; but resignation will be compulsory in the event of marriage.

As Usual

Dr. STYLE. "You say Miss Gotrox is a clever ice skater. Can she cut the figure eight?"

GUERBERTA. "No; but she cuts the figure seven, reduced from eight."

CRYSTAL Domino SUGAR

5½ Sealed Boxes Only! • Best Sugar for Tea and Coffee! • By Grocers Everywhere!

"GUNS" SECTIONAL BOOKCASES

The combination (shown below) bookcase and desk stands as many than a desk alone—and you have the right start for your library at the same time.

There are no awfully big books, except law books or other dangerous indications of sectional construction as in other makes.

Good for new catalogues, postal cards, and will bring it.

The steel for the money

We can buy any sectional bookcase from the best material in construction and finish. Each sectional is constructed in sections. The only one of its kind in the world. It is made in one piece (under bearing, over-laying and dovetailing) and can be removed without leaving even the smallest mark. There are no inspirations to the proper care of books and contents as in the case of the best in the world.

See our list of books and contents as in the case of the best in the world.

HYPNOTIC THERAPEUTICS

By John D. Quackenbos, A.M., M.D.

Member of the London Society for Psychical Research; Fellow of the New York Academy of Medicine; Member of the New York Academy of Sciences

As a narrative and a record of humanity most startling psychopathic cases, ranging from this book will impress and amaze all sorts of the mere pain of abnormal bashfulness to the great depravities resulting from excess and the wildest mental delusions, both the tragic and the absurd. This treatise is true to Science, and nevertheless written for "the man in the street." Dr. Quackenbos is a familiar figure in the world of medical hypnotism, and is a member of the leading societies for such research here and abroad. The published works of Dr. Quackenbos are *Hypnotism in Mental and Moral Culture* and *Practical Physics*. This new work is a distinct advance—the

Hypnotism as the great regenerative force of the age

Based on 7000 experiences with hypnotic treatment

STORY of HYPNOTISM

Dr. Quackenbos puts forward the theory that, by Hypnotic Treatment, it is easy to restrain a kleptomaniac, but not to make an honest man steal. Another most interesting argument advances the belief that this very century may demonstrate immortality itself by supermental communication, banish disease, and bestow painless dying. The already-established scientific facts of hypnotism are followed up with the contention that, ethically, what it really means is the pure, free man coming to himself, and not the outside influence of another's will power—hence there is no possibility that evil can result from its application. There is a widespread public demand for full and authentic Cures, Osteopathy, Christian Faith, and information regarding the principles of Hypnotic Responsibility, with a summary of experiences.

Suggestion, which has become appreciated at its true worth as a great curative instrumentality in the fields of medicine and psychiatry, and as a regenerating power in that of criminal anthropology.

JOHN D. QUACKENBOS, A.M., M.D.

Dr. Quackenbos's book presents a Personal Experience which, in variety, general interest, and sociological promise, has never been equalled.

It explains the principles of Hypnosis and Rapport, and the rational methods of inducing the suggestible state.

It discusses Sleep and Degrees of Suggestibility; Suggestion and Auto-Suggestion, and their relation to Christian Science, Mental Science, Faith

STORIES OF SYMPHONIC MUSIC

A Guide to Modern Orchestral Programme-Music

By LAWRENCE GILMAN

Music Critic of "Harper's Weekly"

This book fills a genuine need of the music-lover, for it offers in compact, accessible, and easily intelligible form information which will help him to listen understandingly to the music of an orchestral concert. It presents clearly and without technical analysis the poetic or pictorial or dramatic basis of every important example of programme-music in the symphonic repertoire, putting the reader in possession of information which will enable him to listen comprehendingly, for example, to a symphony by Berlioz, an overture by Mendelssohn, a symphonic poem by Liszt, or a tone-poem by Strauss or Debussy.

"The best thing for every concert-goer to do is to get a copy of Mr. Gilman's book and prepare himself beforehand."—*N. Y. Evening Post*.

"From Berlioz and Liszt and Raff and Wagner down to the latest works of Strauss, d'Indy, Debussy, Sibelius, Rurikoff, Elgar, Chabrier, and Converse, with many others that will occur to concert-goers, Mr. Gilman has left nothing that has any claim to the attention of music-lovers. It is a useful and interesting book."—*The New Music Review*.

"A valuable contribution to the music-lover's library."

—*Chicago Post*.

THE PRINCIPLES OF MONEY AND BANKING

By CHARLES A. CONANT

In the demand for literature on financial subjects, this work deserves special consideration. A chapter of the second volume is specially devoted to "The Origins of Crises," in which much is set forth that anticipates present conditions. Another chapter, on "The Management of Crises," anticipates the recent steps taken by the banks and the Treasury to afford relief to the money market.

This book was among the first to point out the danger of making large loans on securities pushed upward by speculation to inflated values.

COMMENT

DIED, February 29, 1908—HENRY LOOMIS NELSON, journalist, a true patriot, a noble man, a beautiful spirit. God rest his sturdy soul!

The Fowler Currency Bill

There are very interesting suggestions in the FOWLER credit currency bill which on February 28 was ordered reported to the House by the Committee on Credit and Currency. The committee voted 11 to 6 to report the bill. It divides the United States into twenty commercial zones with a note-redemption agency in each zone. The banks in each zone elect a board of nine managers for their zone, who have charge of the examination and supervision of the banks in the zone. The chairman of each board is a Deputy Comptroller of the Currency. The boards meet once a month. The chairmen (Deputy Comptrollers) of the twenty boards meet every six months to consult and advise with one another and with the Comptroller of the Currency acting as their chairman. With this machinery operative, national banks are authorized to take out for issue and circulation notes equal to the capital of the bank, not secured as now by government bonds, but protected by a gold reserve as now by law, provided and guaranteed by a deposit of about \$700,000,000 in the United States Treasury. With the approval of the board of managers of its zone any bank may take out in time of special need additional notes equal to its capital. The bill further provides that government deposits shall be equitably distributed throughout the United States, that no deposit in any bank shall exceed fifty per cent. of the bank's capital, that the government shall receive in payment of dues national bank notes or the checks and drafts of solvent national banks, and shall pay its own debts by checks or drafts on such banks. It shall deposit its receipts from day to day in national banks. No bank shall pay more than two per cent. on any account subject to check.

Meanwhile, Pass the Aldrich Bill

Such are some of the provisions of the FOWLER bill. Its author is a respected authority on finance, and his bill has some excellent features, and deserves and will receive careful study. But we have set forth enough of its substance to make clear that it undertakes to revolutionize our whole financial system. It is a measure of radical reconstruction, and will have to fight its way in competition not only with the defective system that now obtains, but with such plans as that which includes a central bank, which many high authorities believe to be the best solution of our fiscal perplexities. Mr. ALDRICH's bill does not profess to be a cure for these perplexities, but merely such a temporary remedy as will keep us safe from monetary disaster until our case can be effectively dealt with. It is the only practical measure

offered, or that can be offered. It can be passed at this session of Congress. Mr. FOWLER's bill cannot. It must be, and should be, exhaustively discussed. A banking commission would very likely be asked to pass on it. Let this work proceed. It is vastly important, and inevitably slow. Let it go on by all means, but first pass the ALDRICH bill and provide for comparative safety until a more thorough measure can be devised and accepted. Do in this matter what every prudent householder does—insure the house while it is building. The argument that if the ALDRICH bill passes we shall never get a better one is like saying that if we insure our house abiding we delay its completion.

Beckham and Bryan Beaten

Four Democrats voting on February 28 with the Republicans in the Kentucky Legislature elected WILLIAM O. BRADLEY, Republican, United States Senator, and authorized ex-Governor J. C. W. BECKHAM to stay at home. Our good friend MARIE HENRY WATTSOON will undoubtedly take kindly to this disposition. He and the *Courier-Journal* have been urgent in opposition to BECKHAM, on the ground that he and his machine stood for all that was worst in Kentucky politics and most ruinous to Kentucky Democracy, and that under BECKHAM's administration as Governor Kentucky had been (and still is) "the worst governed State in the Union." It seems rash to assert that Kentucky is worse governed than Nevada, but the facts of the tobacco war seem ample to sustain Colonel WATTSOON's opinion. Mr. BRYAN, who worked all he could for BECKHAM's election, lives in the Republican State of Nebraska, and is not affected by the devils that prevail in Kentucky and make it unsafe in many districts for law-abiding men like Mr. WATTSOON to be out after dark. Mr. BRADLEY, the new Senator, is the second Republican that Kentucky has ever sent to the Senate. He is a veteran of the Union army in the civil war, and also of Kentucky politics, in which he has been a Republican leader for nearly forty years.

Instructed or Uninstructed

Mr. BRYAN grieves at the advice reported to have been lately offered to Southern Democrats by HERMAN BROWER while travelling through the South. He hears that Mr. BROWER urged our Southern friends not to instruct their delegates for Mr. BRYAN, who could not carry a Northern State, but to let them go to Denver uninstructed. Whereat Mr. BRYAN replies, "Why," says the *Commoner*, "should the rank and file of Democracy leave to their representatives the duty of doing what the rank and file should do? Why not trust the rank and file to say what the party's course shall be?" Indulgent, placid man! Why not trust the rank and file, Colonel, to plan the battle as well as to fight in it? Why have a convention of delegates at all? It takes a lot of time and trouble. Denver is far away. Why require a thousand men or so, most of them needed at home, to travel out to lofty Colorado with mere orders from the rank and file? If there is not to be deliberation and choice, the convention will be as perfunctory as a proceedings as a gathering of Presidential electors at Washington. Dr. BRYAN has an ungrateful soul. He would kick down the ladder by which he rose. It was not a convention of gagged and shackled delegates that he made the cross-of-gold speech that got him his first nomination.

Charlotte on Bryan's Chances

This is what the *Charlotte News and Courier* thinks of BRYAN's statement that he will be elected if he is nominated at Denver:

The nomination of BRYAN would mean defeat and the disintegration of the Democratic party. He could not carry a single State outside the solid South, and we believe that he would fail to receive the votes of Missouri, Kentucky, and Maryland. Yet he dares himself persistently upon the situation. He holds himself above his party, and, having put the party down, he intends to keep it down. If there were only the least bit of courage among the Democrats of the North and West, if they only would display a little independence of initiative and self-reliance, BRYAN's nomination would be defeated and the party would be saved, and, with the triumph of the party, the country.

Two Attacks on the Public Business

Two attacks are in progress on the public business—one on the business of the United States, and the other on the business of the State of New York. There is a bill pending before Congress, against which the President has made a

perfectly valid protest, providing for the appointment of census employees by what are known as pass examinations, meaning the examination of personally selected and recommended persons by officers also named to please the politicians who have selected and recommended the candidates. The politicians who are eager for a share of the spoils say that this method is better than a competitive examination, because in the one case nothing is known of the character of the person who, out of a multitude, wins the competition, while the recommender knows the character of his man. There seems to be some truth in part of this, but the government officers know that the selections of the politicians do not depend on character, but on party or personal services; that experience has shown that the probation period of the other method has worked better than the judgment of Congressmen; that the classified service, both in character and in efficiency, is a great improvement upon the old service; that, in a word, pass examinations are intended, in this instance as in others, to secure spoils. The bill ought to be lent. In New York an effort is making to secure the adoption of a constitutional amendment giving to veterans of the Spanish war preference in appointment to places in the civil service. Nothing could be more absurd than this. Civil war veterans are preferred in gratitude to them for saving the Union. Did Spanish war veterans render any such service to the country? Giving them all the credit that is their due, is it not a trifle ridiculous to put them on the same footing with civil war veterans? It would be better for the public business, of course, if the law did not prefer men because they fought in any war, and it might be cheaper to increase their pensions; but don't let us make the civil war veterans comical by raising the Spanish war veterans alongside of them. Both of these projects are attempts to transform the public service from a business organization into a pool to be divided among favorites who may perform, or neglect if they please, the public service for their own gain, but at the expense of the people.

Temperance Reform in England

According to the figures given in Mr. SYDNEY BROSSE's London letter in the WEEKLY of February 29, there are 110,000 licensed drinking places in the United Kingdom, \$1,500,000,000 is invested in the trade, and \$800,000,000 a year is spent for stimulating beverages. Nevertheless it appears that the British are more moderate in their potations than they were thirty years ago, drinking much more tea, and spending more for tobacco, but less by \$100,000,000 a year (in proportion to population) than they would be spending if they drank as hard as they did in the seventies. According to the *World Almanac*, the United Kingdom drinks almost exactly as much beer (1,500,000,000 gallons) as the United States with a population more than twice as great, though of wines and spirits Americans and British drink, man for man, about the same amount. The statement that the British, in spite of their improvement, drink still in excess of their needs and of their means is of course the actuating motive of Mr. ASQUITH's new licensing bill, introduced on February 27. It aims to regain complete government control of the liquor business. Licenses have come to be recognized in England as property in which licensees had vested rights which should not be disturbed except for cause or with compensation. Mr. ASQUITH (Chancellor of the Exchequer) proposes that all licenses shall presently again be held as they originally were, absolutely at the pleasure of the licensing power. He proposes to abolish 30,000 drinking places, paying compensation to their owners, but he stipulates that after fourteen years no compensation shall be paid when a license is taken away. His bill provides for local option in some cases as to the granting of new licenses; for annual renewal of all licenses; for police inspection of all drinking places, including clubs; for exclusion of children from bars, and for closing all bars on election day and on Sundays except for three hours. We are used in this country to measures as sweeping as this or more so, but in England a great cry has risen over the bill. A billion and a half of dollars is a serious sum, and it shudders with apprehension at this bill. The brewers, who own a large proportion of the public bars and of the licenses, say they will be ruined, and their stocks have fallen ominously. The Conservatives say the new bill will overthrow the Liberal government. Even if this bill goes through, however, there seems to be no immediate danger that any thirsty British person who has a

shilling will find difficulty in quenching his thirst. Mr. ASQUITH by no means aspires, as so many of our reformers, including a large number of State legislatures, do, to put intoxicants absolutely out of the reach of folks who want to consume them.

Criminal Appeals in England

Some time ago the WEEKLY explained to its readers the new criminal-appeals bill which had then been introduced into the British Parliament under the auspices of the government, and especially of the Attorney-General. The bill is now a law, and it is unnecessary for us to repeat the explanation of all its details. The subject and the legislation are extremely interesting. The country which has prided itself, almost complacently, upon its pure and impeccable administration of justice, now recognizes the existence of an age-old error in its system of criminal law. That innocent persons have suffered by reason of the refusal of the law to permit appeals is now obvious, and their suffering has brought about a modification of the ancient law. At the same time Great Britain, in establishing its court of appeal, has evidently carefully considered some of the mischiefs of our own hose system, or rather mischief that has grown out of the loose practice of indifferent, or ignorant, or delinquent judges. Under the new English law stays that defeat justice and new trials that do infinite harm to the proper administration of justice are not to be granted. The decision of the appellate judges is to be final, and they are to exercise a discretion and a power in the dismissal of cases, the reversals of convictions, the modification and changing of sentences, which will probably enormously improve the criminal procedure of England, without bringing such scandal upon it as our own appeal system permits. While more carefully guarding the rights of the accused and indicted, the English law does not in the least improve the chances for the escape of the guilty or the indolent.

An Education Problem

A suggestion is made by a correspondent of the *Louisville Courier-Journal* which is worthy of serious consideration. It is well known to teachers that one of the most serious defects of our educational system is the quality of instruction imparted in the primary and the secondary schools of the country. The Kentuckian who writes this communication desires to go to the root of the matter. He pointedly asks how better work can be expected from the public schools of the State so long as the teachers are employed, maintained in their places, and dominated over by the unfit persons who are elected to be school trustees. He says that for years Kentucky has been burdened with an incubus of about 25,000 school trustees, "5,000 of whom can neither read nor write, and 10,000 more are absolutely devoid of any idea as to the duties and responsibilities of a school trustee." This is, indeed, a painfully grotesque fact, but Kentucky is not singular. It is high time that those who are concerned in the teaching of children and in the education of the country—including university and college authorities—should make some effort to rid the schools of this burden.

The Golden Age of the Reformer

When all the saloons are shut, and a few vineyards, breweries, and distilleries supply what stimulant is called for by judicious and responsible (certified) drinkers; when a few surviving stock-brokers attend twice a month to the necessary business of the *bona fide* investors; when an occasional horse-race is permitted strictly for the delectation of horse-lovers who never bet; when the captains of industry and finance always retire from the game as soon as they have made comfortable provision for their declining years; when labor unions cease to attempt to keep non-union men from working; when entrance fees at intercollegiate contests are abolished, and the presiding bishop of the Methodist Church and the president of the W. C. T. U. divide the command of the United States army; when all the trusts are dead and all the railroads carry freight and passengers for nothing, and everybody forty years old has six children and a pension, and duties are abolished and income and inheritance taxes support the government, and JACK LONDON is President, and BATYAN is Congress, and ARTHUR BURNHAM and URBAN SEAGRAM are the Supreme Court—what a wonderfully improved country this will be, and how very, very happy shall be our lot if we have the great good fortune to be living in it!

The Crusade Against Vivisection and the Crusade Against Rats

WHILE we have no thought of applying such terms as sentimental and hysterical to the promoters of the movement, we have no inclination to support the campaign against vivisection if the aim is a complete abolition of the practice. Even if vivisection were employed with the reckless, indiscriminating and appalling cruelty of which its most passionate opponents complain, there is Scriptural authority for it, so far as the serpent is concerned, and what is true of snakes must, by analogy and implication, be true also of vermin, insects, and animals which are noxious or deadly to the human race. It is only, however, by way of dialectics that we cite Scriptural authority. From the scientific point of view, it may be urged that, in sacrificing some of the lower animals to the discovery of remedies for dangerous diseases to which the human race is subject, the vivisectionists do but follow nature's law of exterminating many of the inferior forms of life, in order to assure the survival of the fittest. But while up to this point the vivisectionists seem to have the better of the argument, we would not for a moment deny that a reasonable concession should be made to their antagonists. It is not unreasonable that the authority of the State should be exercised to designate the particular persons permitted to perform vivisection at all, and, secondly, to prescribe the conditions under which experiments should be conducted, so as to attain the maximum of prevention against the infliction of needless pain. If the anti-vivisectionists would confine themselves to presenting such a demand as this to the Legislatures of important States, they would probably be successful. As a matter of fact, all great or worthy investigators habitually take the utmost precautions against the infliction of unnecessary pain, and we believe that they would welcome a wisely drawn law which should confine the right to prosecute researches by vivisection to men qualified for the task, not only intellectually, but morally. The truth is that those leading reformers who desire to stop vivisection altogether, no matter how sympathetically conducted, and no matter how lofty the end in view, are Buddhists rather than Christians. Where the precepts of GAYATRI BIRJANA are rigorously followed, the material transmitting miasma, the plague-conveying rat, the venomous serpent, and the man-eating tiger would all equally be immune from resistance or interference on the part of their human victims. According to the Buddhist doctrine of the transmigration of souls, a doctrine nominally accepted by a large section of mankind, each of the forms of life that we have mentioned may be the temporary abode of the spiritual part of a human being, who must, in equity, be left to work out his upward or downward destiny. In a word, the more advanced and uncompromising assailants of vivisection are Buddhists without knowing it.

We infer, therefore, that the crusaders against vivisection would not take part in, or even condone, a crusade against rats. Such a crusade has been organized, however, in England, and is to be prosecuted with vigor throughout the British Empire. An association has just been formed in London to wage a war of extermination against rats, and at a meeting of professional men of high standing, held under the chairmanship of Sir LAURENCE BURNES, a fervent and elegant address was delivered by Sir JAMES CAIRN-ROSE. Sir JAMES admitted that the antipathy to rats depicted in the first instance upon selfish prejudices, but he pointed out that it now had a scientific basis. In former times rats were hated on account of their feeding habits and their predatory nature. It is certain that no more destructive animal exists. Nothing comes within its chattering teeth and its insatiable jaws. It makes heavy depredations on fields of corn, on stockyards, granaries, and ship cargoes; it devours eggs, kills poultry and game, makes uncleanly visits to dairies and pantries, butcher shops and bakeries; it gnaws through lead pipes, causing household floods, and it is even suspected of arson, by nibbling insulating material on the crossing of electric wires, and so short-circuiting them. All this is doubtless true as regards the mischievous acts of the rat. But the indictment of the animal on the score of its measure to public health is far weightier than any that can be brought on the ground of its depredating propensities. By unquestionable scientific authority rats have been glorified guilty of horrid and disgusting deeds, which almost certainly are the principal agents of propagating plague. The London *Lancet* has lately published an abstract of reports issued by the advisory committee appointed by the Secretary of State for India—by the Royal Society and by the Lister Institute of Preventive Medicine—regarding the cause and control of plague in India, which we need not say has had appalling consequences in recent years, and in former days used periodically to scourge Europe. The ingenious and complete series of experiments devised by Major GEORGE LAMM and Captain W. G. LAYTON proved conclusively that the rat does spread plague through the agency of fleas which have bitten it. The *Lancet* has also published the evidence brought forward by Dr. J. A. THOMPSON, head of the Department of Public

Health in New South Wales, who demonstrated that in the Sydney epidemics there has always been a close association between plague in rats and man, the former preceding the latter, and that the chronicity of the epidemic is an important clue to the severity of the disease in man. It is well known that another disease is laid to the score of the species of rat which exists in Europe and America, but, fortunately, this disease is not a serious menace to those peoples who do not habitually eat half raw and often ratted, fresh pork or ham. The London *Lancet* reviews that the public attention that has been called by modern scientific research to the peril which rats constitute to a community of human beings is a matter of great importance to the British Empire, and it welcomes the formation of a league for their extermination, hoping that the public mind will not relegate the scheme to the ranks of fads. The *Lancet* does not understand, however, the difficulty of the task of exterminating the countless millions of rats, most of which are inaccessible. It cites the observations of Lieutenant-Colonel A. BRYANAS on the relation between the keeping of rats and the incidence of plague in Indian villages. Colonel BRYANAS is convinced that cat-keeping abolishes the rats, and, consequently, plague. The rat-eater and his dog are time-honored means of extermination; and another instance of the militant method is furnished by Jamaica, where mongooses have been imported, and have completely cleared the sugar plantations of rats by destroying their young, thereby saving a large proportion of the sugar crop. The experiments of the Plague Commission in India and the experience of Dr. THOMPSON in New South Wales tend to show that the most effective means of meeting the rats in fighting plague is prophylactic, and consists in rendering dwellings, and especially food stores, rat-proof. The crusade against rats, however, will not rest content with interbreeding human beings against the enemy's hordes, and the *Lancet* deems it probable that science has provided us with a most potent weapon of offense in the form of a bacteriological virus intensely fatal to rats, which readily feeds on bait which has been changed with their doom. Two separate preparations are said to have been prepared which are poisonous to rats, setting up a quickly fatal disease, but which are harmless to man and to the domestic animals. Will the anti-vivisectionists approve of this organized attempt to exterminate rats from off the surface of the globe, and will they deny that such extermination would be a cheap price to pay for the discovery, let us say, of a cure for spinal meningitis?

The Parlor Lady

WHEREVER argument and discussion reign, the clubwoman always wishes there were space for a *tertium quid*, one who might step in from the outside, being free of passionate conviction either way, to explain mere verbal differences, misquotations, inapplicable axioms, and evaded issues. An American weekly last year encouraged a discussion between one of the most radical of our suffragettes and a very old-fashioned Southern lady. The *Fortnightly Review* has recently conducted a more intelligent and interesting discussion on the comparative merits of the "parlor lady" and the "club woman." Between Miss CHRISTINE SMITH, a well-known writer, and Mrs. FRANCES LAW, who pleads hard here and in the *Spectator* for an anti-woman's rights party whose motto shall be "Back to the Home." Naturally, and with all the delightful incoherence for which women have so often been adored by men, she urges, in the *Spectator*, that there are thousands of "good, quiet women," like herself, still extant, who desire only the reversion of the home, "with its limitless opportunities, its wider, truer sphere for the woman's role, its immeasurable, incomparable duties, responsibilities, and influences, etc."

To the unprejudiced observer, one who is still more or less calmly whittling on the fence and wondering how long the battle will rage and what the issue will be, the tendency of the old-fashioned lady to inject venom into argument and resort to personal abuse and such sweeping conclusions as that only in her own party are there such really widespread blessings as "good, quiet women," is very disconcerting. It is somewhat unconvincing to hear a woman plead for such high-sounding matters as "God ordained laws," "morality," "holiness," "a line kingdom of starlike radiance," "divine mould of development," "highest evolution," "harmonious expression and expansion of intellect, heart, and soul," and to see inventive and unreasoning to advance them. One sometimes wonders if reason and incentive could be quite so ready to hand if they had never found their way, just as a sort of preliminary practice, into "the little kingdom of starlike radiance." And if so, the little kingdom the closer one would be to the firing. We remember, with much regret, that the Southern lady topped her argument a year ago by calling her antagonist "a viper."

Research resulting in such discourses reminds one of the reply of a young professor of social sciences, who had made an attempt

out community living, and on being asked if there were many difficulties amongst the women, responded promptly: "Oh no. But now we were there are many womanly women; if there had been—!" But words failed this young professor of economics to say what he thought life would be in a community of twenty families of "new womanly women."

It cannot be too often reiterated, perhaps, that there are saints and sinners in every religion, wearing the banner of every creed. There has never yet been found a doctrine, religious, political, economical, that absorbed all the virtues or weeded out all the vices. We even dare to believe that there are suffragettes who are welcome in their own homes, and who apply intelligence, patience, and tenderness to the rearing of their children, though perhaps it is unfashionable in that set to play too freely with such terms as "sanctity," "holiness," "starlike radiance." We can even see that Miss SUMNER's opening statement has truth in it. She says, "When the growing needs of the community took the manufacturing of household commodities from the home, and supplanted them with mechanical inventions worked in factories on a gigantic scale: when man, in short, usurped the fields of housewifery, and took it on himself to do the pickling and preserving, the spinning and dyeing, the curing and the salting, a tremendous force of unemployable female vitality was set free in the prosperous classes of the community." So far so good. We cannot go so far as to admit with her that "the first step was the logical and possible result of the introduction of machinery," despite Mr. GRANT ALLEN's assertion as to taking her in to dinner twice a week. It may be the result of a limited experience, but we have not met bored young wives who played with pistons, amused themselves by betraying their admirers to their honest passions, and who finally shot themselves because living was too great a bore. We have not met them, but no faithful student of the condition in the newspapers can fail to see that the material for building such a character is still to hand for him who seeks. What we have actually seen with our own eyes is a large number of young wives of men making anywhere from four to ten thousand a year, who do no manual labor, who have not more than two or three children, whose household ordering requires not more than an hour or two of daily attention, who find that clothes can be more economically bought ready made, and who therefore do not do the household sewing, upon whose hands time hangs heavy, and whose lives are often most unprofitably spent. Many take refuge in card playing. In vying with others in giving social entertainments, in novel-reading, or in pursuing a superficial culture which results in nothing. There would seem to be no doubt but that in this country, at any rate, there is too large a leisure class, and it is a leisure class without the wealth for philanthropy or the training for responsibility. There was a time when wealth was largely an inheritance, when certain families were trained to the responsibilities of using money, when position belonged to people brought up to command and to rule, and who understood that the fundamental lesson was self-command, but this is much changed. Democracy and science, liberty and equality, are introducing new conditions of life whether or not we want them.

Men are adjusting themselves to these new conditions, and doubtless women will have to find some way out for themselves. A fundamentally healthy soul will find means, even in a transition period, to withstand the ravages of idleness and ennui. Romance can no more fill a woman's life than it can a man's though with her it is doubtless, as things stand now, a more vital incident than it is to men. Children, if the old-fashioned families of twelve and fourteen prevailed, might well give a woman thirty years of wholesome employment, but such families are now an exception. Also, it is found distinctly better to take the larger part of the education of the child out of the mother's hands. At four or five the child goes to a kindergarten for scientific and regulated play and amusement, companionship, and development. At seven or eight the child goes to school for the larger part of the day and plays out of doors the remainder of it. More and more we are accepting the English ideal that it is best for children to be sent to school at fourteen or fifteen years old. The mother is fortunate who manages under this new system to have three or four hours a day with her children, and once they leave her for the school she has more than ever time heavy on her hands under the new dispensation. Let the German Emperor continue to exclaim that woman is fit only for the three K's, *Küche, Kirche, and Kinder*, it will not kinder women from finding somewhere the employment which will keep them healthy and happy. Children are disposed of for a large part of the time, and praying and cooking, the Emperor to the contrary, are special virtues, not general ones. A man, if we told him his whole work in life was war, politics, and staffwork, would not stop to refute as if his whole soul were centred upon becoming a chef.

So we suppose that sooner or later the suffragettes will win out and try their experiment. By no means can we recall the conditions that made our grandmothers what they were, and while we are undergoing the painful processes of change, each woman must apply such intelligence and courage and patience as is hers to the flux of circumstances, and realize the ancient adage that happiness

is within, not without, and that there are no circumstances so thwart that they may not be transfigured by a strong will and a noble patience.

Personal and Pertinent

IN view of the theory that a little wholesome work is an antidote to social unrest and crime, we have Miss LAWRENCE ALMA-TADEMA lecturing in this country now on "The Meaning of Happiness." Amongst other things she assures us that happiness consists largely in having some work to do and doing it. It soothes unrest, it devours time unobserved, it broadens and strengthens human relations, and gives one the delightful sensation of expansion, and the persuasion that one's influence plays out in ever widening circles among men.

No mild is Senator ALDRICH that one would hardly credit him with the ability which he really possesses, if one did not know him or his reputation. He is as social as Senator HALE, and there are a good many people in Washington who would be astonished to learn that there is anything that ALDRICH prefers to a good dinner or to a pleasant breakfast in the interior rooms of his suite at the Capital, which outwardly is a meeting place for the Senate Committee on Finance, while inwardly it is his private office. Before they come to Washington most Senators speak of breakfasts as luncheons, because of the time at which they are eaten. It used to be said that Senator TATUM gave the occasion for the application of the French term for the gilded meal. He once went to France and returned with some new ideas, one day he informed some of his gossip of the Parisian custom of "poor boys." When one dines in a cab in Paris, or ate a meal at a restaurant, so the versions (Thouan said, one gave something to the driver or to the waiter, and the money, as he understood it, was for the "poor boys" of the city. He also informed them that to the Parisians breakfast was a real meal. They took a snack in the morning—whether or not compelled to do so by reason of the events of the night he did not say—and therefore the first meal at which substantial food was served, and during which general conversation was called a breakfast. So, many Senators have called their luncheon breakfast ever since, in memory of the old Roman. ALDRICH—to come back to him—has never been demonstrated in Washington, but no one is more familiar with its many ways, or better able to put his local knowledge to use. He has glided into the pleasant social life of the capital, the social life with the richest cream on it, and he has also glided into the minds of Senators until Washington and all who are concerned with Washington are conscious of the presence of a leader—one of those real leaders who do not have to tell the world who they are and what they are, who make no noise about their leadership, and who have always time for everything, no matter how prodigious may be the demands upon them.

They call Congressman GILLET the "den" of the Massachusetts delegation in the House of Representatives. He is now in his eighth consecutive term, and as he represents the Springfield district, is approved by the Springfield Republicans, and is chairman of the Civil Service Reform Committee, he is likely to remain in Congress as long as he wants to, but he is not likely to be Governor or Senator. His fame does not flow over the borders of his district—at least not outside of Washington. But why do they call him "den" when "SAM" McCALL has served just as long and is a few months older? For the same reason that GILLET was made chairman of a committee years ago, while McCALL was given a chairmanship only this session. People like McCALL as well as they like GILLET personally, and McCALL has more conversation. He can't play bridge as well as GILLET, and he doesn't like society as well; not that GILLET has a passion for either. He hasn't any passions—at least none serious. He and MOORE are still old bachelor chums, and they eat a good many free dinners. Bachelors are in great demand in Washington, because there aren't many of them. There are really too few to go round. SAM McCALL likes dinners, too, but he is only occasionally a bachelor. Sometimes his wife goes to Washington, and then there is a nice little social eddy around the family, but the people in the centre of it think more of talk than they do of food. There is a rumor that a McCALL hearthstone is being brightened up now at the capital after it has been out for some years. I'm sorry Mrs. McCALL prefers Winchester, where she can look down from her errie on EDWARD EVERETT's old residence, and catch occasional glimpses of her sons, who, of recent years, have been hating their way through Harvard. The difference between GILLET and McCALL is essential; GILLET is loyal to persons, and McCALL is loyal to ideals. If one wants easy honors, a good social position, and is judiciously fond of good dinners, it is a good thing to be loyal to persons. If one picks out one's person with the same perspicacity that one employs in selecting one's oysters and his ducks; on the other hand, if a man loves his ideal he is likely to be a trifle short on dinners, but to be very long on talk. One has his choice, and his selection depends somewhat on his temperament and somewhat on his mind and his conscience.

Correspondence

HOW WE ARE DOING GOOD

PASADENA, CAL., February 13, 1900.

To the Editor of Harper's Weekly:

Sir,—I subscribed through a subscription agency for your publication, beginning with January 1, but have only received three numbers at this date.

While I do not agree with your policy of persecuting President Roosevelt and others who are trying to stop this "money mania" which is destroying all respect for law and is making us a nation of stock gamblers, yet I believe your perverted views are doing good by calling to the support of the President the thousands who ordinarily do not take enough interest to perchem themselves in times of peace.

In the hope that you will have the courage to acknowledge the wrong you have done when time and results will have shown the Roosevelt policy to have been a masterpiece in both statescraft and political courage.

I am, sir,

Mrs. H. E. ARMSTRONG.

THE ONE CONTINGENCY

New York, February 10, 1900.

To the Editor of Harper's Weekly:

Sir,—I want to congratulate you on the very able campaign you have been conducting against Bryan and Roosevelt, both in your editorials and your cartoons.

I am an independent, with Republican leanings, but there is one contingency in which I may vote for Bryan, who, it seems, will be nominated at Denver, and that is Roosevelt's nomination at Chicago. I think Bryan is even worse than Roosevelt, but the former would be harmless with a Republican Senate.

I find there are many others who think like I do. Am I not right in assuming that the Senate will be Republican after March 4, 1900?

I am, sir,

G. D. J.

Yes, the Senate will continue to be Republican.—EDITOR.

HOW IT STRIKES THE ENLISTED MAN IN THE ARMY

February 10, 1900.

To the Editor of Harper's Weekly:
